Arjomand (1988) and Richard (1991) elaborate on Shi’i political ideas, culture, and institutions. The variety of Muslim views on and formalized treatment of human rights is detailed in Mayer (1995).

Much attention has been devoted to specifically Islamist political ideas. Mitchell (1969) puts the thought of Hasan al-Banna in the context of the founding and early development of the Muslim Brotherhood, and Samman (1982) concentrates on al-Banna’s ideological formation and contributions. Haddad (1983), Nettler (1987), Diyab (1989), and Moussalli (1992) explain the thought of Sayyid Qutb, while Kepel (1984), Sivan (1985), and Jansen (1986) elaborate on the thinking and programs of Islamist groups in Egypt and of such influential figures as Shaykh ‘Abd al-Hamad Kishk. Kepel and Richard (1990) indicate the range of ideas offered by the “new” intellectuals and activists in the Muslim world, including the influential Iranian ‘Ali Shari’ati (for example, 1971; also see Richard 1991). Munson (1991, 1998) and Shahin (1994), explicate the thinking of the Moroccan Abd Assalam Yassine, and Hassan (1982) addresses the thinking of the Indonesian intellectual Nurcholish Madjid as well as others associated with the influential Muslim student movement in Indonesia.

One view of Islam and politics has long held that states are authoritarian, and perhaps "strong," because of the absence of countervailing institutions. P. Springborg (1992) argues that this view is a classic Orientalist contrivance. Moore (1974) and Ozbudun (1992) attribute the unrestrained power of government in part to the nature of Islamic law and social traditions which, they argue, do not recognize corporate bodies and institutions that mediate between the individual and the state, while Gellner argues that "Islam ... exemplifies a social order which seems to lack much capacity to provide political countervailing institutions or associations" (1994:29). Sadowski (1993) notes that, as oil revenues declined in the Middle East, scholars came to regard states in the Muslim world as "weak," or at least that civil societies were stronger than anticipated (for example, Migdal 1988). Standing the conventional view on its head, Sivan (1990b) argues that, if we accept that Islamist groups and movements are autonomous of the state, civil society possesses such potency that it "strikes back."

Two studies bring the issue of Islam and civil society into focus. Norton (1995a, 1995b), based on a major Ford Foundation-sponsored project, gathers both comprehensive conceptual essays and country- and region-specific studies that assess not only scholarly writings on the topic but also recent developments in the Arab Middle East, Iran, and Turkey. Salame (1994) focuses principally on the Arab Middle East, and is particularly strong on the Arab Gulf, Egypt, and North Africa. The compatibility of Muslim politics with civil society has also figured prominently in European political debates on the assimilation of Muslim immigrants, notably, although not exclusively, in France (Kepel 1994b; Lewis and Schnapper 1994). Polonskaya and Malashenko (1994) explain the ways in which Muslim groups and social practices in Central Asia persisted in spite of official Soviet antipathy and, since the collapse of the Soviet state, how they condition national and regional politics; Allworth (1994) I highlights the role of ethnicity and nationalism in the reconstitution of Muslim and political identities in Central Asia and the former Yugoslavia. Hefner (1993) places the development of the Association of Muslim Intellectuals (ICMI) in the broader picture of Indonesian politics and explores the possibilities of "civic pluralism," while Othman (1994), noting the Malaysian situation in particular, discusses civil society in the context of the national role of the shari'a. Brenner (1993) brings together a number of studies that explore the "politicization of public life" in sub-Saharan Muslim societies, with special attention devoted to Muslim interest groups.

Particular focus has been placed on the question of Islam's compatibility with democracy. Lewis (1990,1993), Kedourie (1992), and Kramer (1993) stress the obstacles that Islamic political ideas or structures pose to the process of democratization, whereas Hudson (1991), Kramer (1992, 1993), and Ayubi (1993) find in evolving social, economic, and intellectual trends the possibility, though by no means the certainty, of greater political participation and pluralism. Intellectuals in the Muslim world have turned to the matter of Islam's democratic potential (for example, Markaz Ibn Khaldun (1992). Al-Mahdi (1990) argues that Islam is essentially democratic, whereas some Algerian Islamist intellectuals stress that democracy leads to the imposition of the will of the majority rather than to what is morally

right (see al-Ahnaf, Botiveau, and Fregosi 1991). Esposito and Piscatori (1991) survey the various Muslim intellectual responses to this question.

Key studies of the role of women in Muslim politics include Kandiyoti (1991), who explores the ambiguities of the relationship between women as citizens and subjects, and the state, and Keddie and Baron (1991), whose contributors, like L. Ahmed (1992), encompass Middle Eastern Islamic history in general. Among key country-specific studies, Taarji (1991) deals principally with Egypt and North Africa, Afkhami and Friedl (1994) focus on postrevolutionary Iran, and Altorki (1986) investigates elite women in Saudi Arabia, [while Doumato (1992) looks at Saudi women in the political process and as political symbols. C. Eickelman (1988) deals with women's politics in an Omani oasis, and Gole (1993) bases her discussion of the interaction between secularists and women Islamists on the case of Turkey. Mumtaz and Shaheed (1987) and Shaheed and Mumtaz (1992), associated with the transnational group Women Living under Muslim Laws (see Shaheed 1994), chart the changing positions of women in Pakistani society, and Coulon (1988) examines the gender dimensions of Sufism and finds that, in societies of West Africa, women have possessed baraka and have assumed leading roles in the tariqas.

The writing on Islam and international relations has been preoccupied with the question of Islam's compatibility with nationalism. Vatikiotis (1987) emphasizes the problems associated with nationalism, whereas Piscatori (1986) finds that territorial pluralism has long been entrenched, and accepted, in the Muslim world. Yavuz (1993) describes how Muslim intellectuals contributed to the construction of Turkish nationalism. Khadduri (1955) and Abu-Sulayman (1987) explain that classical Islamic sources allow Muslims to engage in conventional international relations, and Hamidullah (1961) demonstrates that modern Muslim diplomacy builds on the example of the Prophet and the early Muslim community. The history of the pan-Islamic idea and of plans to implement it is found in Narayan (1982), Kramer (1986), and Landau (1990), while Dawisha (1983) shows that foreign policies are not doctrinally prescribed but that Islamic values and concerns often enter into the determination of national interests and policies. Rajaee (1983) places the international-relations thought of Ayatullah Khomeini into perspective by examining his larger political thought and focusing on his ideas of territorial nationalism, the export of the revolution, and the international destiny of Iran.

The Muslim interstate Organization of the Islamic Conference is treated in Moinuddin (1987) and Ahsan (1988), and Schulze (1990) shows how the Rabitat al-'Alam al-Islami (Muslim World League) functions as an international da'wa organization at the same time as it advances a Saudi political and religious agenda. Von der Mehden (1993) explores the international and transnational linkages between two parts of the broader umma. Southeast Asia and the Middle East, and Gladney (1992b) considers the impact of transnational Muslim issues on Uighur national identity in China. Ahmed and Donnan (1994) investigate the implications that globalization has for Muslim societies and self-understandings, and Beyer (1994) specifically looks at the Iranian revolution in the course of a general consideration of globalized communications, cultural values, and religious movements.

The policy implications of Muslim politics have increasingly occupied the attention of Western scholars, journalists, and political officials. Lewis (1990) and Miller (1993) are concerned that elements within Muslim movements may be uncompromisingly hostile to Western interests, but Hadar (1993) and Esposito (1992) regard fears of an “Islamic threat” or “green peril” as exaggerated and emphasize that only a minority of Muslim activists—let alone Muslims—resort to violence in the pursuit of their goals. Fuller and Lesser (1995) advocate a nuanced approach, which avoids stereotyping Muslim critics of Western policy as “fundamentalist” and ascribing all political conduct to specifically religious motivations.

*** List of Figures and Illustrations

3.1. Secular and Islamic book covers.

3.2. Cover of Ahu'al al-qubur iva-ma ha ‘d al-maivt

(Terrors of the Grave and What Follows Death).

4.1. Early Islamic web site.

4.2. Movement for Islamic Reform in Arabia web site.

4.3. Homepage of the International Islamic University Malaysia.

5.1. Multilingual web site of Hizbullah’s spiritual guide, Shaykh Fadlallah.

5.2. Yalta! (Let’s go!), a “cosmopolitan style,” youth-oriented Lebanese portal.

6.1. A Content Comparison of Three American Muslim Periodicals.

7.1. “Aristocratic Girl for a Pack of Cigarettes.”

7.2. “Don’t look back—there are informers.”

7.3. War profiteers.

7.4. “Is This for Real?”

7.5. Muhammad Hindi al-Khimi’s store. “Rare opportunity” to buy umbrellas and beach chairs.

7.6. Laws for Bathing.

7.7. “What is this ‘exposure’ that the women want?”

8.1. Comparing Islamic and secular book covers: Mitul’s Golaper Kanta (Rose Thorn) and Nasreen’s Fera (Returning).

8.2. Cover of Abujh Ridoy (Uncomprehending Heart).

8.3. Cover of Medhabi Meye (Brilliant Girl).

*** Preface to the Second Edition

The events of September 11, 2001, and its aftermath brought home not only the significance of the events themselves but also of the rapidly evolving new media environment— for Europe and North America and for the Muslim world—and the increasing interconnectivity among producers, consumers, and subjects of all forms of media. A recruitment video, circulated since May 2001 by the terrorist al-Qa'ida organization, slickly combined clips from CNN, the BBC, and Saudi and Russian television with their own CNN-style footage from training camps and "seminars" in Afghanistan, which took on new significance after September ll.[1] The Ara- bic-language al-Jazeera Satellite Television, based in Qatar and styled after CNN, came under intense scrutiny and political pressure as its policy of airing "other" voices that had already vexed Arab governments became an issue for policymakers everywhere. For the first time, British Prime Minister Tony Blair used al-Jazeera rather than the BBC to make an original policy statement, and al-Jazeera became a sought-out venue for U.S. government spokespersons, including the president's national security advisor, as well as an object of widespread scrutiny (El-Nawawy and Iskander 2002). These actions highlight the multiple and often unpredictable combinations of new media and new publics, new people and new interpretations that are reshaping the public sphere in the Muslim world.

New media undermine the theatre of the state, which Salvatore (1998) has called "staging virtue," with the theatre of the "street," making evident the multiple connections of this expanding public sphere. Eight months after al-Jazeera's Kabul studio was hit twice by "smart bombs" during the U.S. campaign to rout al-Qa'ida from Afghanistan and Osama bin Laden from the international airwaves, CNN, whose coverage in the 1991 Gulf War provided a model for al-Jazeera, "adopted a formal policy to avoid use of videotaped statements by Palestinian suicide bombers" and sent its top news executive "for consultations with Israeli officials about covering the conflict," after Israeli carriers threatened to drop CNN and placed Fox News next to CNN on the dial to offer "an alternative at the touch of a button" (Carter 2002). In between, private "hactivists" were busily disrupting Internet service to sites that they sought to silence. These and other interventions, from complaints about media incitement to national security claims, involve more than rights to speak and to represent. They involve constructions of the public sphere that are made particularly problematic by the advent of new media and growing recognition of their role in a rapidly changing communications ecology.

The extended social infrastructure of public communication is the context, frame, and often the referent of new media. New media frequently, but not always, offer self-consciously alternative forums for alternative voices, from the emergence of Islamic themes in romance novels in Bangladesh (Maimuna Huq, this volume) to thinking about modernity (Armbrust, this volume) to activists' campaigns for a public role (Robert W. Hefner, this volume) to new habits of listening, reading, and watching (Abu-Lughod 1995, Salamandra 2000, Oncii 2000, Hirschkind 2001). While new media give access to messages and voices that existing, particularly mass, media restrict or relegate to less public channels, they are in time also colonized by existing media institutions (Anderson, this volume) and newly emerging orders of discourse about Islam (Oncii 1995, Christmann 1998, Salamandra 1998), as new channels for communication become increasingly significant. Initial Internet sites created by some newspapers in Lebanon and other Middle Eastern countries, for example, were little more than home pages without content or were simply mirrors of their print editions. Increasingly,

however, some of these sites rapidly evolve in complex and diverse ways to reach different audiences than the print editions, facilitating the emergence of a new generation of journalists and information specialists, thus shifting the balance from newspapers' long and authoritative editorials to more diverse and immediate content (Gonzalez-Quijano, this volume).

What and to whom new media connect their users and producers pragmatically involves three layers or contexts of the social infrastructure of communication. One is the world of Muslim opinion, discourse, talk, and teaching focused by religion and concerning its doctrine, practice, and proper role in society. Spokespersons legitimized by conventional systems of learning and their means of production increasingly find themselves complemented and even challenged not just by locally rooted understandings of Islam, with which they are familiar, but with rival and alternative articulations of belief and practice. Also, rising levels of education create audiences for articulating and justifying religious practices that erode older distinctions between "high" and "low" forms of public religious expression (Oncii 2000, also Anderson, this volume). An important part of the dialogue with other Muslims involves new social capital that draws on contemporary intellectual styles and uses different communication technologies to circulate messages and views about what is properly Islamic. New media, from the Internet and audiocassettes to Islamic-themed novels and television dramas, add new performance genres to those of learned commentary and sermons that are already articulated in a range of works from scholarly treatises to chapbooks. As Armbrust and others in this volume explain, the new media draw in resources and skills of distinctly bourgeois character and settings. Far from limiting the potential audience, these resources and skills represent the expansion of Islamic public spheres that was set in motion by the spread of education, the essential social capital of new, growing middle classes, which are beginning to attract the notice of U.S. policymakers. "We must speak," said Deputy Secretary of Defense Paul Wolfowitz, who articulated a doctrine of permanent war on terrorism, "to the hundreds of millions of moderate and tolerant people in the Muslim world, regardless of where they live, who aspire to enjoy the blessings of freedom and democracy and free enterprise" (quoted in Schmitt 2002).

A second layer or context emerges in those Muslim-majority societies where many local religious ideas and practices, long taken for granted and understood as Islamic, come under increasing scrutiny with growing familiarity with other Islamic communities and ways of doing things. New media play a major role in this foregrounding and questioning of local practices (Bowen 1999) and in changing local balances of competing religious authorities (Hefner, this volume), criticisms of other views, and defenses of one's own in public.

A third context is found in the larger public spheres in which Muslims are minorities, sometimes as immigrants and sometimes as converts, for whom the dynamics of new media include forging and sustaining contact and continued interactions between diasporas and homelands, increasingly through media (Starrett, this volume). The significance of such ties has long been recognized, as in the role of overseas Lebanese in influencing village and national politics (Winder 1967), but may mean that expatriates and immigrants are called upon to explain or interpret—or to distance themselves from—politics of their former

homelands. New communications technologies make such interaction immediate and interconnected. This may strengthen sectarian bonds; it also fosters keen attention to the fates of emigrants and Muslims in Western countries. In some contexts, it leads to a greater openness, as when women can more directly join public discussions about their role in society and public debate over such issues as family law; in other contexts, it may only reinforce entrenched views.

In all these contexts, new media blur boundaries and link public spheres that are Islamic with those that are technological, secular, and political, based on class as well as sect, on "cold" ties (such as bureaucracy and duty to the state) as well as the "warm" ones of family and immediate community (Eickelman and Salvatore 2002: 110-12). They provide channels for hate groups, too, but their very porousness offers little basis for exclusivity. One of the new media's chief empirical characteristics is a consistent, often insistent, outreach. An overriding feature of the contemporary communications ecology is that new media expand to shape the public sphere increasingly as a marketplace of ideas, identities, and discourses.

Responses to the attacks of September 11,2001, provide a case in point. Muslims and Islamic spokespersons almost universally condemned the attacks as non-Islamic (typically on the Qur'anic injunction against attacking noncombatants) and as tragedies with which anyone could identify. By November 2001, however, in Muslim-majority countries from Egypt to Bangladesh, rhetorical themes had begun to develop against U.S. imperialism, which secular media attributed to "imperialist muscle-flexing" and Islamic media to Western fears of the rising power of Islam. Muslim communities in the West also directly registered fears in the U.S. and European media which were quickly communicated to the Middle East both through personal and public channels with coverage of anti-Muslim and anti-Arab incidents and official acknowledgments that "Islam is for peace." An important entailment of new media is this thickening not just of ties to diasporas but also horizontally with other communities, including non-Muslim ones, that inflect new senses of "Muslim" community in the Muslim media.

The marketplace of ideas, identities, and ties is more than a metaphor. It is a reality that decisively shifts forums and resources of such discourse and its practices in favor of middle-class actors. Huq (personal communication, April 21, 2002) reports a pattern of educated Islamist youth in the middle and upper classes in Bangladesh introducing the works of more moderate writers on hot-button issues such as gender—authors who are regarded with suspicion equally by conservative traditionalists and radical activists. Authors of works that inspire these youth, such as the influential Egyptian Shaykh Yusuf al-Qaradawi, have similar followings throughout the Middle East and reach a global audience through the Internet (Anderson 2001) as well as through translations.

Throughout the Middle East and Muslim-majority societies elsewhere, the increasing complexity of "local" settings is evident. Gonzales-Quijano (in this volume) opens his analysis of the reshaping of publication and the media in Lebanon with the arresting image

of an Internet cafe that has supplanted Beirut's Permanent Book Exhibit. Together with the ubiquitous satellite dish, Internet cafes have become icons of new media consumption across the Middle East. Internet cafes are particularly venues for youth, and Gonzalez-Quijano notes that younger members of established publishing families increasingly go into digital publishing and Internet services from web-site design and hosting to connections for users.

Likewise, existing publications and commercial publishing expertise have been the initial base for Internet ventures in neighboring countries, and Internet cafes are popular at least partly for repackaging telecommunications service (Anderson 1997). "A family that doesn't have money for a computer and Internet account at home can afford a dinar for the child to have an hour at an Internet cafe," a proprietor in Amman noted of his clientele (interview with Jon Anderson, June 13, 2001). Thus, the domestication of new media goes hand-in-hand with fostering new public places and new publics. But does this use of the new media constitute a public sphere?

Not by itself, argues Robert W. Hefner (in this volume): "there is nothing inevitable about the transition from plurality to civic pluralism." Echoingjenny B. White (1999), he finds amplification, not transformation, when looking at the larger communications repertoire of one of Indonesia's militant Islamic groups. That group marshaled a range of new communication technologies that became broadly available across Indonesia in the 1990s, "beginning with the fax machine and new software programs for desktop publishing, but quickly came to include the Internet, which was introduced into large Indonesian cities in late 1997 and early 1998," to project themselves into a public sphere dominated by Indonesia's larger and more moderate Muslim groups. Like the Daudi Bohras of Bombay (Blank 2001), who embraced information technology to unite their community, Indonesia's Lashkar Jihad use it to enhance their organization in the face of more established groups, but on its own terms.

In all, the evidence to date affirms the outcome of amplified extremist voices over the liberalizing one at the institutional level, but just the opposite at the individual level, where a clear enhancement of agency is commonly the gloss on, if not the outcome of, the new media discussed here. The novelties of the media discussed in this book lie in their incompleteness and in users' abilities to utilize them differently, for different purposes, and in different contexts. The Internet, teenage romance novels, popular cinema, fax and telephone for political networking, religious tracts and educational material all entail more participation by their users than has been associated with "media" viewed through the optics of broadcasting and the press. This, and not just the multiplication of channels, makes the control of state and religious authorities over what is printed or broadcast increasingly problematic (Teitelbaum 2002). Audiences are now defined by exponential rises of mass education since the mid-twentieth century in Muslim- majority countries and the much greater ease of communications and travel for religious goals, education, labor migration, and emigration.

New media and their contexts draw attention to the social organization of communication in which different media operate. They point to an emerging public sphere between the “masses,” evoked by an earlier era of state authorities and political leaders, and face-to-face solidarities of family, neighborhood, and community. Desktop publishing, delivery by fax and other small media, and Internet activists—but even more, Internet users—engender formal responses in the censored or “directed” large media, just as do the reading habits of youth, which vex traditionalists and radicals equally, obliging them, even if unwillingly, to call attention to the messages contained in media of more limited circulation, thereby eroding social distance and providing a model for others. Texts from sources as disparate as South Asia, the Middle East, and Europe circulate to American society, where they are adapted for Islamic teaching and sermons alongside material from the non-Muslim American mass media; similar patterns with Bangla and Indonesian translations of writings by Arab preachers are beginning to appear in media spaces opened by other writings.

The new media analyzed in this book are sometimes limited in audience, modes of participation, content, and authority. However, the practical result is opening up interpretation and introducing "lay" interpreters (Bunt 2000), “other” voices, and the scrutiny of conventional religious and political authority. There are no guarantees that the results will match liberal expectations long attached to enhanced flows of communication and information. While these seem to occur at an individual level, that does not necessarily happen at the level of institutions: existing ones prove adept at grasping the opportunities in new media to amplify their presences and capabilities, too.

The role of new media in expanding the public spheres of Islam, in Muslim-majority societies and for extended transnational Muslim networks, is as complex and multi-dimensional as the connections of these spheres locally and internationally. If it is unpredictable, the consequences are not: eroding social distance and multiplying role models are reshaping the meanings of local and global, and new media are their means.

*** Acknowledgments

This book draws on several lines of inquiry into civil society and new media and information technology. These have included workshops, conferences, and symposia at professional meetings since the mid-1990s: a symposium on the Information Revolution in the Arab World at Georgetown University, a workshop on new religious writings and their audiences at the

Rockefeller Foundation’s Bellagio Study Center, panels on civil pluralism and new media at successive annual meetings of the American Anthropological Association, and a two-year Euro-American Summer Institute on “Public Spheres and Muslim Identities” supported by the Alexander von Humboldt Foundation and the Wissenschaftskolleg zu Berlin. Along the way, we have benefited from advice and comments by colleagues—including Arjun Appadurai, Richard Bulliet, Michael Collins Dunn, Brian Larkin, Madawi al-Rasheed, Armando Salvatore, and Richard L. Tapper—which we gratefully acknowledge. Preparation of this volume was assisted by grants from the Claire Garber Goodman Fund at Dartmouth College and support from the Publication Fund of the Anthropology Department at the Catholic University of America. For the first edition, in 1997-1998 the Woodrow Wilson International Center for Scholars provided Dale F. Eickelman with an intellectual milieu that bridged academic and policy research and was appropriate for addressing issues of wide public concern. Christian Hummel, William F. P. Raynolds, and Allison L. Schumitsch provided critical and timely support for the second edition.

*** Note on Transliteration

This book draws on source materials in Arabic, Bangla, Indonesian, Persian, Turkish, Urdu, transliteration conventions preferred by Muslims writing in English, and colloquial as well as literary uses in all these languages. As consistently as possible, we use the system adopted by the International Journal of Middle East Studies, except that we omit diacritics. Although religious terms often derive from Arabic—for example, the Arabic plural ‘ulama (men of learning) becomes ulenia in Turkish—we decided not to impose the Arabic where it does not accurately reflect local or regional usage. When appropriate, the common origins of such terms are indicated in the glossary. Likewise, the plural of most foreign terms, especially those derived from Arabic, is indicated by the addition of an “s” to the singular.

** 1. Redefining Muslim Publics

Dale F. Eickebnan and Jon W. Anderson

A new sense of public is emerging throughout Muslim-majority states and Muslim communities elsewhere. It is shaped by increasingly open contests over the authoritative use of the symbolic language of Islam. New and increasingly accessible modes of communication have made these contests increasingly global, so that even local disputes take on transnational dimensions. These increasingly open and accessible forms of communication play a significant role in fragmenting and contesting political and religious authority. Muslims, of course, act not just as Muslims but according to class interests, out of

a sense of nationalism, on behalf of tribal or family networks, and from all the diverse motives that characterize human endeavor. Increasingly, however, large numbers of Muslims explain their goals in terms of the normative language of Islam. Muslim identity politics take many different forms that are not unitary or identical, but such politics have become a significant force in both Muslim-majority states and those in which Muslims form only a minority of the population. It is in this sense that one can speak of an emerging Muslim public sphere.

Situated outside formal state control, this distinctly Muslim public sphere exists at the intersections of religious, political, and social life. Facilitated by the proliferation of media in the modern world, the Muslim public can challenge or limit state and conventional religious authorities and contribute to the creation of civil society. With access to contemporary forms of communication that range from the press and broadcast media to fax machines and audio- and videocassettes and from the telephone to the Internet, Muslims, like members of Christian coalitions, Hindu revivalists (Juergens- meyer 1993), Jewish activists, Sikh militants, and protagonists of Asian and African values, have more rapid and flexible ways of building and sustaining contact with constituencies than was available in earlier decades. The asymmetries of the earlier mass media revolution are being reversed by new media in new hands. This combination of new media and new contributors to religious and political debates fosters an awareness on the part of all actors of the diverse ways in which Islam and Islamic values can be created and feeds into new senses of a public space that is discursive, performative, and participative, and not confined to formal institutions recognized by state authorities.

Public dialogue has long held a special place in the Muslim world. A religious public sphere of learned scholars, schools of jurisprudence, and their supporters was often autonomous from the official sphere of rulers in the early Islamic centuries. The precedent was set in the inquisition (mihna) of 833-848, in which four successive caliphs decreed that Muslims had to accept the belief that the Qur'an was created, in spite of intensely held popular support for the traditionalist view that it always existed. This authoritarian imposition of doctrine met fierce resistance, and the effort was abandoned after fifteen years. The result was to strengthen the role of men of learning (‘ulama) in the public sphere from the third Islamic century through the modern era. Subsequent caliphs and other temporal rulers intervened in this sphere only with caution, and in general left it alone (Hurvitz 1997: 6).

In more recent times, especially since the Second World War and the end of colonial rule in many parts of the world, state authorities have used modern means of communication and bureaucracy to craft, refashion, and promote a publicly expressed code of competencies that all citizens or subjects should assimilate and practice in order to achieve modernity. Since the 1970s, few citizens of Muslim-majority countries unabashedly accept the legitimacy of state claims to monopolize this task. Just as there is a general scholarly recognition that there are multiple paths to modernity (Eisenstadt 1996: 396-426), there is a practical awareness that there are multiple claimants to the task of staging virtue (Salvatore 1998a: 87-89), including a public engagement in the name of religion. In this respect, Muslim

activists, at least in public discourse, come close to what Warner (1990: 42-43) has called the republican virtues of colonial America, in which print or other media are used to direct consciousness to and craft certain models of civility, membership within a community, and citizenship within a nation, all resting on more or less mutual packages of commitments and expectations (Salvatore 1997: 55-56).

Publicly shared ideas of community, identity, and leadership take significantly new shapes in such engagements, even as many communities and authorities claim an unchanged continuity with the past. Mass education, so important in the development of nationalism in an earlier era (Gellner 1983: 28-29), and a proliferation of media and means of communication have multiplied the possibilities for creating communities and networks among them, dissolving prior barriers of space and distance and opening new grounds for interaction and mutual recognition.

States in this century have taken it upon themselves to control the broadcast and printed word to foster common, shared, and modern identities at least as much as to deny these means to potential opponents. The centralized, asymmetrical structure of mass media is a product of this; states see these media as vehicles of consolidation and standardization. The correspondingly piecemeal and sporadic impulses to control the small media of fax machines, desktop publishing, and video- and audiocassettes demonstrate how those media contribute to the fragmentation of political and religious authority by bypassing established channels. When recast as differences between senders and receivers, distinctions between center and periphery become far more ambiguous and porous as the senders become multiple and shifting.

Some new media seen as innovative even in the 1980s are now almost taken for granted. In countries such as Saudi Arabia, the same fax machines that rapidly disseminate criticisms of the regime are also essential to the conduct of business. The state is powerless to limit their use without disrupting the economy. Audiocassette tapes spread the sermons of Ayatollah Khomeni and others in the pre-revolutionary Iran of the 1970s, just as videotapes of anti-regime preachers and demonstrations today circulate in some countries of the Arabian peninsula. One such video, showing employees of the Saudi embassy in London videotaping masked demonstrators while the demonstrators videotape the embassy (CDLR 1994), indicates both how commonplace and how flexible the new media have become. Some of these media utilize existing formats, such as desktop-published newspapers. Others, such as Islamic law journals, create an innovative format in which readers from different walks of life —not just conventionally trained religious specialists—exchange views with editors and thus contribute to enlarging the ways in which legal interpretations are made and who can make them. Broadcast fatwas, or religious rulings, have much the same effect: they convert a form of highly personalized interpretation that in an earlier era was provided to individual questioners into more generic messages for a mass audience (Messick 1996: 319-20), and, thereby, shift part of the burden of interpretation to the listener/reader.

Internationally circulated Islamic educational videos, CD-ROMs, booklets, and Internet communications ranging from e-mail to World Wide Web pages frequently borrow formats as new and innovative to Western audiences as they are in Muslim contexts. It is not just that they are new; they are impersonal in the sense that they may be fitted to multiple contexts, put to diverse uses, employed by different people. Place becomes less contextually important than use: Is Pat Robertson's Web page less innovative than that of the Muslim Students Association? Perhaps because of a Western tendency to distinguish between spiritual and technical matters, the use of high-tech communications for religious purposes continues to seem noteworthy to secularists when they initially encounter it, but from Indonesia to Morocco, e-mail and the Internet foster new and rapid forms of communication and coordination for the religiously minded. Indeed, recent scholarly work on globalization and localization in the creation of Muslim private and public spheres in Indonesia (Bowen 1993: 315-30, Hefner 1997, George 1997) has been incorporated into the ongoing discourse of Muslim intellectuals in Indonesia and elsewhere.

Messages also migrate from one medium to another. Novels and recently even comic books (Douglas and Malti-Douglas 1994) address questions of how to lead an Islamic life, a domain previously exclusive to religious scholars who gave advice in the form of religious decrees (fatwas) or published booklets. The proliferation and privatization of television and radio, furthest advanced in Turkey and Lebanon among Muslim-majority countries although still subject to significant government restrictions (Kinzer 1997), includes a significant amount of religious discourse and subtle changes in what is deemed "religious" as broadcasters, competing for market share, reach beyond traditional religious figures to draw the widest audiences. These are counterparts in the public sphere of the earlier displacement of subversive or dissenting messages into more private channels, such as jokes or, in some cases, theater enjoyed primarily by the elite. Newer media reverse this flow and open channels to an expanding public space.

Two effects follow from the boundary crossings of these messages. First, asymmetries between senders and receivers, and between producers and consumers, are reduced as more people participate in religious and civil discourse. In this sense, the new media are more participatory, whether by the access they give for the uninitiated to join the conversation or by the implicit invitation to interpret that accompanies more generic, less personalized messages bound to particular contexts. This incompleteness that invites the further interpretation of messages is the mirror of more symmetrical, more interactive sender-receiver relations that characterize the newer media to which these messages migrate.

Second, boundaries between public and private communication that once seemed clear become blurred as telephones and faxes are used to cross frontiers once readily policed by censors, and conversations that were previously confined to people who knew each other move into a public of anonymous senders and recipients, and thus into a rhetoric of norms that transform the social imaginary and the idea of the public (Warner 1992: 378-79). Messages intended for one medium, such as print, may acquire significantly different meanings when broadcast or faxed, and in all media there are competing and fragmented

voices. Thus a leading Arab secularist, Syria's Sadeq Jalal al-'Azm, can debate Shaykh Yusuf al-Qaradawi, a leading preacher and conservative religious scholar, on a Qatar-based pan-Arab satellite channel (al-Jazira TV 1997). Even now, such a debate would be unlikely on the state-controlled broadcast media, which generally avoid religious controversy. However, the Qaradawi/al-'Azm debate took place in an alternative broadcast medium, satellite television, where the weighting of questions primarily toward a fundamentalist religious viewpoint provided cover for the more unconventional secularist view expressed by al-'Azm. Viewpoints suppressed in one medium almost inevitably find an outlet in others. Thus the newer small media give broader access to these messages and widen the base of their producers, erode the gap between producer and consumer, and create new standards of public rhetoric. They create public space.

In this respect, new media share some of the properties of ritual in that they are performative. Media do not merely convey messages; they are also part of the message. When Saudi traditionalist 'ulania opposed the introduction of radio broadcasting, Ibn Saud quelled their protests by inaugurating Saudi broadcasting with a Qur'anic recitation, which has been a staple ever since. More recently, King Fahd used television in a major 1992 speech, a year after the end of the 1991 Gulf War, to reaffirm the kingdom's existing political values and contain growing dissent (Rasheed 1996: 359-63). Lacking access to this medium of legitimacy, opponents within Saudi Arabia and elsewhere replied primarily through the small media; but some, such as opponents within the religious establishment, replied through mosques and foreign newspapers. Although some of these media are prohibited or, in the case of mosques, not expressly authorized, the various protagonists are drawn together into an increasingly public sphere of performance with the enhanced accessibility of new media. As Taylor (1993: 220-21) argues, members of modern societies are deemed to meet in a common space through a variety of media and through face-to-face encounters, and "thus to be able to form a common mind about matters of shared concern."

Islam and Information

The new technologies of communication facilitate distinctively modern senses of religious and political identity that, rooted in specific local contexts, are also systematized on a translocal horizon opened by new forms of communication. Notwithstanding modern claims that Islam as practiced is uniform and universal, religious identities are everywhere joined to ethnic, political, and linguistic ones, where heightened senses of Muslim identity traditionally figure in local, regional, national, and transnational agendas and claims for leadership. At a local level, Moro nationalism in the Philippines is fueled by appeals to common Muslim identity, but the appeal is to a distinct ethnolinguistic group. It took shape only with the emergence of a colonial elite educated under U.S. rule, and emerged as a viable popular movement only after Philippine independence (McKenna 1998). At a more global level, the Organization of the Islamic Conference, a truly international body, works through state organizations and copes with both national and international rivals. Such identities are set in relations to specific others. And, as times change, many would agree with conservative Muslim intellectuals like Pakistan's Zafar Ishaq Ansari (1997), who observes that there is no

longer any hard and fast line between West and rest, either as ideal types or as functioning communities, as we become aware of contemporary flows of communication. Boundaries are no longer primarily territorial, although these still count, but much more complex and cross-cutting. Those thought of as religious and civilizational, as Huntington (1993) and others remind us, transcend locality, as do other, intermediate levels in which specific bonds of loyalty and trust are elaborated for the purposes of business, worship, and community (Fukuyama 1996).

The emergence of a public sphere in which precedence is given to those who can authoritatively articulate universal standards depends on print and other media to assert this alternative sense of identity. Even as spokespersons for some groups assert that they seek a return to past values, as do some ethnonationalists and Muslim fundamentalists, they do so in a distinctively modern way, oriented to the future and assimilating new technologies and communicative forms (Bayart 1996: 239-41). In an era of restructuring state sectors, advancing market economies, global media cultures—including the globalization of idealized ethnic, sectarian, and regional cultures—and rapid flows of people and money, attempts to speak of transnational cultures, religious traditions, civil societies, or public spheres must take into account a fluidity of identities in these contexts that rests on their essentially, and alternatively, mediated character.

As in earlier public spheres, challenges to authority revolve around rights to interpret. Consequently, Muslim politics is less an expression of a unitary voice (although many would claim this as the goal) than an engagement to argue over correct interpretations. What is new today is that these engagements spill out of a few specialized channels into many generalized ones. They do not necessarily become more public than in the past—mosqueuniversities were public places and legal writings were public documents, although few had access to them; they instead become public in different ways. Their characteristic feature is more, and new, interpreters and, from them, the engagement of a more diverse and wider public.

The conversations and statements that contribute to this public sphere involve trusted partners, channels, media, topics, genres, and other communicative conventions set within different social realities. The result can be seen as both complex and evanescent since more publicness does not inevitably lead to greater participation in associational life—but it is the foundation from which associations can begin to emerge. Some channels, topics, and genres that have risen to prominence appeal primarily to the middleclass Muslim educators, engineers, doctors, and accountants whose techniques of thought and analysis these conventions deploy. These new genres attract identifiable social segments just as a bureaucratized form of Sufism earlier in this century acquired a following in the burgeoning bureaucracy of Egypt (Gilsenan 1973). Others, such as the telephone and local, even neighborhood, television channels in Turkey, fit the personalized network structures and information-seeking behavior of proletarian migrants, whose own networks of kin and friends have become widely, even internationally, dispersed. Across the social scale, some appeals have gained international reach, such as those of the late Ali Shariati (Iran) and Sudan’s Hasan al-Turabi, who cast traditional learning in a modern idiom to transcend traditional

scholarship in style and substance. Syria’s Muhammad Shahrur and Iran’s Abdokarim Soroush have similarly attracted followers, interpreters, and translators disseminating their ideas.

The messages of these thinkers, as of more anonymous persons, are inseparable from their context not just in tone and style, but also in the means of communication that they and others choose. In an era of multiple and alternative channels of communication, issues of how various publics are reached, how messages with religious and political content are listened to in the new Middle East and Muslim world, and what the limits on form and content are in different channels of communication are as important as the overt content of their messages. Much attention has been paid to how institutions formally recognized by the state provide agreed-upon boundaries of civility. Less has been paid to means of communicating the “ties that bind” (Qur’an 31: 22), to use a Qur’anic phrase that suggests how submission to Islam relates to the overlapping ties of kinship, language, and nations that contribute equally to creating institutions and a healthy dispersion of authority. Such means range from the lowly telephone for mobilizing dispersed networks of migrants in Istanbul’s working-class suburbs to the Internet for creating new networks in and to the Middle East’s overseas populations; they include transformed genres from Islamic romances and political comic books to new law journals in Indonesia and imported religious education material for African-American Muslims. They extend to movie making and magazines as well as amateur cassettes and leaflets, all in multiple, overlapping, international conversations.

New Publics and New Media

Throughout the Muslim world—South and Southeast Asia, the Middle East and Central Asia, Africa, and the Muslim communities of Europe, the United States, and elsewhere—increasingly vocal debates on what it means to be a Muslim and how to live a Muslim life frequently translate in highly divergent ways from one context to another. This means that the available publics are significantly expanded not just in numbers or reach, but also in diversity of opinion, over what was possible just a few decades earlier. Upon publication of Salman Rushdie’s Satanic Verses in 1988, opposition press coverage in Pakistan emphasized how the government’s heavy-handed censorship cut committed Pakistani Muslims off from discussions initiated by their counterparts elsewhere. Thus the editor of the mass circulation Takhir (Karachi) wrote of the tragedy that Muslims in Britain and the United States could have direct access to Rushdie’s book, even if this pained their sensibilities, while censorship kept Muslims in Pakistan ignorant and unable to contribute to international debates (Salah ud-Din 1989).

Some of the new thinkers participating in debates within the Muslim- majority world are becoming better known, as boundaries both of debate and of channels in which debates flow shift. Ironically, however, while Arabic remains a universal medium at one level, language differences within the Muslim world significantly constrain the circulation of ideas. Some Indonesian religious intellectuals, often trained in the United States and Canada, interpret

developments in the Arab world, but virtually no Arab intellectuals follow debates on Muslim intellectual and political life in Southeast Asia (Madjid 1997). To some Muslim intellectuals, English has emerged as a preferred medium to call attention to new ideas. One leading Arab religious intellectual recently observed that, even to spread ideas in the Arab world, it helps to have one's ideas known in the English-speaking world and taken seriously by speakers of English, Muslim and non-Muslim alike (personal communication, New York, March 22, 1997).

New media aid this process significantly. Minor and emergent channels of communication that have proliferated are not mass in the same sense as conventional print and broadcasting. They are composed and consumed within more specialized, often voluntarily entered fields where producers and consumers, senders and receivers, are far less distinguishable than broadcasters or the press and their audiences. Instead, they merge in a kind of transnational community that moves the center of discussion and its impetus off-shore or overseas because their technology is mobile or was first available there (Anderson 1997). At times these contributions are anonymous, as is the case with some Internet postings, a tactic that transforms the notion of the public toward participation, as might illicit leaflets. In colonial America and the early years of the American republic, anonymous pamphlets were a major factor in sustaining an emerging public space (Warner 1990). At times, the anonymous leaflet or Internet posting plays a similar role today, as do generic spokespersons in the conventional press; although in some new media such messages are hard to distinguish from those of crackpots or fringe elements, or from disinformation contributed by regional security services.

Except in Turkey and, until recently, in Lebanon, where privately owned broadcast media have become increasingly circumscribed since the end of the civil war in 1995 (Norton 1997), television and radio are the province of official, usually state, institutions or, in the case of the Saudi-owned Middle East Broadcast Center (MBC), establishment commercial interests that limit their range of editorial expression. Through these media, establishments articulate their visions for education, worship, social services, politics, and entertainment (Alterman 1998: 15-24). Emanating from a center, they provide an authorized, top-down pattern of communication, so that competing voices are more likely to emerge through the alternative small media. Audio- and videocassette tapes are ubiquitous in the Middle East, and most countries acknowledge their significance by conducting rigorous inspections at frontiers, where they are subject to special scrutiny. Arab Postal Union regulations ban the posting of video- and audiocassettes. Such tapes circulate sermons, religious instruction, chants, and occasionally subversive folk music, including North African ra'i, as well as other entertainments; they utilize accessible, affordable technologies and vernacular languages to get messages across borders and past official and self-appointed guardians. They extend the speech communities of mosque or locality and also, as Babb and Wadley (1995) have shown for India, homogenize and demarcate regions and localities. To such media as cassettes can now be added local and even neighborhood television and radio stations in Turkey, plus forms of narrowcasting that range from pamphlets to the telephone and Internet discussion groups. Such forms of media link religious identity and civic action to activities in daily life, family, neighborhood, education, dress, jurisprudence, and patterns of consumption.

New media refigure audiences as communities, because senders and receivers have far more in common, not just in interests but also in cultural style and social position. While not nearly as widespread as the production and consumption of cassette tapes and pamphlets, the Internet reproduces many of these features at the opposite end of the social scale. As is characteristic of all these new media, the social and cultural distance on the Internet between producer and consumer is radically reduced. Similarly, with small but influential magazines in Egypt or law reviews in Indonesia, the size of audience is sometimes less significant than the quality and nature of the audience reached for a given purpose.

Another characteristic of the new media is that they occupy an interstitial space between the super-literacy of traditional religious specialists and mass sub-literacy or illiteracy. Their natural home is the emerging middle, bourgeois classes of the Muslim world. They draw—dangerously, in the view of traditionalists—on the techniques of multiple media domains, producing a creolized discourse that is not authorized anywhere but instead links others in an intermediate discourse (Anderson 1995). To the enthusiasts of such forms of communications, the eclecticism they permit is attractive. They are set in contexts of a generation-long rise in the level of mass education in Muslim countries and a relentless urbanization that has filled cities with both a work-seeking proletariat and career-seeking professionals whose mobility is international. Labor migration that puts Sri Lankan and Filipina maids and Pakistani construction workers in the Arab Gulf also facilitates the emigration of Egyptian, Palestinian, and Pakistani doctors, engineers, teachers, and administrators. Most labor migrants in the Muslim world are likely to be Muslims, which reinforces the international, or creole, character of their public space as an intermediate rather than merely disconnected or diasporic one. It is they who first consume and produce the new media, from ra'i music to Internet newsgroups.

The publics that emerge around these forms of communication create a globalization from below that complements and draws on techniques of globalization known in finance and mass marketing. While globalization from above is driven by multi-national corporations, globalization from below is traditionally associated with labor migration. Both constitute incorporation in an increasingly technological world. At their core are professional classes who are at least partly at home with the multiplying media of communication and the skills to operate them and more proletarian counterparts who use new media to incorporate expanding networks of otherwise traditional relations. Among the technicians of globalization as well as its participants, these professionals are both producers and consumers, forming communities on their own scale: interstitial, fluid, and resting on shared communications, a minimal definition of what constitutes a public space.

New People

By new people, we mean those who have emerged and have benefited from the huge increase in modern mass education, especially higher education. Circles of literacy have

been vastly widened and enhanced, creating a dense continuum between mass non-literacy and elite super-literacy. A generation of state-sponsored and, increasingly, private religious schools independent of state support spread the techniques of literacy and the demand for its products, along with a sense of the right to interpret religious texts or to choose interpretations attuned to immediate practical needs and aspirations. The transnational peak of this population takes the form of mobile professionals—a Tunisian Muslim psychotherapist in St. Louis or a Somali Muslim gynecologist in Toronto or an Egyptian Muslim computer programmer in Silicon Valley. But more modest examples of the beneficiaries of mass higher education are equally significant, as are those with less, but still some, education who move from rural village to working-class suburbs of Istanbul or Cairo or Dhaka.

The widening circle of those affected by the new media rests on this foundation of expanded education constituting a market for new mixes of ideas. In principle, traditional mosque-universities (madrasas) in the Muslim world were open to all members of the community; in practice, they empowered a narrow elite to interpret traditions and communicate authoritative interpretive techniques to others (Eickelman 1992: 106-10). Modern mass education means not only more widely spread skills, but also wider, competing repertoires of intellectual techniques and authorities and the erosion of exclusivities that previously defined communities of discourse.

These transformations increase the range of participants in discussions about Islamic values and practice. Women and minorities find their way into arenas of political and religious discourse. Women in Iran may formally acknowledge the male interpreters of Islamic discourse, but this acknowledgment is often marked with barely concealed irony and skepticism, the weapons of the weak in the face of arbitrary authority (Torab 1996: 241-44). Educated people who are not religious scholars increasingly contribute to the discussion of legal issues and create alternative sites for religious discourse and representation. Many of them claim legitimacy on the basis of simplified, systematized, and down-market interpretations of basic texts. Criticism from the shrinking numbers of traditionally educated scholars does not obscure the fact that the new media engage wider and more public communities with claims to interpret and to provide additional techniques of interpretation.

In book publishing, the work of the Syrian civil engineer Muhammad Shahrur is a case in point. His approach to rethinking the meaning of the Qur’an entails a Kantian notion of public enlightenment by ideas, independent of the writer’s status and thus to be evaluated on their persuasiveness alone. Despite the length of Shahrur’s first book (over 800 pages) and its cost (half a month’s salary for a government engineer in Egypt), it sold over 25,000 copies in authorized printings in Syria and many more in pirate and photocopy editions throughout the Arab Middle East, even though formally banned in many of the countries of the region (Eickelman 1993; interview, Eickelman with Muhammad Shahrur, Hanover, N.H., November 27, 1998).

At the other end of the spectrum, government-paid preachers (khatibs) appear on television from Morocco to Pakistan. Some preachers, such as Egypt's Muhammad Sha'rawi and Syria’s Sa'id Ramadan al-Buti, achieve media fame. Most, however, have difficulty extending their reach beyond the Friday sermon and the mosque-university. Shahrur, by comparison, joins an ever-widening cadre of interpreters of Islam who link vernacular expression, modern education, and Islamic themes. Few madrasas are yet on-line, with curricula and faculty profiles, although the International Islamic University of Malaysia, and a counterpart in Herndon, Virginia, target modern (and international) audiences through the Internet, as do branches of major Sufi orders, followers of the work of the Iranian thinker Abdolkarim Soroush, some da'wa (outreach) organizations, some of the theological schools in Qom, and at least one religious training school in Pakistan.

New Thinking

One feature of the new public sphere is a reintellectualization of Islamic discourse. Jeremiads against Western thought are still common, but critiques of Islamic micro-intellectuals or lumpenintelligentsia—to use Olivier Roy’s (1992: 72) term—miss the point that such thinkers successfully join global and local communities of discourse and reach wider audiences than their predecessors.

By reintellectualization, we mean presenting Islamic doctrine and discourse in accessible, vernacular terms, even if this contributes to basic reconfigurations of doctrine and practice. Reintellectualization has sometimes been thought of as the province of folk or local Islam, a category that has been criticized for deflecting attention from the presence of the global in the local throughout the Muslim world. But more is involved with new media and new people: Islamic discourse has not only moved to the vernacular and become accessible to significantly wider publics, it has also become framed in styles of reasoning and forms of argument that draw on wider, less exclusive or erudite bodies of knowledge, including those of applied science and engineering. Shahrur draws his images from the Qur’an and civil engineering, as well as from the linguistics of de Saussure, Sapir, and Whorf. In an intellectual world of systems and subjects, Islam becomes approachable in different ways, one system in a world of systems. It has long been the case that Islam is recognized as an alternative among competing systems of religious belief and practice, and susceptible to multiple interpretive techniques. This in itself is not new—one thinks of the Andalusian ‘Ali ibn Hazm (994-1064), author of extensive writings on various Muslim sects as well as the creeds of Jews and Christians, and of Christian missionaries in thirteenth-century Andalusia who learned Arabic in order to persuade Muslims of the error of their faith and the truth of Christianity—but now the available contrasts range beyond religious systems, so that some believers view Islam as competing with scientific disciplines, on the one hand, and secular political philosophies, on the other (for example, Ahmed 1992).

It is problematic to assert that the interpretation of Islamic precepts (iftihad) was ever closed (Eickelman and Piscatori 1996: 26). Instead, the modern period in Egypt and Iran and parts of North Africa and South Asia compartmentalized Islamic practice into distinct institutions under colonial or secular governments. But even defensive accommodations, starting with Islamic responses to imperialism in northern India in the second half of the nineteenth century, have been accompanied by continuous reinterpretation. In its older conventional form as jurisprudence interpreted by traditionally educated scholars, the shari'a had become increasingly marginalized and irrelevant to social life, of interest to religious scholars only. In its new form as a set of normative rules avidly discussed in the public sphere, not only are

elements of it implemented, often in novel circumstances, but it becomes a significant element of the political agenda (Brown 1997: 374, Eickelman 1998: 258, Nauimi 1996, Salvatore 1998b). One trend has been toward the de facto privatization of religious faith. Another trend has been toward radical doctrines, such as Khomeni’s principle of wilayat-i faqih, which asserts the sovereignty of jurists over the texts they interpret. However, even among jurists in Iran, there has been vigorous debate over whether Khomeni’s doctrine oversteps the appropriate role for the Shi'i religious establishment (Mir-Hosseini 1999). These two positions, however, merely define the ends of a continuum, the intermediate points of which acknowledge in practice a vigorous and growing religious public sphere and vigorous debate and diversity within it.

The reintellectualization of Islam is anchored less in long-standing conventions of interpretation than in the current experiences of believers. In this respect, Islamic discourse and practice is rapidly shifting from the boundary-minded forms it assumed after the advent of European imperial expansion into Muslim lands to a more confident and differentiated internal and external dialogue. The internal element of this reintellectualization engages many more believers in explicitly articulating Islamic beliefs than did its predecessors. As Gaffney (1994) relates in his detailed analysis of provincial Egyptian sermons, those identified as Islamists build their authority not only on personal reputation and knowledge of texts but, increasingly, from a demonstrated practical grasp of society and an ability to share with their audiences a grasp of their daily challenges. Similarly in Indonesia, the most politically influential religious intellectuals are those able to communicate their beliefs to large numbers of Muslims, delicately balancing state exigencies against the constantly growing religious public sphere (Hefner 1997). As Aswab Mahasin, an Indonesian human rights activist, remarked, the growing influence of Muslim social styles in the public sphere made many people who were previously embarrassed about their faith, because it looked backward and unmodern, proud to act like Muslims (cited in Hefner 1997: 111). Likewise, the relationship between Shi'i religious authority (maria') and follower has always been two-way. Ambitious ayatollahs adjust their fatwas to accommodate popular opinion, just as reformist ayatollahs often have to give in to the wishes of their followers. The major post-revolutionary development in Iranian religious thought is the challenge to the seminary-trained clerics of Qom by Muslim intellectuals educated outside the seminary, such as the London-educated Abdokarim Soroush (Mir-Hosseini 1999). At all times, believers have sought fatwas from religious authorities to guide them on specific issues. In turn, fatwas have

conventionally responded to unique instances and have not been meant as generic pronouncements of doctrine or practice. When published or broadcast and thus widely distributed, however, they fill different, more anonymous and “public,” functions.

*** a New Religious public sphere

The conjuncture of new media, new people, and the reintellectualization of Islamic discourse has broad implications. The first is that the translation or movement of messages from one medium to another changes the balance of what gets into circulation and who introduces new ideas. The proliferation of actors able to assert a public role leads to a fragmentation of authority, and it increases the numbers of persons involved in creating and sustaining a religious-civil public sphere. Even sloganeering—whether through graffiti, anonymous photocopied leaflets, or pamphlets—qualitatively changes the sum of Islamic discourse, even more so as many such documents are anonymous. The transposition of religious (and political) issues to new media also changes the associative ecology of Islamic discourse, juxtaposing religious issues in innovative ways with commerce, entertainment, and the professions, and contributing to the greater pervasiveness of religious themes in an increasingly redefined public life.

Issues such as who gets on national television and publishes mass-circulation books and newspapers and who gets confined to the small media contribute to the shaping of a new public sphere. Such channeling—who gets to speak in certain media or deflected to others—has always involved complex interlocking factors, such as official and unofficial censorship, available infrastructure, and gatekeepers who control access to newsprint, studios, and other required resources, including the training needed to use certain media. Messages are the complex products of many actors and factors, and when some actors and their messages are deflected from the major media into the smaller ones, the intermediaries between producers and audiences diminish, along with the ability of state and religious gatekeepers to influence what is said; and the sense of community correspondingly grows with senses of threat or insecurity. The determinant is not, however, the technological consequences of certain media. Media merely enable. Available technologies have a bearing on the messages communicated and the means of doing so, but equally important are the rising levels of education and the growing cultural understanding among the beneficiaries of mass education of politics and religion as embedded in contingent social relations, actions, and representations (Warner 1990: 6).

The second set of implications arising from the proliferation of new media is the emergence of new public spheres in which religious norms, practices, and values play a significant and sustained role that is not necessarily coterminous with civil society but that can offer powerful support to it (Hefner 1997: 110-16). In most Western contexts, religion has been formally consigned to the private sphere, although many observers comment that this may be due more to specific Western political reaction since the sixteenth century to a centralized and politicized church hierarchy than to anything inherent in civil society itself.

Muslim-majorify countries have never had such a centralized church structure against which to react, and the basis for regime legitimacy in most Muslim states is more tenuous than that for many of their Western counterparts. The boundary between public and private in most Muslim-majority states has never been clear or fixed. Thus religious speeches at weddings in Damascus, attended by hundreds of guests, including prominent political authorities, are formally private events. Nonetheless, they are tolerated, guests spread word of what was said, and videotapes of the talk circulate after the event. A speech at a different wedding several days later may provide a sharp rejoinder that is equally communicated to a wide and diverse public through word of mouth and videotape. Neither speech is mentioned in the authorized state media, yet the talks and the fact of their circulation are known to state authorities, some of whom listened to the talks when initially given (Eickelman field notes, Damascus, August 16, 1997). Neither public in an official sense nor private in a personal one, this space is nevertheless a privileged one, with its own formalities and well-understood scope.

Such blurring of lines—or, as we put it here, such intermediate, connective spaces—remind us of the impossibility of distinguishing sharply between public and private and point to more important continuities between one sphere and another that make them public between the private, on the one hand, and the political, on the other. We believe that it is more useful to see such events as giving wedding speeches in Damascus, publishing texts on the Internet, opening law journals to debates about Islamic requirements, or moving those into the genre of romance novels as elements of a public sphere in which cultural entrepreneurs adapt existing cultural practices to new communicative environments. The result, of course, is to develop and promote new understandings of the role of religion in society. As media command attention to it, the emergence of this new public sphere in turn promotes changes in the orientation and style of official discourse, which at least indirectly is obliged to take account of what is said (as in the case of denunciations faxed to Saudi Arabia) or to be perceived as ignoring or tolerating it (as in the case of Damascene wedding speeches). It also has a significant effect on the everyday practices embedded in social relations, where religious or political authority is a matter of face-to-face biographical familiarity rather than the more formal credentials or structural position that is its equivalent in the large media.

These new publics emerge along a continuum between mass communication aimed at everyone and direct personal communications to specific others with whom one already has a personal relationship. This expanding space of public dealings with those whom Alfred Schutz called contemporaries beyond one’s face-to-face consociates (Schutz 1967: 15-19)—indeed doing everything possible to turn the anonymous or unknown contemporary into a consociate working under common assumptions of civility and morality—is an important part of developing a public sphere in which religion plays a vital role. It contributes to the recognition that such a public is not mass and anonymous, but defined by mutual participation—indeed, by performance. In this sense, which Benedict Anderson (1991: 37-46) refers to as a growing sense of reading together, the public sphere emerges less from associations, more strictly the domain of civil society, than from ways of dealing confidently with others in an expanding social universe of shared communication.

We suggest that by looking at the intricate multiplicity of horizontal relationships, especially among the rapidly increasing numbers of beneficiaries of mass education, new messages, and new communication media, one discovers alternative ways of thinking about Islam, acting on Islamic principles, and creating senses of community and public space. Such a realization among large numbers of people is a measure of the potential for a rapidly emerging public sphere and a civil society that plays a vital role within it.

** 2. The New Media, Civic Pluralism, and the Struggle for Political Reform

Augustus Richard Norton

When the al-Aqsa intifada began in the autumn of 2000, images of a terrified boy and his equally terrified father transfixed television viewers in the Middle East and beyond. As Muhammad al-Durra and his father were caught in the crossfire between Israelis and Palestinian demonstrators, the father futilely attempted to protect his son, edging him behind his back as they crouched against a wall and behind a large drum marking a checkpoint. In one moment the boy is alive with fear, in the next he slumps dead across his father's lap. His father, devastated, looks blankly into space. Within minutes, images of young Muhammad's death were beamed worldwide by satellite television, al-Jazeera, Future Television, LBC, BBC, CNN, and others. Images of the boy's final seconds were quickly posted on the Internet, spawning debate, accusations, and counter-accusations, official denials of responsibility by Israel, and, of course, web sites (for example, <[[http://www.fortunecity.com/marina/commodity/1089/idl_47.htm][http://www.fortunecity.com/marina/commodity/1089/idl 47.htm]]>). In reaction to the images, massive demonstrations erupted in Arab capitals, and citizens castigated their governments for impotence in the face of Israeli oppression of the Palestinians. Even where enthusiasm had faded for the cause of Palestinian nationalism, as in Kuwait, the issue became newly politicized. A mere five years earlier, certainly a decade before, more reliable but also more sedate foreign media would have marginalized the event, and the regional state media—television featuring soporific news readers detailing quotidian events in the ruler's life and banal government newspapers—would not wish to rile the masses.

In October 2002, two years into the al-Aqsa intifada, as the United States attacked targets in Afghanistan in retaliation for the horrendous attacks of September 11, Osama bin Laden and his associates appeared on alJazeera, the wildly successful Qatari-based news channel that is in part an Arabic-language answer to CNN. Bin Laden appeared in a shrewdly choreographed videotape and spoke eloquently to the Arab viewers, evoking twentieth-century political manipulation of the Arab world, the fate of Palestinians, the plight of Iraq, and threats to the sacred sites of the Arabian Peninsula. In the United States, official spokespeople and countless talking heads cried "foul." Bin Laden did not really care about Palestine and Palestinians, it was avowed; he was only trying to exploit the confrontations between Israelis and the Palestinians to gain a broader constituency.

A search for bin Laden's "true" beliefs misses the point entirely. Whether in his heart of hearts bin Laden mourned for the fate of Jerusalem was far less important than the fact that he was able to bypass governments and capitalize on widespread discontent by speaking resonantly to the public. If few Muslims approved of the terrorism that he employed, far more took his critique of the existing power structure to heart. U.S. National Security Advisor Condoleezza Rice soon pressured U.S. networks to deny bin Laden and al-Qa'ida a place on their broadcasts, arguing unpersuasively that the messages could contain hidden codes. The problem was not hidden code, but the power of propaganda and the fact that bin Laden's television visage reinforced his importance and gave context to the killing that he spawned. U.S. media executives quickly acquiesced to the government request, and after pressure was applied on the Qatari government, al-Jazeera subsequently adopted a more cautious approach to broadcasting unedited statements from al-Qa'ida.

As the discomfort of the U.S. government revealed, the phenomenon of new media challenges existing governments, confronts American hegemony, and presents themes of disharmony, discord, discontent, and even vicious violence. Halcyon forecasts of a globalized market, universal values, and the seduction of yuppie culture are belied by the headlines that define the dawn of the new century. Yet, unpacked and contextualized, there is considerable promise for improvement in the human condition in the Muslim world precisely because contentious issues of government accountability, individual rights, and not least, religion have become topics of broad debate.

Much of what is happening is hidden from Western view not just by barriers of language and distance, but also by metaphors that betray stereotypes rather than reveal reality. An example is the use of “the street” to refer to mass public opinion in Muslim countries, especially Arab countries. Not only does the term imply a formless mass of people swayed by the sentiments of the moment and manipulated by autocrats, a modern parallel to “the mob” in revolutionary France or “the crowd” in nineteenth-century England, but also few nuances of opinion and no need to stratify points of view by class, gender, age, or regional or occupational distinctions. “The street thinks ...” intone sage-sounding television performers, as though talking about tidal movements. A rough equivalent for the United States would be “the mall thinks ...” But that is not used, because closer to home it is well understood that there are different points of view, different regions to hear from, and that no single group speaks authentically for the United States.

The Muslim world has not been immune to international travel and migration, increasingly globalized trade, and the penetration of all but the most remote geographic nooks and crannies by radio, television, cellular telephones, fax machines, and computers, as well as inexpensive means of printing and reproduction. Why should Islamabad be less susceptible than Cleveland to the pace of global change? Members of Muslim societies at the dawn of the twenty-first century use land-line telephones or cellular models (sometimes several at once), read pulp novels, go to the beach, operate fax machines, and debate their religion. Thankfully, there is more to the story. The focus of new media overlaps with a heightened interest in civic pluralism in the Muslim world.

Pluralism has always been more marked in Muslim societies than prevailing essentialist stereotypes suggest; but, even so, the diversity of Mus- lim-majority societies and awareness in them of intra-Muslim differences are increasing rapidly. From the lowly telephone to the latest Pentium computer, electronic communications permit both conventional and virtual neighborhoods to become sites for identifying, addressing, and solving shared concerns and complaints. Accessible, cheap communication technologies and mass education feed the appetite for new media.

Authoritative interpretations of Islam, long the preserve of learned men (‘ulama}, are now in many hands. Indeed, some of the most creative thinking on Islam in recent years has been done by Muslim men and women with little or no formal

training in Islamic jurisprudence (fiqh) or other specialties of the conventionally trained ‘ulama. At the same time, Islamically correct pulp novels and popularized interpretations of Muslim ideals and norms enjoy a wide readership. The authority of the ‘ulanta of a generation ago is now contested. The competition for Islamic authority is booming in the variety of tapes, inexpensive books, pamphlets, and kitsch that fill the marketplace.

In Saudi Arabia, the Committee for the Defense of Legitimate Rights (CDLR) challenged the regime’s authority in the 1990s. The London-based group exploited the telephone and the fax machine to publicize its Islamist program and to report on the purported misdeeds of and corruption in the ruling family. One leader of the committee asserts that “Khomeini’s was a cassette revolution, ours will be a fax revolution” (al-Rasheed 1996: 16). By decade’s end, the kingdom addressed the challenge by co-opting the leading figures in the CDLR, and buttressed its Islamic credentials by lending tacit and active encouragement to the most conservative tendencies in Saudi society.

As elsewhere in the Muslim world, the Saudi ‘ularna, paid or subsidized by the government, have no obvious advantage in the contest for popular support. In most settings they suffer severe disadvantages by their association with the government, which is often perceived with suspicion and fear. Bin Laden has certainly been a beneficiary of ‘ulanta failings, just as he and al-Qa‘ida were beneficiaries of official Saudi efforts to propagate the particularly conservative and often intolerant variant of Islam that dominates society.

The structural context of growing diversity in large parts of the Muslim world raises important questions for the political evolution of Muslim societies at the dawn of the twenty-first century. In particular, what are the prospects for the transformations of authoritarian governments and what role will the new media and civic pluralism play in inspiring or shaping political reform?

Certainly it is wishful thinking to presume that new media are in themselves an antidote to authoritarianism. The discursive voices of the new media are fascinating, but their political importance has yet to be demonstrated. It is by no means clear how civic pluralism translates into political power, if at all. They may provide a fortuitous rationale for the political class to attempt to maintain its grip on power instead of to loosen it. Authoritarian governments enjoy support in the West, where the status quo is usually viewed as preferable to the potential turmoil of transition. Change is often perceived as jeopardizing Western links to stable authoritarian governments, especially in the Muslim world. One only need ponder the examples of Egypt, Pakistan, or Saudi Arabia. In each case, major Western powers preferred the predictable comfort of autocratic rule to the uncertainties of change, notwithstanding eloquent avowals of support for human rights and democracy.

So, it is ironic that the horrors of September 11 led the U.S. government to “discover” political reform in the Muslim world. It is ironic because American opposition has often stymied reform. A good example is the Palestinian authority that emerged from the Oslo Accords. Faced with evidence of a lively, well-educated Palestinian society with arguable potential for democratic development, the United States, in league with Israel, preferred a Palestinian dictatorship to guarantee order. When, in 1993,1 asked Yossi Bellin, the Israeli deputy foreign minister who played a leading role in the Oslo Accords, whether Israel would be better served by an institutionalized, participant political system than by the creation of a fragile structure of peace resting on the power of a dictator (Yasir Arafat), he replied: “My friend, the Palestinian state is going to be a dictatorship just like all the other Arab states.” Now with the Oslo framework in shambles, the United States and Israel may embrace reform less as a vehicle for the actualization of democratic potential by the Palestinians than in order to find a more pliant, more effectual strongman.

Despite caveats about the persistence of authoritarian government in the Muslim world, social developments that point to the emergence of alternative voices and even a modest weakening of governmental control deserve attention. The quest for government hegemony in the post-colonial Muslim world has often centered on the reproduction of social values and the fostering of national solidarity, particularly in authoritarian republics such as Egypt, Iran, and Turkey; but this quest has largely failed. Instead, government is simply one of many competing sites, albeit a powerful one, in which values and ideals are adapted, debated, reshaped, or nourished. Although government efforts to shape, if not control, the dissemination of political communications persist, censorship is less effective than in the recent past, and sometimes it only serves to parody the abuse of power. While newspapers, radio, and television are relatively susceptible to control through licensing, restricted access to supplies of newsprint, and sweeping libel and press laws, newer media, such as the mass production of audiocassette tapes, are typically unlicensed and anonymous. Ubiquitous ministries of information, established on the premise that information flows downward, find their relevance steadily eroded by the new media, which spread laterally. The horizontal proliferation of information undermines vertical lines of control. Day by day, it seems, the ministry of information becomes more important as a source of employment than as a means of control.

Even so, the post-independence Muslim-majority state has proven remarkably durable and resistant to reform. Despite widespread sentiment in the Muslim-majority world for more accountable, less autocratic governance, the state continues to impose political structures and institutions with remarkably little resistance from society. Many Muslim-majority states have persistently crushed autonomous forms of association, and the legacy of authoritarianism in the Muslim world is stunted civil society. This is not a cultural artifact but a direct result of the policies of the twentieth-century state, with its penchant for a single political party and suspicion of independent voices. Thinking them not to be independent, government policies have tended to privilege populist Islamist forces, sometimes by design, but often as a side effect of the suppression of potential opponents among the secular opposition.

Government intolerance of dissent stems from several factors, chief among which is the political economy of the state, which has, in many instances, been able to draw upon a variety of natural resources and geopolitical rents (for example, cash infusions such as oil income and foreign aid) rather than rely upon a system of taxation. Taxation requires the active participation of citizens. It is no accident that political reforms have been pursued most seriously when straitened resources have forced reductions in subsidies and increased taxes. Consider the contrasting cases of Jordan and Egypt. In Jordan, by the late 1980s, the state was bereft of external subsidies and faced insolvency. In Egypt, despite the awesome economic chai- lenges the country faces, donors have not been shy about picking up the tab for a bloated public sector while underwriting myriad developmental and adjustment projects that have staved off economic ruin.

As the state has proven to be not only durable but also embedded, it is remarkable that the missing player is the state, especially since the behavior and fate of the state will substantially effect the further development of civic pluralism. The state still casts a large shadow even as a parallel global system of non-sovereign actors emerges (Rosenau 1990). The usual examples of these actors include groups such as Amnesty International and Human Rights Watch, which adroitly adopt the new media; but Jon W. Anderson's work on "virtual Islamic communities" (this volume) suggests a more novel example in oppositional groups finding a place on the Internet. The contemporary state must not only contend with growing domestic efforts to shape social values; it also faces an international milieu in which the state is increasingly susceptible to critique and opprobrium. There the transnationality of media (for example, the Saudi opposition's faxes, Islamic sermons on cassettes, CNN, al-Jazeera, and other satellite channels) undermines the state's control by providing alternative sources of information that people can use, whether they are displaced as refugees or labor migrants, members of a diaspora, creolized, or none of the above.

Perhaps we should be grateful that the state is constrained but not endangered. As Hann and Dunn (1996: 7) note, "Despite much heady talk of 'world civil society' in the context of globalisation, there is as yet no sign of any plausible alternative to the state as the primary institutional framework within which security and solidarity can be established in late twentieth-century social conditions." The state remains indispensable, especially for the maintenance of public order. Unfortunately, some governments construe public order in self-serving and capricious ways.

*** The Rise and Fall of Egypt's Law 93

On May 27, 1995, the People's Assembly of Egypt passed a comprehensive press law (Law 93/95) to curtail even mild allusions to official misbehavior and corruption. It included harsh punishments for libel (defined in the vaguest of terms): mandatory imprisonment, fines, and preventive detention. The law was widely viewed by Cairenes as a response to the increasing attention being paid by the press to incidents of corruption around President Husni Mubarak. The law held journalists responsible for the veracity of their reports, even if

they were merely reprinting reports first published abroad. The assembly speaker Fathi Srour pushed the law through the house, permitting no serious debate, and Law 93 seemed destined to be a fait accompli. However, the professional press syndicate reacted strongly to what was quickly branded the “Press Assassination Law.” In response, Mubarak agreed to the creation of a “seini-government” committee with a mandate to recommend amendments to the law. After several months of meetings, months in which journalists were aggressively prosecuted for violating Law 93, the prospects for modification of the law dimmed. In March 1996, the committee’s modestly amended law was submitted to the Shura Council, the upper house of parliament. Despite outspoken efforts by leading journalists to gain modification of the law, the Shura Council refused to permit any additional changes, and the draft law was referred to the People’s Assembly for passage in June 1996.

During this period, the leadership of the press syndicate led a carefully orchestrated campaign against Law 93. Their strategy included mass resignations by senior syndicate members, coupled with relentless confirmations of their loyalty to the state. Throughout the crisis, the syndicate was at pains to keep it a “family” dispute to insure that the government did not see its opposition as a source of insecurity. To the surprise of many observers, President Mubarak lent his support to the press syndicate, and Law 93 was abrogated. This was an impressive victory for the journalists, especially in the face of heavy opposition from government hard-liners. One participant in the crisis was struck by the careful strategic calculations that were made, the most decisive of which was enlisting the president as an arbiter, thereby neutralizing his earlier tacit support for the tough press law. Equally important, the president of the syndicate, Ibrahim Nafa‘, who is close to Mubarak and trusted by the president, played a key role in successfully ending the crisis. Despite his connections—Nafa‘ is a member of the political elite in Egypt and accustomed to being taken seriously—he apparently had no advance warning of Law 93 and was angry that he had not been consulted. Nonetheless, Nafa‘ understood that escalation would play into the hands of the regime’s hard-liners and impair negotiations. In effect, he wanted to avoid a sense of threat to the government or Mubarak. As one insider noted, “We did not want polarization.”

In contrast, Egypt’s university professors were flummoxed in 1993 by the government’s decision to appoint university deans rather than elect them, as had been the custom. In that case, the government was responding to the growing Islamist presence on campus and seeking to deny them high-profile leadership positions. But where the university professors were unsuccessful in getting the change rescinded, the journalists’ unified response was made easier by the small size of their syndicate and by its liberal tradition. Furthermore, since Islamists do not control the press syndicate, there was no risk of lending momentum to the most significant opposition force in Egypt. Had hard-liners prevailed, the syndicate might have been vulnerable to radicalization. As one close observer noted,

For the first time in a long while a strong professional movement appeared, with popular backing, without initiative for the Islamist forces. The journalists’ movement brought together a national consensus between numerous factions of liberal, leftist, and government

forces, and the Islamic factions joined in, but not as leader or most important player. This indicates the natural root of Islamist strength—it grows in the absence of alternative forces!!

Also noteworthy is the fact that 700 members of the syndicate work for the establishment daily, al-Ahram (of which Nafa‘ is chairman of the board), and the syndicate was able to draw upon its considerable resources. Many of the key working papers were drafted by an al-Ahrani working group created by Nafa‘. Several leading rights-oriented groups were also instrumental in preparing thoughtful critiques of Law 93, especially the Legal Center for Human Rights, which organized a workshop in June 1995 to study press legislation.

While the defeat of Law 93 was celebrated as a victory for a free press and for civil society, the circumstances that defined the crisis were unusual. The case illustrates how reform can take place in Egypt’s authoritarian political system, but it also underlines the low likelihood that other syndicates, most of them quite large, could emulate the success of the journalists. The case highlights the real locus of power in Egypt and the specificity of the power structure. The rise and fall of Law 93 illustrates just how deeply embedded is authoritarian rule in Egypt. Most associations lack the solidarity and the connections necessary to reverse major government decisions.

There is, however, strong sentiment in Egypt, as elsewhere in the Muslim world, for political reform. One member of the political elite, a reformer, argues,

Now there are at least two generations among the youth of Egypt in the workforce and active population [whose political consciousness awakened during the mid-seventies], their age being between 25 and 35, who support political freedom and freedom of expression as an absolute value. They are born with rights and live with them, and they won’t give them up. Those that do not take rights seriously cannot remember the previous era of oppression, to say nothing about the important values of freedom and human rights in the international context.

The writer’s claims are not so much wrong as that they misconstrue politics. Politics is not merely a product of sentiments and moods but a contest of organized interests. Therefore we turn now to the question of how civic pluralism translates into political influence, and whether civic pluralism leads to political pluralism.

*** The Importance of Civil Society

Civic pluralism meets the state in the realms where norms are contested and where the boundaries of state and society overlap. It is in civil society that contemporary citizenship is

being redefined and public space is negotiated. In civil society, sentiments and moods crystallize as formal and informal efforts to promote self-interest. If the rise of civic pluralism creates greater opportunity for individual action, the site for agency to be realized is civil society.

Although we should be justifiably skeptical of tropes of civil society that confuse the ideal-typical with the empirical, we should not ignore the fact that themes of civil society—translated, mutated, reinterpreted—have become part of the political discourse of the Muslim world. As Robert Hefner notes, “Much of the theoretical writing on civil democracy has been more concerned with summarizing technical debates among professional philosophers than it has in demonstrating whether those ideas inform actual people’s political actions in real human societies” (1998:7). Rather than focusing on competing theoretical perspectives, it is much more relevant, as Hefner implies, to look at what is actually happening.

The “discovery” of civil society as a topic of debate in the Muslim world is neither an example of ideological imperialism nor a Western liberal’s fantasy. The reason that civil society has attracted serious attention is because it evokes crucial questions: How may people peacefully organize outside of government control? How is citizenship engendered and strengthened? What role should the state play as a referee or rule-setter? How should people’s needs be met in the wake of the retreating state?

The civil society construct has suffered from several weaknesses when it has been addressed in the West. Some proponents, as well as many critics, have tended to conflate the concept with democracy or democratization, which has led to wishful thinking about political reform and has implicated writing on civil society with problematic U.S. government programs for promoting democracy. The result is either blind endorsement of civil society or disdainful rejection of the construct, depending upon one’s biases, and both mask the significant value of much recent discussion.

It is widely claimed that civil society checks the power of government, that it is the natural opponent of autocracy. This is a claim extracted from the observation of mature democracies in the West, and it is even problematic there. One can argue that civil society in some Western societies has been undermined by the full-blown development of the modern state, which provides many of the services and protections originally available within the framework of civil society. It is a bit naive to expect that authoritarian government will be routinely challenged by groups of citizens who lack effective legal frameworks to resist, to protest, or to demonstrate. Moreover, civil society is not locked into a zero-sum game with the state. A more differentiated view of state-society relations is necessary, one that recognizes the opportunities for a dialogue at arm’s length with a powerful state. Where government revenue derives largely from rents rather than the extraction of taxes, the purpose of the dialogue will often be rent-seeking.

Historically, civil society emerged as a bourgeois phenomenon and a reaction to expanding extraction by the state. Subsequently, the project of bourgeois civil society was liberalism, not democracy. In the contemporary Muslim world, where the middle class is anxious to preserve its access to state largesse (rents), it is often palpably unenthusiastic about democracy as well. As G. White (1995: 77—78) suggests,

There is historical evidence to suggest that the bourgeoisie—and many of its subalterns in the middle strata—are more interested in the liberal than the democratic component of liberal democracy, in negative rather than positive freedoms, and in a more strictly political than a socioeconomic definition of democracy. Other sections of civil society, poorer segments of the population, the industrial working class, groups representing socially subordinated or politically marginalized groups such as women, neglected regions, and ethnic, racial, and religious groups— have an interest not merely in the liberal but also in the democratic potential of liberal democracy, in the sense that it opens up new channels for articulating their grievances and pressuring the state to do something about them.

Several examples from recent scholarship on civil society illustrate that the bourgeoisie's disincentives for promoting democracy are clear. In Syria, until the regime launched economic reforms in the 1980s, the predominantly Sunni merchant class—the entrepreneurial heart of the country—was purposefully disadvantaged by the state's strategy of development that promoted state-owned industrialization and restricted private enterprise, as well as land reform. The legitimacy formula of the Ba'athist state was predicated on the building of a broader base in the urban lower class and the rural peasantry and suppressing the merchants, who were viewed as the core of support for the ancien regime. Now that the merchants are back in favor, their interests lie in improving their access to information, insuring the mobility of capital, and enjoying the consistent protection of law. They have little interest in democratizing Syria, which would have the effect of granting a larger voice to employees of public-sector companies or to the peasantry; to do so would jeopardize their newly privileged economic relationship with the state (Hinnebusch 1995).

The clearest illustration of the importance of distinguishing between the project of liberalism and the project of democracy is arguably Turkey. Turkey's encounter with democracy is only a half-century old, and throughout this period significant segments of the middle class have been extremely skeptical of democracy, never more obviously than in the 1950s, when the Democratic Party, led by Adnan Menderes, won power and kept it by building a populist base of support in the urban lower class and among the peasantry. Under Menderes, Kemalist laicism was relaxed, and, for the first time in the republic's history, Islamic institutions were actually promoted by the state. The army, for whom laicism often seems a political fetish, intervened to end the excursion into populist democracy and hanged Menderes in the process. The coup found enthusiastic support among the middle class, including many of Turkey's professional and other associations. One sees a similar pattern in Turkey in the 1990s, after the rise to power of Refah Partisi, the pro-Islam party. Self-proclaimed members of civil society proclaim regularly that they count on the army to intervene "to save democracy"—a strange conception of democracy, to be sure.

In Egypt, the government has met the challenge of reform by suppressing civil society. Stymied by refreshingly independent judges in applying new legislation to regulate external funding and generally tighten the control on non-governmental organizations, a signal example was chosen to chill opposition voices. The target was Professor Saad Eddin Ibrahim, an internationally known and respected sociologist and a leading advocate of democratic reform and human rights in Egypt. After Ibrahim played an organizing role in monitoring parliamentary elections and in revealing considerable vote fraud, as well as examining discrimination against Coptic Christian Egyptians, he was prosecuted for accepting foreign funding (although for technical reasons his research center fell outside the scope of the law that the state applied), defaming Egypt, and embezzling funds. He was convicted in very sloppy court proceedings in 2001 and sentenced to jail for seven years. After an appeal on substantive and procedural grounds, Ibrahim was released for retrial in 2002.

In July 2002, Ibrahim and eighteen of his colleagues were re-convicted of the same crimes and four defendants were sentenced to prison terms. The longest sentence meted out was to Ibrahim, who received a seven-year term for “tarnishing Egypt’s reputation abroad,” among a variety of other crimes, including fraud and illegally receiving funds from the European Union for monitoring parliamentary elections and reporting on discrimination suffered by the Coptic minority. The court went beyond the prosecutor’s charges, and alluded to funding that Ibrahim received from the Swiss Human Rights Organization, al-Jazeera Satellite TV, and from Haifa University (for a subscription to an Ibn Khaldoun Center publication), among other organizations. Predictably, the chilling effect has been palpable in Egypt’s NGO sector, where many activists now shiver at the thought of accepting foreign funding. Ibrahim’s young, idealistic colleagues have been stigmatized by the charges leveled against them and will find the going very tough as they attempt to pursue professional careers.[2]

Oddly, although Ibrahim was well known for his advocacy of democracy in the Arab world (he had been honored by Freedom House, among other U.S.-based organizations), the initial reaction from the Bush administration was relatively muted. (In fairness, so was the response of the Middle East Studies Association, the leading professional organization of its kind in North America, and the very organization that honored Ibrahim with its Academic Freedom Award in 2001.) Government spokespeople expressed “disappointment” at the convictions, but were reluctant to level sharp criticism of the Mubarak government. The U.S. government’s silence punctuated the basic contradiction between rhetorical advocacy of democracy and freedom in the Arab world, and realpolitic calculation.

Democracy and reform have been central motifs of U.S. commentary, within and without government circles, following the terrorist attacks of September 2001, but the Ibrahim case illustrates that other interests heavily condition U.S. support for democracy. Egypt, after all, is an important American friend in the Middle East. Following a surge of supporting statements from politicians, commentators, and academics (for example, Friedman 2002, Diehl 2002, Norton 2002), the Bush administration announced on August 15, 2002, that as a

result of the persecution of Ibrahim it would not extend further aid to Egypt over and above the annual allocation of two billion dollars. In a sense, this was an empty threat, since neither Congress nor the administration was contemplating further aid. The belated U.S. action met a recalcitrant response in Cairo, including from President Mubarak and his major political advisor ‘Usama al-Baz.

As a tactical matter, by focusing its criticism solely on the Ibrahim case, the U.S. government played right into the hands of the anti-Ibrahim slander campaign in Egypt by highlighting Ibrahim’s dual nationality and feeding the accusation—by now common in the Egyptian press—that Ibrahim’s activism served foreign masters, not Egyptian interests. Had the United States focused its complaints more broadly on the arbitrary legal procedures associated with the Emergency Law that has been in effect in Egypt since Anwar Sadat’s assassination in 1981, and which facilitated the state’s persecution of Ibrahim and his co-defendants, opinion leaders in Egypt may have been less inclined to rally around Mubarak. However, the U.S. response was calibrated to be as narrow and as palatable as possible, so as not to upset the geopolitical apple cart. Thus, President Bush was wont to reassure Mubarak that his stance did not jeopardize the generous annual stream of U.S. aid.

Unfortunately, in the aftermath of September 11, 2001, conditions for reform are even worse across the Muslim world. Leaders like Husni Mubarak have used the “war against terrorism” to deny any space to the opposition and deny any exercise of basic human rights to whomever they choose. Mubarak offered the view that “terrorists have no human rights”; so for opponents classified as terrorists, the gloves are off. Militant opposition groups, including Islamist groups bent on replacing the state, are major beneficiaries of these policies, which only serve to validate their critique of government oppression and corruption.

Of course, the formal associations of bourgeois civil society, such as Egyptian NGOs, are only part of the picture. Comparatively less attention has been paid to networks of informal civic associations, which have filled the void left by governments’ failure to meet the needs of the urban lower classes and the rural poor. Perhaps the most attention has focused on the impressive array of service organizations created by Islamist opposition movements. What the reformist-oriented Islamists have accomplished is impressive and should be seen as an important step toward a more inclusive civil society. Nonetheless, the Islamists’ efforts are only one segment of an array of informal networks that crisscross the urbanscapes of the Muslim world (Singerman 1995, J. B. White 1996). It appears that their success has been less in creating networks of informal association than in exploiting patterns of association based on reciprocal relationships. Only when these informal forms of civic pluralism have been politicized—which is to say, only when the participants believe that there are political solutions to their problems—will political movements emerge. In this regard, the importance of the new media is to help sensitize heretofore economically marginalized people to the prospect that life chances can be improved.

We should not expect creative thinking about reform and political change to come from the regimes in the Muslim world. They are too embedded in privilege and too insecure in their power to think deeply about fundamental political or economic reform. The discourses that will give shape to change must emerge from society, and new media are some of its channels. New media are central to expanding the public space. Some of the examples provided in this book hint that growing civic pluralism in the Muslim world will result increasingly in organized demands on governments. Even if progress is slowed by the developments of 2001 and 2002, the slow retreat of authoritarianism in the Muslim world remains likely.

*** NOTES

This section is based on fieldwork conducted in Cairo with Farhad Kazemi in 1995 and 1996.

[2] Egypt's highest appeals court overturned Ibrahim's conviction on December 3, 2002, ordering a third retrial.

** 3. Communication and Control in the Middle East: Publication and Its Discontents

Dale F. Eickebnan

Authority to suppress or “guide” the printed and spoken word in the Middle East has become inherently vitiated by social and technological developments that are reaching full force in the 1990s. In Gamal al-Ghitani’s Zayni Barakat (1988: 200-201), a historical allegory written in the early 1970s satirizing Nasser’s rule, a chief spy in Mamluk Egypt dreams of a world in which everyone is numbered and agents of authority can intervene in a conversation and move it in a particular direction. Sadly only for the censors, mass education and new communications technologies have rendered that dream impossible. Desktop publishing makes the expensive, vulnerable printing presses of older technologies

obsolete; satellite dishes, even when heavily taxed and regulated, evade effective government control; and Internet and computer links are rapidly eroding control of what is said (Alterman 1998: 45-72).

The frontier between banned words and images and those that are tolerated in the Middle East has never been fixed, but access to new technologies has multiplied the channels through which ideas and information can be circulated and has enlarged the scope of what can be said and to whom. It has eroded the ability of authorities to censor and repress, to project an uncontested “central” message defining political and religious issues for large numbers of people. In other words, the lines between the “official” and “hidden” transcripts (Scott 1990: 3-4) have become increasingly blurred. Censors may still restrict what is said in the mainstream press and broadcast media, but these media have lost the exclusivity they once had. Mass education and the availability of alternative media have irrevocably altered how “authoritative” discourse is read and heard.

State efforts to gain control of one medium—the press, the broadcast media, or even music —lead only to the proliferation of other means of communication and foster, albeit inadvertently, a “civil society” of dissent. The Iranian example is well known. From 1958 until 1969, Iran had only commercial television, but this ceased with the advent of National Iranian Radio and Television (NIRT). Ostensibly independent when founded in 1969, NIRT lost its credibility in the early 1970s when, in the midst of an urban guerrilla movement, viewers were offered long lectures by Parviz Sabeti, a SAVAK (state security) official in charge of ideological matters, on the sinister intentions of “subversive” groups. Subsequent broadcast “confessions” by captured guerrillas further discredited the state-controlled medium (Sreberny-Mohammadi and Mohammadi 1994: 69). When the Shah exiled key members of the religious opposition, leaflets and audiocassettes smuggled into Iran or taped from international telephone calls and passed from hand to hand—creating bonds of complicity and trust among those involved— became a primary vehicle of communication.

A more recent example is contemporary Saudi Arabia, where the fax and photocopy machine make bans on the printed word impossible to enforce without alienating regime supporters. Threats in the Saudi-controlled media (for example, al-Sharq al-Aivsat 1994) to make those who distribute or comment on leaflets that defame or slander the “legitimate rulers” (wila’ al-umur) as guilty as their creators make public implicit circles of complicity and draw attention to the inability of authorities to control such communications. Newspapers, dependent on their presses, imported newsprint, and formal distribution networks, are easy to control. The “small media”— cassettes, photocopies, desktop publications, and electronic mail—are not. Such technologies, combined with the wider audiences created by mass education, create an irreversible trend toward a freer market in religious, political, and social ideas and foster a pluralism often resisted and poorly understood both by states and by religious authorities. These new technologies challenge those who seek authoritatively to demarcate the lines between the licit and the illicit.

In earlier eras, control and censorship were more predictable. The bookplate of Egypt's King Farouk (reproduced in Mitchell 1988: 91) foregrounds a turbaned man of learning next to a printing press. He is handing a book to a peasant, alongside his water buffalo and plough, who has stopped work in his field. In the background is a silhouette of Cairo's citadel and Farouk's name in calligraphy, topped by a crown. The image exemplifies the top-down notion of communication, where those in authority control what is printed and how it is disseminated.

It was easier to control the public word with older communications technologies. Printing presses could be confiscated, sequestered, or destroyed. More subtle techniques have emerged since the 1960s—manipulation of newsprint prices and supplies, direct or indirect publication subsidies, and control of distribution channels—strategies in which countries such as Morocco have excelled. Under such circumstances, a self-censorship more pervasive than any imposed by state security officials also constrained what was said.

When full literacy was restricted, for all practical purposes, to an elite, the print media—pamphlets, newspapers, periodicals, and books—addressed the elite and thus authority directly. From the late nineteenth century onward, however, the multiplication of printed religious texts, at first controlled by religious authorities, "struck right at the heart of person-to-person transmission of knowledge" and significantly enlarged audiences (Robinson 1993: 239). Print initially enabled religious scholars, the 'ulama, to expand their influence in public affairs because they sponsored and controlled religious publications. Yet the ironic consequence of printing reduced their authority because of the rapidly increasing number of educated persons and the shift to a more accessible, popular language (Robinson 1993: 245).

The frontier between the banned and the tolerated has become more uncertain in the past few decades with the advent of mass education, particularly mass higher education, throughout the Middle East because it has increased dramatically the audience for the printed word and the publicly spoken political and religious words of the broadcast media, audiocassettes, and videos. Although the onset of the commitment to mass education varies throughout the Middle East—1952 for Egypt, 1956 for Morocco, and 1970 for the Sultanate of Oman, for example—its growth in all cases was exponential. The combination of mass education and the "intellectual technology" of communication innovations has also changed what is said and not said, radically altering audiences, concepts, and practices (see Eickelman 1992).

Although the broadcast media and cassettes have become important means of communication, the printed word retains a special place in "authoritative" communications. Even if only a minority of the population read books, a much larger number hear them spoken about—and books, following the paradigm of the Qur'an—remain central to the cultural imagination (Atiyeh 1995). The most rapid growth for the printed word is in what Yves Gonzalez-Quijano (1998) calls "Islamic books"—inexpensive, attractively printed texts

that are accessible to a readership who lack the literary skills of the educated cadres of an earlier era and that take advantage of new printing technologies. Such books and pamphlets have also captured an increasing market share in Muslim majority countries outside the Arab world. As Huq (this volume) explains, teenage romance novels, once a specialty distributed in “secular” bookstores, now have Islamic counterparts, which are distributed through religious bookstores (Fig. 3.1). In Pakistan, the types of religious books that sell in Islamabad, Karachi, and Lahore differ somewhat in each city, but in all cities religious titles far outsell other titles (Eickelman and Anderson 1997: 54-55). In Morocco, Mu’tamar sahafi m‘a jinn Muslim (Press Conference with a Muslim Jinn), generally available only in pirated photocopies, is a best-seller, with students at the nation’s thirteen public universities among the major consumers.

Figure 3.1. Secular and Islamic books are generally sold in separate bookstores in Dhaka, but the cover art for these novels suggests a competition for audiences also characteristic of publications elsewhere in South Asia and the Middle East. Budhdhodeb Guho, Pardeshia (The Foreigner) (Dhaka: Shameem Ahmed, 1985), above, is generally considered a “secular” novel; while Kasem Bin Abubakar, Basar Rat (Wedding Night) (Dhaka: Kakoli Prokashoni, 1993), right, is an “Islamic” one (Courtesy Maimuna Huq).

Figure 3.2. The eye-catching cover and theme of Shaykh ‘Ali Ahmad al-Tahtawi’s Ahtval al-qubur wa-ma ba'd al-mawt (Terrors of the Grave and What Follows Death) (Cairo: Dar al-Bashir, 1987) typifies the inexpensive, widely circulated “Islamic” book, the fastest growing segment of Egyptian and Middle Eastern publishing.

Since the late 1970s, religious books have eclipsed other types of publications, often bypassing bookstores and being sold on sidewalks, in kiosks, and in general-goods stores (Starrett 1995). The style of these books is usually a breezy mix of literary and colloquial diction; the covers are eye-catching. Some of the books deal with religious themes and the afterlife or answer questions on how to be Muslim in the modern world (Fig. 3.2); others deal directly with the political questions of the day, such as a Saudi pamphlet that argues that democracy is incompatible with Islam because Islam offers governance by the Creator (al-khaliq)—as understood by a properly instructed religious elite—whereas “democracy,” derided as a non-Arabic term, implies rule by the created (al-makhluqin), where unbelievers and the ignorant have an equal say in governance and usurp God’s rule (Sharif 1992:16-18).

In many parts of the Muslim world, including North Africa, the style of argument is sometimes regarded with amusement, but it is more accessible to recent beneficiaries of mass education and appeals more to their perceived interests and needs than books written by the established literary, religious, and political elite. Advertisers too have begun to notice

such books: on the inside cover of some of Shaykh Sha'rawi's books in Egypt, for example, are advertisements for consumer goods—in decorative script and citing Qur'anic verses.[3]

These "Islamic" books point to the changing nature of religious—and political—discourse. Many take the form of practical manuals on how women ought to conduct themselves in modern societies, children's religious education (Starrett 1996), death and the hereafter, and reconciling Islam with science. At one level, they indicate how religious and political beliefs are increasingly transformed into a conscious system. At another level, they encourage and mirror the growing fragmentation of religious and political authority. The net result of these changes—the growing tendency to think of religious belief and practice as a self-contained system and the fragmentation of authority—is to reconfigure the symbolic production of politics.

The accessibility of such writing to new audiences is an important theme that has parallels with the broadcast media. Unfortunately, few studies concern audience response to Middle Eastern media.[4] One of the first, conducted in Iran in the 1970s, revealed that a large portion of the population did not understand the language of broadcasting, "especially news programming" (Sreberny-Mohammadi and Mohammadi 1994:69). In the late 1960s, when newscasts were in "standard" Arabic, I had the dubious honor in a rural area of western Morocco of "translating" the formal Arabic of radio newscasts into colloquial Moroccan. Programming in Moroccan Arabic and in the Berber languages expanded significantly only after Colonel Qadhdhafi allowed Moroccan dissidents to broadcast in colloquial Arabic from Libya in the early 1970s.

The gap between broadcast production and audiences has narrowed in recent years, but it remains significant. A former minister of information in an Arab country commented on the decision to build a second television network: "We didn't need any opinion polls. I knew what the public wanted."[5] The commercial film industry in Egypt may have a better sense of popular taste: the Egyptian film al-lrhabi (The Terrorist) (Galal 1994) may seem crude in its portrayal of Islamic activists. Starring 'Adil Imam, one of Egypt's best-known actors, the film portrays Islamists as violent, naive, and boorish, manipulated by authoritarian leaders. Bourgeois life, in contrast, is depicted as cosmopolitan, comfortable, and tolerant. Egyptian commercial film-makers, unhappy with the Islamist project in Egypt, did not require instruction in the propaganda potential of mass communications—particularly in the video version of the film, which could be viewed in the privacy of homes in case some viewers were reluctant to see it in public cinemas. Some Arab intellectuals laugh at the film's crude portrayals, but a village-born Egyptian political scientist explains that the producers had a finely honed sense of the primary audience for whom the film was intended.[6] Similarly, many creators of more "highbrow" publications have yet to adjust to the "market economy" of popular religious and political writing.

In electoral politics as well, politicians only incrementally acquire the skills needed to communicate to audiences through print and the mass media. The 1992-1993 Moroccan

local and parliamentary elections were more open than earlier ones, with candidates given access to television for the first time, and even more access was permitted for the 1997 local and parliamentary elections. Unfortunately, most presentations took the form of speeches to party followers, so their impact on the elections was negligible.

In general, censorship and control of print and other media has had to become more multidimensional and nuanced. It shows a greater sophistication on the part of state gatekeepers about which media make a significant impact on the population. Thus small intellectual magazines in Tehran publish on a latitude of subjects, as the authorities—who retain tight control on radio, television, and the content of Friday sermons—know that their political impact is minimal and that the costs of repression outweigh those of turning a blind eye. Nonetheless, Islamic texts that few people read are published in profusion in post-revolutionary Iran, although what people buy is the more scarce “secular” magazine or book. In Morocco, censorship is frequently selective. In 1992, the arrest and trial of Hajj Muhammad Mustafa Tabit, a senior Moroccan police official convicted of raping over 300 women—activities he preserved in a personal videotape archive—went unreported by the Moroccan broadcast media. In contrast, newspapers, with the exception of one semi-official publication, carried daily accounts of the trial, which took place during Ramadan, the month of fasting. The timing was important, for the trial doubled as a morality play. Newspaper circulation soared as a result, and papers were rented out by the hour at some kiosks in Rabat and Casablanca. In Morocco, where most people get their news from the broadcast media, state-controlled except for a private radio station in which a holding company related to the palace has a significant interest, newspaper coverage—which reaches a much smaller number of people—offered a safety valve sufficient to control rumors and give the appearance of a relatively unfettered press.[7] Likewise, cassettes of Berber and Arabic songs commenting on the case circulated freely, although they were never mentioned in the broadcast or print media (Lakhsassi 1998).

Political and religious communications that are banned take on a new significance. The words of a hand-copied leaflet concerning how one can earn sufficient “credit” to enter paradise may be politically innocuous, but the risk a sailor in the Moroccan navy took to copy it and the bonds of complicity created in passing it to trusted mates parallels the circulation of leaflets in Afghanistan’s Islamic Youth Organization in the 1960s (Edwards 1995) and the now common distribution of photocopied leaflets.

On a technologically more sophisticated level, the “fax wars” in Saudi Arabia successfully evade government efforts to restrict criticism of the regime, which is virtually powerless to control the incursions of the “small media.” Prohibitions against circulating such documents only draw further attention to them (for example, al-Sharq al-Aiusat 1994). Efforts to ban books can also be easily circumvented. In 1991, Saudi Arabia banned Muhammad Shahrur’s al-Kitab wa-l-Qur’an (The Book and the Qur’an). Nonetheless, an estimated 10,000 photocopies circulated within the kingdom (“Prophetic” 1993). Although also banned in Egypt, large numbers of photocopies of the book circulated there as well, and for several years after the 1992 assassination of journalist Farag Fuda, for which Islamists claimed responsibility, al-Kitab was published in Egypt in a

pirated edition, which reached its third printing in mid-1995.[8] Even mainstream newspapers can escape state disapproval and build readership by publishing articles that attack Islamist doctrine, although readers sympathetic to such views can read the summaries of Islamist arguments differently (for example, Anonymous 1992).

Technology is supposedly neutral, but technological innovations subtly alter the structure and content of disseminated messages. Print and other technologies create new forms of community and transform authority and social boundaries. Thus an Egyptian newspaper reported that a raid on a software import firm yielded computer discs that disclosed the structure of the clandestine wing of the Muslim Brotherhood and potential targets for political action and infiltration into the police, judiciary, press, medical, and other professions. Omani security uncovered a similar use of computers in a sweep of Islamists that resulted in more than 300 arrests beginning in June 1994 (“Up to 70 Suspects” 1994; Abdullah 1995).

In some regions, audiocassettes have begun to supplement or replace pamphlets as a vehicle for religious debate. A pamphlet has the advantage of greater anonymity for the author—voices on cassette can often disclose authorship—but cassettes have other advantages. Inexpensive, easy to smuggle, and readily reproduced, they may be played in the home, automobile, mosque, or other meeting places. The sermons of Lebanon’s Shaykh Husayn Fadlallah and Egypt’s Shaykh ‘Abd al-Hamid Kishk are available throughout the Middle East and wherever Arabic-speaking Muslims are found in Europe and America. Cassettes, like the other “small” media, make it easier for Muslims to keep abreast of developments elsewhere in the Muslim world and to feel as if they participate in them. “Voiced Islam” (al-Islani al-sawti) has thus become a force rivaling “print Islam.”

Recent developments in communication technologies also empower protest groups within societies. Conscious that Islamic groups elsewhere bear similarities to their own situation and influenced by transformations in the Islamic political vocabulary, hitherto isolated protest movements or individuals acquire a bolder voice and are encouraged to act more decisively. The recent rapid expansion of Islamic publishing and the emergence of television channels controlled by religiously oriented groups in Turkey is a case in point (see Yavuz, this volume; also Gazeteciler ve Yazarlar Vakfi 1994). Even repressive states have to take uncontrolled messages into account. Concerned about waning youth audiences for Iranian state television, a small interministerial group in Tehran called the “Optimal Image” (Simay-i-Matlub) committee considered adopting programs that could rival Western music videos for audience appeal.[9]

The content of Friday sermons also shows the influence of a wide range of print and broadcast media, and preachers now assume that the audience has been so influenced. They incorporate references and allusions to a wide range of texts and events (Gaffney 1994:50,215; Eickelman 1990). Preachers cite contemporary Muslim intellectuals such as

Sayyid Qutb, Mawdudi, Kishk, and Shaykh Ibn Baz of Saudi Arabia as well as Western writers and publications. In Saudi sermons distributed via cassettes during the 19901991 Gulf crisis, preachers invoked such sources as the memoirs of Richard Nixon, the Voice of America, the Financial Times, CNN, the writings of George Bush, and contemporary Arab periodicals like al-Hayat and al-Watan al- ‘Arabi. Criticism is often indirect. For example, an approving reference to the probity of the “rightly guided" caliphs of early Islamic history would not be lost on the audience as a veiled attack on the injustice and immorality of present-day leaders.

Dissident and subversive messages are also communicated through nashids, martial chants that rival ra‘i or even rap music in popularity. The importance of the nashids and rap music is that they represent the ways in which popular cultural forms can be mobilized to foster claims and counterclaims in Muslim politics. The insistent rhythms, assertive refrains, and often mocking tones are especially effective in articulating protest. Humor serves a similar function. Although Morocco’s Ahmed Sanoussi is no longer allowed access to the stadiums that once drew up to 40,000 people to hear his performances, his cassettes and appearances in small theaters consistently draw capacity crowds who appreciate his political satire (Hedges 1995). Comic strips often have the same effect (Douglas and Malti-Douglas 1994). Hannah Arendt (1986: 65) reminds us: “To remain in authority requires respect for the person or the office. The greatest enemy of authority, therefore, is contempt.” Music, poster art, and graffiti can also be subversive and indirectly indicate rival claims to authority. They arc popular representations of symbolic politics, but, as we would expect, they may be ambiguous in their political message.

In conclusion, the “migration” of messages, media, writers, and styles of discourse is part of an increasing fragmentation of authority. It also multiplies the ways in which authority can be represented and by whom. “Islamic” books and cassette sermons set aside the long tradition of authoritative discourse by religious scholars, so that chemists, medical doctors, journalists, and even garage mechanics, for example, can interpret “Islamic” principles as equals with scholars who have graduated from the schools of the 'ulama. This multiplication of voices in public discussion of religious and political belief further erodes the boundaries between kinds or sources of authoritative speech.

In addition, new forms of communication and their increased rapidity allow “peripheries” and audiences to talk back and can infuse new life to local and regional traditions. When states shut down one form of communication, others take its place, or diasporas sustain voices that otherwise would be silenced or muted. New technologies of communication and publication also enable those who hold minority views, including extremists, to join forces with like-minded people elsewhere to accomplish common goals. The new political geography of communications may actually facilitate pluralism. Finally, in the sense that symbolic and political connections across national and other political boundaries are encouraged, conventional understandings of “external” and “internal” become increasingly blurred.

Through fragmenting authority and discourse, the new technologies of communication, combined with the multiplication of agency facilitated by rising educational levels, contribute significantly to re-imagining Middle Eastern politics and religion. Understanding the dynamics of these new voices and the media through which they are disseminated entails listening to the many voices of the region, not merely to those of a Westernized elite. This fragmentation may contribute to political volatility in the short run, but in the long run, it may become one of the major factors leading to a more civil society throughout the Middle East and elsewhere in the Muslim world.

[3] I am grateful to Yves Gonzalez-Quijano (personal communication, September 12, 1994) for drawing my attention to advertisements in religious books and pamphlets, an issue further discussed by Starrett (this volume).

[4] See, however, Pollock and el Assal (1995) and Claeson and el Assal (1996). Kamalipour and Mowlana (1994) provide a country-by-country inventory of press and broadcast laws and facilities. For television in Morocco, see Poindexter (1991).

** 4. The Internet and Islam’s New Interpreters

Jon W. Anderson

Recent discussion of civil society in comparative and international contexts of the Muslim world has focused largely on a search for voluntary associations as intermediate social forms between those of family and polity (Norton 1995, 1996). The hope of finding counterparts to de Tocqueville’s key to democracy in America cannot escape ethnocentrism for defining civil society so narrowly and misses more important developments in the realms where “civility” frames social space. Behind voluntary associations and other “intermediate” institutions lie understandings of individual responsibility in a public sphere (Seligman 1992) that may provide more productive ground for comparison. Every society includes conceptions of trust and responsibility, and of their scope. Prominent among these in Muslim societies is responsibility for interpretation of religion, of its requirements, of its expressions and, above all, for handling its texts. Today, more and more individuals are assuming such responsibilities, in public and through media that help to define or extend the public space of religious discourse. The Internet is one of these new media, by some measures a new public space, which enables a new class of interpreters, who are facilitated by this medium to address and thereby to reframe Islam’s authority and expression for those like themselves and others who come there.

This is not—or not yet—the world of Islamic organizations and activist intellectuals, who attract attention and exegesis of their views (for example, Kepel 1985; Moussalli 1992; Roy 1994; Rahnema 1994; Appleby 1997).

Surrounding them is a larger, more inchoate context of seekers and various other Muslims similarly if less dramatically engaged in defining a Muslim life in a world in which Muslim and non-Muslim are increasingly intertwined. A common issue across the range of discussions, positions, and arguments associated with Islamic activism is taking responsibility for interpreting religion in a world of competing voices, multiple authorities, and problematic legitimacies. This wider context of interpretive practices and discursive authorities sets the narrower, more solemnized and abstracted forms of the activists in worlds beyond those they would essentialize.

This larger public sphere is marked by a coming into public view, and discussion, of interpretive practices between the high textualism of ‘ulanta, marked by the super-literacy of an interpretive elite, and more mystical, participative expressions of the non-literate sometimes identified as “folk” Islam. Such orientations form more of a continuum than suggested by Hodgson’s and similar distinctions between sharia-minded and sufi-minded Islam (Hodgson 1974). Recent research shows fundamental similarities in modes of transmission, patron-client (master-pupil) relations, and cohort networks from those of sufi (Gilsenan 1973; Trix 1993) to ‘ulama (Fischer 1980; Eickelman 1985; Messick 1993) forms. Still, class and mass Islam have been treated as analytically separable domains, one subject to an updated version of textual analysis that probes for meaning (Moussalli 1992; Lawrence 1989) and the other subject to a more behaviorist analysis that probes for social forces (Sivan 1990; Goldberg 1991).[10] But contemporary Islamist discourse occupies, expands, and makes public a range of intermediate positions between these, combining features of traditional modes of representing the experience and interpretation of Islam with contemporary ones (for example, Gaffney 1994).

This linkage to social experience and contemporary cultural resources that expands the social space between elite and folk is crucially facilitated by media that feature the migration of discourse from narrower to broader, more “public” realms. Media make public what previously circulated in narrower, face-to-face interpersonal settings, such as coffee houses, dotvrehs, the majlis, and informal discussion circles from university dormitories to parlors to dissident cells and other places where familiars meet, by giving messages additional circulation. The examples of cassette sermons against the former Shah of Iran (Sreberny-Mohammadi and Mohammadi 1994) and faxed fatwas of today’s opponents of the Saudi regime (Sardar 1993) are joined by pamphlets and graffiti (Starrett 1995) that move messages from more restricted to less restricted spaces of circulation. In this move, relatively greater anonymity conveys an aura of more social—or at least more common—authority than that of face-to-face transmission between master and pupil, pir and murid, mullah and congregant. Media not only place messages into wider circulation, but also rebalance their authority from that of the sender to include the circulation itself. What is “new” here is the enhanced visibility that media afford.

Since the Salafiyya movement in the nineteenth century (Cole 1994), new interpreters of Islam have been tied to innovations in media. The founding figures of Islamic reform in this century such as Muhammed ‘Abduh (1849-1905) and Mowlana Mawdudi (1903-1979) have been journalists whose work was enabled by the arrival of printing and of print news with new audiences for the written word. They filled and expanded the space between previously restricted circulations of text and talk. A century ago, printed books were the “new” media of Islamic reformist movements that spread from British India (Metcalf 1982). An important medium for the rising influence of the Iranian clergy in this century has been the circulation of religious interpretation and guidance in printed booklets of religious counsel, often in simple question-and-answer format, that preceded the rape cassette sermons of the exiled Ayatollah Khomeni and others. And today, television makes stars of conservative vernacular preachers. In their time, all new media have a certain “down-market” quality from high-

textualist perspectives. They employ vernaculars and are often cheaply produced and ephemeral; but they expand the domain of Muslim discourse by engaging a wider public than previously had access to elite-controlled discourse and a more problematic public than other non-elite, “folk” forms reach.

*** The Internet's Public Space

Through the increasingly worldwide and nearly instantaneous Internet, Muslims adept at its use are increasingly able to reach out to each other and to publics beyond the Muslim world. They put into wider circulation views that previously circulated only in narrower circles and bring additional techniques for interpreting Islam, drawn first from those that facilitate access to the Internet itself. This extends the process that Eickehnan (1992) has identified with the massification of education in the contemporary Muslim world, which has given wider access both to the texts of Islam and to a wider range of interpretation than developed in mosque-university (madrasa) and religious lodge (zawiya). Born in the world of higher education, the Internet facilitates and links specific new interpreters lodged within or enabled by it to form an extended discursive space, marked by new techniques not only for interpretation but also for creating a public that lies between, draws on, and links previously discrete discourses.

This is a process I have described as “creolization" (Anderson 1995) in the extended sense not just of mixing codes but also of forming what Drummond (1980) recast as special-purpose, intermediate communities of discourse that array in a continuum between otherwise (for example, so- daily) separate communities of communication. Islam is represented on-line in a melange of wire-service news copy, transcribed sermons, scanned texts of the Qur’an and hadith collections, advice and self-help information ranging from where to find halal butchers and mosques to matrimonials and cheap travel to prayer-timers and Islamic educational materials. It is commonly driven by and often wrapped in intense discussion and debate about how to square Islamic requirements with modern life and how to lead a Muslim life in a non-Muslim society. Traditional apologia appear alongside attempts to think about Islam with techniques drawn from engineering and applied science. Islam on the Internet emerges as an intermediate realm of mixed content, mixed intellectual technique, and mixed persons who are not divided into the senders and receivers of mass (or of class) media but instead form a sort of community—commonly called “virtual.” This is a social-communicative sphere more comparable to the “creoles” that Benedict Anderson (1991) identified with the civic publics that arose, without prior design, with the earlier spread of print capitalism and particularly with early modern newspapers. That is, the Internet and its surroundings that enthusiasts call “cyberspace” or envision as a new “information age” do not facilitate the spokesperson-activists of established institutions, but draw instead on a broader range of new interpreters or newly visible interpreters of Islam (Fig. 4.1).

Organization as a speech community, rather than of mass media, is built into the Internet. Representations of the Internet as a new paradigm of work, community, thought, and utopia (or dystopia) of unfettered communication tend to generalize from a narrow range of experience and often the worldview of programmers (for example, Lammers 1989; Gates 1995; Negroponte 1995) or enthusiastic annointers of the avant garde (for example, Rheingold 1993; Rifkin 1995; Levy 1984). The Internet originated as a collaborative tool, constructed by engineers and applied scientists in accord with their work habits and values (Hafner and Lyon 1996; Leiner et al. 1997). They built into it open access, flattened hierarchies, freedom of information, and, more subtly, notions of transient, purposive connections among people and between pieces of information. Their Internet is organized not so much around transmission as around sharing of information. Their scheme, in turn, diffused to and was taken up by the larger world of higher education and allied activities and, subsequently, in an increasingly commercial communication ecology of business and leisure. This, in the view of one of its creators, is composed of a changing community of users, technologies linking them, schemes for managing the system, and now commercialization of access and content (McLellan 1997).

The Internet's transformations to successively wider realms has been one of partial translations of engineer's tools to the larger worlds of research and higher education and then to realms engaged by their occupants. They develop as extensions of the physical network of computers, the programs and protocols written by engineers to connect them, a social organization of work that engineers built into them, and a culture translating that organization into more general values. On the foundational technologies for remote access or connection to distant computers and for making files accessible, created in the 1960s, are built the functional technologies of electronic mail (1972), electronic mailing lists for groups of subscribers, newsgroups (1980) or electronic bulletin boards for discussion of special interests, and schemes for more ordered publication, which culminate today in the World Wide Web (1990).[11] With each, initial interest in professional communication has been quickly followed by avocational interests, first of engineers and then of others sharing those interests, including Muslims, first in the high-tech realms that invented and built the Internet and then in the wider world.

Figure 4.1. Early Islamic sites, like this Cybermuslim Webpage, displayed a clear "creole" character in their mix of forms (Western, Islamic, youth, university) and address to both believers and seekers. Sites like this one provided guides and links to similar efforts and material in cyberspace.

Setting aside the technologies primarily accessible to specialists and electronic mail, which is not a public medium, on-line communication for religious and other special interests breaks into roughly two kinds (Kinney 1995). One is found on Usenet newsgroups or electronic bulletin boards and e-mail lists. The dozen or so devoted to Islamic and Middle Eastern topics tend to be dominated by people with professional-technical qualifications who happen to be Muslims. Many, perhaps most, are students and expatriate professionals in the

Middle East’s “overseas.” They belong to the world of or are enabled by higher education and range from ordinary Muslims to dedicated polemicists. Newsgroups and mailing lists are nominally articulated by open access and freedom of interpretation, into which practically intrude other values that routinely are negotiated, and often hotly debated. Tension commonly arises between access and desires, usually not fully articulated until challenged, to construct something like a home away from home around values and attitudes of hospitality. Interpretive freedom escalates into disagreements and sometimes into accusations less of bad manners or bad faith than of personal “ignorance” or willful “violation” of previously unstated or lately ignored rules—in other words, disagreements over interpretation, followed by attempts to redraw the boundaries of discussion. For all its artificiality and newness, there is a sense of transforming information into knowledge, at the same time that boundaries are fluid and change with participants, through the practices they bring on-line. On an electronic mailing list devoted to discussions among Palestinians, limits on access were waived to admit Israelis professing sympathies with the Palestinian cause; but their interventions to “provide information” were repeatedly censured as “Zionist” violations of a Palestinian space, that is, an on-line home for Palestinians ordered by guest-host relations in which they were charged with being bad guests.[12] Another list devoted to discussions of the history of Islam altered to a forum for participants and for seekers’ questions about correct practice, and attendant disputes, that effectively excluded “objectivist” views offered by historians and drove them away.

By comparison. World Wide Web homepages, typically produced by individuals or groups to provide information, generally take the form of publications. Web technology facilitates linkage over discursiveness, and Web pages run the gamut from lists of links to other Web pages (and other on-line information) to extended presentations of original material. Here, interpretation is practically a matter of making and commenting on connections. The same material is often relinked over and over, with variations in organization, selection, and emphasis. In these respects, the Web is comparable in a contemporary context to early printing presses in the world of the scriptorium: it escapes the world of editors and arbiters of thought and interpretation by displaying the materials of interpretation and providing alternative organizations for them. And it brings together something of the moment. Into this world come people with views about Islam who are able thereby to extend those views into newly public forums—a “public” that is defined (like the readership of early newspapers) by those with access to its techniques (Fig. 4.2).

to the MutUm wurid titled "What We're Fighting Ear" The communique amounted to a Declaration of Pontion on the American wv on "terrorism". In it. the signatories sought to found moral justification for iheu countries military strikes m Afghanistan and Io legitimise any forlhromtng attacks in Amenta's on gomg military campaign This is a response to the said communique drafted by the Movement for Islamk Reform in Arabia.

Figure 4.2. The movement for Islamic Reform in Arabia (al-Harakat al-lslamiyya li-l-lslah), established in London in 1966 as an offshoot of the Committee for Defense of Legitimate Rights in Saudi Arabia, takes advantage of Internet technology to add a “media watch," responses to international intellectuals, and links to other media to its own

chronology of dissent in Saudi Arabia, critiques, and data on Saudi leaders. The site is now fully bilingual in Arabic and English. <[[http://www.miraserve.com/englishnew.htm] [www.miraserve.com/englishnew.htm]]>

*** Internet Sociology and Communication Ecology

Internet sociology follows this continuum of forms between conversation and publication. Muslims initially located in the high-tech precincts that created the Internet included students who found their way overseas for advanced training in engineering and applied sciences and expatriate professionals. Located in universities and polytechnic institutions of the West or in corporate and government research labs, they have brought other interests on-line, including interests in the religion, culture, and politics of their home countries, and brought these on-line with a sense of empowerment by the technology they commanded. In this respect, they are no different from non-Muslims, who also bring interests outside of their work and interests in making connections; indeed, technologies such as Usenet newsgroups and the World Wide Web were, in part, motivated and developed to overcome barriers of dispersion and to connect people of like interests.

Around these cores accumulate others who are similarly situated but in other fields, similarly seeking to make contact, to share views, and to recruit others. Through the Internet, these activities create worldwide networks that significantly extend conversations, expressions, and representations of and about Islam that were previously confined to coffee houses, university dormitories, cells, peer circles, and other off-hours sites of discussion and debate. The Internet unites such people, not just electronically but also through shared intellectual techniques derived from higher education, including techniques other than those classically associated with religious discussion and exegesis that are organized by and delivered in madrasa and other “traditional” forms. Balance of personnel affects the balance of communication. This is a realm in which engineers and applied scientists, followed by others with access to international-standard higher education, followed by others in their circles and increasingly by wider, more anonymous circles with similar access can try their hands at religious interpretation in a new medium of publication that extends the reach of their intellectual technology and enlarges the public space of discourse about Islam.

This enlargement echoes those new senses of agency that Eickelman (1992) has associated with the spread of mass education—especially secondary and higher education—throughout the Muslim world that de-mo- nopolizes access to the texts of religion and opens their interpretation to new techniques. The process is reflected in the migration on-line first of translations and then of Arabic transcriptions of the Qur’an, collections of hadith, and other documents from history to apologia by those adept in the technology of the Internet. Use of the Internet as a channel is quickly overtaken by use of its techniques and the sense of confidence in their authority to carry messages of mutual recognition in a public of others like oneself. Texts are not only made available; what begins

as a pious act of witness is followed by interpretations that apply intellectual techniques developed elsewhere than the texts themselves, along with the practical lessons of interpretive freedom, including responsibility for interpretation that goes beyond challenging received views to a broader pattern of expanding the public space.

The pattern goes back at least to Salafiyya and similar movements in South Asia in the nineteenth century, in which new interpreters of Islam have arisen in conjunction with new media to take responsibility for interpreting Islam. It has become a commonplace that "fundamentalists" embrace the techniques of "modernity" in order to challenge its goals (Lawrence 1989, Appleby 1997); but reformer-critics are not alone in creating a public space for Islam between the traditional style of the 'ulanta and those merging Sufi with "folk" Islam. The bourgeois character of this space was revealed in Gilsenan's (1973) account of the recasting of Egypt's fastest growing Sufi order in modern times to the practices and values of rising first-generation clerks, teachers, and new urbanites of Egypt's new middle class. In his account, the rule of this order—modeled on bureaucratic practice and training office holders—is hardly to be described as "folk" as that term has been deployed by historians and indigenous observers to indicate something, especially something rural, beyond 'ulama control. It is the more professional middle-class end of this spectrum that is engaged on the Internet. The rising curve of expanded education to which Eickelman (1992) pointed as giving unprecedented access to the texts of Islam and opening interpretation to techniques outside the traditional frameworks of niadrasa training intersects the rising curve of the Internet's spread to more people and tasks and development as a public space. The Internet, which begins globally in high-tech precincts, arrives in Muslim spheres in hands committed to combining their values and expanding the public space for them through this means.

This more professional end of the middle classes attracts relatively less attention,[13] but it is the natural home also of representations and systematizations of Islam ranging from views that Islam is inseparable from all life (thus problematizing its integration in contemporary forms) to modernist views of Islam as a system in a world of systems (for example, Rahman 1982). Brought to the Internet, these make it an arena for alternative expressions of Islam both to popular and to traditional elite views that are soon joined by oppositional and alternative groups speaking to Western and other non-Muslim media and opinion publics. They range from political activists to Sufi orders, from mobilization to witness. They both recruit and propagandize, bringing their issues into a wider, already public sphere in some cases but in others carving out a new one that encompasses or repackages existing ones, compelling dialogue by leveraging forms of communication that reshape the social field.

The complexities of this process sort into stages by which it proceeds. Islam on the Internet is first a story of new interpreters, newly emboldened by confidence in and command of the channel. The channel's foundational values, drawn from the work habits and values of engineers and applied scientists' need to collaborate and share in flattened hierarchies—in other words, specific senses of responsibility for statements—are extended into broader "cultural" values about open access, freedom of information, and taking responsibility for,

rather than merely receiving, interpretations. Its context is an emerging bourgeois, essentially middle-class, and importantly a professional world, authorized by skills and increasingly transnational by virtue of the spread of professions through mass higher education and modern means of communication among them.

Until recently, the story of Islam coming on-line would have been limited to creole pioneers, located in the high-tech precincts that produced the Internet and drawing on a transnational population of Muslims. They still bring religious interests on-line as after-hours interests, essentially as devotions and as witness in a public space that they define and in which they give a new dimension to their interests. Such Islam on the Internet is shaped much like anything else relocated there by techniques, including intellectual techniques, from the world of higher education and research. The early creoles link up with others like themselves and extend their links to realms surrounding and served by higher education and research, especially in communication agencies and businesses that increasingly convey the Internet to the wider world. After the pioneers also come activists, some to recruit within this world, others to address a wider audience through the channel widely believed to be a leading edge and symbol of a globalizing "age of information." Until recently, also, "official" Islamic voices—of the tnadrasa, 'ulama, and authorized institutions such as the Organization of the Islamic Conference or the Muslim World League—have been largely absent from these arenas, except as others brought bits and pieces of their discourse and documents on-line. Conventional, established voices of Muslim authority as such are unrepresented here, in part because the effect of the channel was to foster intermediate sorts of discourse that could be dismissed as naive, if pious in its own terms.

Increasingly, however, just as the creole pioneers were followed by activists, so both are now followed by officializing discourses that range from conventional da'tva organizations and, recently, Sufi orders to governments of Muslim countries. Forced to adopt the forms and formats already present, some organizations manage better than others a convergence on increasingly international, increasingly uniform formats. Al-Azhar, for instance, is not on-line. What are on-line are a School of Islamic and Social Sciences (SISS) in suburban Virginia that offers international-standard master's degrees in Islamic studies and pastoral training, an International Islamic University in Malaysia (HUM), which presents a public face, a table of organization, and programs formally identical to those of Western universities. In the United Kingdom, a Muslim national council presents the face of a religious denomination with houses of worship and ancillary charitable, educational, and community activities. SISS grew out of a project supported by pious foundations to update Muslim apologetics; the IIUM is a joint project of the Malaysian government and the Organization of the Islamic Conference to create an international-standard Islamic university for training professionals (Fig. 4.3); and the national Muslim council evokes parallels with other national religious establishments.

These convergences and measures of uniformity characterize presentations that do not homogenize the faith brought on-line so much as affirm universal access and a sense of participation in a pubic sphere of listeners, watchers, or, in cyberspeak, "browsers." This affirms new senses of interpretive freedom to go beyond previous forms and responsibility to

speak for Islam in a “civic” public that goes beyond transferring discussions from more restricted to less restricted realms. Getting the word out supplants the earlier felt need to reach out to others like oneself; public space replaces virtual community. The move is not just from private to public, but a blurring of that distinction through communication and interpretation that bypasses the gatekeeping and sanctions embedded in older media. Just as print bypassed the scriptorium, so the Internet bypasses institutions of mass media and those attached to it and currently institutionalized through editors, publishers, acceptable genre, and marketing to specific “readerships.”

Figure 4.3. The homepage of the International Islamic University Malaysia is regularly updated with the latest Internet technology—here, a rotating picture gallery. HUM was founded by the government of Malaysia and several member countries of the Organization of the Islamic Conference in 1983 as an English-medium institution for “integrating sources of revealed knowledge with an arts and sciences curriculum,” which it proudly displays on its web site <[[http://www.iiu.edu.my/][www.iiu.edu.my/]]>.

While many of the views expressed in these media are intolerant in that context and are often driven into the underground or “minor” media, the larger contexts where they occur register a practical pluralism that prob- lematizes responsibility and what Bourdieu (1991) called the social capital that enables interpretation. Among the first opposition met by these new interpreters are liberal humanists, whose social capital is tied to media that the new interpreters bypass.[14] They call to account responsibilities assumed outside existing conventions no less than silence from Muslim establishments. For a social analysis, such oppositions are part of the redefinition of the public sphere, a part that points to rarely articulated, often implicit notions of taking responsibility for interpretation otherwise met as rights to interpret.

*** Conclusion

The Internet is a significant new medium in expanding the public sphere, where Islamic discourse is altered by new positioning and new interpreters. Like other media, from cassettes to novels and tracts, it is fast and flexible, not least for providing opportunities for alternative expressions, networking, and interpretations that draw on and extend its techniques. Additionally, the Internet is worldwide in its reach and rooted in, as well as rooting, a professional class not yet so widely represented but uniquely positioned to leverage the techniques to reshape the public sphere of Islam. The process is an emerging one, and absolute numbers are small. It is their extent and the techniques they bring that is significant. Initially, they joined others’ migrating discussions from more private to more public spaces that media make accessible and, ultimately, create. Increasingly, however, they reshape that space and what it means to be public.

What is happening with Islam on the Internet is a forging of at least three sets of related links. One set links individual Muslims via the medium of the Internet, individuals often in similar situations and often similar to each other, in social networks of communication. What begins as a home away from home extends to and then transforms the space in which "home" exists as this technology spreads, in part in these hands. Broadly speaking, these are the modern skill-based professions of expanding middle classes, whose mutual recognition and negotiation of rights to speak set the issues and character of on-line communities. The discourse itself reflects a creol- ization that does not so much mix religious with other talk as foster intermediate speech communities as contexts with rules that describe rights and responsibilities. They cast religious talk in idioms of speech and thought previously or otherwise allocated to separate speech communities, forming a continuum instead of a dichotomization between elite and mass, literate and folk. The significant feature of these links is the application to religious subjects and contents the techniques and models drawn from higher education generally and from science and engineering specifically. What emerges with the Internet is thus a sphere of intermediate people, new interpreters, drawn from these realms and linking them in a new social, public space of alternative voices and authorities.

Bringing these to the Internet also makes them more public. Internet discourse, in the first instance, migrated from less public to more public spheres by linking people, social networks, and modalities of thought in transnational networks of which they are in part the expression and in part its builders. Technology, not association, enables participation and is the means of participation in a space defined by taking it upon oneself to participate. In taking these as responsibilities to think about religion in the world, irrespective of the presence or absence of familiar institutions, a wider body of new interpreters of Islam beyond merely activists emerges, as does a context other than that of conventional and folk religiosities.

Islam on the Internet highlights not just new interpreters but also the presence of intermediate contexts that reflect a more nuanced diversity of views, settings, projects, and expressions of Islam today. This context is also occupied by Islamist critiques of both elite and folk traditions; but activists may not be its diagnostic creatures. Just as print—especially newspapers—opened a channel for what became recognized as Islamist critique and cassettes opened a channel for the circulation of sermons and other didactic material, so too the Internet opens arenas where responsibility is both problematic and engaged. These interpreters are part of a real diversity of opinion, interests, and variously formed programs, and part of a more general and diagnostic context shared with activists of sharper profile. The medium overlaps with others, as did those of previous interpreters. And the most striking features of the Internet are how it brings out the broadly intermediate character and location, the "in-between" and ordinary character, of the efforts that mark it, and its practical diversity. Finally, the recency of the introduction of its interpreters to a more public realm brings out the priority of responsibility and how taking responsibility, particularly for interpretation, in public (instead of forming associations) is the intermediating step for "civil" society.

[10] Gaffney (1994) has corrected this view by showing, on the one hand, how, at the level of expression and interpretation, activists are part of the same social field as shaykhs and pirs and, on the other, how they connect with their publics through emphasis on practical interpretation. A similar point is developed in more comparative terms by Eickelman and Piscatori's (1996) discussion of political Islam's many and local resonances.

[11] The World Wide Web, which has become the Internet for most users outside the research world, superseded earlier technologies of WAIS (Wide Area Information Servers) and Gopher, which were created to index and systematize access to information on networked computers.

[12] I am grateful to Rachel Rumberger for bringing this example, and this interpretation, to my attention.

[13] But compare the singular study by Clement Henry Moore (1980) of Egyptian engineers, Gdle (1993) on Turkish engineers. Palmer et al. (1988) on senior bureaucrats, and Vitalis (1995) on businessmen. Goldberg (1992) and Robinson (1991) focus on mobilization in this portion of the middle class.

[14] This is equally true in realms closer to debate about the Internet itself, from the anti-internet screed by the conservative literary theorist Gertrude Himmelfarb (1996) to reservations by journalists (Wald 1995) over the lack of "standards" and the rights of "experts" to judge what is acceptable.

** 5. The Birth of a Media Ecosystem: Lebanon in the Internet Age

Yves Gonzalez-Quijano

(translated by Dale F. Eickebnan and William F. P. Raynolds)

Until a few years ago, a visitor to Beirut could escape the commotion of Hamra Street, West Beirut's main commercial road, by entering a large exhibition hall in the basement of a modern building on Sadat Street. It was the Permanent Book Exhibit (ma'rad al-kitab al-da'im), where most of the Lebanese publishers—the most important ones in the Arab world— had exhibition space. Today, the exhibition hall is just as calm, but the bookshelves have given way to an orderly array of computers. Only a soft drink machine and a counter at which clients, most of them young, pay for Internet connection time, break the impeccable array of computers.

As in most large Arab cities where this new type of business has flourished—Cairo, Casablanca, and Amman, of course, but also Damascus, Nouakchott, and Sana'a—the large bookstores of an earlier era have given way to Internet cafes. Many Beirut intellectuals invoke this symbolic replacement with bitterness. For them, it underlines the dangers of a new "culture" in which books have given way to video screens. In practice, today's concerns merely prolong the laments that the local intelligentsia has expressed since the time that the new technologies began to appear at an ever accelerating pace several decades ago. These new "mid-range" media technologies (Alterman 2001) and their associated techniques do not always need large financial investments and complex skills. It has become increasingly clear that this complex package of instruments and tools has profoundly modified the shape of the intellectual field. By means of these new instruments and skills, unexpected and at times bizarre new voices have begun increasingly to mix with those of the earlier "legitimate interpreters"—that is, when these new voices fail completely to replace their predecessors. These new voices get the attention of a radically different public, one that belongs to their generation. It accepts the cultural and intellectual practices that modern technology facilitates (Eickelman and Anderson, this volume).

These new practices are fundamentally altering how information and ideas are shared, communicated, and produced. They are accompanied by, and partially explain, social and political change in contemporary Arab societies. Sometimes they take spectacular forms, especially in the case of technical changes with visible consequences, such as the proliferation of parabolic antennas for satellite television. However, the influence of these

new techniques and technologies can also be less visible and more far-reaching. They can even radically transform established, “traditional” practices considered so old that they appear impermeable to change. Thus, the tremendous commercial success of the contemporary “Islamic book” (al-kitab al-islami) —which has totally reshaped the idea of religious books in conception, production, and marketing (Gonzalez-Quijano 1998)—offers a perfect illustration of the re-invention (Hobsbawm 1983) of “traditional” and “sacred” forms of knowledge in Muslim societies (see Eickelman, this volume, and Huq, this volume).

The re-invention of the modern Islamic book, made possible by the spread of desktop publishing techniques, could not have occurred without an associated decisive technological development, the creation of software applications to digitize Arabic. Word-processing programs for typesetting Arabic, such as al-nashr al-maktabi (literally, “desktop publisher”), were first developed in the mid-1980s.[15] These programs facilitated the creation of newspapers accessible to a worldwide Arabic readership. This first occurred in London in 1978 with the appearance of al-Sharq al-Aivsat. Then in 1987, al-Hayat became the first Arabic daily with an entirely computerized editorial process. Since the early 1990s, these technological innovations spread with the first on-line editions of daily Arabic language newspapers, beginning with al-Sharq al-Awsat in 1995 in image (PDF) format, and direct on-line text in more recent years. Today hundreds of Arabic publications are available on the Internet,[16] to which one must add a larger number of Arabic-speaking and/or Arab-oriented sites that distribute information in one form or another.

As part of the linkages and mergers of traditional media actors (the press and broadcast media) with financial enterprises, information technology, and telecommunications companies, a stiff competition is taking place for global domination of the emerging Arab information market (Anderson and Eickelman 1999: 59). As of March 2001, there were more than 3.5 million Internet users in the Arab world, a number predicted to grow to 25 million by 2005.[17] This growth has facilitated a wide array of entrepreneurial initiatives. Some of these are based on passing fashions and will probably soon collapse and disappear. Others, like web portals, on-line newsletters, and webzines are better adapted to the still uncertain market for on-line information in Arabic and have already succeeded in finding a niche in the regional Arab media scene.

For at least half a century, scholars have recognized the importance of public opinion and the media to the growth of Arab societies and, in recent years, to such developments as the Internet and its uses as a new channel for information. In spite of this, few studies on the new media focus on this development. They focus instead on international[18] or “Western” (Bunt 2000) subjects, or privilege the transnational mass media and their effects from a global perspective (for example, Alterman 1998) at the expense of detailed case studies. Victims of a sort of fascination with technology-oriented ideologies (Wolton 2000: 13), most of those who produce such studies take for granted that the new media have completely surpassed and replaced prior systems for disseminating information and opinion. This chapter takes a different point of departure and is based on Lebanon, a case study with

special regional significance. It requires us to note—in as detailed and specific a manner as possible—how an existing media system absorbs innovations, adapting new information techniques to its own needs.

*** Lebanon: The Crossroads of Arabic-Based Information

Lebanon stands out from all other arenas for technological transformation that influences the production of information in Arabic. Based on the changes that can be seen in editorial production techniques alone, Lebanon is at the core of a regional media network with global implications. The Lebanese played major roles in what can be called the incubation period of information technologies in the Arab world (1995-2000). Now that these innovators are crossing another development threshold, Beirut retains a number of features that allow it to remain an obligatory hub for the “Arab information highway.” It will remain so even if a good part of regional information flows shift, in the not-so-distant future, to states such as the United Arab Emirates, which have made important investments (more than a billion and a half dollars, for example, with Dubai Media City, Dubai Internet Media, and Dubai Ideas Oasis, launched at the end of 2000).

In spite of numerous challenges, the importance of the Lebanese press, initially favored by the weakening in the early 1950s of its Egyptian rivals, was not entirely weakened by nearly two and a half decades of civil war. In the context of a regional crisis that remains unsolvable, the political formula devised during the 1989 Taif Accords is not yet fully realized. In spite of everything, however, it has permitted the implementation of certain important legal measures vital to Lebanon’s future, including the fields of information and media technology. This new legislation, developed and applied with difficulty between 1992 and 1996, drastically reduced the number of media outlets. A decade earlier some three million Lebanese had access to some fifty television stations, and more than 150 radio stations, as well as a hard-to-calculate number of periodicals, not always legal, that occupied the many commercial niches of the local political market (Dajani 1992).

Clearly motivated by the political goals of maintaining a Lebanese national coalition and respecting the “privileged” relations with neighboring Syria, the Lebanese media reforms favored certain businesses able to use their “know-how” to help one of the political forces present on the local or regional scene. After this “cleanup” of the Lebanese media scene, a dozen important periodicals continued to appear and, of these, only a few—the most outstanding of which were the fairly liberal al-Nahar and the nationalist al-Safir—had a voice beyond Lebanon’s borders. As for central Beirut, now reconstructed, it once again contains the reopened offices of the international wire services and, just recently, those of al-Hayat, whose main offices have returned from their London exile.

If print journalism taken as a whole has regained working conditions that permit it to recapture its traditional markets, the growth of Lebanese satellite television has been even more spectacular. Among the most popular regional satellite TV channels—including Middle East Broadcasting Centre (MBC) in London, Orbit in Rome, the Egyptian Satellite Channel, Emirates Dubai Television, and, of course, al-Jazeera from Qatar—are two Lebanese enterprises: the Lebanese Broadcasting Company International (LBCI) and Future TV, without forgetting al-Manar TV, a channel close to the Shi'i population which seems to gain more and more international influence. Even though the political ties of these corporations are mysteries to no one,[19] LBCI and Future TV are the only two private channels that broadcast from the Arab world, a situation made possible because Lebanon is the only Arab state to have legally relinquished its monopoly on televised information (al- Rammal 1999-2000: 62).

Finally, in spite of the inherent difficulties of rebuilding a technical infrastructure after the damages incurred during the civil war, it is remarkable that Lebanon became one of the first Arab countries to embrace the Internet. The information professionals of the Beirut daily newspapers were among the first in the region to make use of a technology that has been available since 1994. Competing against European-based rivals equipped with better financial support and technology, three Lebanese dailies (al-Anwar, al-Nahar, and al-Safir) placed themselves on-line by 1996. For the Arabic language press, al-Anwar launched a highly condensed version of its paper edition called al-Anwar fax. Al-Nahar, on the basis of a major investment in technology, launched the first real electronic edition on January 1, 1996. It was followed several months later by al-Safir. After this first wave and the enltry into play of foreign language journals (the Daily Star in October 1997, followed by L'Orient-Le Jour), al-Liwa followed (summer 1998), then al- Mastaqhal (August 1999), a mere two months after the launch of its print version. Al-Kifah al-‘arab opened a site with a PDF version in 1999, and soon followed it with a full-text format.

These pioneering efforts served as a model for many others, both existing newspapers and those created to take advantage of the Internet. By the beginning of 2002, Lebanon had around 200 web sites (of a total, probably underestimated, of 5,000) providing information and news of one sort or another (Mokaddem 2001).

*** A Cartography of Shifting Borders

The Arab information market has paradoxically benefited from its delay in investing in infrastructure. For the most part, it has escaped the economic crisis permeating the dot-com economy as a whole, particularly initiatives in developing and selling on-line information (Gonzalez-Quijano 2002). Quite the opposite; due to an increase in the number of users and hardware purchases, the growth of on-line commerce and advertising, the creation of local branches of international corporations, and the launch of important public development programs, even in countries such as Yemen and Mauritania, the overall impression is that

the new technologies have entered a new phase of growth. In Beirut, as in the other regional capitals, Internet usage was confined for a time to a narrow segment of the population drawn from the economic and cultural elite and largely imbued with a cosmopolitan spirit. This experimental period has been over for some time, because there is a much larger public now familiar with the “new” media technology. This implies, among other factors, the progressive Arabization of site content together with a lowering of communication costs, as Muhammad al-Shareh, the CEO of Sakhr Software, the principal IT firm in the region, explained to a gathering of political and economic advisors in Beirut in April 2001 (“Ajeeb.com” 2001).

Despite the many difficulties associated with two decades of a civil war that had barely ended just as the U.S. public discovered the Internet—the 1989 Taif Accords were signed just as html became the industry standard and the first browsers emerged—Lebanon was nonetheless one of the first countries in the region to rapidly develop a market interest in exploring the possibilities offered by this new and poorly understood media. Beginning in 1995, the first local Internet service providers (ISPs) offered people in Beirut a chance to connect to the global network. Today, many specialized firms (Gonzalez-Quijano and Taha 2001: 6) offer businesses and individuals connection rates that are mid-range for the region (about a $15 monthly connection fee).[20] This is even more advantageous because the standard of living in Lebanon is higher than in many neighboring countries. The number of Internet users in Lebanon was estimated at slightly more than 30,000 in July 1997, and is expected to pass 300,000, or roughly 8 percent of the population, by the beginning of 2002. Lebanese Internet usage is much higher than the average for the Arab world as a whole, which was only 1.29 percent as of March 2001. At this earlier date, the United Arab Emirates had the highest number of Internet users (around 25 percent), followed by Bahrain (17 percent), Qatar (10 percent), Kuwait (8 percent), and Lebanon (6.5 percent) (see note 3).

Different factors explain the relative success of the Internet in Lebanon in contrast to other countries in the region—its relative political liberalism, its higher level of socio-economic and educational development—Lebanese private and public universities offer some 22 academic degree programs in information technology—and a long and strong history of emigration, principally to industrialized nations. However, in spite of these characteristics, which make Lebanon seem like the most advanced Arab nation to put local information on-line, attempts remain largely embryonic. Nevertheless, limited as these early efforts may be, they offer a sense of the direction that later developments, vital for the region’s future, will take.

Even for a country as small as Lebanon, creating a reliable overview of Internet information sites, let alone evaluating their content, is a major challenge. The capital needed to start a business is minimal, and businesses disappear as fast as they are created, a situation further complicated by a multitude of mergers and acquisitions. This development can be interpreted as confirming the maturity of the market. For example, after the Inconet and Datanet companies merged under the name Inconet Data Management in early 2002, it became the most important private ISP operating in the region, with 120,000 subscribers. Now only three providers—the other two are Cyberia and Terranet—control the entire market for private subscriptions, a market that was once much more open. Just before the Inconet

and Datanet merger, the acquisition of the web-site portal Lebanon-online by Arabia.online based in Dubai and Amman—one of the biggest players in the local Net-economy—clearly suggests a regional trend of restructuring and consolidating the new information technology market.

Evaluating the implications of on-line information for Lebanon is equally difficult because of the gap that often exists between the services offered by different sites or even the same site during different stages of its existence. It is easy to note that many of the local companies, magazines for example, and also radio stations, limit their Internet presence to a simple publicity page, often devoid of other content. It is as though these companies are acceding to a passing trend and acquired an Internet address to give their enterprise a "modern" look.[21] Those responsible for these sites, many of which were created in 2000 or 2001 during a frenzied speculation over network potential, are content to maintain an Internet presence without exerting any effort on updating, simply to keep their options open should a change in circumstances justify increased investment.

Because the number of Internet users remains relatively small, the authorities in Lebanon have not yet found it necessary to set up a separate administrative and legal framework specifically for those new fields of information and communication. Out of roughly 200 on-line information sites operating from Lebanon, fewer than half have addresses that end with Lebanon's characteristic "lb." One reason might be that it is much cheaper and easier for a Lebanese webmaster to get a foreign URL address—often from the USA rather than from Lebanon (Tabbarah 2000). There are positive benefits to this governmental neglect, such as the absence of censorship,[22] but in the eyes of some there is also the negative consequence of a lack of any form of effective local regulation.

Any account of information-producing web sites must take into consideration the transnational nature of Internet activities, which makes it difficult to determine the identity of even the most important sites. For example, the daily al-Hayat has two addresses, one of which hosts two other publications of the same publishing group. Historically it has been Lebanese, including its editorial staff, but it has been subject to English law since it opened offices in London. Owned by Saudis, the newspaper has done well in the past few years since its return to Beirut, but its Internet site is still managed in London. Adding further to this "global" touch, the web site's technical base is the program Sakhr Press Solution, developed by a firm based in Cairo's duty-free zone operated by a Kuwaiti businessman. In contrast, al-watan al-'arabi, a weekly political magazine based in Paris since 1977 in order to escape political pressure, chose (perhaps because of costs) to repatriate only its Internet site to Beirut, while maintaining its offices abroad. In addition, [[http://www.naharnet.com][www.naharnet.com]], one of the most important web portals in the region, is registered in Cyprus.

In general, the Lebanese case, characterized by a strong emigre influence, confirms that the new media technologies transcend and in some cases efface state boundaries. Thus, many

emigrants contribute to the creation of a new professional space in which American corporations such as the Beirut Times, printed in California, or an “ethnic portal” such as <[[http://www.lebanon.com][www. lebanon.com]]>, created in 1995, can become players in the information market of their country of origin because of the lack of firm national boundaries on the Internet.

Of course, the idea of what is “information” on the Internet has been totally overtaken by the rapid technical, legal, and economic changes introduced by the use of new media. To assess the current situation, one must look beyond the conventional print media and focus instead on the new information forms made possible by the technologies. Some of these are readily identifiable—like web portals and on-line newsletters—because they share many points of resemblance with the earlier conventions of information professionals, especially of journalists. Other features are more difficult to discern because the new forms of publishing and disseminating digital data involve a change not only in the hardware associated with producing information, but in the idea of information itself. To sense this change, one need only visit the web site of a public figure such as Shaykh Husayn Fadlallah, the religious authority of Hizbullah, whose sermons and fatwas are available on the Internet ([[http://www.bayynet.org.lb][www.bayynet.org.lb]]). One can also visit the web site of a local militant based in south Lebanon ([[http://www.geocities.com/][www.geocities.com/]] sajedz), who reports on Shi'i resistance activities. Either web site can be legitimately considered—as do certain search engines such as <[[http://www.thedaleel.com] [www.thedaleel. com]]>—as information/media sites; all the more so as they sometimes reach a large public.

Besides these examples, where ideology is the sole motive, many web sites have an economic dimension in one form or another. One advantage of the Internet, particularly in societies where information is limited by political control or merely through a lack of a structured marketplace, is the possibility for communicating with a wide public at a cost considerably lower than that of other media, including recent ones such as fax. The spread of new media technologies in Lebanon has contributed to changing radically the economic value placed on obtaining certain types of information. For example, Lebanese authorities have placed some administrative information on-line. The result has been to break up the networks of petty corruption because certain essential administrative forms that some officials previously made available only at a high price are now available at the government web site. The same logic prevails among a larger number of actors who utilize the seemingly inexhaustible Web-based information resources, including political, economic, and technical bulletins, as well as chat rooms, practical advice sites, and even want ads. Observing the Internet scene in Lebanon demonstrates that the majority of these numerous initiatives flounder quickly. The few that survive today, and those that are bound to follow when conditions are better, lead not only to an increase in the supply of information, but also to a radical transformation in the idea of information.

*** The Impact of the Online

*** Lebanese Press

Is it possible to conclude that the first years of Lebanese sites on the Internet have begun to have specific consequences on the supply of information in Lebanon? It is difficult even to provide an exact number of sites. Some information providers share the same Internet address; others have multiple web-site addresses, and their visibility, according to the number of links that lead to them, can vary greatly.[23] On a strictly qualitative basis, of 160 Lebanese sites mentioned on the Web, 100 offer regularly updated information, another 40 appear dormant (without any regularly renewed content), and more than 20 have disappeared (their URL addresses no longer function). On the whole, the number of information web sites does not appear to be a major challenge to the traditional information sector, where there were officially more than 400 periodicals published in 1994 (Kalamipour and Mowlana 1994: 163). Moreover, among the Internet information sites created on the Internet, roughly two out of every three belong to a business already involved with the media. Nevertheless, this figure suggests that the growth of new media technologies has permitted the appearance, in a media form that is still poorly developed, of a significant number of new actors who are entering and modifying the local media landscape.

To elaborate on one such modification, there have been notable changes in language use on these sites. While the “traditional” actors have typically addressed their audience on the Internet in English as well as French and Arabic, the new actors favor English at the expense of the other two languages. The technical constraints, which are now completely identical for all actors, do not explain everything. In fact, a more precise observation of language choice, often linked to graphics, results in two general orientations that correspond to two different communication strategies. On the one hand, today the majority of the “cosmopolitan” sites directly introduce to the local region different models that were developed in other parts of the world that are more advanced in terms of new media technologies. On the other hand, a smaller group of sites where Arabic plays a much greater role (and is often the only language used) shows specific efforts to adapt the Internet to local conditions, especially in terms of graphics.

While the “cosmopolitan” sites remain dominant, it is increasingly clear that the predominantly Arabic sites are attracting an increasing number of users. In fact, large international sites like MSN (since November of 2001) and CNN (since January 2002) now offer their content in Arabic to facilitate reaching the local market.[24] In Lebanon as elsewhere, it is difficult to obtain reliable information about the number and frequency of web-site hits. In an emerging market that is still poorly regulated, one must view available figures with caution because the number of visitors at any given site may have been exaggerated as advertising budgets are determined by the number of people likely to be reached. Nevertheless, when the claims of the public and private Internet actors agree with the information available among specialists or with information suppliers, some general trends can be discerned. The number of advertising banners (which cost up to US $2,000 monthly for the best placements), the frequency of site update, and the status of advertisers (local businesses close to the company that opened the site or prestigious international organizations) are among the best indicators, as Lebanon is particularly active in the

advertising industry. The main Arab advertising agencies and the regional representatives for the large international agencies are in Lebanon, which is also where Arabad, the main advertising periodical, is published. Seen in this light it is clear that the sites that advertisers prefer are those of the principal local web-site portals, Cy- beria, Naharnet, and Yalta! as well as the sites of the major Beirut dailies.

Figure 5.1. The multilingual web site of Hizbullah's spiritual guide, Shaykh Fadlallah, has been redesigned more than three times since its opening in 1997. The earlier "oriental" touch has been replaced with this new welcome page, which integrates the graphic conventions of the Web with proper Arabic.

<[[http://www.bayynat.org/www/arabic/][http://www.bayynat.org/www/arabic/]]>

The importance of the local dailies is confirmed by the fact that after several years of activity on the Internet, Beirut's foreign-language press (the Daily Star and L'Orient-Le Jour) already attract a number of readers equivalent to their hard-copy circulation (8,000 to 10,000 visitors daily for the Daily Star, for example, with more than 1,000 people registered to use its on-line forum).[25] Admittedly, these publications are marked by their small local readership; their profitability is assured because these individuals are of high social standing, and the use of European languages makes them readily accessible to Internet users around the world. For the most part this has not been the case for the Arabic dailies, whose on-line readership increasingly resembles that of their print version. However, if the al-Nahar newspaper develops ambitious Internet projects, notably with the launch of its trilingual port, <[[http://www.naharnet.com][www.naharnet.com]]>, it is because its business managers know that the two or three thousand paying subscribers in the late 1990s are currently many thousands more and the number is rapidly increasing (Nagi Tueni, interview with Gonzalez-Quijano, September 2000).

Figure 5.2. Yalla! (Let's go!), a principal Lebanese portal directed especially to youth, illustrates the "cosmopolitan style": Arabic text is only provided through links and some ads, and the global emphasis of the home page is superficially adapted to local users, thanks to an agreement with ai-Manar TV, whose importance on the local media scene is thus confirmed.

<[[http://www.yalla.com.lb/NASApp/portal/YallaHome][http://www.yalla.com.lb/NASApp/portal/YallaHome]]>

In the aftermath of important political events such as local elections and bombings, web-site visits peak. In Lebanon, the May 2000 Israeli army withdrawal from south Lebanon created an increase of 60 percent over normal usage in attempts to connect to certain sites, forcing some servers, such as the one used by Hizbullah, to shut down to avoid attacks from

hackers).[26] Nevertheless, it is still the case that the number of on-line readers of the Arabic press remains small, especially if one takes into account the world daily information flow on the Internet. Even so, with the public informed by the local media and the small number of Arabic language Internet users, it can be noted that the usage rate of the on-line press, particularly among the elite, has become significant.

*** A “Small” Information Revolution

Now that the Arab world—or, more specifically, certain Arab states or certain sectors of the Arab population—seems to be entering the Information Age more than before, the case of Lebanon, whose regional importance has already been noted, suggests that the new technologies have accelerated the modernization of the local media that had already been underway for some time. Although the first Arab satellite television dates only from the early 1990s—the Middle East Broadcasting Company (MBC) began in London in September 1991—this development was preceded, as noted earlier, by the use of digital data transmission techniques by the Arabic- language press in the mid-1980s. The local media’s current Internet use highlights a certain number of current developments.

The case of Beirut does not significantly differ from what is happening elsewhere in the Arab world. The inevitable shift to new technologies has everywhere accelerated generational change. In every niche of the information industry, but especially in the daily press, the introduction of new technologies has been accompanied by a significant turnover of personnel. Journalists have been the first to be affected because the work styles accompanying the new technologies differ significantly from the earlier locally prevailing mode in which editorial commentary overshadowed new reporting. The current style increasingly approximates international standards for the on-line press, in which news content has become more important.

In a milieu in which social and professional mobility is rather limited, the new technologies have significantly accelerated the circulation of elites. The old guard of well-known writers have not adapted well to the specific format of electronic writing. A new generation of “inheritors” has been able to accede more rapidly to important posts on the basis of a technical competence largely acquired from abroad. Considering only the Beirut dailies, names such as Ahmad Salman (al-Safir), Nagi and Wadih Tueni (al-Nahar), Said Freiha (al-Anivar), and Majed Mneimeh (al-Liwa) come immediately to mind. They all belong to publishing families who have placed them in charge of projects for digitizing texts.

The winds of change are present in conventional enterprises, but they naturally blow much stronger in companies created thanks to the development of new technologies. These companies are often founded by emigre Lebanese professionals who have frequently trained abroad—like Ahmad Omari, the young founder of Cyberia, an Internet Service Provider that

currently dominates the Lebanese market and is also active in the regional market through contracts with Jordan, Saudi Arabia, and projects in North Africa. In their offices, which fully resemble those that can be found in the most modern Western metropolis, teams of young bilingual editors, in addition to technicians, webmasters, and businessmen, share the experience of returning to their country of origin in following the technological flow. Convinced that they are the pioneers of a future Arab Silicon Valley, the names that they have chosen for their sites—Yallah! (Let's go!) or even ThisisCy- beria—directly reflect their inspiration.

Under their influence, on-line publication has significantly contributed to spreading a new journalistic style that places more value on the sheer amount of information at the expense of contextualization and analysis. Linked to feedback from the public, which is more apparent thanks to increased interactivity—forums, e-mail, guest books, and surveys—the home pages of sites indicate a new information hierarchy of which one sees categories highly valued earlier for ideological reasons—foreign affairs, for example—lose their prestige in favor of more everyday concerns such as local, practical, or financial information.

The younger actors who are taking charge of publishing enterprises facilitate the implementation of strategies better adapted to the needs of a global digital information market. Throughout the Arab Middle East, the openness to new styles of information management is often associated with the rise in influence on the political scene of a new generation—for example, in Qatar, Bahrain, Jordan, and Morocco, and soon perhaps in Syria and Libya. Following this trend, the Lebanese press thus chose to go on-line in order to strengthen its ties with its foreign-based readership and, thus, at the same time minimize the costs of overseas distribution. This decision also corresponds to their aspiration to play a major role in a new regional and even global space, as well as to become the local relay for the global media giants. As a function of their own market position and their available political and economic resources, the various Lebanese media have opted for a style of modernization that permits them to retain and, if possible, to reinforce their market share at a time when the new media technologies facilitate a means of exchange that is specifically Arab in terms of language and interests. At a time of information globalization, this option remains open for a market that can develop only due to production costs that remain low—in a region whose strategic importance makes it a continuing political hot spot ("al-i'lam al-'arabi" 2002).

The convergence among digital media has opened the way to strategies of syndication already evident in several sites. When al-Safir made an agreement in 2001 with the Arabic service of the BBC, al-Nabar responded with an agreement with the Arabic service of Radio Monte Carlo, a particularly popular regional service, and by developing a radio version of its print newspaper. Television stations have adopted the same strategy and have begun to use pictures and texts from their broadcasts on the Internet. In terms of the success achieved by the al-Jazeera Satellite Television web site launched in early 2001—unquestionably the first Arabic web site, with around 12 million hits daily, capable of competing with the major international sites[27]—the major private Lebanese broadcasters lag somewhat behind. However, they have a different market strategy and the

Arab public values them less for their information than for their entertainment value. The “Arab street” recognizes these essential features through a word play based on the acronym of one of them, the Lebanese Broadcasting Corporation (LBC)—in Arabic, albisi (“Get undressed!”), alluding to the dress code of some of the female announcers!

An unexpected rival of al-Jazeera may be another Lebanese station situated in a south Beirut suburb, al-Manar TV, in spite of the fact that it plays on a register diametrically opposed to al-Jazeera—or perhaps because of it. Started in 1991 as an offshoot of a radio station close to the Shi'i resistance and becoming since then a formally established television station in 1996, al-Manar opened an Internet site in the same year. Having made its local reputation by televising videos taken by Hizbullah combatants fighting the Israeli army in south Lebanon, al-Manar sought to acquire a regional reputation, especially after it received authorization to broadcast via satellite. These transmissions began on May 24, 2000, the day that the Israeli army withdrew completely from south Lebanon. Perhaps to capture market share, the station sometimes sets aside journalistic scruples. In October 2001, for example, it televised video footage that it falsely claimed was taken in Afghanistan (Liberation, October 13, 2001). These methods notwithstanding, al-Manar appears to have gained an increasingly important audience, especially in the Arab Gulf, where it directly competes with major Arab stations such as Dubai television (for example, al-Sammak 2002). The Shi'i or, more specifically, Iranian flavor of these programs only partially explains the audience gains that observers attribute to its editorial slant, notably concerning the Palestinian conflict, as well as the quality of its generally open debates involving different opinions in the Arab world, including nonreligious ones. The success of its Internet site is evident in the fact that its owners had to add a new web-site address in late 2000 to accommodate the large number of users. However, this site, along with similar ones, frequently finds itself at the front line of an information battle between pro- and antiIsraeli web-site hackers. Al-Manar is also deprived—because of the close ties that it maintains with Hizbullah (as a local ISP called “Destination”)— of advertising revenues from American companies such as Microsoft and Amazon (“The Odd Tale” 2001).

In sum, the rise of a media player such as al-Manar TV, which focuses on issues specific to the region, is even more significant than the presence of the Arab media giants so well represented in Lebanon. No doubt these “giants" are aware of the important changes, but they have not significantly altered their relationship with the political authorities. Although modernized and consolidated through regional and international alliances, the local media remain indentured to local financial circles and to technical networks over which the state authorities retain significant control. Even if a broadcaster such as al-Manar TV knows how to take advantage of Lebanon’s local political context to develop (like LBCI and Future TV), its placement on the media scene situates it amid new categories of actors who have appeared with the spread of new technologies. Their goal, that of reaching wide audiences and, if possible, to spread their worldview, may no longer be merely a utopian dream.

*** New Uses for Media

Jon Anderson (1997) stresses not only the technological but also the social stakes of the Arab information revolution. One conclusion to draw from an analysis of new media in Lebanon is the emergence, albeit still modest, of new media uses. Some signs of this are already apparent among the professionals who supply a good part of on-line information, but it is at the other end of the communications spectrum, that of the public, where one must look for more telling examples.

In a country like Lebanon, where political and even moral censorship is lighter than elsewhere—without being totally absent—the Internet contributes significantly to the trend underway since the introduction of new media technologies of diminishing the control that state authorities can exercise over the circulation of information. These openings are realized by various sites such as the Campaign for Good Governance ([[http://www.cggl.org][www.cggl.org]]) and by El-Sohof ([[http://www.elsohof.com][www.elsohof.com]]), a site maintained by young, local journalists who critically monitor the media. In a less formal manner, they express dissident opinions while creating new forms of political and social mobilization. Even on the web sites of the conventional press, sensitive stories are sometimes available, even if only in the form of links to other web sites. Gradually, under the influence of technical developments that range beyond the transfer to screen of reproductions (usually in PDF format) of print editions, the content of on-line editions is becoming independent. Following the trend of the foreign language press, often more liberal in tone than its Arabic equivalents—the case of the AI-Ahram Weekly is a prime example—the on-line press benefits from a greater degree of freedom, largely due to the nature of its readers. They feel freer to express themselves in the on-line forums associated with the majority of sites.

The anonymity offered by the various forms of digital communication is one of its strong attractions. Sheltered from the negative consequences associated with free expression in other contexts, Arab internauts do not shut themselves off in a virtual universe. Instead, they take advantage of the new spaces for exchanging ideas to contribute to public discussion. Polls that directly tackle taboo subjects, chat rooms focusing on political and religious issues as well as relations between women and men, and e-mail messaging services offered by different sites,[28] suggest the need felt for more open discussion on many issues. Because these web sites offer the opportunity to compare different sources of information, intensify the (virtual) coming and going between different local and international places, and transcend physical and intellectual barriers between political worlds previously sealed from one another—for example, exchanges, including hostile ones, between Arab and Israeli Internet users—the new techniques have been taken up by sectors of the population, such as women, who were earlier barred from public expression.

In grafting a horizontal communication network onto the traditionally vertical one of the traditional media, the Internet no doubt contributes to bypassing the older elite hierarchies to widen communications with a public that is only beginning to be envisaged. Because of the new media technologies, new understandings of the world are becoming increasingly accessible, including in a material sense. Digitalization expands, with the addition of sound and images, the limits of textual readings which gaps in the educational system make

difficult for many people. In contrast to the nahda (“renaissance”) and the earlier print revolution in the Arab world during the second half of the nineteenth century, partially held in check because of difficulties in integrating the Muslim cultural and religious heritage (Graham 1987: 165), the experience of a country such as Lebanon offers hope that the entire region is on the verge of taking part in the new age of communication and information in a positive way.

*** NOTES

The research for this chapter was conducted during four periods of field study in Beirut between January 2000 and June 2001. The data, brought up to date wherever possible, is presented in more detail in Gonzalez-Quijano (in press).

[15] The program developed by the firm Diwan (London) in late 1985 for Apple Macintosh. In its more advanced form, it remains the standard program for Arabic (see <[[http://www.diwan.com][www.diwan.com]]>). However, this situation may change due to the technical constraints of Internet browsers, mainly Microsoft’s Internet Explorer.

[16] The site <[[http://www.mafhoum.com][www.mafhoum.com]]>, which is not limited to Arabic-language publication sites based in the Arab world, contains more than 600 addresses.

[17] “Over 3.5 millions Arabs accessing the Net, according to Ajeeb.com survey,” a study published March 25, 2001, on the portal <[[http://www.ajeeb.com][www.ajeeb.com]]>. This portal was started at the end of 2000 by the company Sakhr (founded in 1982), a pioneer in Arabizing information technologies ([[http://www.sakhr.com][www.sakhr.com]]).

[18] As suggested in work published by the American University in Cairo’s Transnational Broadcasting Studies ([[http://www.tbsjournal.com] [www.tbsjournal.com]]).

[19] LBCI, founded by the Lebanese Forces (a Christian militia) in 1985, is now controlled by politicians known for their good relations with Syria. Future TV, as well as the daily Al-Mustaqhal and Radio-Orient (based in Paris but relayed in Lebanon) were created by the Lebanese prime minister, Rafic Hariri, who remains one of their principal shareholders. Al-Manar TV, founded in 1991 during Lebanon’s war against the Israeli occupation in south Lebanon, was legalized under the pressure of the Hizbullah Party.

[20] At one point in 2001, monthly rates were down to US$10 due to a price war between providers, but prices later increased. However, in the absence of strict regulation, there are many local arrangements, especially the use of illegal but tolerated cable links (see “Kayfa nasilu” 2002).

[21] For example, see <[[http://www.snobmagazine.com][www.snobmagazine.com]]>.

[22] The only recent example of censorship occurred in April 2000, with the trial of Kamal El Batal, the head of a human rights organization, and Muhamad Mugraby, the owner of the ISP “Destination” (which has Hizbullah among its clients). The proceedings, formally undertaken for reasons of public morals (the offense was that “Destination” intended to host the site <[[http://www.gaylebanon.com][www.gaylebanon.com]]>), ended with a lenient judgment. Nevertheless, the political interference with the press was clearly evident. See “Documents” on the web site for Campaign for Good Governance in Lebanon ([[http://www.cggl.org] [www.cggl.org]]).

[23] Al-Hayat can be found at <[[http://www.alhayat.com] [www.alhayat.com]]> and <[[http://www.daralhayat.com][www.daralhayat.com]]>; Al-Nahar can be found at <[[http://www.annaharonline.com] [www.annaharonline.com]]> and <[[http://www.annahar.com.Ib][www.annahar.com.Ib]]>, not to mention the portal opened by the press group <[[http://www.naharnet.com] [www.naharnet.com]]>. The web site for the town of Tripoli, in the north of the country, <[[http://www.tripoli-city.org/news/index.html][www.tripoli-city.org/ news/index.html]]>, gives excerpts from three local publications.

[24] This decision, taken in the context of the post-September 11 world and the war in Afghanistan, coincides with the launch of American media endeavors designed for the Arab public, such as the youth-oriented FM radio station “Sawa” (Together) on the Arabian Peninsula.

[25] Information given by various sources and confirmed by Ali Mneimeh, the webmaster for the Daily Star (personal correspondence, June 2000).

[26] At the time, the local press (see al-Safir, June 6, 2000) believed there had been 500,000 visits to Hizbullah’s web site. On information warfare in the region, see “Hasilat ‘amm” (2000).

[27] Al-Jazeera’s webmaster claims 41 million daily hits following September 11,2001 (al-Makki 2002).

[28] The significance of e-mail messaging services was indicated when the web portal <[[http://www.maktoob.com][www.maktoob.com]]> reported in June 2001 that its messaging service had more than a million members, or one-third of all Arabic-language Internet users.

** 6. Muslim Identities and the Great Chain of Buying

Gregory Starrett It is obvious how economic goods satisfy physical

needs such as those for food and shelter; less evident, but of overwhelming significance in understanding modern society, is how merchandise can fill needs of the imagination. (Williams 1982: 65)

The protean capacities of new communications technologies are quickly making their way into the popular imagination through political speeches, phone company advertisements, and the anxious experiences of information workers threatened with obsolescence. Among Muslim groups, such technological and market-driven changes in information distribution have very diverse effects. It has been argued (Eickelman 1985, 1992; Roy 1994; Sardar 1993; Starrett 1998) that such obsolescence has to some extent already begun to overtake traditionally trained indigenous religious intellectuals in urban areas of the Middle East as growing literacy rates, publishing, and changing discursive practices bring growing numbers of literate citizens into public debates on religious, social, and political questions. But for African-American Muslims, who have not experienced Islam in the context of comprehensive institutional orthodoxies, issues of counterhegemony currently so important in the Arab world (Eickelman and Piscatori 1996; see also Dannin 1996), are often less significant than

creating a Muslim identity in the first place through forming a community with its own body of knowledge and interpretive traditions.

The process through which new technologies and channels of information distribution come into play is one of creating a space for the production, appropriation, and consumption of intellectual commodities. Since the mode of consumption of such products is not a simple function of their availability, we need to study the way specific communities acquire and use information media and to understand this “consumption . . . [as] a key instrument in . . . the creation of. . . particular social relations and group identity” (Miller 1987: 204). Group identities and the public spheres in which they are negotiated are increasingly mediated by such consumption practices. A suggestive example of the way information and material goods help construct new publics has been provided by historian Colin Jones (1996), who writes of the change over the course of the eighteenth century in French notions of social order, especially the shift from a view of social institutions as hierarchically arranged in a vertical chain whose topmost link was in the hand of the king to a view “horizontally disposed: grounded in human sociability and exchange, . . . positfing] an open and relatively egalitarian social organization [which] undergirds a commercial society” (Jones 1996: 14). Imagining these horizontal linkages as a “Great Chain of Buying,"[29] he discusses a new kind of product in the latter half of the eighteenth century: weekly provincial advertising newspapers that addressed different classes, occupations, and localities as one consuming public. The commodification of culture and its circulation through these newspapers established “new links that transcended geographical localism, social particularism . . . and occupational restrictiveness . . . (through) the social and cultural capillarity” of advertisement (Jones 1996: 26). Jones’s image also suggests senses in which contemporary Muslim communities are formed through the cultural appropriation and consumption of intellectual goods. Following a brief overview of the nature of these products obtained through the market, this chapter examines an inventory of intellectual goods and how they are coded and used in an African-American Muslim community in the Southeastern United States.

Globally, the sheer scale of information on Muslim topics is enormous, taking advantage—to point in only one direction—of Anglophone publishers and research and educational foundations in Britain, Nigeria, Malaysia, Pakistan, and North America. A broad indicator of the availability of intellectual goods in this marketplace is the most recent catalog of the Iqra' Islamic Foundation in Chicago, which lists 250 titles in English and Arabic. One can also order an entire pre-packaged K-6 curriculum, including books, charts, and curriculum guides for setting up an Islamic school. Islamic Publications International, based in Teaneck, New Jersey, lists nearly 1,500 book titles and offers 250 videotapes, as well as Qur’anic CDs, perfumed oils, inspirational plaques and bumper stickers, T-shirts, calligraphic watches, three-dimensional models, posters and jigsaw puzzles depicting the mosques in Mecca and Medina, greeting cards, board games, and computer software, including Qur’an and hadith databases, and computerized aids to Arabic learning. Other companies, like Chicago’s SoundVision (the media arm of the Islamic Circle of North America), produce and distribute specialty videotapes for children, as well as computer software like SalatBase (prayer base), and a new serial publication. Young Muslim. Arabic-language

Islamic software, including games, databases, and interactive guided tours of the Pilgrimage sites, are available from Egypt through distributors in the Middle East, Malaysia, Indonesia, Britain, and North America.[30]

Given the linguistic, socioeconomic, and cultural diversity of the Muslim world, the flow and spread of these products into different communities is necessarily uneven. Geographical and ethnic origins, wealth, taste, tradition, education, association membership, community structure, and other factors influence the availability and use of Muslim intellectual commodities. For African-American Muslims, links to this market are forged primarily at the household level, as religious media—primarily books and videotapes—are purchased with personal funds and shared with other community members in the mosque, which serves as a public forum where the use and interpretation of these commodities are negotiated. At the same time, the gradual construction of an inventory of communally held intellectual commodities and practices is shaped by multiple links to a wide range of non-Islamic media.

*** Communities of Knowledge

In the United States, a number of African-American Muslim movements have developed during the twentieth century (see Haddad 1991; Haddad and Smith 1993, 1994; Waugh et al. 1983), each of which has constructed a unique relationship to the texts and traditions of the wider Muslim world, often in competition with one another. In 1975 Wallace D. Muhammad, the son of the Honorable Elijah Muhammad, succeeded his father as leader of the 44-year-old Nation of Islam (NOI). Diverging sharply from his father's precedent, Wallace Muhammad embarked on an Islamization program that repudiated the racial separatism of the NOI and sought to bring the movement into line with international Islamic practices. In 1976 he renamed the organization the "World Community of al-Islam in the West" (WCI), isolating and demoting some of his father's associates, including Louis Farrakhan, who revived the Nation of Islam in 1977 under his own leadership and promised to remain true to the legacy of Elijah Muhammad. In the ensuing years, Wallace Muhammad's WCI was renamed, first as the "American Muslim Mission" and then as the "Ministry of W. D. Muhammad, Muslim-American Spokesman for Human Salvation." W. D. Muhammad's movement began to benefit from close relationships with international Muslim and ecumenical organizations, the leaders of some of the Gulf states, and even the U.S. government, which had so assiduously spied on and persecuted its predecessor, the NOI, throughout the 1940s, 1950s, and 1960s as a perceived threat to national security. In part because of the movement's historical origin and in part because of ethnic, class, and political differences, many immigrant Muslim groups are suspicious of W. D. Muhammad's Ministry, stereotyping it as a prison ministry and not to be mistaken for "real" Islam. W. D. Muhammad's followers, on the other hand, consider themselves victims both of Farrakhan's ethnic separatism and of the general misunderstanding and suspicion of Islam in the West.

According to W. D. Muhammad’s followers, the extent and development of the NO1 has been retarded because little of its theology and practice is shared by the world Muslim community. NOI members, they say, are not taught proper Muslim prayers, fasting during Ramadan, or Arabic. There is a rumor, though, that a cadre of leaders close to Farrakhan has this knowledge but does not share it, either with the mass of the believers or with visitors. One former member recalled that NOI centers ran public religious services in ground-floor meeting halls and afterward held different private services in the basement for members only. Such secrecy confirmed for him that the NOI, unlike the Ministry of W. D. Muhammad, has something to hide from the rest of the world. The right to speak authoritatively about Islam is tied to the issue of free access to knowledge, both on the part of local community members and on the part of the world community.

The Masjid al-Nur of al-Islam is a local affiliate of the Ministry of W. D. Muhammad, occupying a rented clapboard building on a corner of a main thoroughfare through the African-American section of a mid-sized city in the Carolinas. The street has been the site of thefts and narcotics sales, and since only a handful of the 100 or so families who belong to the masjid actually live in the surrounding neighborhood, the directors plan a move to a recently acquired three-acre lot in a better location. Members feel that their young community is still growing from the kernel planted in 1975. The head of the Education Committee, Brother Shaheed Bilal, told one of his classes that

We’re still pioneering (here). We’re not established. You’re established when everybody knows when the ‘Id is, when they put it on the calendar like Christmas is or like Rosh Ha Shana or Hannukah is. They had an ‘Id at the White House last year, and you’d think if Bill and Hillary are getting in on the act, someone would be smart enough to put the 'Id on the calendar. But because we’re just establishing Islam here, we really ought to give more [in sadaqa and zakat, to build up the community]. (September 15, 1996)

The masjid hosts activities every day. On Tuesdays there are adult Arabic classes, taught until recently by a Mauritanian graduate student from the Sorbonne who had married a local woman. Thursday is for committee meetings, Friday for collective prayer, and Saturday has social activities and seminars, including a Sisters class. On Sunday, there are three levels of regular classes for children and adults. From 10:00 a.m. to noon, a preschool and an elementary Islamic school operate simultaneously in the mosque’s main room. The younger children draw, write, and listen to stories read by Sister Kenyatta, a young graduate of one of the state’s historically black land-grant colleges who is taking graduate courses in education at the local urban university to complete her teacher certification. The Islamic Sunday School, for older children, is taught by Brother Bilal, a public middle-school teacher who recently relocated from Georgia. From noon to one o’clock, there is an Orientation to Islam class for new believers (many of them former NOI members, some new Muslims, others curious members of the local black community). Finally, from one o’clock until the mid-day prayer, Brother Ansari holds a hadith class where new and more advanced students study the sciences of evaluating and interpreting the traditions of the

Prophet, using chapters photocopied at his own expense and books purchased from a home-based book distribution business operated by one of the Sisters.

In contrast to those of the other two Islamic centers in town, the library at the Masjid al-Nur is tiny. It holds a dozen copies of the Saudi reprint of Pakistani A. Yusuf ‘Ali’s translation and annotation of the Qur’an, a two- volume hadith collection, and four or five Arabic reference works on morals and theology. Also on the shelves are a set of Funk and Wagnall’s Encyclopedia, an English dictionary, and a student writing manual. The collection in the adjoining Sister Clara Muhammad School office is far more extensive.[31] Aside from a single copy of the Qur’an and a few Arabic workbooks and dictionaries, the collection consists mostly of general-interest books and old college texts from the 1970s. There are do-it-yourself legal manuals, IBM CAD and OS/2 manuals, tax and test preparation guides, several books on basketball and baseball, a dozen or so children’s picture and story books, four identical fuel-injection manuals, a text on film criticism, four volumes on “Insect Life” first published in 1890 and harvested recently from a used book store, and a row of thirty trade paperbacks ranging from Nietzsche’s Genealogy of Morals to The Book of Lists. The collection was mostly donated by Brother Bilal.

The bookshelves also hold stacks of twenty different photocopied documents. Two are school planning and fund-raising documents outlining plans for the establishment of a full-time Islamic school; the other eighteen are 11" x 17" copies of material from children’s books meant to be folded in half and used as worksheets: Islamic crossword puzzles, charts outlining activities that Islam discourages, color-in Arabic calligraphy and transliterated Islamic phrases, Td songs. There were excerpts from more advanced books on the Caliphs ‘Umar and ‘Uthman, tips for “Raising Your Child with Faith,” and a dot-matrix printed sheet of advice on “The Selling of Our Children—Coping with Commercials.” These materials were compiled for an intensive two-week Islamic day camp held in mid-summer and are not currently used in Sunday School classes.

On shelves to the right of the book collection are the school’s videos. Three two-volume sets of “Religion and Politics in Contemporary Society” show Imam Muhammad’s guest lecture at The Citadel earlier this year. A video featuring an African-American woman storyteller stands next to two nature videos, one taped from broadcast and the other the introductory piece to a Time-Life subscription series, two videos about the history of baseball, episodes from the civil rights series Eyes on the Prize, a video biography of 1920s dance sensation Josephine Baker, two copies (either taped from broadcast or copied) of “The Book of Signs” about scientific knowledge in the Qur'an, and a copy of “The Furthest Mosque,” about the history of Jerusalem and al-Aqsa mosque. There are two purchased Islamic videos: “Salam’s Journey,” an animated cartoon about the evil king Abraha, who tried to destroy the Ka‘ba in the sixth century, and “Fatih,” a two-hour animated epic produced in Turkey and dubbed in English, chronicling the collapse of Byzantium at the hands of the rising Ottoman Empire.

More tapes are expected soon. The school has more than one hundred dollars' worth of the Adam's World series on order from Sound Vision. Bilal was impressed when he saw some of the series on cable television during a visit to Washington. The AW series features a bright green, red-headed Muslim muppet and his multi-ethnic friends learning about Islam while traveling about the Muslim world courtesy of Adam's high-tech Trans-Visualizer, all while producing a basement talk show with famous and not-so-famous Muslim guests. Alphabet songs, segments about the wonders of nature, plays illustrating Islamic values like honesty and courage, and Adam's fantasies about what he'll be when he grows up (Adam the Wonder Journalist), alternate with Adam reading Islamic children's stories and folksy songs about prayer and pilgrimage.

Videos, though, are special and infrequently used. In weekly classroom use, the more usual instructional aids are books, which come and go as personal copies in the briefcases of the teachers. The range of texts in use both privately and in class enforces a continual interpretive project in public discussions. Bilal, Ansari, and other visiting teachers bring books from their home collections—from the Anglo-African Islamic Foundation's Islam for Children, Short Suras, and The Promise, to hefty tomes of scholarship for adults—and read excerpts or use them as references for the class. Adult students in the Orientation to Islam class, too, often bring books they have come across in stores or ordered through the mail. Bilal warns them constantly that they have to take secondary works and translations with a grain of salt and that even the best English translations of the Qur'an are flawed. "You've got to learn the Arabic," he tells them, even if only well enough to look up a word here or there in Hans Wehr's Dictionary of Modern Written Arabic. One day an adult student was comparing two paperbacks before class, one of which Bilal had recommended some weeks before, the other of which he had brought with him from his former home in Philadelphia. The two books presented such different English texts of the tashahhud, the ritual statement of intention to pray, that he brought them first to me and then to Brother Bilal, who initially attributed the difference to translation. But closer inspection revealed that the Arabic texts were not the same either. Checking the publicity statements on the back covers, we discovered that the student's older book was a reprint of a work originally published by the Ahmadiyya, an Indian Muslim movement that had done significant missionary work among African-Americans in the 1920s. Bilal shook his head. "There shouldn't be any sects or schools in Islam. That's why we left the Nation. Sometimes there are just different versions of what you say. Basically, I suppose either one's fine. The important thing is their statement of intention."

Working with texts from multiple sources creates other uncertainties as well. The use of English as a lingua franca of the world Muslim community (see Metcalf 1996) disperses texts far beyond their original target markets, sometimes rendering incomprehensible ideas and ritual requirements that have been translated into local terms. During one discussion of zakat during the Orientation class, Brother Bilal produced from his briefcase the paperback Elementary Teachings of Islam, an unusual Indian volume written by Maulana Abdul-Aleem Siddiqui in catechistic, question-and-answer format. "Now," he said, "about specific items you have to pay zakat on, the book says, 'You should pay on gold in the amount over—' . . . hmm, the note gives the equivalent of

‘Pakistani tolas,' but I have no idea what a Pakistani tola is. This doesn’t do me any good.” He sighed, looking up at the audience.

You see, that’s why we need to have something for America.... We’ve got a lot to do, and we’ve got a road to pave that nobody’s ever paved before. In every area there’s plenty of work for us to do. When a Muslim intends to do something, he seeks to perfect it, that’s what the Prophet said. Do it so nobody could come behind you and do it any better. . . . We need to do one of these zakat tables for the United States. Hardly anybody owns goats anymore! We need to put together a zakat information package so that when new believers come and convert over from Christianity, they know. Right now they think it’s the same; you just give over ten percent of your check.

He called on Brother Karim, an accountant and construction contractor who serves as the mosque’s treasurer, to form a committee to put together an easy-to-use zakat table and contribution form so that members could understand how their financial obligations to the community are part of their ritual obligations as practicing Muslims.

*** Mediations of Knowledge

Creating a community of correct practice is one way in which the mosque works to distinguish itself from the Nation of Islam and to integrate itself with the world Muslim community. In support of correct practice, a community of reliable knowledge has to be forged and expanded,[32] and as part of this project, the mosque’s educational programs deal both with the specifics of Islamic tradition and with the character of knowledge itself. The Sunday hadith class, for example, offers a substantive review of Prophetic traditions and a course in epistemology. For several weeks the teacher. Imam Ansari, distributed photocopies and read to his students from the book Hadith Methodology’ and Criticism, both about the process of hadith verification and about the way the Prophet distributed knowledge to the Believers during his lifetime. First, the Prophet did so orally, repeating important parts three times so that his companions might remember. Second, he did so through writing, including letters and treaties dictated to the forty-five scribes who recorded his words. And finally, he did so by means of practical demonstration. “Islam is easy,” Ansari assured the class,

because it’s natural. It agrees with your nature. The Qur’an is the manual for all human beings. Allah sent the manual, but also sent a demonstrator, Muhammad. He was a Qur’an. A living, walking, talking Qur’an. You should emulate the Prophet in your actions, in your speech. You should always carry the Prophet inside of you. We need to have a course on the Companions—and that way we’ll learn that we are the Sahaba—we’re his companions, in their place, and we have to do what they did. (September 15, 1996)

The Prophet was both an embodiment of Qur’anic knowledge and, through his behavior, a commentary on the Qur'an. In studying this behavior and thus being the companions of the Prophet (Metcalf 1993), members of the community are bound in turn to share their knowledge with others, particularly those who are less involved with activities in the masjid. “There are a lot of Muslims walking around out there who don’t come to these classes,” Bilal told the Orientation students, “who don’t hear what we’re saying, who don’t know this. People need to know’ this stuff, and it’s up to you to tell them” (28 September 1996). “Islam is the way to go for human beings,” he had said two weeks before. “Allah’s trying to show you; he shows you the signs. Some information can renovate your personal life and then the whole community. Use the information we give; we’ll run off some copies, but don’t hog it—spread it around.” In the children’s Sunday School class, a visiting teacher, Sister Khadija, repeated the theme. “Knowledge increases your faith,” she explained.

“As we walk through our lives, this is what Allah has given us. We have to think about garments not just as shirts and shoes, but as knowledge. Knowledge gives you a protection and a covering. Faith gives us the shahada, and prayer, sawm, zakat, hajj. The things Allah gives us should be as close to us as a garment, to protect and cover us. You have to guard your own soul first, and then you are responsible for guarding the souls of families and others around you. What are you supposed to do with knowledge?”

“Practice it,” suggested one student.

“Recite it,” offered a second. “Study it,” answered a third.

“And aren’t you supposed to teach it, to give it to someone else? That’s the worldview. You’re not supposed to just keep it, to see how big it makes you, but to share it with others.” (October 27, 1996)

In both children’s and adults’ classes, these oral and personal channels for transmitting knowledge of the sacred tradition are supplemented by, and refer to, media outside the domain of Islamic intellectual production, including general newspapers, movies, television, public school textbooks, mass-market paperbacks, and the signs of nature. Experiences at meetings and conventions, local and national news stories, television series, and films stimulate discussion of the global values shared with other Muslim nations, as well as considerations of the difference between American and foreign Muslim contexts.[33] Both teachers and students use such examples, which rely for their force on the assumption of common knowledge of extra-scriptural media.[34] Illustrating the necessity for self-control during Ramadan, Bilal told adult students that they needed to control their environments so as not to fall into tempting thoughts during the fast. If you fall asleep watching a football game and wake up with the lithe dancing bodies on “Soul Train” staring you in the face, he said, you’ve got to get up and turn it off. You can’t predict when Satan will slip through the

cable on the back of your television set, he argued, but you can control whether or not you listen to his whispering. This is a media culture, and the market is evoked as one context of Islamic messages.

Teaching the children about etiquette on another occasion, Bilal told a story from David Carradine’s 1970s television show Kung Fu. The children knew the series well enough to remind him of the name of the Chinese temple—Shaolin—where the action took place. The week before, a discussion of proper dress had included a hadith condemning cross-dressing, which ignited an unprompted and enthusiastic student recital of examples from the media, from basketball star Dennis Rodman to transvestite pop-culture figure RuPaul. As an extreme example of the moral degradation manifest in the practice of men wearing women’s covering, one student eagerly recited details from the 1991 Jodie Foster/Anthony Hopkins movie, Silence of the Lambs, in which the male villain constructed a body suit from the skin of his female victims.

Even though the mass media and its referents provide useful fodder for religious critique (Moore 1994), the media should also confirm and amplify positive understandings gained through public discussion. When an adult student asked whether there was going to be an advanced class after the Orientation to Islam was completed, Ansari replied, “Listen to the Imam [W. D. Muhammad]. He will take you where you want to go. His teaching is precise, clear, simple. Imam Muhammad is an advanced Islamic class: listen to him on the radio on Sunday. Attend his class on WBAV 1600, every week” (September 8, 1996). If Imam Muhammad is a person, a class, and a radio broadcast all at once, this is in part because the lines between the media of knowledge are permeable. They include not only intellectual commodities like books and the technologies of broadcast, but also, according to mosque members, the signs of the human body and the observable structure of God’s creation.

*** Lord of All the Systems of Knowledge

Media used in the classroom are broadly merged under a common purpose and a conception of their source in God. On a flyer tacked to the bulletin board of the mosque’s anteroom, one of the state functionaries of the Ministry's Office of Public Relations makes this point theologically in stressing the importance of the Sister Clara Muhammad School as a basis for community building:

Prophet Muhammad said it best: “Knowledge is the lost property of the believer.” Imam W. D. Muhammad has recently given a new and clearer translation for the Qur’anic verse, [U]al-hamdu li-llahi rabb al-'alamin.”[35] Imam Mohammed translates this, “Praise be to Allah, Lord of all the Systems of Knowledge."

This new label for God is starting to circulate beyond the Ministry's flyers and is gaining currency in public discussions. Anything with instructive value is fair game, whether it is specifically "Islamic" or not, and consequently, instructional themes range widely. The Islamic Sunday School begins each week with twenty to forty-five minutes of Arabic, using elementary workbooks for learning the alphabet and vocabulary. It ends with a story read from a Muslim children's story collection or from Aesop's fables, or told by the teacher. These are usually focused on the theme of leadership. Otherwise, science, Islamic history, and etiquette are treated as interchangeable subjects, all unified ultimately through their relationship to God, as the Lord of all the systems of knowledge, and the needs of the community He established.

This theme is also developed by appropriating additional material for the classroom. For the first few weeks of the fall semester, Brother Bilal assigned homework not only from the Arabic workbook but also from the Jurassic Park Puzzle Book, a short volume of logic, mathematical, and word puzzles (anagrams, word searches, crosswords) based on the 1993 Steven Spielberg blockbuster movie, which he had purchased in bulk from a local discount store. He discussed scientific method with the students and told them to use their own minds to find out about the world, including topics like the life of the Prophet. "You have to check it for yourself to see if what people tell you is true. Don't just believe me when I tell you something. Think about how you would check on it, verify it, research it" (September 15, 1996). On other days he brought in large-format (18"x 24") photo books he used for his sixth-grade public school class on topics like The Rain Forest or Recycling. "What's science?" he asked the children. After they mentioned technology and finding out about nature, Bilal confided to them.

Now, I can't say this in the public school, but I can tell this to you all: science is the study of Allah's creation. Science is the study of Allah's creation. Any word you see with an "-ology" at the end is part of science. Like biology, the study of life. Ecology, the study of how living things relate to each other. And that includes people as living things.

He showed them the photo book on recycling, counseling them to get their parents to use the bright plastic recycling bins the city provides for cans, bottles, and paper. "Allah designed the world," he said, "in a way that everything gets recycled back to where it came from. Allah has put a recycling system in nature. A lot of recycling systems. One of them is called the Water Cycle...." "I teach the children about science," he told me later, not only to provide extra attention to children the public schools define as at-risk, but "because 1 want to show them the unity of creation and how they can understand it. 1 want to show them that God is mathematics."

The unity of God, the unity of creation, and the consequent importance of science and knowledge are themes that consistently run through public discourse at the mosque, drawing on and tying together various media and sources. "We need to have a workshop on diet and nutrition for Muslims," Bilal told the adult students:

There’s a book out called Medicine of the Prophet; you should have that. Any food mentioned in the Qur'an is good for you. Lentils, cucumber, olive oil. In fact, everything that’s in the earth is in your body: gold, silver, phosphorus, magnesium—and you need all of that to be a healthy adult. (September 28, 1996)

He had drawn this latter image from one of his favorite videos, “The Book of Signs," a lavish 1986 production of the Regional Da'wa Council of Southeast Asia and the Pacific. Narrated by Briton Robert Powell, the video was approved by the Malaysian Prime Minister’s Office, a Saudi da'wa council, and al-Azhar University in Egypt. It is based on a book by Frenchman Maurice Bucaille, which details the parallels between the Qur’anic worldview and that of modern science, asserting that the Qur’an anticipates modern knowledge of everything from embryology to meteorology. Islam, one with human nature, reveals its plan through the signs of the observable world. “When Jibril told Muhammad, ‘Read!’," Bilal told his adult class,

He didn’t have a book to read, so what did he read? What was the angel telling him to read? Read Allah’s creation! Read the sunrise, read the world! Jibril is not talking about a physical book; he's talking about the creation. When we start kids in school, they don’t know how to read, so we start them off with picture books. There were slaves that couldn’t read, but they could read the north star, to keep the star in front of them as they walked to freedom! (September 28, 1996)

Being encouraged to read the natural world as they might read a book bestows a measure of interpretive authority on each member of the community and not only frees them to deepen their own understanding but makes them responsible to enter into discussion with other community members in the context of the mosque as a public forum. A young substitute hadith teacher, weaving together a complex set of images comparing the sun and its planets to the Ka’ba and its pilgrims, explained that “God’s creation shows the virtue of taking one’s place and allowing others to have their place. You have to know who you are, have your culture and let others have theirs. The sun is symbolic of God’s light and also of our work enlightening others through spirituality.” And not only the natural world, but the body especially, is a sign of God. When a local Muslim politician substituted in the Orientation class one day, he elaborated on the meaning borne by the body:

God doesn’t pay attention to the intellect, he pays attention to the heart, to the human sensitivity. You see, your body is a sign. But the sign won’t be held accountable on the Day of Judgment. The body is Muslim; in fact, on the Day of Judgment the body will testify against the soul; the body is made to follow the soul. So when you see, move toward the light. Don’t go back! (October 27, 1996)

Being Muslim, the body will follow Islam naturally. The soul, on the other hand, is subject to temptation, to error, to falling away from the truth. “The Qur’an says your body parts will testify against you on the Day of Judgment,” the substitute hadith teacher agreed. “You need to think about the symbolism here. The hand, for example, is symbolic of your actions; your arm is symbolic of your power. Take the literal meaning, but don’t be limited by that literal meaning” (December 8, 1996). Others contrasted this ongoing interpretive project, the continuous intellectual challenge of Islam, to the emotionally expressive tradition of black Christian churches. “Part of the reason I became a Muslim,” Bilal told the adult students, “is because it gave me academics, and it gave me knowledge, and it gave me facts. It’s not about emotion. Lots of things can make you feel good. If I just wanted to feel good I could go to a nightclub!” (November 7, 1996). Another hadith student agreed:

When Allah says, “submit,” you’ve got to submit everything. You have to become a scientist when you become a Muslim. You have to have a whole curriculum. Give up your Afrocentric way of thinking, give up your whole way of life, and submit. Everything is a schoolhouse for Muslims. You have to become a storehouse, submit not only to the rituals, but you have to study, establish a community, be the pioneer, the forerunner, rewrite everything. (December 29, 1996)

*** Offshore Investments

Not everything can be easily rewritten by the growing Muslim community. There are communities and cultural networks already in place whose boundaries and intersections—whether local or international, ethnic or confessional—require effort to cross, adjust, exploit, or transcend. One of the links strengthened through participation in a globalized market for Islamic intellectual commodities is an investment of identity in the larger Muslim world. In making this investment, the followers of W. D. Muhammad are forced into a complex series of negotiations with the local African-American community, with the imagined community of Africa, and with the larger Muslim community, both regionally and internationally. “I don’t even like to say ‘American Muslim,’” Bilal explained to the adult students,

because I don’t like divisiveness. Or “Black Muslim,” like the Nation of Islam. One of our brothers went to Pakistan, and while he was there, they were always talking about a Muslim writer named Maududi. It was Maududi this, and Maududi that. Maududi represents a leader for them, like the Grand Mufti of Russia who was here visiting the States a while back. These people represent different communities. Now, I have to accept other ways of doing things, [but] I don’t have to be an Arab to be Muslim or eat camel meat to be Muslim. African-Americans have a unique problem. There is an Islamic culture. We don’t eat pork. But in the plantation culture we were taught to eat everything off the pig—the feet, the intestines; and it’s a real adjustment. (December 8, 1996)

National, regional, and local identifiers, whether writers, leaders, clothing, or culinary traditions, set communities apart from each other, despite belief in a transcendent Islamic culture. Different expressive and consumption habits provide students with points of articulation to different communities. The boys come to class in winter coats emblazoned with NFL logos, while Amina, the one girl in the Sunday School, covers her hair with a plain white scarf like one of her Arab sisters might. When a class on appropriate dress turned into a discussion of cultural differences in bodily decoration, some of the boys described the scarification rituals undergone by immigrant acquaintances from Nigeria, and Amina gasped, "I sure am glad I'm not from Africa!" (December 8, 1996). Similar sentiments expressed publicly have recently caused controversy in local African-American communities (Young 1997). But particularly where multiple orders of identity are in play, the sense in which any of them are local or transnational, authentic or authoritative, becomes problematic (Eickelman and Piscatori 1996: 149-55). In a June 7, 1996, sermon in Philadelphia, Imam Muhammad Abdul-Aleem proclaimed,

My dear Brother and Sister Muslims, let us stop feeling that we have to abandon what is the best of our cultural tradition to be Muslim. When we come to the table, our other brother may bring chicken curried. However, I may like chicken smothered in gravy, like Grandma used to cook. So I am going to bring that to the table. My chicken smothered in gravy has to have the same respect as the brother who brings the chicken with curry.... If we come to the table looking identical, then you won't recognize me, because I don't know myself. I must get to know myself and feel comfortable coming to the table as who I am.

We have to stop being carbon copies. . . . Let me just give you one example. . . . You would think that African-Americans would at least look at Africa for Islamic models. Yet too many of us look past Africa, like it has never been Muslim and try to be something from the Middle East. That's not us, Brother and Sister Muslims. Let's be comfortable. Our last contact with Islam was on the African continent. We should reconnect ourselves with that life and stop trying to graft a life that is not for us. The Islam we are used to is colorful and has vibrant life to it, it isn't dark or drab. No, Sister, that isn't you. . . . You are the best educated Muslim women in the world. So use your knowledge. Use your insight. Use your flair for style to create a beautiful Islamic expression that is native to here, and stop trying to import and graft yourself onto a life that isn't you. You won't last. After a while, you will get tired of that same old shabby dress, as Otis Redding once said. You have to come alive. Be more creative in the way you dress, the scarves and everything. Don't just have an old drab look, because you know it won't hold up. (Abdul-Aleem 1996: 12)

The authentic African/American/Islamic modes of expression should be native to "here," the United States, a space defined in part by the shared vocabulary of popular culture. Bilal and others feel that in some ways it's easier for African-Americans to be Muslims in the U.S. because they already have a place in the culture; unlike immigrant Muslims, they already know how to deal with the potentials and problems of living in the majority white Christian culture, with all its temptations and distractions.

These different points of articulation were mediated in one of the two instances I've seen so far of a commercial video being used in class.[36] One cold day in fall Bilal had the older students watch a portion of Fatih, the 1995 video about the Ottoman Empire produced in Istanbul and marketed in the United States by SoundVision. Detailing the life and times of Sultan Muhammad II, founder of the Ottoman empire "through his struggles dealing with the plotting and aggression of the Byzantine Emperor Constantine XI,... it shows his creative planning for defense against an inevitable clash with the Crusaders" (cover blurb). The protagonist—who looks remarkably like Sean Connery on the video case—is portrayed as a precocious leader who refuses the pomp and luxury accorded to his Byzantine rival. When it comes time to build a strategic fortress, for example, Sultan Muhammad rolls up his sleeves and acts as the construction foreman, to the bemusement of visiting Byzantine messengers.

The four older students were shivering in the cold building and distracted by the noise of the younger children playing nearby. On top of that, they were slightly unsure of the conventions of the Epic Civilizational Clash movie genre (they had no idea, for example, what the video and their teacher meant when they said the Ottomans "laid siege on Constantinople"). After half an hour or so, Bilal stopped the video and began asking questions, always referring to the Ottomans as "we."

"Who," he asked, "were the Byzantines?" Silence. "The Byzantines," he answered his own question, "were the enemies, in the ancient times, of the Muslims. Who was Constantine?"

"Emperor."

"Emperor of who?" Silence. "I see we're gonna need to watch the whole thing again two or three times." He shifted his line of attack. "Remember when the Byzantine messenger came and knelt down? Why did the Sultan [Muhammad] tell him to get up?"

"You don't worship no one."

Bilal nodded, "You don't bow down to any man. In Islam we don't do that. . . . What else did you notice about the Sultan?"

"The first one or the second one?"

“They were both pretty much the same,” Bilal explained. “The second was fulfilling his father's dream, building that fortress.” He paused. “If I told you to write an essay contrasting the Sultan with Constantine, what would you say?”

“What’s ‘contrast’?”

“Show the differences between two things.” “Constantine had servants cleaning his feet and stuff.” The teacher nodded. “What are some other ways the Sultan and Constantine are different?" Long silence. “Have you studied the Ottoman Empire?”

“The what?”

“The Ottoman Empire. I know that in your [public school) social studies books, in the world history part, that they say something about the Ottoman Empire, because when I teach Social Studies in the public school, I talk about it. You never heard of the Ottoman Empire?” One of the boys shook his head. “All we study,” he said, “is about Africa.”

The sensitivities of the American majority culture that prompt it to provide limited resources for the creation of a non-Eurocentric identity for young African-Americans are sometimes wide of the mark. The majority culture’s limited and homogeneous perception of African-Americans derives from an understanding of origin and identity as constituted by a system of naturally discontinuous spaces rather than by the intersection and convergence of cultural, political, and economic processes (Gupta and Ferguson 1992). The case illustrates, among other things, that the “we” of the African/American/ Muslim (or Muslim-American, as in the label W. D. Muhammad has chosen for himself) community is labile and does not necessarily presume or privilege Islamic Africa as an intermediary. For Muslim Americans like the followers of W. D. Muhammad, the investment in broader identities pays a higher dividend, insofar as it can move beyond a specific Africanness and connect with wider global currents (Dannin 1996: 142) and Islamic histories alternative to both America-centered and Afrocentric identities.

At the same time, the linkage with multiple offshore identities coincides with the creation of a comfortable space of consumption and entrepreneurship on a local and national level. While some scholars have pointed to an “anticommercial” bias in the bourgeois black community, which associates commerce with hustling (Austin 1994: 240-41), the Muslim community tends to treat the market with cautious respect, interpreting its potential as enormous and its lapses as the result of moral rather than economic forces. For example. Brother Bilal once quizzed his young students on the life of Muhammad.

“Now Muhammad was married to Khadija, and he was known as a trustworthy man in his business transactions. People admired him, people respected him. While he was working for Khadija, did he make her a profit?”

The children misunderstood. “Was she a Prophet too?”

Bilal puzzled for a moment, then smiled. “No, no. P-R-O-F-I-T. You're thinking P-R-O-P-H-E-T. He was a Prophet, and he made her a profit; he made money for her business.”

Islamic history provides plentiful support for the dignity of the merchant life, and one of the items advertised on the back page of the Muslim Journal is a book by W. D. Muhammad, Islam's Climate for Business Success. During the class section on recycling, Bilal had emphasized that the recycling industry not only was morally important but was the site of enormous economic potential and that some of them might one day be in the recycling business. The unspoken implication was that, given God’s interest in creating a world where recycling of material is a natural process, the creation of profit from the enterprise not only fulfilled the economic needs of the family and the community but could be interpreted as a pious act in itself.

*** The Great Chain of Buying

Given this predominantly positive view of commerce, communities like this, which construct their identities in part through the market, experience the market as liberating, empowering, and creative. Jones (1996) demonstrates that, for France, the provincial advertising newsletters that proliferated in the latter half of the eighteenth century helped shape their readers—from domestic servants and women to artisans, physicians, lawyers, merchants, and the minor nobility—into a consuming public. In this world of the market, wealth and taste rather than the social rank of birth or nobility defined an audience linked together in a “communication and commerce of minds,” “‘a reciprocal commerce in enlightenment’ . . . tied closely with their belief in the enlightening and civilizing powers of trade” (Jones 1996: 24-25). As the century wore on to its revolutionary climax, these newsletters came to carry more and more literary and political material, although they still relied on their subscribers and on each other for most of their copy, providing a mechanism through which “the parish pump spoke to the world, and the world to the parish pump,” effectively preparing the ground for a bourgeois public sphere “that transcended geographical localism, social particularism, gender exclusivity, and occupational restrictiveness” (Jones 1996: 26). Likewise this Muslim community is oriented and situated through the commodities linking it with others.

Intellectual commodities play a key role in the contemporary Muslim world, as they did in creating France. But instead of focusing only on the market for printed materials like books or periodicals (Anderson 1983), we can look also at the ways that printed materials act as a window to a market, the sense in which printed materials like newspapers are self-sustaining links to other products, other services, other communications, and in general are links to the imagined community of world commerce. Large parts of Muslim periodicals, like other periodicals, are given to these sorts of links through advertising.[37] A comparison of three popular journals suggests the extent to which they provide these extra linkages.

The type of advertising in the sample periodicals differs somewhat. While the Nation of Islam and the Ministry of W. D. Muhammad devote most advertising to products, the Islamic Society of North America—largely comprising educated and relatively prosperous immigrant Muslims and WASMs (White Anglo-Saxon Muslim converts)—devotes its largest single block of ads to services, largely financial planning services that proportionally fewer African-American Muslims have the means to benefit from. But these services, international in scope and serving to construct the financial underpinnings of other sets of connections, can diffuse through multiple links (for example, entities like the Iqra' Foundation or the Islamic Circle of North America's SoundVision corporation, which advertise in the Muslim Journal), [38] to benefit communities like the Masjid al-Nur, whose new lot was donated by a consortium of thirty or so "Arab Brothers."

Figure 6.1.

A Content Comparison of Three American Muslim Periodicals

JOURNAL TITLE

| What Is Advertised | Muslim Journal (WDM) | Final Call (NO1) | Islamic Horizons (ISNA) |

| % of Total Space | % of Advert Space | % of Total Space | % of Advert Space | % of Total Space | % of Advert Space |

| Conventions | 17.0 | 32.0 | 3.0 | 10.0 | 9.0 | 19.0 |

| Speeches, Broadcasts, Services | 0.4 | 0.8 | 3.0 | 7.0 | 17.0 | 35.0 |

| Products (Total) | 27.0 | 51.0 | 22.0 | 72.0 | 11.0 | 23.0 |

| Print | 9.0 | 17.0 | 5.0 | 16.0 | 6.0 | 12.0 |

| Audio/Videotapes | 3.0 | 5.0 | 14.0 | 46.0 | 3.0 | 6.0 |

| Charities | 4.0 | 8.0 | 1.0 | 4.0 | 4.0 | 8.0 |

| Help Wanted | 7.0 | 15.0 | 0.0 | 9.0 | 7.0 | 15.0 |

| Total Proportion of Space Devoted to Advertising | | 52.0 | | 31.0 | | 49.0 |

Like any periodicals, Muslim tabloids and magazines depend on market linkages to subsidize their cover or subscription price. But it would be a mistake to assume that advertisements are unwelcome distractions breaking up blocks of “real” content. Given the high percentage of space devoted to them (a percentage that is much higher in some other mass periodicals), it is likely that both editors and readers experience advertising as part of the informational content of periodicals (Miller 1987: 171-72). The advertisements, which define and grant access to constellations of goods that demarcate particular communities and lifestyles, are part of the reason magazines and newspapers are purchased.

Habermas (1989: 16) reminds us that the original newspapers were really newsletters distributed by the guild-like organizations of sixteenthcentury merchants seeking to construct their own larger-scale imagined community, a point repeated by Anderson (1983: 62) and Jones (1996) with respect to later developments in North America and France. They were engaged in constructing an imagined universalism of distribution and consumption, a universalism of the same type we see being built by the world Muslim community through its entry into intellectual commodity production and distribution on an international scale. As we have seen, the availability of particular products on the market has not led to their universal adoption[39] but to a selective and strategic use of materials to create both a local community and investment in broader identities. These two elements are clearly reciprocal, for it is only by establishing a strong and responsible local Muslim community that individuals can feel a part of the world community of Muslims. Hence the emphasis on knowledge, which is held to be the core of Muslim identity, and the effort to identify, acquire, and consume intellectual commodities from a variety of sources, marking a cosmopolitan participation in a global market of ideas rather than a particularist one consuming mostly proprietary goods, like the Nation of Islam.

*** Conclusions

The diversity of sources that shape given interpretive worlds and the diversity of those worlds themselves are facts of the first order. The sense of investing in the historical and geographical community defined by Mecca as the Center-Out-There is shared by the African/American/Muslim as well as by the Islamist radical in Egypt (Goldberg 1991). Both strive to create an encompassing local community in which personal and public virtue can be achieved. For both, the creation of this community is perceived as liberation stemming from a return to the sources. The difference between them lies in the different structures of power and networks of position and identity to which and through which new markets in intellectual sources are responding. Returning to the sources amidst the enervating abundance of Islamic literature in Egypt (Starrett 1998) means locating a culturally specific purity of knowledge and practice that transcends the globally corrupting influences of power, careless imitation, and worldly desire. Activists strive to "make the discursively

mediated public sphere govern the public environment influenced by commodification, . . . reimposing a politics of high meaningfulness on what appears to them the exteriority of consumption" (Salvatore 1997: 15-16). The paucity of similar literature in the American context stimulates, conversely, an omnivorous appetite for a corpus of knowledge that transcends cultural specificity, either that of domestic black nationalism or that of Middle Eastern tradition. The local Muslim community looks outward toward the global umma as a storehouse of materials for building a sense of identity in situ. Returning to the sources means focusing on the universality and naturalness of Muslim identity, those aspects of Islam that are independent of culture and of place.

Only by looking precisely at what are the sources for specific communities can we identify real interpretive worlds, worlds not deducible either from individual media or from the constellations of intellectual commodities assembled in advertisements, bookstore shelves, or market stalls. In the process of returning to the sources, members of the Masjid al-Nur combine two strategies: pooling individually held commodities (books, videos, software) and forging linkages between religiously inflected materials that are consciously sought through the market and those that represent the common knowledge of the community (the unavoidable mass media, the historical experience of African-Americans, the signs of the human body or of the physical world). These strategies underline the sense in which the religious imagination in both its public and its private forms is stimulated and circumscribed by the vehicles at its disposal. The multiple links forged through the market elaborate, unavoidably, multiple communities of Muslim knowledge and practice.

*** NOTES

The research for this chapter is part of a larger project, "Disks, Games, and Videotape: The Impact of Technological and Market Forces on Islamic Education," conducted with Kathryn Johnson and funded by the University of North Carolina at Charlotte. My thanks go to the panelists, discussants, and audience of the original panel, "Civic Pluralism and Mass Communication: New Media in the Muslim World," for their constructive suggestions. The editors, in particular, have provided vital direction and criticism. The paper has also received many useful comments from Allen Roberts and from members of the Department of Anthropology at the University of Chicago.

[29] Jones derived the phrase as a pun on Arthur Lovejoy's classic examination of ancient and medieval understandings of the ascending linkages between living things. The Great Chain of Being.

[30] Another important set of questions about these developments—unfortunately, far beyond the scope of the present chapter—has to do with the formal transformation of fourteen centuries of textual and embodied knowledge into new representational

conventions, distributed through new mechanisms and intended for new audiences (Eickelman 1985; Messick 1993; Starrett 1996, 1998; Anderson, this volume).

[31] Sister Clara Muhammad was the wife of Elijah Muhammad. Her interest in education led to the naming of NO1 and WCI schools after her.

[32] During a heated discussion of the mosque’s financial troubles, several people pointed out that during Friday prayers the parking lot has more than one Mercedes Benz in it but that the wealthier members of the community did not seem to be contributing their share. One of the regular participants in the hadith class attributed this to the casual but well-to-do believer's lack of “scientific Islamic information.” He insisted, and several others agreed, that the basis of the community is knowledge and education, on which everything else depends.

[33] At one point there was a lively discussion of the fact that young Arab and Pakistani children visiting mas/ids in the U.S. can sometimes recite the whole Qur’an from memory. When it was pointed out by Brother Bilal’s wife, Angela, that they didn't understand much of what they were reciting, admiration for the feat of memory turned into disappointment in the flaws of such an approach to schooling.

[34] Bowen has noted the same process in Indonesia, where the Gayo “would at times elucidate an Arabic text (or its translation) with a Gayo proverb or compare the power exercised by Moses with that wielded by a local ancestor spirit" (Bowen 1992: 496).

[35] This is usually translated “Praise be to God, Lord of the Worlds." The verb 'alam is derived from a verbal root denoting knowledge; the noun ‘alam means “that which is known.”

[36] The other case was on a day when Sister Kenyatta didn't make it to school; Bilal hooked up the TV and used the storytelling video and “Salam’s Journey" as babysitters for the younger children.

[37] The Muslim Journal is published weekly by the Ministry of Wallace Muhammad; The Final Call is published weekly by the Nation of Islam. Islamic Horizons is published bimonthly by the Islamic Society of North America. This is a rapid comparison of single issues of these periodicals and is thus suggestive of questions rather than representative.

[38] Each devotes between 43 (MJ) and 83 (FC) percent of its product advertisements to intellectual commodities—books, other periodicals, informational video- and audiotapes. In general, products advertised in The Final Call are proprietary— for example, videos of speeches by Minister Farrakhan and other NOI officials.

[39] At the Masjid al-Nur, only the Imam, who works full-time as a county prison chaplain, has access to a computerized Islamic database—at work—and the school's one ancient IBM PC currently gathers dust in the office, too slow and small to run Islamic computer games or databases, even if the school could afford them.

** 7. Bourgeois Leisure and Egyptian Media Fantasies

Walter Armbrust

Egypt has rich and diverse mass media that have grown up and expanded with the country's modernization. Modernization, in turn, has been one of the Egyptian media's major topics. In exploring the meaning of modernization, mass media are part of the public space that is explored in them, and they help to define it. They not only describe, they also simulate, in the words of John Hall, the spaces "in which people could try out, at first or second hand, different social roles" in "a lively sphere marked by the spread of new codes of manners" (Hall 1995: 7). Such a "lively sphere" in Egypt has been all but invisible to analyses that focus on associational life and its structures as measures of freedom of expression. But media do more than record or promote. They are especially significant sites of social experimentation because they are at once removed and engaged, observers of the public space that their activities also define.

Tester (1992: 11) has suggested that social experimentation is especially significant for its ability to enable the transcending of social bonds previously thought to be immutable (or as likely, previously not thought about). Leisure is such an experimental site for modernizing societies; in the perspective that goes back to ideas about mass culture and mass media developed by the Frankfurt school sociologists, particularly Adorno and Horkheimer (1944), leisure channels disruptive emotions into a controlled release that is part of modernity (Rojek 1995: 51-52). While reducing mass culture and mass media to a "safety valve," such functional views still allow a place for disorder, ambiguities, and, most important, the exploration of change. Leisure—particularly as constructed and disseminated in the mass media—consists of ideologically informed texts, but it is also experienced by consumers. It is "mediated," presented as well as represented in the media, in the company of incentives to consume products and practices associated with it. But leisure consumption is also inseparable from an imperative to imagine a world in which the givens of the social order no longer remain unexamined, and so also falls within a sober discourse on civic pluralism and the shape of public space.

To tease out these connections, I focus here on representations of a particular instance of leisure and consumption: the practice of going to the beach, particularly the practice of men and women going to beaches where mixed bathing occurs. This practice pointedly depicts women in public space. These are, furthermore, not just representations of women in public space but, in varying degrees, attempts to sanction behavior that clashes with traditional social practices relevant to gender roles. They bear a superficial resemblance to orientalism's use of women to imagine an unbridled space (Graham-Brown 1988, Alloula 1986) and to the more recent neo-orientalist strategy of juxtaposing images of "Westernized" Middle Eastern women with images of tradition to suggest a sense of inevitable modernization (Graham-Brown 1988: 241). Indigenous representations of women in public space are also modernizing, but in a different way. Here nationalist imagery often dominates (Graham-Brown 1988: 244), including representations of idealized motherhood and iconographies of emancipated social progress, which, Graham-Brown contends, are not necessarily matched by substantive changes in the status of women. Graham-Brown also notes that representations of women have been used in locally produced Middle Eastern media to eroticize Western-style consumption (1988: 247).

Representations of going to the beach similarly contain a great deal of such visual juxtaposition that has, like beach-going itself, been dismissed as Western-influenced and passed over as unworthy of further analysis. But media commentary on the beach, with its controversial mixing of partially dressed men and women in public, indicates that “the beach” as a destination of leisure and a topic of representation implicates the reality of Western involvement in popularizing this form of leisure. Still, it is not reducible to Western hegemony. Neither does it represent a purely indigenous, traditional “response.” Instead, it presents a zone of danger that media representing it share, symbolized by their treatment of women as the most contentious issue in East/West polemics. Beach representations always pointedly include women. If they did not, there would be nothing to say or represent, nothing to register the zone of social experimentation that they mark out and share.

These representations have been formally continuous over time and across different media, suggesting that while the issue is not new, it does find new homes or vehicles of expression. Beach representations, like political cartoons, are topical; they are a fluid representational genre that maintains an internal consistency, while at the same time responding to the political and social contingencies of particular periods. What the different media used to convey these representations have in common is that they are also the vehicles of modernity’s public spaces and its modes of representing social experimentation. Here, I examine the iconography of such representations at different moments in time and in different media that, having no prior counterparts, are intrinsically definitive of the new public space they examine.

Beach representations operate in the space between “the super-literacy of traditional religious specialists and mass sub-literacy or illiteracy” (Anderson and Eickelman, this volume; Anderson 1995). Such a space can be thought of as “interstitial," for it does indeed stand between all sorts of differences conceptualized as tradition and modernity, male and female, elite and common, or literate and illiterate. However, interstitiality suggests a misleading image of an emergent bourgeoisie wedged uncomfortably between well-defined hegemonic cultural formations. In fact the imagery described below has been ubiquitous in Cairo for decades, and present to varying degrees in the rest of Egypt and the Arabic-speaking world. It has become naturalized; its hybrid character is more apparent from an outside perspective than from that of someone who grows up with it. New media in Muslim societies are new to the extent that they are inseparable from the content they convey. An analysis of the content properly begins with an understanding of how these media carry forth, and sometimes transform, processes with established trajectories.

*** Beach Discourse: 1992

“Aristocratic Girl for a Pack of Cigarettes” was the title of a cover story of a 1992 issue of Ruz al-Yusuf (no. 3348, August 8), one of Egypt’s largest and oldest mass-circulation weeklies. The picture on the cover is a lurid drawing of a woman reclining on a beach towel. She has exaggerated bare thighs, big hair, and sunglasses, and she stares

boldly at the viewer. In front of her are a bottle of suntan lotion, a pack of Marlboros, and a cigarette lighter. The picture is repeated inside the magazine (Fig. 7.1), along with a text by ‘Adil Hamuda, a well-known columnist.

Eyes born of the temptations of the night.... The hunger of the sun for the water of the sea. Passion. Caprice. Quenching the thirst. Satisfaction. Sunset. Pain. Boredom. Departure. Waiting for the winter to wash away the sins of summer. This is the story of every summer in al-Agami. Firdus: beach of hot bikinis, excessive liberty, the madness of pleasure reaching into the brain. This is the private beach, only for the rich. (Hamuda 1992: 38)

Figure 7.1. “Aristocratic Girl for a Pack of Cigarettes.” Ruz al-Yusuf 3348 (August 19, 1992): 38-41.

Hamuda explains that Firdus, this private beach in an area west of Alexandria known as Agami, was, until a short time ago, undeveloped and owned by bedouin. He scathingly characterizes the bedouin as ignorant, boorish overnight millionaires, enriched by easy profits from beachfront development projects. Now rich foreigners in scandalous “French-cut” bikinis expose most of their backsides (but not, he notes sourly, their midriffs) alongside similarly attired corrupt Egyptian elites. An Egyptian woman (Hamuda claims she is a real person but mentions no names) spends her summers on this beach by herself because her parents have divorced and moved to Spain and Australia. With no family to protect her, the woman lives the life of a prostitute, so desperate for sex that she will sell herself for a pack of cigarettes—hence the article’s title.

At a glance this article seems to be anti-leisure—to have everything to do with creeping fundamentalism and class resentment and nothing to do with tolerance or Hall’s “lively sphere marked off by the spread of the new.” The article points to massive social contradictions that could threaten the painful rebirth of civil society that some observers (for example, Ibrahim 1995) see as having come about in the 1980s, after decades of state domination. Indeed, at one point the article strongly implies that “liberty [and] the madness of pleasure reaching into the brain” is a recent corruption of more innocent pleasures experienced by ordinary Egyptians. The decadent Firdus beach, Hamuda tells his readers pointedly, is a private beach—a product of the infitah, Egypt’s post-1973 “open door” economic policy. The infitah was an early instance of what is now termed (in Egypt and elsewhere) “structural adjustment” of state-dominated Third World economies: forced capitalism under threat of withdrawal of support from the IMF and World Bank. Beside the decadent infitahi beach are more wholesome outlets for the summertime leisure urge.

There are public beaches on either side. The distance from those beaches to the public beaches takes you from one world to another; from an exciting beach—naked, wealthy—to a modest, crowded beach from which women enter the water wearing

galabiyyas. The line between the two beaches appears to be imaginary, but it really isn’t. It divides between whiskey and nti'assil a honey-steeped tobacco associated with a more modest lifestyle]; between arrogance and humility; between debauchery and sedateness; between the motor boat and the raft. But in the end all of them are swimming in the same sea. (Hamuda 1992: 39)

This image of women entering the water fully dressed has a power to fascinate imagemakers, although the way they employ these presumably contradictory juxtapositions of extreme modesty and extreme bodily exposure varies. Yusuf Shahin’s semi-documentary film, Cairo Enlightened by Its People (Shahin 1991),[40] used juxtaposition of flesh and modesty to show a city groaning under the weight of its contradictions and ripe for trouble. Unemployment, sexual frustration, dirt, dilapidated public housing projects, seedy foreigners on sex vacations, and the ever-present lurking menace of fundamentalism run together throughout the film. At one point we see people praying in the shadow of a giant movie billboard showing a big-breasted film starlet. The juxtaposition of fundamentalist and sexual imagery, together with the film’s relentless pessimism on the likely fate of freedom of expression if the situation is not bettered, suggest a city on the point of explosion. Shahin’s film debuted at the Cannes Film Festival just as American and IMF officials were deliberating on whether Egypt would be rewarded by debt relief.

Neither the state nor the public was pleased with Cairo Enlightened by Its People. Shahin had not shown the finished version of the film to the censorship authorities before releasing it at Cannes. Journalists attacked him mercilessly, calling him “khaioaga Yusuf” (more or less, “Gringo Joe”). Although nobody in Cairo had yet seen the film, the general feeling was that it “slandered Egypt’s reputation” abroad. The key to this feeling is that it was first shown abroad; nothing in the film was markedly different from the contents of many commercial Egyptian films, which are, however, not shown widely outside the Arabic-speaking world.

Another recent film shown in the West, Marriage Egyptian Style (Head 1991), touches on the assumed contradiction between bodily exposure and modesty less explicitly than in Cairo, but with a beach scene.[41] Marriage Egyptian Style is an ethnographic film that focuses on the life of an old woman who works as a domestic. The film explores the woman’s hopes for remarriage (she is divorced) and for her children’s marriages. In the course of the film, she, her son, and the family of a prospective bride take a trip to the beach. The purpose of the trip is for the two families to get to know each other better prior to the marriage. On the beach the two families mix freely with other bathers. Some of the women in these scenes wear bathing suits, and some appear in more modest dress. Most of the men wear swimming trunks.

Such trips are in fact common. I have been told that, aside from providing a means for families to get to know one another in a leisurely setting, a groom’s family can observe how

the prospective bride behaves in a potentially licentious public setting. Given that such beach outings do occur and would strike few Egyptians as controversial when the young couple is accompanied by their families, the reaction of the Egyptian media to Marriage Egyptian Style was surprising. The film, it was said, was a complete scandal. In the opinion of Egyptian journalists, this was not how real Egyptians lived. Because a foreigner had been involved in making the film and because it was intended for foreign consumption, the film was instantly labeled a national shame. As one writer put it, “An Egyptian researcher helped to produce the film Marriage Egyptian Style—the director was a British woman. She chose everything that was wretched, disgusting, and ugly, and photographed it” (al-Gamal 1993: 97). As in the case of Cairo Enlightened by Its People, the objection was not to the content of the film, which was commonplace, but to the involvement of foreigners and the fact that foreigners were the intended audience. But even the foreign involvement might have been forgiven if the film had not focused on lower-class subjects. In Egyptian media discourse, leisure is an aspect of a “clean” middle-class lifestyle.

The problem is that what constitutes “middle class” in Egypt is difficult to pin down. It does not correlate with a material standard of living. There are, however, certain attitudes and expectations commonly associated with a middle-class ideal. Egyptians who have at least a high school education, and therefore basic literacy and familiarity with how modern institutions work, generally consider themselves middle class. Egyptians who think of themselves as middle class expect a lifestyle free from manual labor. In the media, the ideal of middle class is often associated with modernity, bureaucracy, and office work, and it is portrayed as having a degree of familiarity with an ideology of national identity that seeks to balance local Egyptian and classical Islamic cultural referents.[42] Certainly middle-class Egyptians, as previously mentioned, consume objects and images that they do not themselves produce “in the first instance” (Miller 1995: 1).

The juxtaposition of flesh and modesty in Marriage Egyptian Style, “Aristocratic Girl for a Pack of Cigarettes,” and Cairo Enlightened by Its People allude to a class dimension in the way leisure is represented. “Aristocratic Girl” and the furor whipped up in the media over Marriage Egyptian Style mark the socioeconomic limits of leisure in Egypt. Leisure is not for the poor, and it is not healthy when the extremely wealthy indulge in it. The presumed decadence of both the poor and the rich brackets middle-class identity. The poor are suspect because of their “failure” to adjust their lives to modern institutions, the wealthy for a rootless cosmopolitanism at the opposite end of the socioeconomic spectrum. Thus failure to “get with the program” is marked by presumed backwardness in the case of the poor, and for the rich, by an inauthenticity tainted with foreignness. To be middle class is to refuse both extremes.

Cairo Enlightened by Its People suggests that social conservatism, alongside licentious imagery, presages an imminent explosion. The film depicts such juxtapositions as new, as the harbingers of change. It encourages viewers to assume that the society depicted in the film has been entirely covered and that leisure as represented in the lurid billboard’s backdrop to prayers threatens the social equilibrium of traditional society. This implication of

novelty marks the film for foreign consumption. The other two instances of covered/uncovered imagery—“Girl for a Pack of Cigarettes” and Marriage Egyptian Style—are more closely connected to a local discourse over the meaning of exposure in the pursuit of leisure.[43] It would be misleading to suggest that the local reading of these violent juxtapositions is only a constructed vision of an imposed modernization theory or of nationalism. Although both Marriage Egyptian Style and Cairo Enlightened by Its People were intended in part for foreign audiences, audiences that read novelty into juxtapositions of exposure and modesty, it is not necessarily the case that the sense of outrage conveyed by “Aristocratic Girl” arises from the same impulse. The article was published in the mass-circulation weekly Ruz al-Ynsnf, intended primarily for an Egyptian readership. “Aristocratic Girl” was accompanied by a cartoon that emphasizes the starkness of visual juxtaposition by showing a man and a woman walking together on the beach, other bathers in the background. The man is grotesquely fat and hairy; the woman wears a bikini with a niqab—a Saudi-style face veil that covers her entire head, leaving only a slit for the eyes (Fig. 7.2). Such dress is considered a statement of radical fundamentalism in the Egyptian media and a sign of backwardness by many Egyptians. Of course it is normally worn with a long shapeless gown and gloves. As the pair walks, the man says to the woman, “Don’t look back—there are informers.” One might be tempted to interpret the cartoon, along with the article, as an instance of the lurid Western iconography that careens from the harem to the brothel. But in Egypt, these images are part of a long-standing discourse within the Egyptian media; there is in fact nothing new here. Ruz al-Yusuf's “Aristocratic Girl for a Pack of Cigarettes” portrays a thoroughly modern sense of leisure fully entrenched in Egyptian society that has been represented uninterruptedly in Egypt for decades.

Figure 7.2. “Don’t look back— there are informers." Ruz al-Yusuf 3348 (August 19, 1992): 40.

*** The Beach in 1969

In 1969 the Egyptian public sector was near the pinnacle of its power and influence. Saad Eddin Ibrahim describes the 1960s, when Gamal Abdel Nasser led a wave of populist postcolonial regimes in nationalizing social institutions that had previously been in private hands, as the low tide of civil society (1995: 36-37). Starting in 1963, the Egyptian cinema was extensively nationalized. The state acquired almost all the means of production, distribution, and exhibition. Many Egyptian intellectuals remember the period as the golden age of Egyptian cinema, when state sponsorship of the industry gave filmmakers a freedom from constraints imposed by the marketplace. However, since 1967, when Egypt was crushed militarily by Israel, the public sector has declined. Public-sector film production was one of the first casualties. By 1971 the cinema had been “reprivatized,” to the extent that direct state funding of films was ended, although the state has not yet relinquished control of the decaying studios.

Papa's up a Tree (Kamal 1969b), released in 1969, was one of the first significant films not made in the public sector since 1964. Intellectuals feel ambivalent about the film. Papa's up a Tree, unlike the expensive prestige projects of the public-sector period, could not be shown in European film festivals; it was geared to a popular Arabic-speaking market. The masses, however, were not ambivalent about the film and allegedly made it the most profitable film in the history of Egyptian cinema up to that time. Papa's up a Tree was a musical, starring ‘Abd al-Halim Hafiz, the most popular singer of the Nasser period and the singer most closely linked to the fortunes of the state. ‘Abd al-Halim was the heir apparent of another giant of Arabic music, Muhammad ‘Abd al-Wahhab, and the only active performer who rivaled him in popularity was the female vocalist Umm Kulthum.

The director, Husayn Kamal, trained in France, was artistically ambitious and was given his first chance to direct by the public sector. His first film, The Impossible (1965), was a morality play.[44] A man and a woman, both married but not to each other, live lives of quiet desperation until they develop a powerful urge to have a torrid affair. Before the affair can really get off the ground, they decide not to go through with it for the sake of their children. The Impossible was not very successful at the box office. Kamal’s second and third films, The Postman (1968) and A Bit of Fear (1969a), were adaptations of literature, and both films had limited appeal. Papa's up a Tree, written by novelist Ihsan ‘Abd al-Qudus, was Kamal’s first privatesector production and his first popular film.[45]

Papa's up a Tree is a beach film, and it gives a much more detailed exhibition of the discourse invoked in 1992 by “Aristocratic Girl.” In particular, it elaborates a representation of what happens, in media fantasy, on the “other beaches” located on either side of the decadent locale described in the article. In a nutshell, the film is about the middle class only briefly alluded to in “Aristocratic Girl;”[46] its focus is ultimately a vision of what the beach should be with respect to middle-class ideals. ‘Abd al-Halim plays a college student who goes to spend his summer at the beach with friends from school, one of whom is his girlfriend. He craves intimacy with her, but she is shy and insists that they stay safely with the group. He runs off with a prostitute and spends his summer trying to accept the fact that she has other lovers.

In the first fifteen minutes of the film (including a song), the film develops several themes, including (1) generational conflict, (2) romantic love between individuals before marriage, and (3) leisure as an escape from the ordered world of work. It begins with ‘Adil (the character played by ‘Abd al-Halim) preparing to travel from Cairo to Alexandria for his summer vacation. His teenage sister packs his bags for him. This is quintessentially conservative, as brothers and sisters in many Arab societies are held to have a special bond, a semi-romantic relationship in which a brother and sister’s “masculinity and femininity were defined and practiced in a connective relationship that was often sexually charged” (Joseph 1994: 66). There could scarcely be a more efficient way to evoke a patriarchal social structure; the first five minutes of the film further evokes what Gellner (1995: 33) characterized as the “tyranny of cousins"—a more extended version of patriarchy that he

argues is anathema to civil society. But mixed in with what are unquestionably tradition-bound family relations are copious references to order and modernity.

As ‘Adil’s sister packs his suitcase, she discovers that he has already written and addressed his postcards for the summer. He explains this as an attempt to better organize his time—he does not want to waste his summer having to worry about the “work" of corresponding with friends and family back in Cairo. As his sister finishes the packing, she complains that she does not get to go to the beach, even though she too has passed her exam. ‘Adil tells her she is too young, and she retorts that girls grow faster than boys; her sixteen years make her the equivalent of twenty-six in relation to him, therefore she is “older" and should be allowed to go. This light-hearted joking in the first scene essentially states the film’s theme in miniature: the younger generation yearns to be free of rules imposed by tradition. And of course a temporary relaxation of rules is inherent in leisure generally (Rojek 1995: 80). The rest of the film constantly reiterates a dialectic between order and disorder.

As the sister packs ‘Adil’s bags, their mother enters the room with a cake “for Khalid.” The reason for the gift is that Khalid—‘Adil’s schoolmate and a native of Alexandria—will watch over him during the summer, just as they watch over Khalid during the school year. Khalid's parents will be there too. The film never explicitly describes Khalid’s relationship to ‘Adil, but the close connection between the two families suggests that he is kin, perhaps even a cousin. Furthermore, Khalid’s sister Amal is ‘Adil’s girlfriend. Patrilineal parallel cousin marriage (between the children of male siblings) is so prominent in the anthropological literature on the Middle East as to be almost a cliche, and the issue of cousin marriage has, in fact, been present in the Egyptian cinema since its beginnings in the late 1920s. Some films portray cousin marriage as coercive and undesirable, and others as the perfect match. But in all films, the prospect of cousin marriage is an icon of tradition.

Papa's up a Tree, although it leaves ambiguous the issue of whether ‘Adil and Amal are biological cousins, portrays their relationship as the traditional ideal, but also as problematic. It is ideal in that the eventual marriage of the two is condoned, or even arranged, by their parents, and problematic in that ‘Adil chafes under the dead hand of tradition. He wants more than a conventional marriage to a family his parents know and respect (and may be related to). Not to put too fine a point on it, he wants a romantic relationship with an individual woman, a relationship not constrained by the overbearing presence of a group, whether the group is their friends from school or their parents.

The film's alternation between work, authority, and order on the one hand, and rumblings of rebellion on the other continues when ‘Adil and Khalid arrive at an isolated bungalow on the beach. The bungalow is a mess, and ‘Adil immediately starts cleaning. Khalid comments that he wishes his colleagues from college could see him so that they know what his real future will be: “engineer and janitor.” ‘Adil replies that their shilla (group of friends from college) has never seen him at the beach in anything but a bathing suit, and in a bathing suit everyone looks the same. One who sweeps the floors looks just like the boss of

a company; someone who lives in a hut looks exactly the same as a person who lives in a palace. Khalid then excuses himself, saying he has to join the shilla because they are preparing a mahkama, a “court.” ‘Adil has an errand to run before his date in beach “court.” The audience sees a dreamy juxtaposition of Amal, a woman who has light auburn tresses flowing in the breeze and wears a form-fitting pink blouse with tight pants, and ‘Adil. Both are running, and eventually they meet and embrace. He tries to follow up the embrace with a kiss, but Amal pulls away. “Mother and father say hello. They’ve missed you too.” And she walks away from the frustrated ‘Adil.

Next the “court”: It begins with young men in bathing suits blowing seashell “trumpets.” Swimmers and boaters standing on kayaks come ashore like South Sea islanders. The orchestral music swells. A group of students run out from beneath a row of colorful umbrellas. A ring of them bend toward each other in a close-up shot, hands clasped, and as they rise, the sun blazes out from among them. The singing begins: Bismi-l-hatva wish-shams wi-l-viligat; bismi-sh-shabah wi-l-hubb wi-l-agazat (in the name of the air, the sun, and “villages” of beach bungalows); in the name of youth, love, and vacations). The dancers form lines of women in tight shirts and pants, alternating with lines of boys in bathing suits. The overall effect up to this point is rather pagan—pointedly so, as their “in the name of...” invokes the sun and wind rather than the God of a traditional Islamic benediction. As they sing, they set up a podium, and the “judge” arrives with two officials of the “court.” The officials, both men, wear tiny bikini bathing suits; the judge (played by ‘Adil’s friend, possibly relative, Khalid) wears a brown robe, a turban improvised from a towel, and a beard made of seaweed. The parody here is not of South Sea natives in canoes, but of an Islamic court. The joyful song about love, sun, and carefree vacations is interrupted by one of the judge’s cronies yelling Mahkama! (Order in the court!).

The judge calls for ‘Adil, son of Kamal, “a student on summer vacation." He approaches the podium guarded by soldiers carrying kayak paddles instead of swords. ‘Adil sings his case: “Judge of the beach, O judge, I’ve been absent since last summer, and now I’ve come back to my dear friends” (he casts a glance at Amal, who stands in the line of students leading to the podium). “I’ve found my place still open, what are we waiting for, O judge?”

The judge points at him accusingly: “You’re asking to spend the summer, boy?”

“I want to have my vacation both summer and winter.”

“Raise your hand and take the oath,” says the judge. “State your defense.”

The music grows more lively, the stiffness of the “court” dissolves momentarily, and 'Adil dances back into the crowd of students, singing, “By God, I’ve studied all year; it gave me

headaches and colds; but I’ve passed my exams, and that’s why I want a vacation—I and my friends and festivity; it’s all up to you, O judge, my love to you, O judge.”

“Al-niyaba” (the prosecution), calls the judge.[47] One of the two men on the podium with the judge sings censoriously, “He's forbidden to spend his summer here: no beach, no love, not even an air-conditioner; and he has to take the first train back to Cairo.” The guards hustle ‘Adil off to a prison constructed of kayak paddles.

‘Adil sings, “What is my crime? What have I done?” A female chorus repeats his plaintive appeal.

The prosecutor responds, “Why have you come here in a bathing suit without permission?” The women all rush to the kayak-paddle prison, exclaiming “Yd Latif" (O God—but perhaps also “How nice,” a double entendre, as the women are looking over ‘Abd al-Halim as they say the line). The prosecutor continues, “And why has he come here without bringing cookies or a cake?” (‘Adil’s mother had given him one to bring to Alexandria, but he ate it on the train). “ Yd Hafiz" (O God), sings the female chorus in make-believe shock.

The judge then asks the opinion of his “jury,” which consists of the various male “guards” holding kayak paddles. Some say, “Let him stay"; others say no. Finally, ‘Adil breaks out of his “jail” and approaches the judge directly: “You mean I’ve left mother and father, fled from domestic lockup,[48] and now I can’t enjoy my vacation? By the Prophet, you students, we’re being oppressed!”

Order breaks down once again. The students, ‘Adil, and even the judge and the prosecutor begin dancing and singing about the joys of vacation after a hard year’s work. Then the court crier once again yells Mahkamal bringing the court to order once again. All three—the judge, prosecutor, and crier—sing portentously: “The legal interpretation of the beach court . . . is to give him the title musayyif daraga ula [summer vacationer first class].” The students erupt in cheers. They gleefully wash ‘Adil in sea water and put him in the judge’s place, dressing him in the robe, the towel-turban, and the seaweed beard. “Long live the judge,” they sing. The scene is ritualistic in a fairly classical sense: the initiate (‘Adil) is set apart and put in a liminal state and then reintegrated into society transformed to a new social state.

Now ‘Adil gets to judge other students. A pretty young woman approaches the court, singing that she’s finished prep school, high school, and most of college. “So how old would you say I am?” she asks.

“How should I know?” replies ‘Adil.

“What kind of judge are you?" she asks indignantly. ‘Adil replies that he knows all about legal interpretation, even statistics and agriculture, but nothing about women. She replies, “What would you say if I told you I’m seven years old?"

“Seven!” he exclaims.

She explains: “Mama and Papa think I’m not more than eight; they treat me like I’m still in kindergarten wearing ribbons in my hair; my whole life is ‘Shame,’ ‘Don’t talk back,’ ‘You can’t have that.’ When do I get to be myself? 1 want to live. Mama and Papa have become ancient.”

The court descends once again into a chaos of joyous singing and dancing until the crier again yells Mahkanial

‘Adil pronounces: “After legal deliberation of the beach court, family disputes branch, and after reviewing all the documents, we have decided the following: we will change her status, for those responsible for her, from the age of seven to the age of five.”

The court tries several more cases, always reiterating the same pattern: order alternating with a sense of disorder that is barely contained. Eventually the lighthearted joking of students in this early beach song gives way to real rebellion, as ‘Adil temporarily abandons his conservative girlfriend and has an extended fling with a prostitute (the film’s version of “Aristocratic Girl"). Patriarchal authority tries to intervene when ‘Adil’s father comes looking for him, but the father too falls victim to the charms of the prostitutes. Eventually they meet in a seedy bar, both having been shamed by their wallowing in lewdness. They forgive each other; the conservative Amal forgives ‘Adil because she truly loves him; everybody goes back to their ordered lives (except the prostitute, who it seems, truly loved ‘Adil and is heartbroken).

*** Back to the Future:1934-1969

Papa’s up a Tree suggests that the novelty factor in the material from the 1990s (described above) is purely a function of our own stereotypes. The ability of racy Western style juxtaposed with what we assume to be icons of tradition to induce a sense of shock or urgency—to suggest barely contained social strife as in Yusuf Shahin’s Cairo —depends in some cases on a certain separation from local traditions of

representation. “The beach” is one of these and as a destination for leisure was certainly in full bloom in Egypt by 1969.

One might question whether Papa's was a novelty of an earlier time, an artifact of Nasserism—a kind of forced secularization with shallow social roots. The director, Husayn Kamal, was at that time in good graces with the regime, and his first three films were made in the public-sector cinema. Indeed, he was one of the few directors of any distinction to have made his first film while the cinema was nationalized. By the same token, ‘Abd al-Halim Hafiz, the singer who played Adil, is also frequently associated with the Nasser regime. It might, in other words, he possible to look at Papa’s up a Tree as a cultural artifact from a period in which, as Ibrahim has described it, “an explicit or implicit 'social contract’ was forged by which the state was to effect development, ensure social justice, satisfy basic needs of its citizens, consolidate political independence, and achieve other national aspirations” (Ibrahim 1995: 37). The feisty near-nudity (by Egyptian standards) of young people cavorting in the sand could perhaps be seen as attractive window dressing for the film’s rather obvious affinity with patriarchal attitudes. Even the carnivalistic beach court might be viewed as an indulgence by a regime determined to deflect attention from the far more serious political repression everybody knew was being carried out in the mid-to-late 1960s, not to mention the catastrophic collapse of the Egyptian army in the war against Israel only two summers earlier.

But to look at the film as only or even primarily an artifact of Nasserism would be overinterpretation, for the image of beach leisure noted in Papa's up a Tree was scarcely more original in 1969 than it was in 1992. Beach leisure has been the subject of a consistent discourse going back at least to the 1930s.[49] By the end of World War II, for example, many Egyptians resented the rise of allegedly boorish nouveaux riches who had profited from serving the British war effort and from hoarding scarce commodities to sell to their less fortunate neighbors. The campaign against these “war profiteers” (aghniya’ al-harb) was carried out in a long-running campaign in the magazine al-Ithnayn. The new class was mercilessly mocked in cartoons for their presumed ignorance and lack of taste. The cover of al-ltbnayn, no. 567 (not pictured), shows the stereotypical war profiteer as a grotesquely overweight man in slightly old-fashioned European clothes—the sort of outfit that might be worn by someone accustomed neither to finery nor to dressing like a European. The bottom of the page says, “In this issue—war profiteer contest.” The contest is to invent a caption for the picture. A few issues later the winner was announced: “War profiteer [holding telephone): I wonder what the number of the black market is?”

In summer issues the beach was a favorite site for these cartoons. Fig. 7.3 shows a pair of “war profiteer” cartoons from 1945. The story on the page matches the cartoon. A war profiteer and his wife plainly don’t know what a beach is (Egyptians often use the French word plage—bilaj in Arabic—meaning, this ignorant, non-French-speaking clod doesn’t know what bilaj means). They ask a lifeguard, and he tells them they’re on it. “But I want to meet him personally” says the profiteer, who is accustomed to being able to buy an audience with anyone he pleases. They refuse to take

off their clothes because it appears low-class to them. By the end of the story they enter the water fully clothed and are on the point of drowning (lower right-hand corner). These cartoons bear a striking resemblance to the way the infitahi class of 1990s Egypt is sometimes depicted (compare Fig. 7.3 with Fig. 7.2). The rhetoric of resentment, in other words, is hardly a new feature of the representational repertory of Egyptian public culture.

In popular imagery, the objectionable nature of war profiteers was often signaled by an obvious lack of taste and refinement, making them out of place on beaches, which were sold to the public as a place for cutting-edge modern habits. This is still true, as the media campaign against Marriage Egyptian Style, with its lower-class beach outing, suggests. This does not mean that the tables aren't occasionally turned. Some cartoons made fun of what must have been for many a strange new habit. Figure 7.4 shows a cartoon in which two peasants (by the look of their clothing) go to a beach. In the first frame (top) they see a sign that says "LE 50 reward for saving a person who is drowning." One man says to the other, "I'll throw myself in and you save me." In the second frame the man is in the sea drowning, while his friend, who was supposed to save him, lounges in a chair. In the third frame the nearly drowned man says, "Didn't we agree that you were going to save me?" In the fourth and final frame the lounging man says to his angry companion, "But I hadn't yet seen that other sign." The sign says, "LE 100 reward to anyone who pulls a corpse out of the sea."

Figure 7.3. War profiteers. Top cartoon (man and woman walking with servant carrying umbrella): "What fools. Why would anyone put an umbrella in the ground and sit under it?" Bottom cartoon (man soaking his wrist in a bucket of water). Wife of the war profiteer (in incorrect Arabic, suggesting that she either is a foreigner or has spent so much time abroad she no longer speaks Arabic well): "Look, sister she is talking to a man], ever since he bought a 'waterproof' watch he hasn't taken his hand out of the water." Al-Ithnayn 577 (July 9, 1945): 5.

Figure 7.4. "Is This For Real?" First frame: sign says, "LE 50 reward for saving anyone drowning." One man says to his companion, "I'll throw myself in and you save me." Second frame: "Too bad, someone's drowning. Isn't anyone with him?" Third frame: "Didn't we agree that you'd save me?" Fourth frame: "But I hadn't yet read that sign." The sign says, "LE 100 reward for pulling corpses from the water." Al-Ithnayn 577 (July 9, 1945): 15.

In addition to its social commentary, representations of beach leisure have also been part of a broad network of consumerism.[50] Advertisements for leisure products run from the 1930s (and very likely from even earlier) to the present, including advertisements selling accessories for the beach. For example, Fig. 7.5 shows a man and woman with a beach ball in an advertisement for the store of Muhammad Hindi al-Khimi, which sells umbrellas and beach chairs.

Another subgenre of representations of beach leisure is advertisements for train rides to the beach. In one advertisement from al-Ithnayn (July 9, 1934, p. 47), the reduced price for tickets is 325 millimes (the ad doesn't give the regular price), which was not necessarily accessible to everyone (the magazine itself cost only 10 millimes), but it does suggest a broadening of interest in this particular kind of leisure. An article and accompanying drawing in another issue of the same magazine (July 2, 1934, pp. 32-33) shows hordes of people descending on the beaches of Alexandria.[51] The title is “Train of the Sea, or Train of the Resurrection” (qitar al-bahr aw qitar al- hashr—it rhymes in Arabic).[52] The article describes a man buying a newly discounted summer train ticket to the beach 24 hours in advance and going to the station half an hour early to buy more tickets for friends, only to find the place packed with people. The author finds all the cars full and finally jumps onto the last one in the train, where he finds Muhammad al-Qasabgi, a famous composer, who announces he will make the trip pleasant for everyone by playing his lute. The man leaves al-Qasabgi “drowning in his tunes” and finds himself in a crowd of bureaucrats from various government ministries, with the exception of the Ministry of Religious Endowments. “Are they [the Ministry of Religious Endowments] waiting for yet another reduction in price from the railroad company? Or has the price reduction been hurtful to them, and made them abstain from traveling and participating in this ‘democracy’?” Suddenly he’s joined by Zaki ‘Ukasha (presumably the Minister of Religious Endowments), who tells the author to follow him, and they go to a car where four men give up their seats. The author discovers that his ticket cost 32.5 piasters, but the Minister of Religious Endowments paid 34.5. He wonders why ‘Ukasha was charged 2 piasters more—initially he suspects this unworldly man of religion has been taken advantage of—but he learns that the four men who gave up their seats were the minister’s employees, whom he’d sent to hold his place. The rugs the minister is carrying are not for prayer, as the author had assumed, but to furnish the villa he’s rented at the shore, which is supposed to be finer than those leased by the really big ministers. The Minister of Religious Endowments, it seems, is no pious prude but something of a high roller.

The mocking of religious authority evident in the story is quite common, as is illustrated by a “beach laws” feature (Fig. 7.6) remarkably analogous to the “beach court” song in Papa’s up a Tree. The accompanying picture includes a “shaykb” in robe, turban, beard (Fig. 7.7). There are also

Figure 7.5. Muhammad Hindi al-Khimi's store. “Rare opportunity” to buy umbrellas and beach chairs. Al-Ithnayn 577 (July 9, 1945): 30.

strong overtones of generational conflict, as is evident in the text. But this was in 1934, thirty-five years before Papa's up a Tree. The drawing of a bearded Azharite shaykh in robe and turban, strolling on the beach among reclining beauties conversing with boys in swimming trunks, accompanies the “Bathing Law” (Fig. 7.6). The caption by the shaykh says, “What is this ‘unveiling’ the women want? Isn’t it supposed mean that they’re taking off their long dresses?!” He says this as if the woman lying on the sand next to him with the shoulder strap on her bathing suit slipping off—an affront to standards of public decency—was somehow overdressed.

*** Conclusion: Consumption, Modernity, and Media

Consumption is important in the analysis of media effects, but content also matters. The machinery of new media—and perhaps even of less novel media such as large-scale publishing and television—is controlled by metropolitan producers. Obviously consumption is far less controlled. A consumption-oriented research agenda draws us away from concern with the technological and commercial dominance of metropolitan societies, but should not cause us to lose sight of the production of media content.

Figure 7.6

Laws for Bathing

| Article 1: | -Everyone must obey the law. |

| Article 2:

| Article 3:

| Article 4: | -Male and female bathers must be good.

-“Good" means that boys must be handsome and girls pretty.

-Those who are not “good” can swim under the following conditions:

a. they are rich

b. they are cultured

c. they are lighthearted |

| Article 5: | -Those who do not meet the conditions of article 4 will be expelled from the beach at the first sign of disagreeableness. | Old People (shuyukh wa-aga‘iz)

| Article 6:

| Article 7: | -God created them to cause fear.

-They can come to the beach under the following conditions:

a. they leave their “irritated faces” at home

b. they wear one of the protective masks used in the military club [presumably a fencing mask|

c. they can prove that they were once handsome |

| Article 8: | -An old woman can come to the beach only on the condition that she drown herself in the water (tighraq). |

| Article 9: | -If she cannot meet the conditions of article 8 she must stand far away so as not to bother the girls and the children. |

| Article 10: | -We assume no responsibility for lost items such as false teeth, glass eyes, wigs or the lives of any other old women (al-baqi min ‘umraha). |

| Article 11: | -Before swimming with wives and children, men must know that morals are old-fashioned. |

| Article 12: | -Pray for the deceased spirit (al-fatiba 'ala rub . . .) of modesty and jealousy. | This law has been issued for the shore, and is in effect 15 minutes after coming onto the beach.

| Signed: Minister of Waves (tvazir al-amwag); Sultan of the Jinn (sultan al-ginn). (al-Ithnayn 8 [August 6, 1934|: 26) |

Figure 7.7. “The Shaykh: What is this ‘exposure’ that the women want? Isn’t ‘exposure’ taking off long clothes?!” (as if the women all around him aren’t already exposed enough). Al-Ithnayn 8 (August 6 1934): 26.

The content in question here is a discourse about a particular kind of leisure—beach leisure. In Egypt there is a vocabulary for talking about leisure, and for talking about the beach, and it has developed over a long period. None of the elements utilized in beach discourse of the periods discussed here—1934, 1945, 1969, and 1992—was original. To characterize the consumption patterns evident in “Aristocratic Girl” or Papa’s up a Tree strictly in terms of such contemporary academic concerns as the expansion of transnational capital and culture or reaction to Islamist politics would be ahistorical. It would similarly be mistaken to think of this kind of consumption as a product of digital-age technology developed substantially over the past two decades, or even technology of the post-World War 11 era. The fat man walking with the woman in bikini and niqab on the “Aristocratic Girl” beach of 1992 is recognizably a variation on the corpulent war profiteer of 1945, and even in 1945 this was no longer a novel image. Simmering resentment of the overprivileged and excessively Westernized in the 1990s bears an eerie resemblance to resentment of the

rootless cosmopolitanism of the 1930s and 1940s. Carnivalesque digs at religious and patriarchal authority in Papa’s up a Tree reiterate the imagery of juxtaposed law and youthful rebellion in the “Bathing Law” of 1934, right down to the ridiculously robed and turbaned shaykh striding on the beach amid throngs of teenagers in revealing swimsuits. The recognition of such continuities protects analyses of new media from anachronism.

It is important to acknowledge the continuity and depth of this discourse. There is a tendency in discussions of the Middle East, and increasingly of Egypt in particular, to search for signs of imminent change, to point to social contradictions and say, “It’s about to blow—the entire edifice of modern Egypt is about to come tumbling down,” or conversely to point to Egypt’s increasing integration into world systems and say, “They’re over the hump—civil society must be just around the corner.” Both the panicky rhetoric of those obsessed with “fundamentalism” and the cheery and self-serving association of globalism with democracy (and the presumption of open markets for metropolitan-based companies) associate new forms of media with sweeping change. And of course many things have changed in Egypt, including certain conventions in popular culture.[53] But there are also elements of popular culture that show strong continuities. And furthermore, some of the changes we associate with new media are arguably extensions of processes initiated through “old media.”

Egyptian beach discourse fits readily within current emphases on creolized or hybrid cultural forms. But at what point does the emergence of such discursive practices as hybrid cultural form cease to be its most salient feature? All cultural forms are hybrid at some level, but hybrid for whom? Under what historical circumstances? And for how long is hybridity the most compelling aspect of the phenomenon? The representations described here appeared in media that are no longer strikingly new. Truly mass-circulation weeklies have been produced in Cairo for most of the century if not slightly longer, and films since the 1930s. The machinery of new media produce an appearance of continually shifting boundaries. And yet the machinery itself is locatable. Metropolitan societies produce it, and these same societies control the wealth generated by it, and this tends to force analytical attention up the scale and away from the continuities of popular forms. Reproduced on the English-language-dominated Internet, beach discourse would look as new as Yusuf Shahin’s Cairo Enlightened by Its People. But in both cases the effect of novelty would be largely a product of our metropolitan location.

Beach leisure, and leisure in general, are not novelties, but they are modern. Change comes about partially through the tensions generated by the rigidity inherent in the more orthodox conception of modernity that rarely reflects the actual experiences of human beings. Conventional notions of modernity have channeled disorder into the field of leisure: leisure was for the betterment of individuals, a healthy release that enables one to function more efficiently in the rational world. Rojek (1995) suggests that confining disorder to the margins of society did not eliminate the unsavory aspects of life as much as it created a liminal zone in which new forms of social experience could take place. The liminal zone constructed in leisure activity is one area in which the social space necessary for the formation of civil society could take place. Rojek claims that this liminal zone could be exploited by leisure

producers eager to create new commodities and by individuals whose leisure habits could never be completely controlled, and who might well experience leisure in deviant ways.

Whether beach leisure ultimately buttresses the hegemony of the bourgeoisie or creates a space in which people can experiment with freedom from it is ambiguous. For some, mass-mediated images of rebellion or freedom from the strictures of conventional social order can be nothing more than “insipid, enervated, co-optable forms of carnival” (Stam 1989: 92). Certainly, the portrayal of beach leisure in Egypt has always been tied to the construction of class through a pictorial grammar of consumption, and the excesses of unchecked commodity fetishism can be alarming.[54] But there are good reasons for paying attention to such representations. For one thing, the construction of class, particularly the bourgeoisie, is essential to discussions of civil society and the public space it occupies. Yet analyses of the manifestations of bourgeois culture in the Middle East are conspicuously lacking—as if civil society, artistic culture, or the intellectuals (both Western and Egyptian) who write about them are all ideally free from any taint of it. The promotion of consumption in general, so evident in the material described here, looks like the vanguard of dependent capitalism. Although one might readily concede that all these representations are shot through with Western influence, even Western hegemony, this does not diminish the importance of such material as a forum for a discourse that can only be understood through a historicized understanding of the local culture. Unless we reevaluate the importance of the mass media as a vital creator of modernity, we will restrict ourselves to talking about the failure or success of modernity experienced or not experienced by the Egyptian bourgeoisie without ever delving into how the bourgeoisie was created and how it experiences itself.

The idiom of leisure—in this case the imagery of trips to the beach—is a productive point of entry into this space, but of course by no means the only one. Such material is salient in magazines read by mass audiences, and it is often presented in ways that intersect with wider social concerns. Beach imagery is part of the growth of consumerism in Egypt, as it was in the West; but it is also a blank canvas upon which the concerns of the day could be painted. In Egyptian beach imagery specific issues, such as the economic infitah, war profiteering, and the phenomenon of neo-Islamic conservative dress appear beside the advertisements for summer villas, bathing suits, and beach blankets. The beach also comes to its audiences intertwined with more general issues of obvious relevance to discussions of the public spaces like courts, the rule of law, the regulation of commerce, the toleration of new practices, and, perhaps most important, the division of life into realms of ordered work, play, and family life, social obligations and individual fulfillment. Every drawing, photograph, and film discussed here can be dismissed as vulgar, but to do so is to use the word “vulgar” in a thoroughly modern way: as a morally charged aspect of lowbrow/highbrow distinctions used to create canons of taste (see Twitchell 1992). Beach imagery is one of many vocabularies used to construct such canons in ways that are both modern and distinctly Egyptian.

In the end, while the issues in going to the beach (or in imagining that one does so) are not identical to those in forming an opposition party, neither are they entirely separate from conventional politics. Associational life and the habit of leisure are each an aspect of

modernity with political ramifications. Both are potentially important aspects of social change, and we should not automatically assume that the social consequences of leisure are always of a lower level of importance than the consequences of explicit politics. Politics may be easier for the state to identify and control. Hardly a day goes by that our own media fail to mention the authoritarian nature of Middle Eastern regimes, and more serious analyses than those typically found in the media must also take this troubling aspect of the region into account. By comparison, leisure, although ambiguous in its effect, is part of this discourse locally. Throughout the entire period, media—one after the other— have constructed beach leisure in persistent terms; habits and expectations were routinized; comparisons to other social institutions were made; and a new concept of work and non-work was instilled. These were not processes that were always imbued with explicit politics, but by facilitating both a sense of order and an expectation of change, they may in fact enable new kinds of politics.

A simple comparison makes the point. Women did not disappear from the public sphere once a majority of them started wearing the hijab, even though some of its proponents advocate restricting women to the domestic sphere. As Macleod (1991) notes, the hijab is an ambiguous symbol, a form of “accommodating protest,” that for some legitimizes non-traditional activities of women even as it signals loyalty to a concept of tradition. And the neo-Islamic hijab—ascetic, class leveling, and radically pious in its original conception (el-Guindy 1981)—quickly became enmeshed in elaborate webs of commercialism. Styles proliferate, stores specialize in “modest women’s clothing” that in fact is quite varied, advertisements appear in the middle of videotaped films that militant Islamists denounce as sinful. One now often sees the hijab worn with bright accessories and blue jeans rather than as the austere shapeless gowns associated with “fundamentalism.” In other words, it “migrates” much as beach-leisure imagery moved among media as the local accent of what was “new” shifted. Moreover, it is a fashion statement that occupies the same commercial galaxy as the bathing suit. And like all fashion statements, the hijab and the bikini leave open the possibility—indeed, the expectation—that tomorrow’s fashion will be different. This, of course, is the message in all modern media, which exemplify this restlessness in the very ways they examine such practices as the making of fashion statements.

NOTES

An earlier version of this chapter was written during the author’s fellowship at the Institute for the Transregional Study of the Middle East, North Africa, and Central Asia, Princeton University, 1996-1997, and presented at the annual meeting of the American Anthropological Association, November 21, 1996. I also wish to thank Jon Anderson and Dale F. Eickelman for later comments on the paper.

[40] Cairo Enlightened by Its People mixed genres indiscriminately. The film depicted numerous street scenes in Cairo but combined the

anonymous masses with more intimate situations staged with actors. Which parts of the film were staged and which were not was not always immediately obvious to an audience unfamiliar with commercial Egyptian cinema.

[41] Head worked with Egyptian anthropologist Reem Saad, whose role in the film was bitterly criticized in the media (see Saad 1998).

[42] Elsewhere (Armbrust 1995, 1996) 1 have described the way “authenticity,” including classicism and “folkloric” imagery, is constructed in the mediated popular culture of various periods. Lockman (1994: 167) describes Egyptian class consciousness in its formative stages (late nineteenth to early twentieth century) as a discursive process in which “the poor” is the most vaguely defined category. The middle class, by contrast, “comprises those who ‘work for the benefit of the nation in such occupations as commerce and agriculture and industry,’ as well as scholarship, writing, and government service” (Lockman 1994: 164). In contemporary Egypt, “middle-class” occupations such as these are often impoverished, and the social prestige associated with them is, at best, ambiguous.

[43] Marriage Egyptian Style is the most complex of all these examples. A BBC production, the film was made to be shown in the West, but at the same time it conjures distinctly Egyptian assumptions about national identity. The differences in how the film is viewed in the West and in Egypt attest to the film’s ability to speak a double language. To a Western audience, Marriage is a colorful glimpse into a social world that most Westerners do not associate with the Middle East—a world of a strong woman unafraid to speak her mind and very much in control of her life. The film will be shown almost entirely in educational settings, where the desired effect is to break up the prevalent image of a monolithic Middle East. To an Egyptian audience, Marriage challenges assumptions of class propriety, most generally by giving an unvarnished and unsentimental look at the lives of the poor and through showing lower-class people doing stereotypically middle-class things. But it is also true that the challenge to middle-class propriety comes from showing the film outside Egypt. In terms of domestic audiences, the film has practically no point. Without the crucial element of national identity brought to the film through its foreign audiences, it is little more than a collection of commonplace images and conversations.

[44] The Impossible was written by Mustafa Mahmud, a medical doctor and former atheist who returned to Islam in the 1960s and began transforming himself into a government-sponsored religious commentator—essentially the government’s fundamentalist. He has his own television show called al-Ilm iva al-Din (Science and Religion), dedicated to promoting the idea that there is no inherent contradiction between science and spirituality. He also writes a weekly column in the public-sector paper al-Ahram, as well as numerous short stories, novels, and essays.

[45] ‘Abd al-Qudus is a novelist with numerous screenplays to his credit. He is also the son of Fatma Yusuf, the founder of Ruz al-Yusuf, the weekly that published “Aristocratic Girl.”

[46] Armbrust (1998) discusses the attitudes of spectators to Papa’s up a Tree. Many Egyptians joke about the alleged sexiness of the film. It is also a film with a considerable cult following, and many young people today treat it almost as camp.

[47] In the Egyptian court system, the myaba has powers of both prosecution and investigation—rather like the chief of police and the district attorney combined.

[48] Harabt mm d-baytabu bawwaba, “I’ve fled from the house of locked gates.”

[49] This is not to say that the depiction of youth culture and leisure were entirely devoid of a period style. Marriage the Modern Way (Karim 1967) and other films treat the beach theme; Midterm Vacation (Rida 1962) and Love in Karnak (Rida 1967) are about leisure. But the concerns of these films were not new in the 1960s. For example, “beach issue" magazine covers have been regular features of mass-circulation magazines since at least the 1930s, if not before (for example, al-lthnayn 851 (October 2, 1950); 786 (July 4, 1949]; 731 (June 14, 1948]; 572 (May 28, 1945]; 7 (July 30, 1934]). The models on these magazine covers tend to be almost exclusively European-looking. On the whole, the imagery is more Papa's Up a Tree than “Aristocratic Girl.” But sometimes more resentful, critical, or even playful attitudes were on display inside the magazines.

[50] By contrast, the commercialization of leisure in England began as early as 1690 and was well marked by the mid-eighteenth century (Plumb 1973).

[51] The phenomenon of special rail transportation to oceanside leisure sites echoes a similar development in mid-to-late Victorian England. Railroads transformed visits to the sea, formerly a variation on “taking the waters” in a health spa, to a mass phenomenon involving, by the 1850s, the transport of hundreds of thousands of lower-to-middle-class visitors (Walvin 1978: 69-82). In England, as in Egypt, the advent of mass leisure caused some anxiety over the mixing of disparate social groups and quickly resulted in the socioeconomic stratification of beach recreation sites (Walvin 1978: 70).

[52] “Train of the resurrection" is perhaps a play on yawm al-hashr, the “day of congregation” or day of resurrection (of the dead). In other words, the train is so crowded it looks as though it is taking all the desperate souls off to their salvation (or perhaps

damnation) on the beach. The drawing gives an impression of complete chaos. Hashar means “to stuff,” so the title might be a double entendre—the train is obviously stuffed, but the religious sense of yawm al-hashr also fits with the theme of the article (one of the passengers mentioned is a shaykh).

[53] In earlier works (Armbrust 1995, 1996) I have argued that there was a broad sea change in the character of Egyptian popular culture, particularly with regard to the way images of the middle class are constructed. Before the 1970s, the cinema and, to some extent, the other arts were a synthesis of vernacular and classicist elements. After the 1970s, the tendency of popular culture was to refuse any kind of viable social synthesis of cultural elements.

[54] For example, Sonallah Ibrahim’s latest novel, Sharaf (1997), takes commodity fetishism to its extreme. The protagonist spends the novel in prison for a crime he did not commit, but his real prison is the iron grip of his desire for consumer goods. Ibrahim punctuates his prison narrative with commercialist reveries—essentially lists of products and brand names. The protagonist’s memory of his outside life gradually fades as his stay in prison lengthens, but the grip of commodity fetishism remains forever fresh and inescapable.

** 8. From Piety to Romance: Islam- Oriented Texts in Bangladesh

Maimuna Huq

Public protests in Bangladesh against the controversial novel Lajja (Shame) by the Bangladeshi feminist-secularist writer Tasleema Nasreen seemed to demonstrate the growing strength of Islamic “fundamentalism” in Bangladesh.[55] However, the furor effectively concealed the pluralistic base from which “fundamentalist” opposition to her work arose and concealed the similarities between Nasreen and many of her foes. While many among Nasreen’s opponents are products of traditional religious schooling, other “fundamentalists” not only hold secular college and university degrees but are also

physicians and writers, as is Nasreen. Some enjoy reading her works. Some “fundamentalists” write novels themselves—romantic ones with hard covers as “secularly” and provocatively illustrated as Nasreen’s, a style and language as contemporary as hers, and plots equally laden with the sufferings of women in an unjust society. Paradoxically, the producers and readers of these novels consider them “Islamic” works, so do not deem them objectionable. While the form of these works clearly delineates the influence of new media on Muslim societies, their contents signify a shifting attitude toward Islam, and their producers and consumers constitute part of the new Muslim public sphere, primarily urban, which increasingly challenges the religious authority of traditional experts.

Most scholars of Bangladesh attribute the recent and unexpected growth in Islamic activism to “internal” efforts of the state and “external” efforts of Middle Eastern countries (Khan 1990: 50-62; Kabir 1990: 118-36; Husain 1990: 137-52). I depart from imputing such centrality to the state in explaining Islam-related developments over the last two decades and instead shift the focus from state-sponsored Islam to an Islam emerging “from below,” exploring a zone of Islamic literature not dominated by the state, even though the state participates in the production of this literature through sponsorship of institutions such as the Islamic Foundation. I argue that the phenomena related to this literary zone are at least as important, if not more so, to the comprehension of the recent increase in Islamic activities in Bangladesh as the role of the state of Bangladesh or of other Muslim states, such as Saudi Arabia and Iran.

Islamic literature and Islamic activism are symbiotically related. Each field experienced new ripples as people with new qualifications began to contribute to religious discourse in Bangladesh during the late 1970s. Until then, public religious discourse in Bangladesh had been dominated by a narrow base of madrasa-trained specialists, a dominance facilitated by the adoption of secularism by the state from 1970 to 1975 and one that continues to be buttressed by state-sustained segregation of “religious” and “modern” education. This privatization of Islam in a society where Islam is an integral part of everyday life sustained the concentration of religious authority in the hands of traditional experts. The deliberate and sometimes scornful distancing of the secular intelligentsia from Islam-centered issues has only enhanced this process. Thus the traditional religious elite has been able to ensure that Muslim personal laws, for example, remain firmly grounded in traditional interpretations of the shari'a, despite the efforts of the feminist movement in Bangladesh and despite the abuse of these laws to the detriment of women. Most importantly, these traditional Islamic specialists continue to define what it means to be a “good” Muslim. The authority of these wuJrasa-trained experts has been contested in recent years by the growing number of secularly or modern-educated Islamists, even though the formal ideological core of the Islamists closely resembles the outlook of the former, especially with regard to gender ideology. It is only when the focus is shifted from the ideological terrain to that of daily practices of those “below” or on the margins of political or social authority that important differences in their approaches to Islam can be observed. One area of such practice, the emergent and seemingly apolitical domain of Islamically oriented novels, is my key concern.

Even though the successive regimes of Zia-ur-Rahman and Hussein Muhammad Ershad turned to Islam for a variety of reasons, especially to popularize their ruling bases and to garner financial support from oil-rich Middle Eastern countries, neither regime sought to challenge the entrenched authority of madrasa-educated religious specialists. However, the Zia regime's decision to lift the ban that the earlier government of Sheikh Mujibur Rahman had imposed on Islamist or political Islamic groups transformed the relationship between Islam and the public sphere. Along with other Islamist groups, Jamaate Islami re-entered the national stage during the late 1970s. It quickly emerged as the most powerful Islamist group in the country. A unique feature of Jamaat is its domination by those educated at secular, modern, state-run institutions of higher education as well as by those trained first at religious schools and later at secular colleges and universities. These self-styled students of Islam contribute to the fragmentation of religious authority by re-conceptualizing and disseminating discussions of religion using novel approaches evident in the compilation of political biographies, booklets, and romance novels. Indeed the domain of Islam-oriented literature particularly exemplifies the changes and continuities that the public religious imagination has experienced over the last two decades in Bangladesh. This experience can be best grasped if considered through the junctures of "new media," "new people," and "new thinking" (Eickelman and Anderson, this volume).

The changing features of this literary domain from the early 1970s through the mid-1990s tell us much about how literate Bangladeshi Muslims conceptualize and practice Islam, blurring conventional boundaries between the religious and the secular in the cultural imagination. On the one hand, these literate Muslims are educated at largely secular state institutions. On the other, they are exposed to "informal" Islamic knowledge through training in Islamist groups, through Islamist productions in print, and through exposure to audio- and videocassettes, public performances of scriptural commentary (waaz niahfil), and television and radio programs. The linkage between the rise of mass higher education, the globalization of media technology, and the emergence of new forms of authority in religious discourse in much of the Muslim Middle East (Eickelman 1992: 643-52) is vital for contextualizing the appearance of new genres of Islam-oriented literature in Bangladesh in recent years, especially didactic booklets and romance novels.

One way of looking at these new literary genres is to view them as profit-making projects for Islamists, who invest the money derived from the sales of romance novels with eye-catching cover illustrations in other more "serious" projects. Many would argue that these texts deceive their readers into thinking them meaningful; others see them as commodified tools of political propaganda and manipulation. However, as various arguments concerning commodification suggest, such an approach is unsatisfactory, for "things" have social lives (Appadurai 1986). I propose that a study of Bangladeshi Islamic texts, centered on the aesthetics and politics of production, allows us to trace some of the continuities and changes in the engagement of literate Bangladeshi Muslims with what it means to be a "true" Muslim, a "good" member of the Bangali ethnic community, and a "loyal" citizen of the Bangladeshi nation-state.

In this essay, I focus on recent transformations in this engagement, as exemplified by didactic booklets and romance novels. Such transformations are also visible in the genres of Qur'anic exegisis and hadith literature, the compilations of the sayings and actions of the Prophet Muhammad, although these two genres of literary space remain beyond the scope of this chapter. Here I also treat, but briefly, the continuities in Islam-oriented literature, ranging from the texts that prescribe cures and instruct in religious rituals— mas ala texts—to romantic prose, can be traced back to the vast quantity of punthi or dobhashi (compositions in Bengali verse or rhymed prose heavily influenced by Arabic and Persian) literature produced by and for semi-literate Bangali Muslims during the nineteenth and early twentieth centuries (Ahmed 1974: 306-69, 1981: xvii-xxvi). Later, however, especially with the rise of Bangali nationalism in post-partition Pakistan, boundaries between the "religious" and the "secular" solidified, so that the domain of romantic love, for example, became a secular prerogative. In fact, the entire arena of creative literature came to be dominated by secular artists, and this has continued into the present decade. Whenever Islam occasionally appears in a secular novel —and this is especially true for the 1950s through the 1980s—it does so "in the form of a hypocrite mullah (a rural preacher with little formal Islamic education), profligate pir (religious leader), cohort of a reactionary political thug and the like" (Maniruzzaman 1990: 75).

Cultural, political, and material tensions between the Punjabi ruling elite based in West Pakistan (now Pakistan) and the Bangali inhabitants of East Pakistan (now Bangladesh) from the 1940s through the 1960s led to the rise of Bengali nationalism among the political and intellectual elites of East Pakistan. This nationalist spirit privileged a Bangali cultural identity over a Muslim identity and crystallized into state-sponsored secularism during the reign of Sheikh Mujibur Rahman (1971-1975), the first premier of Bangladesh (Murshid 1995: 284-360). Later governments diluted the secularist project for a number of reasons, including the continuing popular appeal of Islam as a cultural tradition. Indeed, this dilution began during the Mujib era itself (Rashiduzzaman 1996: 41-2; Kabir 1990: 46). Despite the gradual inclination of national politics toward "cultural" Islam, secular tendencies have continued to prevail in most elite national arenas, particularly that of creative literature. However, secularist hegemony in the literary arena is being increasingly contested by Islamist "micro-intellectuals," who occupy the interstices between traditionalist religious experts at one end of the intellectual spectrum and secularist intellectuals at the other.

While print culture has been shown to secularize Islamic knowledge in modern Turkey (Yavuz 1995: 2), I demonstrate that print in contemporary Bangladesh is Islamizing secular discourse. Islamic texts have conventionally ritualized (mas'ala texts) and devotionalized (biographies) religious meaning, but now they have begun to socialize, politicize, and culturalize the religious imagination. In other words, new Islamic texts—namely, polemic booklets and romance novels—attempt to introduce Islamic themes firmly into issues of cultural identity, social problems, and "national" concerns, just as new Turkish "Muslim" writings have been said to do in their setting (Meeker 1991: 203). By clarifying a unified Muslim consciousness compatible with Bangali culture, national history, scientific progress, and global modernity, these texts engender semantic spaces that provide a wide audience with common interpretative frameworks for imagining itself as a cohesive

community both internally and in relation to external groups. This new approach to thinking about and presenting Islam also bears implications for older forms of religious affiliation.

Treating the market for Islamic literature as an indexical symbol, I identify it as a site of multiple intersections of the sacred and the mundane that not only “refers back to classical constructs and forward to uses in the present” (Tambiah 1993: 4) but also invents the classical or traditional through a discourse of the mandatory “Islamic state,” for example, and classicizes the present by imagining it as jaheliyat (the Benjalized Arabic for jahiliyya), the pre-Islamic period in Arabia generally understood by Muslims as one of ignorance, paganism, moral depravity, and injustice.

This invention of tradition or “blurring” of temporal, cultural, and conceptual frames, implicit in Tambiah, is explicitly discussed by Eickelman and Piscatori (1996: 22-45) as an integral aspect of current Muslim politics. They criticize modernization theory for its rigid delimitation of tradition from modernity, which oversimplifies the complex interaction of tradition and religion with modern conditions and leads to serious misperceptions of Muslim societies and politics. “Since values take on symbolic form, the parameters of culture appear to remain intact while the renewal and transformation of values are in fact taking place” (Eickelman and Piscatori 1996: 28). A consideration of the interaction between tradition and context is crucial to a grasp of the complex and seemingly inconsistent ways in which Islamic activism manifests itself in Bangladesh. A good example of such heterogenous manifestation is the claim that female Islamists lay to an ideological struggle for the re-establishment of the seventh-century “golden age of Islam,” even as some of these women study at unisex universities, work in offices alongside men, stay out late to participate in religious activities in defiance of parental and spousal authority, watch romantic Bangla, Hindi, and English films, and read romantic novels, including those by Western writers. An awareness of the ongoing fusion and diffusion of religion, politics, and socio-economic processes is pivotal to the illumination of the peculiarity embodied in the writing of a love story interspersed with discussions of the Qur’an and hadith.

While most books in the market for Islamic literature are generally within the financial reach of the middle class, one can segment this market from a “literary-economic” perspective, for this uncovers the partial link between educational level/type and purchasing power. For example, mas'ala texts have persisted in Bangladesh for decades because of a pragmatic and strategic convergence of economic, educational, and stylistic elements. While the writing style often appeals to only the mudrasu-educated, the type of knowledge provided—advice on worldly problems—is accessible to both the madrasa-educated and the secularly educated. Furthermore, the pricing of mas’ala texts covers a broad range, transcending economic boundaries. Although larger volumes are usually more expensive than smaller ones, they provide formulas for treating numerous mundane concerns. Members of the lower middle-class, especially those who have had some madrasa education, sometimes purchase these relatively expensive volumes as “investments” to spare them medical fees and long trips to religious experts or saints. This “literary-economic” perspective is useful for tracking the emergence of new literatures and the persistence of older literary forms.

*** Mas’ala Texts

These texts provide detailed and specific information on how to benefit from Qur’anic verses in various aspects of life—health, intellectual ability, socio-economic well-being, family affairs, and the attainment of greater virtue or satvab for success in the Life After Death. They prescribe religious formulas for curing illnesses, improving performance at work, enhancing eyesight, securing jobs, outwitting adversaries, and passing examinations. They also discuss many Islamic principles, performances, and laws.

Most of the Islamic literature produced between 1971 and 1975 focused on mas’ala. Such texts made up one of the largest segments of Muslim Bengali literature during the nineteenth and early twentieth centuries (Ahmed 1974: 324), and it remains one of the largest categories of religious writings in Bangladesh today. The books enjoy wide popularity, although both Islamic and secular activists tend to look down on them. Mas’ala texts, Islamists believe, limit Islam to rituals and hinder the growth of a revolutionary or reformist consciousness. To many secularists, they embody backwardness, rusticity, and superstition. Mas'ala texts include translated works of Islamic scholars and are produced in hard-cover editions with flowery and geometric patterns or mosque domes, minarets, and the Qur’an on the dust jackets. Since none refer to politics and few to socio-cultural concerns, they were compatible with the socialist-secularist character of the Mujib regime, which promoted the idea of Islam as a “religion” limited to one’s personal life. During this period, while other forms of religious literature and public religious activities waned, publishers such as Ashrafia, Emdadia, Nomania, Osmania, and Rahmania produced mas’ala texts in abundance (Maniruzzaman 1990: 76).

Demand for this type of text also reflected the profound influence of those Sufis whose preaching played a central role in the spread of Islam in Bengal as early as the seventh century (Haq 1975). More importantly, it reflected the significant difference in cultural imagination between the secularist political elite and the greater public even at a time when the nation had just emerged from its struggle for independence from the Islamic state of Pakistan. Many Bangladeshis (then East Pakistanis), especially the political elite, felt that the Pakistani state had used Islam to oppress East Pakistanis, to exploit them economically, and to denigrate their culture. After his ascension to power following the independence war, Sheikh Mujib, with his party (Awami League) ideology of Bangali nationalism, appointed a Commission on Education to reform the educational structure on the basis of the four fundamental principles of the constitution—nationalism, democracy, secularism, and socialism (Maniruzzaman 1990: 71).

The commission submitted an interim report in May 1973, which recommended a complete separation of religion and education. Nonetheless, responses to questionnaires circulated by the commission showed that about 71 percent of the respondents, most of whom were

secular-educated, advocated modernized religious education (as opposed to the madrasa type) as an integral part of general education. This revealed a significant gap between the worldview of the educated Bangladeshi public and that of the dominant political elite, even during the heyday of secularism.

The Commission could not neglect the decisive opinion of the respondents. While they did not include religious education in the syllabi for classes i to iv, they reluctantly recommended religious instruction as an alternative to ethical studies in classes vi to viii and as an elective subject in classes ix to xi only for those in the humanities. (Maniruzzaman 1990: 73)

Indicative of how deeply rooted Islam is in the popular Bangladeshi imagination as a guide for daily living, mas'ala texts are as abundant today as ever. Alongside new ntas'ala texts are new editions of old and popular ones, such as Shamsul Haq's Neyamul Qor'an. It was first published in 1937; the eleventh edition appeared in 1989. A certain Kitabul Molla, whose review was reproduced in the seventh edition (1960), claimed that the primary reason for the popularity of this text was that people benefited directly from the formulas it contained. He suggested that the most important prerequisite was complete faith in the efficacy of the text. And, since Neyamul Qor'an explains the "spiritual, philosophical, inherent, and scientific principles of the formulas it contains, this feature enhances the reader's faith in these formulas" (Haq 1989: 8; emphasis added).

In Islame Halal-Haramer Bidhan (1984, 1994), the Bangla translation of an Arabic text written by Yusuf al-Karzavi, the translator, Muhammad Abdur Rahim, writes that the text responds to "inquiries of the modern mind" (emphasis added) in the Muslim world. The topics in this book are discussed at many "centers of Islamic thought worldwide," Rahim explains, but the "scientific way" in which the author presents "high quality and comprehensive principles and information-based research in this text makes it unique" (al-Karzavi 1994: 8; emphasis added). More recent mas'ala texts imagine a "worldwide" Islamic consciousness. These attempt to enhance linkages between religion and science/modernity. Indeed, this enhanced objectification is reflected in the very forms of these texts. For example, Islame Halal-Haranter Bidhan is more systematically structured than older texts like Neyamul Qor'an.

Mas'ala texts play a significant role in shaping public consciousness of Islam by encouraging a ritual-based piety in readers. The content of the books spreads quickly by word of mouth, especially in the densely packed middle-class and lower-middle-class neighborhoods, foregrounding Islam and the Qur'an in daily practice, even if the texts do not encourage explanations. More like handbooks than discursive formations, mas'ala texts appeal to a majority of the mudrasa-educated. Their pragmatic, "how-to" approach also appeals to many secularly educated Muslims—those who perceive

Islam as a “religious system” (as opposed to a “code of life," which is precisely what Islam is to many Islamic activists) clearly demarcated from the political.

It has been argued that modern mass higher education in the Muslim Middle East facilitates the conceptualization of religious beliefs as “objective systems” (Eickelman 1992: 646-47), a premise easily transposed to South Asia. The view of Islam as an objective system is one that secularists and Islamists in Bangladesh share. However, while Islam represents to Islamists a system of thinking, acting, and living—socially, politically, and economically—it symbolizes an apolitical system of personal values to secularists. Both Islamists and secularists are therefore vehement in their claim to know the “real,” or legitimate, concerns of Islam.

In Bangladesh, the slow but steady spread of modern/secular higher education appears to be eroding the privileged position of traditionally educated religious scholars, as is the case in several Arab countries (Eickelman 1992: 646). However, in Bangladesh, this erosion is due at least as much to the secularist activism of non-governmental organizations in rural areas as to the spread of modern/secular higher education. While a majority of Bangladeshis continue to live in rural areas, modern/secular higher education is available primarily to urban regions (Chaudhury and Ahmed 1987: 39). Masala texts appear to further diminish the roles of traditional religious experts. By exposing the secularly educated Bengali Muslims to specific, practice-based, Qur'anic knowledge compiled by various authors, these texts allow readers to play off one authority against another and reduce the necessity for face-to-face interaction with traditional specialists.

On the other hand, these texts reassert the importance of traditional religious education, perceived as the basis for religious cures. They also enhance the dependence of secularly educated Muslims on the traditionally trained, since the former are not likely to engage in the public production of mas’ala discourse. This dependence is occasioned by people’s need for private assistance—in the case of illness or childlessness, for instance. The language of the texts, sadhu or classical Bangla, is unattractive to many modern-educated persons and hard for them to emulate; knowledge required for writing mas’ala texts must be acquired primarily from traditional religious training.

Lacking in secular modalities for meaningful renderings of sacred phenomena, mas’ala texts fail to engage a majority of the modern-educated, who are reluctant to perceive a text as authoritative and interesting simply because it is full of Qur’anic verses and hadith. They demand that citations be explained, contextualized, and buttressed by references to shared ideas, common-sense examples, scientific evidence, or corroboration by recognized scholars. Such challenges, in turn, indicate how Islam is becoming increasingly objectified in the consciousness of many of its believers: “What is my religion? Why is it important to my life? and. How do my beliefs guide my conduct?” (Eickelman 1992: 643). While the newer mas’ala texts respond to shifting criteria for persuasiveness more effectively than older ones, they do not compete

well with more recent booklets and novels in attracting readers in a society with rising levels of modern/secular higher education, especially readers from influential circles.

*** Biographies

Like mas'ala texts, biographies are an old literary form, one that constituted a very popular category of Muslim Bengali literature during the nineteenth and early twentieth centuries (Ahmed 1974: 352-53). They are one of the few types of Islamic literature available in general bookstores, probably because of their apolitical nature, easy-read style, and suitability for both adults and children. Like most mas'ala texts, biographies have bright-colored hard-cover designs in floral and geometric patterns, and the writing style is similar—sadhu Bangla with a fair amount of rhymed prose (characteristic of nineteenth-century punthi literature), dialogue, and monologues assigned to Allah, prophets, angels, and saintly characters. They seem to inspire piety by narrativizing the religious devotion of other characters.

A significant break in the tradition of biographical texts occurred in the late 1980s (although the older tradition remains dominant), but the new biographies are not yet visible because the project is still nascent and because new texts entail higher production costs due to their more sophisticated appearance—such as high-quality paper and print—and the qualifications of their producers, who are often the recipients of higher education in both traditional and modern state-run systems. Prices and style of presentation indicate that the audience for the new biographies is growing, but it is still a small literary-economic one—primarily members of the middle and upper-middle classes with modern higher education or higher education in both modern and religious schools. The texts are primarily sold at stores affiliated with Islamist groups and located around group headquarters or mosques that tend to be Islamist strongholds, such as the Kantaban Mosque in Dhaka. These sites are usually removed from general bookstore locations.

One example of the new biographies is Sirate Ihne Hisham, translated from Arabic into Bangla by Akram Farooq and first published in 1988 (republished in 1990 and again in 1992). With a somber-colored and simply illustrated hard cover, this biography of the Prophet Muhammad is much longer and of a more "authoritative" or "serious" appearance than most popular biographies. Also, since it is a translation of an Arabic text, authored by an Egyptian named 'Abd al Salam Harun and based on Ibne Hisham's work in 1953, its organization of material and its writing style differ from those of traditional Bangladeshi biographies. For instance, the work includes a comprehensive introduction and notes. It is aimed at a wide audience, especially recipients of secular higher education.

Another instance of divergence is Rasulnllahr Biplahi Jihan (The Revolutionary Life of the Messenger of Allah), a translated text based on a work by the Indian writer Abu Salim Muhammad Abdul Hai. A considerable amount of material has been added to the

original, including a chapter entitled “The Role of Female Companions in the Preaching of Islam.” According to Muhammad Habibur Rahman, translator and editor of this new-style biography, “Muslims today see the life doctrine of the world Prophet in segments, as the life of a mere preacher of religion.” Consequently, they fail to grasp the “revolutionary significance” of his existence and hence do not see the need to reform their problem-ridden states and societies (1993: preface). This text claims to enable the reader to “see the entire form of (the Prophet’s] life” (preface; emphasis added). Such emphasis on the wholeness of form resonates with the increasing perception of "religion as system and object” (Eickelman 1992: 646-47). This is one of the few biographical texts in the Bangladeshi Islamic market that attempt to objectify Islam for readers through a contemporary Islamic activist vocabulary—“Islamic movement,” “Islamic state,” "Islamic society,” “establishment of Islam,” and “training of the faithful.”

It is noteworthy that translation, compilation, publication, and distribution of both Sirate Ihne Hisham and Rasnlnllahr Biplahi Jihan have been undertaken by Jamaate Island. Jamaat has also contributed significantly to the new genre of Islamic literature in Bangladesh that I call “booklets,” and it is to these that we now turn.

*** Booklets

Booklets started to appear in noticeable numbers in the late 1970s. As far as the basic nature of their contents is concerned, of course, they can be traced to “social” and “political” works of nineteenth- and early-twentieth- century punthi literature (Ahmed 1974: 341-52, 359-69). Current booklets are cheap and readable because they adhere closely to colloquial Bangla and treat specific issues. They are not usually eye-catching in appearance, probably to keep costs to a minimum and to insure accessibility to a larger readership. Another reason might be to communicate the seriousness of the contents. Many producers of booklets and most producers of the new-style, austerely illustrated biographies are often affiliated with the same Islamist group, Jamaate Islami, while mas’ala texts tend to be produced and purchased by those attracted to either orthodox or non-radical modes of Islam, such as that advocated by Tablighi Jamaat. Potential recruits to Jamaate Islami and its offshoot groups are sometimes introduced to Islamist literature through translations of the works by Maudoodi, which are often produced in booklet form (Huq 1994). In fact, these are the works through which Jamaat launched its literary campaign following its re-entrance into national politics in the late 1970s.

Booklet writers in Bangladesh, like those in Turkey described by Meeker (1991: 91), “have adopted a style and stance that has no exact precedent.” They address wide-ranging issues, from broad Islamic principles to particular historical and current socio-political concerns, such as the women’s movement (Nizami 1991), secularism (Rashid 1993), and freedom of expression (Gofran 1989). Booklets Islamize what has been conventionally regarded as secular knowledge, and, as in Turkey (Yavuz 1995: 14), play a pivotal role in the formation

and dissemination of Islam-centered discourse. Many booklets go through five or six editions.

As mentioned above, Jamaate Islami “flooded” (Maniruzzaman 1990: 77) the market with booklets upon its return to national politics nearly two decades ago. As it turns out, this booklet production could not have been more opportune. While Islam has always been integral to popular culture, its political image had just begun to recover from the severe blow suffered in 1971. At the same time, modern schools were turning out significant numbers of men and women who had been the recipients of higher education. Only 1,210 students were enrolled in 1968 in modern high schools; 513,835 were enrolled in colleges throughout the country in 1975 (Chaud- hury and Ahmed 1987: 43, 45). These numbers are not significant in relation to the total population in 1975, hut the point is that there was virtually no Islamic literature in the mid- and late 1970s that could appeal to these educated readers. Furthermore, these young graduates developed an interest in national and religious identities, boosted in part by the Zia government’s advocacy of “Bangladeshi nationalism" (Rashiduzzaman 1996: 42), which departed from Mujib’s “Bengali nationalism” in re-integrating Islam as an important component of national identity and in refusing to privilege ethnic identity over a religious one. Mas’ala and biographical texts, which were practically the only types of religious literature available at the time, did not employ modern writing styles; neither did they address elements of identity politics. But booklets—or rather their producer, Jamaate Islami—rose to the occasion.

The production of most ntas’ala and traditional biographical texts is not directly connected to Islamic activism, but most authors, publishers, and readers of booklets are affiliated with various Islamic groups. Jamaat- affiliated publishing agencies and distribution centers or bookstores, complete with Jamaat-connected authors, editors, translators, cover designers, and computer experts, currently dominate booklet literature. Therefore, while some booklets may be seen as formulating a new type of Islamic knowledge that is “abstract, reflective, and universal,” as Yavuz argues is the case for Turkey, such information is not “context free.” Islamic knowledge is not “freed from its narrative base” (Yavuz 1995: 3). Rather, it is uprooted from its more conventional bases to be resituated in a culture w here modalities of secular education are increasingly dominant. Where a booklet is sold and by whom it is written, published, and read tell a great deal about the “narrative base” or social location of this Islamic discourse.

The sorts of literature discussed so far do not, however, attract the majority of the literate, who are increasingly those secularly educated at state schools, with a taste for modern styles and non-religious, non-political topics; they hold aspirations for secular, “modern” jobs and careers. Islamic literature does not entertain or help obtain well-paying positions, or facilitate peer talk on campuses, many of which continue to be secularist strongholds. Some Jamaat-affiliated publishers complain that “Islamic publishing centers, critically limited by economic factors in their productions, are unable to satisfy demands of the Muslim mind. Therefore secularists, with formidable financial resources, are taking over the literary arena empty of Islamic literature” (interview, December 24, 1994).

While booklets employ more contemporary styles of argumentation, providing a voice “flexible enough to address anyone from small shop owners to university professors,” as Yavuz suggests is true for contemporary magazines in Turkey (1995: 8), they lack the right physical look and depth of discussion for the secularly educated, who lay claim to higher social and intellectual status through enacting sophistication. But booklets target the working middle and lower-middle classes, even though they are written primarily by degree holders from secular state universities.

Furthermore, for graduates of secular universities, the political messages of booklets arouse suspicion. Many Bangladeshis today find political propaganda unattractive, and those advocating political Islam are seen as having collaborated with the enemy in 1971. As electoral patterns and Razia Akhter Banu’s (1992: 163-68) study have shown, most contemporary Bangladeshis would prefer to separate religious and political authority, even though the government is expected to uphold Muslim tenets. All these factors financially undermine the production of both existing booklets and new ones, especially ones more likely to appeal to the growing numbers of better-educated, middle-class Muslims.

*** Novels

What complaining publishers do not tell us is that, unable to compete with secularist literature in quantity, Islamist litterateurs are turning to novels in an attempt at diversification. The format of novels, especially romance novels, attracts an audience from active followers of political leaders—high school, college, and university students—and provides the Islamic-minded with alternatives to secular literary entertainment. Romance novels with their vividly illustrated covers have been a stronghold of secular literature, one that Islamists could not have imagined as appropriate, at least not for the purpose of Islamization, even a decade ago.

It is not difficult to see how Islamists, looking for alternative national visions, could have moved from a mas u/u-text-dominated market to one of booklet production in which the Islamic principles discussed in mas'ala texts become related to specific social, cultural, and political issues. This shift obliges readers to move from an awareness of principles to a realization of how society might be transformed. It is challenging, however, to imagine linkages between Islamic teachings and stories of romance that involve not only married couples but unmarried ones as well. Yet, when one considers the popularity of the romantic novel, particularly among the youth of Bangladesh, one can see why Islamists might have adopted this genre to move the audience toward a particular brand of Islam. Readers are persuaded to Islamically imagine various aspects of their lives and the lives of others around them. I see this adaptation of the project of Islamization to the medium of the romantic novel as a pragmatic attempt to extend and redefine the boundaries of the Islamic imagination and to create a platform for Islamist critiques of secular ideologies and practices. Since romance is well grounded in popular culture, it is

strategically more effective to give a negative portrayal of certain aspects of a romantic relationship than to denounce it wholesale.

Where the interplay of cultural symbols is so layered and cacophonic that any overarching agenda the master narrative might have tends to be lost, one encounters in Bangladeshi fiction an illusion of incoherence and purposelessness. However, this style lends authenticity to the stories. In a culture where political themes threaten to eclipse all else, fiction is a welcome respite. Novels therefore become more than genres of creative writing by their performativeness, where, in the reader's imagination, ordinary individuals become performers of domination, opposition, nationhood, and culture. They have voices, desires, strengths, and weaknesses that readers can ally with (Ghosh 1993; Combs-Schilling 1996).

These developments are not unique to Bangladesh. In other Muslim- majority countries as well, the "Islamic" novel constitutes the latest mode of articulation within the broadening zone of religious discourses and symbolizes a turn to "discursive practice" and away from "didacticism," as Meeker (1991: 214) notes for Turkey. Montgomery (1991) highlights the place of story poems in the modernization and secularization of Uzbekistan's Islamic community during the transition toward sovietization in the 1930s. Bowen (1993: 632), on the other hand, describes the use of poetry in modernist Islamic reform among the Gayo in Indonesia from the 1930s through the 1950s. Yavuz (1995: 15) and Meeker (1991: 206) mention the role of novels in the production of Islamic thought in modern Turkey, and Banks (1990) discusses the role of Malay novelists in the invention of Malay rural culture in the context of "resurgent Islam."

While some Islamic activists do not accept novels as "Islamic" literature (interviews, December 1994), the novels I am concerned with here are sold exclusively in Islamic bookstores. Some Islamic publishers see novels becoming the most popular form of Islamic writing in the near future (interview, December 24, 1994). Their popularity stems in part from the fact that novels are simply more fun to read and in part from the apparent distance between the intimately social Islam of the novels and the rhetorical Islam of propagandist literature such as booklets and newspapers, and this is refreshing for readers of Islamic materials. Most importantly, perhaps, these novels bridge the gap between the types of romantic novels written by Tasleema Nasreen and Humayun Azad, who advocate transcendence of all social mores and attack religious values, and normative Islamic literature, which is preoccupied with reaffirming Islamic principles, purifying society, and decrying the moral depravity of various Bengali cultural practices.

Such bold appropriation of the distinctively modern and secular genre of the romantic novel to disseminate ideas about Islam is unprecedented in Bangladesh. These novelists seek not only to redraw the boundaries of an Islamic imagination but also to chart new ways of acting (Meeker 1991: 197). More pragmatically, Bangladeshi writers and publishers use the novel to attract young readers who are not particularly enthused about religious discussions. These novels do not constitute just an Islamist space; they give voice

to the large segment of “middle roaders” (Maniruzzaman 1990: 89) to whom Islam is important but who do not support the radical societal visions of either Islamists or secularists.

Although Islamic novels began to appear in Bangladesh only in the 1980s, historical novels by an Urdu writer, Nasim Hejazi, were translated into Bangla and published as early as the 1960s. Hejazi’s novels are quite popular among Islamic activists. Produced in grim hard covers, these novels retain numerous Urdu words, but the writing style is dated and the progression of events slow in comparison to current Islamic and secular novels. Slightly colored with romance, Hejazi’s works emphasize Islamic history. The current publisher of Hejazi’s works in translation is Bangladesh Co-operative Book Society Ltd., whose chairman hails Hejazi for proving that novels can become popular in Bangladesh without being sex-oriented (Prologue, Hejazi 1988). The translator of Hejazi’s Khun Ranga Path (Blood-Colored Path) (1988) writes that the novels are “inspired by Islamic thoughts and sentiments” (emphasis added). The spaces between this Islamic intentionality and the stories told are often pregnant with the politics of ambiguity and with the potential for attracting a broad audience, for whom the same event might convey different morals.

Among more contemporary Islamic novels are series of paperback thrillers such as Typhoon and Saimoom, which closely resemble secular series like Masud Rana (Anwar Hossen 1994) and Western (Shawkat Hossen 1994) in both appearance and writing style. Saimooni creatively enmeshes Islamic doctrines and history in plots involving romance, adventure, and local as well as global socio-political issues. The first Saimoom story appeared in 1987 as Operation Tel-Aviv—1. Novels by Qasem Abubakar began to appear at about the same time, followed by the works of Abdus Salam Mitul in 1994. Both writers’ works are similar to secular social novels such as those by Humayun Ahmed and Imdadul Haq Milan. Other novelists, writing in similar styles, began to make their presence felt during 1995 and 1996. Works by some of them are virtually indistinguishable from secular novels, since Islam does not appear in them at all. Yet they are regarded by distributors and publishers as “Islamic” and “decent” (interviews, August 1996).

Ahmed Musa, the principal character of the Saimoom series, is a Muslim driven from his homeland in Central Asia by Communists. He is now an international Islamic revolutionary, the leader of an international Islamic group called Saimoom. Musa travels from one part of the world to another to help Muslims in trouble. Operation Tel-Aviv finds him in Israel, helping Palestinians establish a state of their own. It contains fairly interesting discussions of Islamic principles, history, and organization and Muslim nationalism. The plot proceeds through strategies and counterstrategies, attacks and revenge, torture and betrayal, martyrdom and organizational loyalty, and a romance that ends in marriage between a Palestinian Islamist and an Israeli woman. Detailed descriptions of places, events, groups, and individuals, clearly as much a product of the imagination as of research, contribute to the persuasiveness of the story.

Abubakar’s and Mitul’s writings, on the other hand, are social novels. Both writers claim to show that novels can be entertaining without being “indecent” and casually inform readers about various aspects of Islam. According to Mitul, “In the current world of novels, a group of writers with distorted taste do not seem to be able to write novels without sexual appeal and amorous male-female interactions.” He tries to show that “love is sacred and how this sacredness turns people’s lives toward principles, productivity, and fear of Allah” (1994). Mitul urges readers not to weep over the pain of his main characters but to “try to accept their principles” (Golaper Kanta [Rose Thorn] 1994). Abubakar sketches images of urban and rural societies in Pratikhkha (Waiting) (1992). He hopes that the reader might “attain some religious knowledge from (the novel] and be inspired by it.” However, while political Islam has a favorable presence in Mitul’s work, it is altogether absent in Abubakar’s.

The “Islamic” nature of these novels cannot be deduced from their appearance. For instance, Abubakar’s Basar Rat (Wedding Night) (1993) has a glossy hard cover with a bride and groom sitting on a bed. Mitul’s Golaper Kanta has a glossy cover of a woman’s face with a rose placed sensuously across it (Fig. 8.1). In terms of graphics, the novels are indistinguishable from secular novels such as those by Tasleema Nasreen and Imdadul Haq Milan.

Despite the remarkable similarities between secular and Islamic novels in Bangladesh, the Islamic character of the latter is quite clear in some cases. In the case of Nasir Helal’s Obanchito Kalanka (Undeserved Disgrace) (1996), for example, the narrative itself contains strong Islamist overtones. In the case of works by Abdus Salam Mitul, on the other hand, Islam is latent in the story, but appears clearly in the preface. In his introduction to Borkha Pora Sei Meyeti (That Veil-clad Woman) (1994), Mitul thanks Allah profusely for enabling him to write this novel. Then he recites dorud (a set of Qur'anic verses in which God is implored to bless Muhammad and his family) “hundreds of tens of million times,” referring to the Prophet Muhammad as “the great messenger of the liberation of humankind” and “director of the liberation of the exploited, oppressed, and tortured peoples.” Abubakar, somewhat less enthusiastic, often begins “in the name of Allah, the Extremely Merciful.”

Mitul’s and Abubakar’s support of Islam in their novels does not mean that their works are perceived in the same light by everyone. Group affiliations and differences in Islamic attitudes play a key role. While the affiliations of Asad (Saimoom) and Mitul with Jamaate Islami are quite clear (Asad is a prominent Jamaat activist; Mitul’s publisher, Al-Falah Publications, is Ja- maat-linked), it is not clear to which group—if any—Abubakar is connected. That Abubakar has no Jamaat connections is clear from the comments of a Jamaat-affiliated publisher and salesman: “Qasem Bin Abubakar’s books do not create an interest in readers concerning the Islamic movement and render readers suspicious towards Islamic regulations through weak and out-of-contextual usage of the Qur’an and Hadith.” He further remarked that “seeing nudity and dirtiness alongside the Qur’an and hadith, it would not be ridiculous to speculate that Qasem has begun to compose so-called religious literature with a commercial outlook” (interview, December 25, 1994).

Yet Abubakar’s works are stocked at this Islamist’s store. One could venture that this is because Abubakar’s books sell well. But if profit is the key factor, why not keep some popular secular works as well, especially those without “nudity and dirtiness”? Besides the commodification of Islamic literature, we see a tolerance for literature averse to one’s own taste,

Figure 8.1. It is difficult to distinguish Mitul’s Islamic novel Golaper Kanta (Rose Thorn), above, from Nasreen’s secular novel Fera (Returning), on the right, by appearance. as long as there is some “Islamicness” present, a tolerance influenced perhaps by the scarcity of Islamic novels at a time when, according to this publisher, novels show the potential for becoming the most sought-after literary items among young Islam-oriented readers (interview, December 25, 1994). Such tolerance and flexibility are further produced by the educational and cultural “habitus” the producers and audiences have in common.

The fact that Abubakar’s and Mitul’s works sometimes have the same publisher attests to this fluidity. Publishers’ personal knowledge of an author and familiarity with her/his “basic” values, regardless of whether the author actually uses Islam in his/her work, plays an important role in the publication of Islamic novels. This sort of trust goes beyond writer-publisher relations to affect writer-reader relations and relations among the audience. Particularly in the case of Islamic novels where Islam is not mentioned directly, Islamicness is imagined and becomes objectified through the book’s association with an author or publisher known for her/his religiosity or knowledgeability about Islam or with a specific Islamic place such as an Islamic bookstore or fair.

Furthermore, Islamist publishers gain by publishing works of writers not affiliated with Islamic activism, for the credibility of a novel then increases for a broader audience. Two examples are works by Al Mahmud and Razia Majid. Both are known well as writers, but little is known about their political inclinations. Conventionally, their works have been published by various agencies. Razia Majid’s latest novel was published by Preeti Prokashon, an Islamist publishing house. There is a color photograph of the writer at the back of the novel’s glossy dust jacket, along with a blurb on her earlier publications. The photograph depicts a bespectacled female scholar with very short hair who wears make-up and fashionable clothing. In other words, it is clear that the author is among those least likely to have sympathies for Islamism.

The publisher went out of his way to violate the basic Islamist principle that a Muslim woman should carefully conceal her physical appearance from public gaze by veiling. The publisher’s transgression becomes meaningful when one realizes that this novel effectively problematizes the secularist depiction of the 1971 war of the independence of Bangladesh. The controversial role that Islamists played in this war continues to haunt Islamist attempts today to popularize Islam as a political ideology.

While ambiguity as to the Islamic credentials of a novelist endows a novel with additional political innocence for a broader audience, a novel's physical location among other Islamic books tints it with the authority and propriety of more explicit Islamic books such as nias'ala texts, booklets, and exegetical works on the Qur'an and hadith. In other words, Islamic novels "become components of a 'paradigmatic' series" (Tambiah 1993: 263). Even though the Saimoom series contains romantic exchanges of which pious adults would disapprove, young Islamic activists can cite the name of the author of the series, Abul Asad, a prominent Islamic activist. In the imagination of an Islam-oriented audience diverse in age, educational background, and degree of religiosity, Asad's ideological commitment is stamped onto the novels he writes and serves as a guarantor for the goodness of the work.

Despite some Jamaat-affiliated publishers' approval of work by writers like Mitul, political Islam—and more accurately Jamaate Islami—does not play as prominent a role in Mitul's work as in the novels of Mosharraf Hosain Shagar. In Abujh Ridoy (Uncomprehending Heart) (1st ed. August 1995; 2nd ed. January 1996), for instance, Shagar describes how the main character becomes an Islamic activist and advances from one cadre to the next in an Islamic group called Islami Mukti Sangha (Islamic Liberation Association) (Fig. 8.2). Anyone familiar with the internal workings of Jamaat or its student groups will easily recognize the group Shagar is talking about. Malti-Douglas argues, in contrast, that in an Iraqi novel entitled al-Ayyam al-Tau>ila (The Long Days) by 'Abd al Amir Mu'alla, "a partly fictionalized account of a period in Saddam Husayn's life," this "semidisguise permits Mu'alla to take whatever liberties he wishes with the life of his protagonist, while permitting the identification with the historical personage essential to the latter's legitimation" (Malti-Douglas 1994: 47). The Bangladeshi novelist Shagar, however, takes little or no liberty with the organizational facts of the movement he deals with, yet the poor disguise is essential for legitimizing the fictional form he is using.

The fictional form itself is crucial for the contemporary Islamic activist agenda of Islamizing national culture and history, not only through didactic works and speeches but through entertainment. Islamist novelists rely heavily on readers to subscribe to the "language of politics" approach, while they use the "politics of language" approach. The former assumes that "language carries intrinsic authority that is largely independent of the political circumstances in which it is used" (Piscatori 1990: 770). The latter assumes that "language acquires authority according to usage and has primarily tactical value" (Piscatori 1990: 771). Islamic novelists' perception of the role of secular novels in contemporary society also plays a key role in their fiction. One of Shagar's goals in writing, for instance, is to counter writers who, "in the name of writing novels," are ruining "national ideology, tradition and culture and youth character" and trying to "distance young men from Islam" by "distorting the great objective and real spirit of the liberation war of 1971." Thus Islamic novelists see themselves as not only sustaining national identity but also writing national history as it "really" took place.

A decade ago, Islamic activists either avoided the issue of the independence war or became defensive when charged with betraying the Bangladeshi nation by secularists who wrote enthusiastically about this war. This secularist-Islamist split can be traced to the early twentieth century, the twi-

Figure 8.2. In his Islamic novel Abujh Ridoy (Uncomprehending Heart), Shagar makes little attempt to conceal the real identity of the Islamist group at the heart of his narrative.

light of British colonial rule in India (Murshid 1995: 120-68). For Bangladeshi secularists, the 1971 war demonstrated that the Islamic bond could not supersede cultural differences between West and East Pakistan and that embroiling Islam in politics could only lead to exploitation and disaster (284-360). For Islamists, this war was the product of the unjust rule by the military dictator of Pakistan and the efforts of Hindu-ruled India to break up Muslim-ruled Pakistan. It therefore bore no connection to "real" Islam (Asad 1990). Some Islamists collaborated with the Pakistani army in eliminating fellow Bengalis who either supported or fought for independence (Ahmad 1991:501). An inability to adequately justify or refute charges of collaboration has prompted Islamists to shy away from the topic of the war. These charges also constitute a serious obstacle to the popularization of Islamism in present Bangladesh, for they can be and have been effectively used by opposition groups to whip up popular emotions against the Islamists.

Yet young Islamic novelists are entering previously forbidden terrain by boldly incorporating the 1971 war into their narratives for the purpose of popularizing Islamist ideologies. They employ the war as a strategy for retelling national history and for historicizing the marginalized discourse of political Islam. Challenging the negative linkage between the war and Islam in dominant secularist discourse, these Islam-oriented novelists attempt to show how good Muslims (whether affiliated with Islamic activism or not) were persecuted by both the Pakistani army and Bengali secularists. They also delineate the violence unleashed by Bengalis on Urdu-speaking or non-Bengali residents of East Pakistan as a consequence of the war. An example of such a novel is Judhdho O Bhalobasha (War and Love) (1996) by a female novelist named Razia Majid. As with many Islam-oriented romantic novels, it is impossible to know this book as Islamic from its cover illustration or even from the contents, for Islam appears only sporadically within the body of the text. But this is precisely why the book is effective. While distancing itself from Islamic activism, it complicates the glory and clarity of meaning that secularists assign to the war, thereby destabilizing the sharp boundaries drawn between friend and foe in the dominant literature on the war. In effect, the writer manages to accomplish what seasoned Islamist writers have not been able to before, either through booklets or through more scholarly works such as Abul Asad's Kalo Ponchisher Age (Prior to the Dark Twenty-fifth). This book is certainly more "historical" in appearance, style, and scope—footnoted to the hilt—but high school and college students are much more likely to pick up Majid's narrative of love and loss.

The fictional form frees authors from the need to provide concrete evidence for their claims. It also provides an element of unpredictability and distance from political motifs. While a booklet with a title suggesting the independence war immediately politicizes what is to come—and booklet titles have to be specific—fictional dialogue, especially an entertaining romance, has enabled Islamic writers to enter one of the most powerful arenas of nationalist discourse, that of the liberation war, with a voice that is not easily dismissed as political propaganda. It is the abstract and artificial engagement with reality that fiction allows that Bangladeshi Islamic intellectuals find useful for laying claim to cultural and political spaces conventionally guarded by secular intellectuals.

Most important, romantic fiction, as a popular performative genre and emblem, is a powerful pathway to the heart of the national imagination. Bangladeshi society is remarkably heterogeneous in its perceptions of a variety of national, cultural, and religious formulations. A key source of this heterogeneity is the informational arena, which consists of state and private religious schools, state and private Bengali-medium schools, a growing number of private English-medium schools, books written for these different audiences, television, movie theaters, songs on audiotapes, Hindi and Western films on videotapes, and the satellite dish. In each of these arenas, romance is envisioned somewhat differently. However, the significant presence of romance in each of these spheres, along with the wide range of meanings it encompasses, forms a thread of “national” commonality that cuts across educational and socio-economic boundaries.

Speaking in general terms, madrasa students tend to read romantic novels by Islam-oriented writers; Bengali-medium students read novels by secularly oriented writers (however, most Jamaat activists are educated at Bengali-medium schools and therefore tend to read both secular and Islamic novels); English-medium students read English novels such as the Mills and Boon series, the Harlequin series, the Sweet Valley High series, and novels by Danielle Steele, Barbara Cartland, and Sydney Sheldon. Many Bengali-medium and English-medium students are familiar with romantic Hindi songs and movies, and madrasa students are at least familiar with Bangla romantic films and drama through theater and television.

Discussions of real romantic encounters and of romantic drama and films, as well as exchanges of romantic novels, are widespread. Brightly illustrated covers of romantic novels are there for everyone to gaze on in marketplaces and at fairs, as are brightly illustrated graphic posters advertising new films in the theater. Madrasa students watch romantic Bengali films, often modeled after Hindi ones, in the theater without their parents’ knowledge. Many Islamic activists continue to engage in interests that began before their participation in Islamic activism, and such interests often include Bengali and Hindi romantic films and secular romantic novels such as those by Humayun Ahmed.

An example of such textured continuation is an event organized by a group of student Islamic activists, a showing of the Hindi film Bombay, which featured a

romance and subsequent marriage between a Hindu man and a Muslim woman where the Muslim woman does not convert to her husband's religion. The movie ends with horrifying scenes from the Bombay communal riots. The organizers of this event convinced their supervisors that the movie would provide an excellent opportunity for “learning about religious communalism in India.” The supervisors agreed only on the condition that one of them be present to ensure its propriety. The activist assigned the task of supervision was not particularly interested in the movie and spent most of her time outside the room where the movie was being shown. Scenes of physical intimacy were quietly watched in the absence of the supervisor and fast-forwarded diligently whenever the supervisor walked into the room (Huq field notes, Dhaka, July 1997). This spilling of specific kinds of the romantic imagination across formal borders further facilitates the production of romance as a popular discourse; everyone partly knows what everyone else is talking about where romance is concerned.

Since Islamic activists are now trying to appeal not only to the Islamically inclined but also to the secularly inclined, what better icon to employ than that of the romantic novel? Such a text can discuss the blissful irresistibility of romance and its destructive potentialities, loyalty to one’s Islamic organization and competing loyalty to one’s lover, the necessity of family life and its increasing impossibility in a fast-moving world. In these novels, registers of piety shift from praying to preying upon oppressors, from making the pilgrimage to Mecca to traveling around the globe like a true transnational revolutionary, from giving zakat to embracing martyrdom for a noble cause, from enjoining fasting to reforming the government.

The popularity of Islamist novels like Saimoom lies not in ideological coherence or consistency but in effective symbolic constancy of form-oriented closeness to a conventionally popular secular thriller series like Masud Rana. It is virtually impossible to distinguish between Saimoom and Masud Rana through either outer appearance or inner style. Both series use a graphic imagery of heroism, romance, sci-fi techniques, organizational conspiracies, and violence. At the same time, the heroes and heroines of Saimoom have a very specific kind of Islamic mission; they are upholders of a specific kind of goodness. But this ideological difference between Saimoom and Masud Rana gets muted through “emblematic constancy” (Combs-Schilling 1996: 12), through the sort of broad-banded whimsicality that is a regular feature of thriller fiction. Islamic novels attempt to become part of popular literature by having an audience that is very much a product of national education— the young Islamic activists of today—and that can easily spread the word about these novels to non-Islamic activist classmates, friends, and relatives.

Here we see an objectification of Islam different in texture from that discussed for booklets where the words impinge directly on the reader’s intellect; where Islam becomes a body of clearly delimited compartments, and where authority emanates from specificity. In the case of novels, on the other hand, awareness is meant to develop through the diffuse transformation of consciousness; authority is effective because its form may not be easily recognized. This becomes clearer in looking at those novels that, despite being perceived as Islamic, do not apparently draw on Islam. Abul Khayer Muslehuddin’s Medhabi

Meye (Brilliant Girl) (1996) (Fig. 8.3) does not mention Islam but deals with the peer pressure that young women feel to acquire boyfriends and the ways that young women are seduced through false promises of marriage and then abandoned at the first sign of pregnancy. The woman becomes a social outcast, her aspirations to higher education and a career are cut short. Firoz Ashraf's Deep Jele Jai (I Go On Kindling the Light) (1st ed. 1993; 2nd ed. 1994; 3rd ed. 1995) treats the social problems of how men deceive women, how young women are forced into prostitution, and how women are not consulted about choice of marriage partner. The reader is entertained, but if the romance does not end in marriage or leads to physical intimacy outside marriage, it is indicted.

Reading between the lines in such novels where Islam is barely perceptible, one could perhaps see in them certain implicit Islamic messages, such as the ills of extra-marital sexual relations and of free mixing, and the need to uproot prostitution. However, such views are also fully consonant with popular Bengali cultural ideology. Instead of relying on Islam for legitimizing a particular social value, as earlier generations of Islamists in the region tended to do, contemporary Islamic novelists draw on the authority of popular notions of "cultural decency."

Figure 8.3. Islam is never evoked directly in Muslehuddin's Medhabi Meye (Brilliant Girl).

*** Conclusion

It remains difficult to define "Islamic" literature, especially since there is little consensus among readers: "Islamic" is a volatile signifies When a bookseller at the Islamic Book Fair in Dhaka in August 1996 showed me a novel by Shukumar Rai entitled Pagla Dash" (Mad Dashu), I exclaimed, "But he is a non-Muslim writer!" The salesman smiled benignly and said, "Yes, he is a Brahmin. However, he is not anti-Islamic. There is a big difference, you know. Muslims can be anti-Islamic while non-Muslims can be tolerant. This guy brings up Islam in his work but does not attack or ridicule it—he treats it quite respectfully."

But if Islam encompasses every aspect of life and is as tidily packaged as many Islamic activists would have it, how can an Islamist read an "in-between" novel and encourage others to read it? Given the hostilities between Muslims and Hindus in India, for a well-known Indian Brahmin writer to write well of Islam not only adds to Islam's prestige but also shames those secularist Muslims who are perceived as denigrating Islam in their works.

When I asked a salesman why some Islamic activists do not consider Abubakar's work as particularly Islamic, he replied, "Well, it may not be fully Islamic, but it's certainly pro-Islamic and by no means anti-Islamic." Thus, as long as a novel does not support ideas and imagery

in direct conflict with Islamic principles and is acceptable in terms of “Bengali cultural decency,” it is regarded as possessing a degree of Islamicness and therefore suitable for Muslims. As such, it may be considered part of “Islamic literature.”

This willingness to widen the boundaries of the Islamic resonates with the position of the noted Indonesian scholar Ibrahim Hosen on Islamic legal interpretations. Hosen insists that “all types of laws and rules are to be valued as Islamic (or Muslim) laws as long as they are not in opposition to the intent and spirit of shari'a, even if contradictory to the surface (harfiah) meaning” (cited in Bowen, this volume). A similar privileging of “intent and spirit” over literality enables Islamist publishers to publish non-Islamic novels.

Some Islamic activists assert that fictitious literature, even when written from Islamic perspectives, does not count as Islamic literature since it deals with the “imagined,” while Islam is real. Sometimes this literature includes “romance between unmarried men and women,” which cannot be a part of Islam (personal communication, December 1994). A high-school Islamist did not hesitate to challenge the Islamic nature of the thriller series Saimoom, even though she is an avid Saimoom reader and particularly appreciative of the agency granted women in this series, where women often engage in combat, espionage, and defiance of male authorities. Referring to the main character of Saimoom, Ahmed Musa, she commented, “I’ve no idea where Abul Asad (the well-known Islamist author of Saimoom) is going with his macho character. He refuses to let Ahmed Musa get married and kills off every woman who comes into his life. This is not Islamic, is it? Not only are marriage, family, and home important in Islam, but this endless number of romantic affairs, with occasional physical contact as well, is really a bit too much.”

The issue of what role novels play in Islamic literature in Bangladesh resists closure at this time. But looking at different kinds of Islamic literature tells us several things. First, mas’ala texts, biographies, and booklets exemplify an “objectification” of the Muslim consciousness—codification, principles, citations from the Qur’an and hadith, and recognizable forms of authority (Eickelman and Piscatori 1996: 37-45). Such crystallization of Islam as a system among other systems is a product of mass higher education. It attains the effectiveness it does because of rising literacy. Booklets as well as subtle changes within mas’ala and biographical formats indicate changes in forms of authority in religious discourse closely linked to the increase in numbers among the secularly educated.

Second, novels depict a different type of objectification: Islam is objectified not through apparent systematicity, coherence, organization, and the positing of clear-cut differences but through the openness of cultural symbols and shared local notions, the presence of non-Islamic elements like premarital romance, the voicelessness of religious authority, and the absence of particularity. The fact that the ideas of the new Turkish Muslim intellectual Ismet Ozel are not necessarily consistent with popular Muslim opinion lends his works “an

atmosphere of frankness and sincerity" (Meeker 1991: 214). Likewise, the projected distance between regular political Islamic rhetoric and romantic novels creates new spaces for interest, empathy, and understanding. This projection is perfected in those novels where the Islamic credentials of the writer are purposefully rendered ambiguous. However, even as Islamic novelists seek to draw readers to their view of Islam, their reliance on the fictional form, which has traditionally been considered as secular, enhances the ambiguity of their messages and significantly dilutes their projects.

Third, variety in Islamic literature, even within a specific category such as the novel, reflects a pluralistic view of Islam, ranging from an Islam hinged on political power and organizational training to one based on shared understandings of cultural decency and goodness malleable to symbolic manipulation and semantic fluidity. While sharp differences may exist between past and present carriers of Islamic culture in certain Muslim-majority countries, such as Turkey (Yavuz 1995: 5-6), I submit that older styles of Islamic knowledge coexist with newer ones in Bangladesh, as they do in Middle Eastern countries such as Oman (Eickelman 1992: 648).

Fourth, types of literature such as thrillers and romantic novels indicate attempts to talk about religion in ways that undercut either "secularist" or "fundamentalist" approaches to Islam. Through the signifier/signified dis- juncture built into their narrative forms, such Islamic writings facilitate the entrance of new voices into delicate debates over the place of religion in local culture, history, politics, and the formation of a personal identity, voices that probably could not have participated otherwise, either because secularist publishers found them "tedious" or because Islamist publishers regarded them as "indecent."

Fifth, closeness in form between secular and Islamic writing styles, as is evident in the novel, reflects complex interactions between formal, secular, higher education and informal religious training, especially in the case of writers affiliated with political Islam. Such an interaction allows those interested in Islamic discourse to rework their particular notions of what is Islamic and what is not into a "locally effective discursive form" (Bowen 1993: 629). This heterogeneity in educational imagination opens young Islamic activists to using popular cultural human imagery on book covers, considering them "acceptable," and dwelling on romance while confidently citing the Qur'an and hadith in appropriate places.

Last, while the recent varieties of Islamic literature do not have massive audiences, they are often aimed at and read by those from the prestigious circle of upwardly mobile professionals, the powerful communities of high school, college, and university students, and the influential associations of small and big businessmen. These are the groups out of which the national leadership arises and which serve as the conduits between the local and the global, for they are able to forge transnational connections via international conferences, business networks, study-abroad programs, and, of course, the revolutionary information superhighway. These groups, even though they constitute a small percentage of the total Bangladeshi population, grow every day, as thousands of young men and women graduate

from public and private institutions of higher education throughout the country and enter the work arena.

*** NOTES

In transliterating Bangla words, I have preferred to go by the pronunciation rather than follow the conventional system, which treats Bangla words as though they were Sanskrit. With regard to Arabized and Persianized Bangla words or “Musulmani Bangla” such as the book title Neyamul Qor’an, I have transliterated them as they are printed and pronounced in Bangia. Hence the Arabic word “Qur’an” appears as “Qor'an” in the book title.

[55] “Bangladeshi” denotes the national identity of the people of the nation-state of Bangladesh. “Bangali” refers to the ethnic identity based on the language “Bangla." The ethnicity of the majority of Bangladeshis is Bangali. Most inhabitants of West Bengal in India are ethnically Bangalis as well. “Bangali” is both a noun (e.g., “She is a Bangali”) and an adjective (e.g., “This aspect of Bangali culture must be preserved”). “Bengali” is the anglicized term for both “Bangali” and “Bangla.”

** 9. Civic Pluralism Denied? The New Media and Jihadi Violence in Indonesia

Robert W. Hefner

It is a truism of modern democratic theory that prospects for democratization increase with the development of multiple centers of power and a plurality of public discourses in society. Classical statements of this so-called pluralist theme in political theory (Dahl 1971, Held 1987: 186— 220) emphasize that a multiplicity of ideas and authorities makes it difficult for any single group to win a clear monopoly of power. The frustration of monopolistic aspirations has the unintended consequence of increasing the chances of parties to the political process agreeing to some kind of powersharing compromise. In other words, if incapable of capturing the whole, actors are more likely to put aside their totalizing ambitions. If this really is a key to democracy’s possibility, of course, it means that democratization is less the product of ancient civilizational dispositions than it is the contingent and creative outcome of contemporary pluralist impasses (cf. Przeworski 1988).

One commonly cited antecedent for the pluralist model of democratization is Max Weber's and Marc Bloch's description of the four-cornered contest between kings, feudal lords, town dwellers, and the Church in Western Europe from the eleventh to the fourteenth centuries (Bloch 1961, Weber 1978: 1082-88). These models explain that by the late medieval period no single estate was capable of effectively dominating the others. The resulting standoff led to the great compromise embodied in the Standestaat ("state of estates"), whereby the aristocracy, the bourgeoisie, and the Church pledged allegiance to the monarchy in exchange for being granted powers and liberties of their own. These included a degree of autonomy in one's own affairs and limited representation in a jointly managed, but not yet truly democratic, government (Poggi 1990: 9-51, cf. Lipset 1960: 88-89).

Writing on the dynamics of European democratization in a different historical period, Jurgen Habermas (1989 [1962]) has largely accepted the premises of the pluralist model. But he has also emphasized that, in addition to structural countervalences and great political compromises, democratization needs something more specifically cultural. In particular, it requires a public sphere and a participatory culture that encourage citizen participation in discussions of matters of shared interest. In the eighteenth century, Habermas observes, Western Europeans used coffee houses, newspapers, literary clubs, and other social forums to develop an incipient sense of themselves as a public with a right to speak about common concerns. Over the course of the nineteenth and twentieth centuries, these civic precedents were scaled up into general frameworks for citizen participation in state and society.

As has been widely observed (Calhoun 1992), the Habermasian model overlooked the extensive restrictions placed on the access of certain groups (women, the poor, ethnic and religious minorities) to the public sphere in this early period. The model was also silent on the way in which European frameworks of civility and participation periodically broke down, giving rise to the class and religious violence with which modern European history has been blighted. Despite these omissions, literature on the public sphere has provided a useful reminder that the social preconditions for democratization include not just countervailing powers (although these are important too), but a culture that embraces pluralism and elaborates the terms for public participation. This insight in turn points toward another; namely, that it is too simple to equate democracy with majority rule alone. Democracy involves not just the relationship of a dominant majority to a subordinate minority, but civil and non-coercive mechanisms for engaging the full variety of identities and interests present in all modern societies (cf. Lijphart 1977, Parekh 2000).

There is another way of stating this conclusion more immediately related to the present book's concerns with new media, new leaders, and the prospects for civic pluralism in the contemporary Muslim world. It is that civil society and democratization require not merely the growth of plurality in religion and society, but a commitment to engaging that plurality in a civic and pluralist manner. A society or tradition is plural where it has developed a high measure of social and cultural differentiation, not least of all as regards ethnicity, religion, gender, ideology, and class. A society or association can be described as civic pluralist, however, only where its members renounce any

intention of repressing this pluralism, and respond to its challenge in a peaceful and participatory manner (Casanova 1994, Hefner 1998, 2001).

There is nothing inevitable about the transition from a structure of plurality to a culture of civic pluralism. European history provides numerous painful reminders of the fact that a plurality of groupings and interests can give rise not to democratic pluralism but to struggles to capture the state and unleash programs of ethno-cultural cleansing. New technologies of communication have a similarly double-edged potential. In his famous essay on the origins of nationalism, Benedict Anderson observed that newspaper reading among nineteenth-century Europeans helped to foster a sense of simultaneity and, ultimately, nationhood (1991: 37-46). In this case, then, new media promoted symmetrical patterns of participation and identification. However, far more than Anderson was aware (cf. van der Veer 1994), modern communications and associations can also be used to exclude minorities and promote public cultures that are anything but civil democratic (cf. Hefner 2001, Keane 1996: 10).

It is just such a contest over pluralism and the terms of public participation that is raging in the Muslim world today. As Eickehnan and Piscatori (1996) have observed, in the 1970s and 1980s mass education and urbanization combined with new communications and organizations to pluralize religious authority and heighten contests over the meaning and social relevance of Islam. The seeds of pluralization and contestation had been sown earlier with the great movements of religious reformation that swept the Muslim world in the nineteenth and early twentieth centuries. However, in the 1970s and 1980s the process took a new turn. As Jon Anderson has put it (this volume), drawing on Eickelman's work, in those years new technologies of communications intersected with "the rising curve of expanded education . . . giving unprecedented access to the texts of Islam and opening interpretation to techniques outside the traditional frameworks of madra- sa training." The classically educated scholars ('ulama), who long dominated the religious tradition, awoke to face a host of new challengers, including secularly educated new Muslim intellectuals, independent preachers, Internet Islamists, and other beneficiaries of new technologies and organizations.

The question these events pose, and which the present chapter addresses, concerns the prospects that this growing plurality of groupings might give rise to a civic pluralism that accepts and legitimates this diversity and, from there, goes on to develop public institutions for its peaceful regulation. Clearly, the fragmentation of religious authority in the Muslim world is creating "multiple centers of power and contenders for authority" and an "intricate politics of compromise and give-and-take" (Eickelman and Piscatori 1996: 132, 134). What remains to be seen is whether the new plurality can be "scaled up" (Evans 1996, Hefner 2001) into a stable and inclusive pluralism.

The case through which I want to explore this question is that of the Laskar Jihad or Jihad paramilitaries in contemporary Indonesia. The Laskar Jihad is or, as of

October 15, 2002, was the paramilitary wing of a larger jihadi organization known as the Communication Forum of the Followers of the Sunna and the Community of the Prophet or FKAWJ (Forum Komun- ikasi Ahlu Sunnah wal-Jamaah). Founded in Solo, Central Java, on February 14, 1998, just prior to the collapse of the Suharto regime (1966-May 1998), the FKAWJ burst into national prominence in early 2000, when it defied Indonesia's president and sent jihadi paramilitaries to fight against Christians in the troubled provinces of Maluku and North Maluku in eastern Indonesia. From early 2000 to October 2002, the paramilitary fielded some 10,000 armed fighters in Maluku and on the nearby island of Sulawesi. At its peak, the FKAWJ claimed 40,000 members and several hundred thousand supporters. These and other activities eventually led the U.S. State Department to charge that the Laskar Jihad had ties to Osama bin Laden's al-Qa'ida. When terrorists blew up a nightclub for foreign tourists in Kuta, Bali, on October 12, 2002, killing some 200 people, analysts were quick to point the finger of suspicion at the Laskar Jihad.

The Laskar Jihad leadership has consistently denied any connection to al-Qa'ida and insisted that its political concerns were exclusively domestic. Muslims make up 88 percent of Indonesia's 215 million people; Christians comprise about 9 percent. In the Maluku region, however, Muslims and Christians are roughly equal in number. In the late 1990s fighting between the two communities gave rise to horrifying incidents of mass slaughter. In 1999, Muslim civilians were on the receiving end of some of the worst of this violence. The FKAWJ claimed at the time that its aim in establishing the Laskar Jihad paramilitary was to defend Muslims from Christian paramilitaries that the government seemed unable to contain.

In interviews I conducted in July-August 2000 and 2001, however, FKAWJ leaders openly admitted that their paramilitary had an additional aim: to drive President Abdurrahman Wahid from power. Before becoming president in October 1999, Wahid was known as a pro-democracy Muslim and the leader of the world's largest Muslim association, the Nahdlatul Ula- ma ("renaissance of religious scholars"; see Barton 2002, Feillard 1995). The FKAWJ and Laskar Jihad bitterly opposed Wahid's tenure as president, however, on the grounds that he refused to implement Islamic law, had proposed to lift the ban on the Communist Party, and was considering establishing diplomatic relations with Israel. In the eyes of the Laskar Jihad leadership, these actions marked Wahid as no less than an apostate and communist.

From the perspective of new media and the Muslim world's public sphere, the Laskar Jihad is of special interest for several reasons. First, the Laskar Jihad relied heavily on new communications technologies that became broadly available ac.oss Indonesia in the 1990s. This began with the fax machine and new software programs for desktop publishing in the early 1990s, but quickly came to include the Internet, which was introduced into large Indonesian cities in late 1997 and early 1998. No mass organization in Indonesia has relied more heavily on these technologies to coordinate its operations.

Second, the Laskar Jihad utilized these new technologies in combination with conventional media to overcome the disadvantages it faced relative to Indonesia's larger and more moderate Muslim groupings. As in Jenny B. White's (1999) discussion of Turkish Islamists, the combination of abstract, electronic communication with face-to-face mobilization extended the Laskar Jihad's appeals well beyond what would have been possible using web-based or face-to-face communication alone.

Finally, the Laskar Jihad phenomenon illustrates that the growing plurality in Muslim society does not necessarily guarantee civic pluralism or democracy. Indeed, the example suggests that the new media may at times work to the benefit of absolutist jihadis more than moderates. In the Indonesian case, the country's huge, mainstream Muslim associations, the Nahdlatul Ulama (35 million members) and the Muhammdiyah (25 million), were slow to take advantage of the new communications technologies. Part of the reason for the lag is political. Both bodies are, first and foremost, social-welfare and educational organizations, not ideologically cohesive parties dedicated to the transformation of Indonesian society. By contrast, the Laskar Jihad was a vanguard organization dedicated to specific political goals and willing to use whatever was required to achieve them.

Notwithstanding its media savvy and mobilizational skills, the Laskar Jihad suffered from a critical vulnerability, one that became glaringly apparent in the aftermath of the Bali bombings in October 2002. Three days after the bombings, the Laskar Jihad was suddenly and unceremoniously dissolved. Its parent organization, the FKAWJ, survives, but its future is cloudy. This unexpected outcome reminds us that, to understand the impact of new media on Muslim (or any other) politics, we have to situate them in a broader political economy of alliance, mobilization, and countervailing powers. Having done so, we can then assess the capacity of different groupings to "scale up" their influence into "solidary ties and social action on a scale that is politically and economically efficacious," not least of all against political rivals (Evans 1996: 1124). The transformative alliances that result from these initiatives are a key to understanding the impact of new media on pluralism and civility in the Muslim world.

*** Pluralization and Contestation

Although the Communication Forum of the Followers of the Sunna and the Community of the Prophet (FKAWJ) was officially established only in February 1998, its origins go back to the great pluralization and contestation in the Muslim community during the final years of President Suharto's "New Order" regime (1966-1998). Over the course of the New Order period, Indonesia's urban population grew from less than 20 percent of the population to 35 percent today. Between 1965 and the early 1990s, the number of young adults in Indonesia with basic literacy skills rose from 40 percent to 90 percent (Jones and Manning 1992). The increase in the numbers of people completing senior high school was equally dramatic, rising from 4 percent in 1970 to more than 30 percent in 1990 (Hull and Jones 1994). This educational expansion was accompanied by the development of a new, urban, Muslim

middle class. Comprising about 15 percent of the total population, the new middle class became the trendsetter in new religious media, new styles of religious education, and new ideas on Islam, state, and society.

New religious organizations and mobilizations were, of course, common across the Muslim world in the 1970s and 1980s (Eickelman and Pis- catori 1996: 71, Kepel 2002). What was unusual about the development in Indonesia, however, was that the dominant streams in the resurgence were moderate, not politically radical. Several of the most distinguished new Muslim leaders were educated in the United States. In addition, the two most prominent Muslim leaders of the 1980s and early 1990s, Nurcho- lish Madjid (a former leader of the Muslim Students Association, or HMI) and Abdurrahman Wahid of the traditionalist Nahdlatul Ulama (NU; see Barton 2002, Hefner 2000), were outspoken supporters of religious pluralism, Western-style democracy, and heightened participation by women. The combination of higher education, a growing middle class, economic expansion, and—not insignificantly—state controls on radical Islamism seemed to give a comparative advantage to moderate Muslims.

Over time, however, the Suharto regime responded to the resurgence in a way that weakened the influence of moderates and worked to the advantage of hard-line conservatives. Since coming to power in early 1966, the New Order regime had strictly enforced regulations requiring that all citizens profess one of five state-sanctioned religions (Islam, Protestantism, Catholicism, Hinduism, or Buddhism). Students received two hours of religious instruction weekly from grade school up through their college years. State-sponsored programs of mosque building and religious proselytizat'on (known from the Arabic as dakivah, or “appeal”) introduced Islamic activities into neighborhoods previously indifferent or even hostile to Islamic piety. In its early years the New Order regime hoped to use these programs to inoculate the public from the perceived threats of Marxism and Western liberalism. The Suharto regime was determined that these cultural programs did not lead to the revival of an Islamic political movement. But its policies on Islam were soon to have unintended effects.

By the mid-1980s, ethnographic reports made clear that many former bastions of secular nationalism, especially in Java, which has half of the country’s population, were being swept by the Islamic revival (Hefner 1987).

In the 1950s, secular nationalists, Western-style democrats, army technocrats, and socialists were united in their opposition to any form of Islamic governance. From the late 1980s on, however, the popularity of secular nationalist ideals among the political and military elite declined significantly. Although, along with Turkey (see Gole 1996), Indonesia once had the largest movement for a secular or multiconfessional politics within the Muslim world, after the political violence of 1965-1966, Indonesia’s conservative nationalist elite was uninterested in creating a mass-based movement comparable to Turkey’s Kemalism. Their reluctance reflected their internal ideological divisions and the fact that they were more

interested in containing civil society than they were in promoting any form of popular mobilization, even if conservative.

As the Islamic resurgence gathered momentum, the Suharto regime responded by changing tack, moving from its earlier policy of repression to systematic co-optation. The target of the regime's outreach changed over time. At first the regime attempted to co-opt moderate Muslims like Abdurrahman Wahid of Nahdlatul Ulama and Amien Rais of the Muhammadiyah. When these leaders continued to demand political reforms, however, the regime directed its appeals to the radical margins. From 1993 to 1995, Suharto intermediaries conducted a series of secret meetings with the leadership of the hard-line wing of the modernist Islamic community, in particular with groups regarded as the ancestors of today's radical groupings: the Indonesian Council for Islamic Predication (DDII) and the Indonesian Committee for Solidarity with the Islamic World (KISDI). The DDII leadership had once figured among Suharto's fiercest critics; the KISDI leadership had always been more accommodating. By 1994-1995, however, the DDII had moved from the ranks of the regime's critics to join with KISDI and became one of its most ardent defenders (Hefner 2000).

It was during these years, too, that regime spokespersons and their conservative Islamist allies began to speak jointly of an international conspiracy of Christians and Jews against Indonesia. It was alleged that European and American criticism of Indonesia's human rights record in the occupied province of East Timor was all part of this anti-Islamic master plan; so too was Indonesia's growing democracy movement (Hefner 2000). The message was soon to be embraced by others once marginal to the Muslim mainstream.

*** Jafar Umar Thalib and

*** Radical Salafism

The Communication Forum of the Followers of the Sunna and the Community of the Prophet (FKAWJ) and its paramilitary wing, the Laskar Jihad, have their roots in a theologically conservative movement founded in the early 1990s by a young (born December 1961) Indonesian of Hadrami- Arab and Madurese parentage, Jafar Umar Thalib. Thalib identifies his followers as "Salafy" (in Arabic, Salafiya), a reference to a long-established movement that aims to purify Islam by taking as its model the first generations of followers of the Prophet Muhammad (Shahin 1995). However, in the form promoted by Thalib, the movement is better described as neo- Salafy, because it emphasizes extreme political views not associated with earlier variants of Salafism, including those still popular in Saudi Arabia. One such emphasis is the firm belief that the United States and Israel are leading a worldwide conspiracy to destroy Islam, and that the response by Muslims to this effort must be armed jihad.

Thalib began his career studying in a conservative modernist religious school in Bangil, East Java, in 1981. Upset by Suharto policies on Islam and impatient with the apolitical nature of his instruction, he soon traveled to Jakarta to study at the Saudi-sponsored Institute for Islamic and Arabic Studies. In the capital, Thalib became active in student groups opposed to Suharto policies, which at that time included efforts to force all Muslim groups to accept the state's "Five Principles" (Pancasila) rather than Islam as their ideological foundation. Awarded a scholarship by the Indonesian Council for Islamic Predication (DDI1), Jafar traveled in 1986 to Saudi Arabia to study with, among others, two well-known Wahhabi scholars, Muhammad Nasr al-Din al-Albani and 'Abd al-'Aziz 'Abd Allah bin Baz (Hasan 2001: 6). The DDII was formerly the official representative in Indonesia of the Saudi-based Muslim World League (Rabitat al-'Alam al-Islami, founded 1962). In my interviews with him, Thalib acknowledged that, though he took his education seriously, he was restless because his lessons kept him from other Muslim struggles. It was not long before he left for Afghanistan in 1987, once again under the auspices of the Saudi-sponsored Muslim World League. In Afghanistan, he met briefly with Osama bin Laden. However, Thalib opted to join with a faction of the mujahidin with ties to a strict Salafy organization known as the Jam'at al-Da'wa ila al-Qur'an wa-Ahl-i Hadith. This Saudi-based organization is famous for, among other things, instructing its followers that rulers who fail to implement Islamic law are apostates and must be overthrown.

in 1989, Thalib returned to Indonesia, accepting a teaching post at a Salafy school in Salatiga, central Java, a two-hour car drive northeast of Yogyakarta. Eager to further his Salafy education, he traveled back to Yemen in 1990, where he studied with a Yemeni teacher, Muqbil ibn Hadi al-Wad'i, well known for his ties to Wahhabi conservatives in Saudi Arabia. In 1993, Thalib came back to Indonesia. Now, for the first time, he directed his attention away from small-town religious schools to student circles in the nearby university town of Yogyakarta. In 1994 he founded a religious school for young adults known as the Jama'ah Ihya al-Sunnah, twelve miles north of Yogyakarta in the subdistrict of Kaliurang. According to Muslim activists I interviewed in 1999, the land on which Thalib founded his religious school was donated to his organization by a prominent army retiree, who had settled in the Yogyakarta region in the late 1980s. According to these reports, the officer met in 1993 with several other military retirees residing in the province in an attempt to bolster the efforts of conservative Islamists against what they described as growing "communist" influences in Yogyakarta's Muslim community. In an interview with me in August 2001, Thalib denied that military retirees had helped him to acquire the land for his school. Nonetheless, he acknowledged that one of his school's aims was indeed to combat "secular," "liberal," and "communist" influences among Yogyakarta's Muslims.

During these early years, however, Thalib was better known for his emphasis on the re-Islamization of society rather than any direct effort at political mobilization. He made a point of distancing himself from activists associated with the Islamic State of Indonesia (NII) movement, many of whom had recently relocated from West Java to Yogyakarta. Although Thalib criticized the democracy movement as "Christian-dominated" and "un-Is- lamic," he and his followers saw their primary mission as the re-Islamization of society from below. By 1996, when I first encountered members of the group, Thalib's followers were famous throughout the city for their distinctive garb and exclusive social behavior. Although women

are underrepresented in the organization, they attract special attention when out in public because of their full-bodied black hijab and facial veil (which may or may not have slits for the eyes). As with the patriarchal Islamists whom Olivier Roy calls “neofundamentalist” (1994: 75-89), women are barred from leadership roles in the movement and, once married, are discouraged from working outside the home. Even at home, any socializing with unrelated males is strictly forbidden. Women offer snacks to their husband’s male guests by handing both items to their husband while otherwise remaining behind thick cloth curtains. Male associates grow long beards, and wear white turbans, loose-fitting tunics, and baggy trousers of a broadly South Asian variety. Males, but not women, are enjoined to perform all five daily prayers in congregation.

In these early years, what was most distinctive about Thalib’s pro- selytization was that it was aimed not at the whole Muslim community but at university students in the exact sciences, computer science, and professions. Many were at first recruited from among the discussion groups or halaqah popular among students in these disciplines. Students from these fields, Thalib told me, are better able to appreciate the “precision” of Islamic law than are those in the social sciences and humanities. Education in the latter fields leaves individuals “only more confused.” For this reason, Thalib insisted that it is best to avoid taking courses in these topics entirely. From the beginning of his career, Thalib’s proselytization was also distinctive in the way in which it combined face-to-face preaching with the new and more anonymous technologies of electronic publishing and, from late 1997 on, the Internet.

In his sermons and public lectures, Thalib decries the failures of secular nationalism and the perfidy of infidels (especially Christians), and calls repeatedly and passionately for Muslims to wage unceasing jihad against the infidel. For Thalib and other neo-Salafis, jihad is understood in a literal military sense, and is regarded as a duty as incumbent on male Muslims as the annual fast or daily prayers. The purpose of jihad is to cleanse society of un- Islamic influences and to bring God’s law into daily life. Jihad also insures that unbelievers understand that their proper status in society must be that of protected minorities (dhimmi). A concept from classical Islamic politics (An-Na'im 1990: 88-91), dhimmihood stipulates that non-Muslims not be allowed to exercise authority over Muslims in any field. Unlike the great majority of Indonesia’s Muslim leaders, then, Thalib emphasizes that the equal citizenship upheld by the constitution is antithetical to Islam. So too is the idea of democracy, which Thalib told me is a Western import intended to destroy Islam from within.

*** Media Islam

More than anything else, Thalib’s reliance on new communications technologies allowed him to establish a foothold in Yogyakarta's highly competitive Islamic religious market and, from there, catapult himself into a position of national leadership. Although Yogyakarta is regarded as Indonesia’s leading university town and has a relatively liberal atmosphere, the

city’s Muslim organizations have long had a reputation for resisting out- of-town interlopers. The two largest organizations are the Muhammadi- yah and the Nahdlatul Ulama. With some 25 million followers, the Muham- madiyah has one of its two national headquarters in the city, where it was founded in 1912 (Peacock 1978). The association is modernist in theological orientation, and well known for its efficiently run and centrally coordinated social-welfare activities. Although it claims 35 million followers, the Nahdlatul Ulama is a more loosely organized and fractious federation, theologically “traditionalist” in its commitment to the schools of Islamic law and canonical commentaries (Feillard 1995).

However much they might differ on questions of theology, the Mu- hammadiyah and Nahdlatul Ulama have long agreed in their commitment to the ideals of Indonesian nationalism. This spirit of nationalism made most of their membership resistant to Thalib's appeals for the imposition of Islamic law and the assertion of Muslim hegemony over non-Muslims. In fact, in the 1990s, Muhammadiyah and NU leaders in Yogyakarta had been at the forefront of those insisting that Islam is compatible with democracy. Some had even openly urged Muslims to join the struggle against Suharto’s New Order regime.

The one portion of Yogyakarta’s religious scene not dominated by these two great organizations is the city’s thirty-plus colleges and universities. Since the late 1980s, Yogyakarta’s universities had spawned several of Indonesia’s most famous new Islamic movements. Some have been theologically conservative, but others have been pluralist and democratic (see Abdul Aziz et al. 1989). The many university-based Islamic study groups (halaqah) active in the city offered Thalib a means to outflank Yogyakarta’s Muslim establishment and promote a vision of Islam at variance with that of the moderate mainstream. Thalib gathered a small circle of halaqah students around him shortly after his arrival in Yogyakarta in 1993. With the regular turnover in the student population, however, Thalib’s following remained small. His Salafy school in Kaliurang had less than 100 students, minuscule by comparison with the NU-linked pesantren found to the south of Yogyakarta, which have thousands of students. As one of Thalib’s followers told me in 1999, “the problem was that once we left the university, most of us could not stay on near the Ihya al-Sunnah school, because we had to make a living. So after graduation many of our friends would return to their home communities and lose their way, coming under the influence of unbelievers (kafir).”

To combat this chronic problem of membership defection and to disseminate his message more broadly, Thalib turned to the new religious media. A year after the founding of the Ihya al-Sunnah school, several of his media-proficient students got together to create Salafy, an inexpensive, glossy- covered monthly dedicated to Thalib’s militant Salafism. Taking advantage of new desktop-publishing technologies, the staff of Salafy did most of the editorial and layout work at their homes or at the Ihya al-Sunnah school. Printing was then out-sourced to a shop in the nearby town of Klaten. After the establishment of the FKAW J in February 1998, Salafy became its official organ.

The establishment of the FKAWJ coincided with two important shifts in Thalib’s broader political strategy. First, the move reflected a heightened commitment to political activism, prompted by the crisis of governance into which Indonesia was rapidly descending. As a result of the Asian economic crisis, in late 1997 Indonesia went into severe recession, the worst since the economic ravages of the early 1960s. The economic tumult was soon compounded by a political crisis, putting new wind into the sails of the antiSuharto democracy movement. Yogyakarta quickly became a stronghold of democratic activism, with a rank-and-file famous for including Christians, Hindus, and Buddhists alongside the Muslim majority. In interviews with me in July-August 2000 and 2001, Laskar Jihad leaders, including Thalib, explained that they felt compelled to become involved in public politics because of what they regarded as the left-wing and secularist bias of the democracy movement. Although Thalib was critical of many Suharto policies, he said that he feared that the president’s ouster would usher in a government dominated by Christians, communists, and secularists. Activists close to the FKAWJ told me that military officials had also made contact with Thalib at this time, encouraging him to take action against the political left. Thalib vigorously denies that his actions had anything to do with these visits, although he acknowledges that meetings took place.

The other event with which the formation of the FKAWJ coincided was the movement’s increasing reliance on the Internet. It was only in late 1997 that commercial servers made the Internet broadly available in major cities in Java and Sumatra. The net was then extended to urban centers in Kalimantan, Sulawesi, and eastern Indonesia in late 1998. The FKAWJ leadership immediately recognized the mobilizational potential of the new medium. The Internet allowed the Salafy staff to maintain editorial and layout operations at the Ihya al-Sunnah school outside Yogyakarta, while more than tripling their staff to include writers from around the country. As Internet technologies became more widely available, the FKAWJ established branch offices in other cities, using the Internet, telephones, and fax machines to coordinate operations.

It was only with the establishment of the Laskar Jihad paramilitary in February 2000, however, that Thalib’s followers began to take full advantage of the new communications technology. The founding of the paramilitary was catalyzed by an escalation in fighting between Christians and Muslims in the eastern provinces of Maluku and north Maluku in early 1999. Maluku had been a center of conflict almost two generations earlier, when, during the war for independence (1945-1949), some in the—at that time—predominantly Christian province tried to declare their independence from the majority-Muslim republic. With the great economic shifts of the New Order era, immigration transformed the province’s demographic profile. Muslims came to comprise half of the population, and the hardworking immigrants quickly dominated the economy. Combined with Suharto’s shift toward a pro-Islamist policy, these changes caused deep unrest among Maluku's once dominant Christian population.

Some political analysts have argued that the violence in Maluku was deliberately inflamed by ancien regime provocateurs determined to use ethnoreligious violence to scuttle the democracy movement, undermine Christian-Muslim unity, and turn back calls to

remove the armed forces from politics (Aditjondro 2000). While acts of provocation by outsiders do indeed appear to have contributed to the violence (ICG 2002a), the fact remains that Christian Malukans, especially those from the criminal gangs known as fireman, were responsible for some of the worst violence during the conflict's first year (1999-2000). Alarmed by Muslim losses, hard-liners in Jakarta called for a jihad, claiming the fighting was a Western conspiracy to dismember Indonesia. The radicals' appeals were quickly silenced by mainstream Muslims, however, who demanded that the conflict be resolved in accordance with nationalist principles and the rule of law.

With the election of Abdurrahman Wahid to the presidency in October 1999, however, the campaign for jihad in Maluku gained new momentum.

Wahid was deeply unpopular among the armed forces leadership because of his support for efforts to curb military power. As Wahid told me in an interview in November 1999, he was concerned that some in the armed forces might use the Maluku violence to reassert the military's right to involve itself in politics. Faced with a hostile military command, Wahid appealed to Christians and Muslims in Maluku to settle their differences peacefully and on their own. The fact that the Christian forces in 1999 still had the upper hand and had committed atrocities against Muslim civilians, however, convinced hard-line Muslims that the real reason for Wahid's reluctance to commit troops was his sympathy for the Christian side.

*** Scaling Uncivil Society

It was in this context of growing violence and disunity among political elites (national and local) that the FKAWJ established its paramilitary wing, the Laskar Jihad, in February 2000. Although Thalib has repeatedly denied the claim, two men once active in his organization told me in July 2000 that Thalib, before establishing the paramilitary, held secret meetings with representatives from a faction of the armed forces unhappy with the Wahid presidency and determined to use the Malukan crisis to drive him from power. Western intelligence reports claim that army officers transferred $9.3 million to the militant group during 2000 (Huang 2002). In interviews with me in August 2001, Thalib explained that he felt compelled to act because President Wahid was an apostate and a "communist." Earlier, in late 1999 and early 2000, Thalib had secured legal pronouncements (fatwas) from Salafy muftis in Saudi Arabia and Yemen sanctioning jihad in Maluku. In April 2000, a leading Salafy mufti in Medina, Muhammad ibn Hadi al-Madkhali, also issued a fatwa declaring that President Wahid's prohibition of jihad in Maluku was contrary to Islamic law (Hasan 2001: 17).

With these resources in hand, the Laskar Jihad leadership combined conventional mobilization techniques with new communications technology to catapult their once-fringe movement to national prominence. In April 2000, Laskar Jihad supporters marched outside

the presidential palace, brandishing swords and appealing to able-bodied males to join the jihad in Maluku. This brazen show of force encountered no opposition from security officials. A few weeks later, the Laskar Jihad force traveled to the port city of Surabaya in eastern Java. Despite the fact that the president, the minister of defense, and the governor of Maluku all appealed to security officials to stop the militia from coming, the convoy did not encounter a single security checkpoint. Indeed, the militants were given military escorts along portions of their route. In the port of Surabaya, the fighters boarded state-owned ferries for Maluku. According to interviews I conducted with Laskar Jihad volunteers from Yogyakarta, upon their arrival in Maluku, the recruits were taken into the city and given weapons by soldiers under the command of anti-Wahid army officers. Interviews that 1 conducted with student activists involved in the Maluku mobilization during July 2000 indicated that a Jakarta businessman with close ties to ex-president Suharto coordinated a vast flow of funds and arms to the jihad forces. The flow of aid had a powerful impact. By August 2000, the Christian paramilitaries in Maluku were suffering severe losses, including the mass slaughter of 500 Christian villagers in a portion of north Maluku where atrocities had earlier been committed against Muslims (Tomagola 2000).

Coincident with the jihad campaign in Maluku, the Laskar Jihad established a web site at <[[http://www.laskarjihad.org][www.laskarjihad.org]]>, featuring photo galleries of alleged Christian atrocities, daily news reports on the fighting, and Indonesian- and English-language commentaries on the religious significance of jihad. During its first year-and-a-half of operation, <[[http://www.laskarjihad.org][www.laskarjihad.org]]> also featured stories and links to the web sites of other jihadi groups around the world, including those in Chechnya, Kashmir, and Afghanistan. Curiously, however, after September 11, 2001, and U.S. administration accusations that the Laskar Jihad had ties to al-Qa‘ida, these international links were quietly removed from the site.

Another change in the content of the Laskar Jihad web site occurred after the organization’s first national congress in Jakarta, on May 13-19, 2002. Up to this time, the site had featured articles describing the Maluku conflict as having been instigated by Jews, Christians, and the United States. After May 2002, accusations of international conspiracy did not disappear entirely from the web site. But the message was featured far less prominently than reports that—in a language that mimicked armed forces’ appeals for national unity—accused the Christian Malukans of wanting to destroy the unity and integrity (persatuan dan kesatuan) of Indonesia by establishing a Republic of South Maluku. These changes provided at least suggestive confirmation of reports I was receiving from Muslim activists in Yogyakarta: that elite supporters of the Laskar Jihad were pressuring the paramilitary to sever its ties to international jihadis and tone down its attacks on the United States.

Since the organization was first established, the Laskar Jihad leadership demonstrated great skill at linking its Internet resources to other communications media. It used the Internet to send daily reports on the Maluku violence to each of some 24 Laskar Jihad branch offices around the country. Each bureau downloaded the messages, which were already laid out in a desktop-publishing format. These were then printed out on a single, two- sided sheet of

paper, to create a bulletin with the masthead “Maluku Today” (Maluku Hari Ini). The l.askar Jihad emblem, with its open-paged Qur’an set above two crossed swords is featured to the left of the masthead. Information on the Laskar Jihad web site, e-mail address, bank account (for donations), and local branch address are featured on the bottom of the back page. At the height of their operation, Laskar Jihad officials in branch offices gave young male volunteers thousands of copies of the bulletin to distribute to the public. Clad in the jihadis’ trademark tunic, trousers, and turban, the volunteers positioned themselves at stoplights in cities across Indonesia. They distributed the bulletin for free, but with the understanding (conveyed in a none-too-subtle fashion by passing a bucket in front of car windows) that donations to the Maluku campaign were welcome. The more senior among the volunteers also sold copies of the monthly Salafy, as well as a large, sixteen-page weekly known simply as Buletin Laskar Jihad Ahlus Sunnah tval Jama'ah. Unlike Maluku Today, the large-layout Buletin features color photos and advertisements.

Although the largest of the groups sponsoring jihadi fighters in Maluku, Laskar Jihad was not alone in the effort. Other hard-line groups, including most notably the Islamic Defenders Front {Front Pembela Islam or FPI) and the Indonesian Council of Jihad Fighters (Majelis Mujahidin Indonesia) dispatched fighters too. The Laskar Jihad contingent in Maluku, however, was ten times the size of its nearest competitor, the Council of Jihad Fighters—a fact that Council members acknowledged in interviews during July 2001. For most of 2000 and 2001, the Laskar Jihad stationed 2000 fighters in the field, rotating individuals out of the province every four to six months. While in the field, all but the senior command lived in the homes of ordinary Muslims, an arrangement intended to facilitate Salafy prosel- ytization. According to interviews I conducted in 2000 and 2001 with Muslim Malukans residing in Yogyakarta, the military support provided by the Laskar Jihad was at first well received. Local Muslims recognized that the outsiders helped to shift the balance of the war in the Muslim favor. However, Malukan Muslims have long been famous for being casual about daily prayer, fasting, and the consumption of alcohol. Laskar Jihad opposition to these infractions led to widespread tensions and, on a few occasions, physical clashes.

The success of the Laskar’s military campaign eventually revealed a critical tactical vulnerability. In March 2001, a Laskar Jihad officer in Maluku was accused of having sex outside marriage. The condemned man acknowledged his guilt and accepted the sentence Thalib pronounced against him, death by stoning (raj am). The death sentence was carried out. A few weeks later, Thalib was arrested by the police on charges of incitement to violence and murder. Three weeks later, after conservative Muslim politicians rallied to his defense, Thalib was released from custody, although the charges against him were never resolved.

By March of 2002, momentum for a peace accord in Maluku was growing. A report released by the Brussels-based International Crisis Group (ICG 2002a) stated that there were indications that some in the armed forces were attempting to prolong the conflict because of

the lucrative income it generated. In late July 2001, however, President Wahid had been removed

from power, and the new president, Megawati Sukarnoputri, was known to have cordial ties with the senior military command. Megawati made clear that she had no interest in supporting further investigations into alleged human rights abuses by the military. With Wahid out of the way, pressures for a peace deal in Maluku grew, and Christian and Muslim leaders signed an accord in April 2002.

Thalib showed that, whatever his ties, he was no simple puppet of the military, and quickly went public with his opposition to the peace plan. In early May 2002, he called on his supporters to defy the government and continue the jihad against “Christian separatists.” In the months preceding this declaration, Thalib had also worked furiously to extend the reach of his paramilitary to new fronts. In August 2001, he dispatched 1000 fighters to Poso, Central Sulawesi, an area where, like Maluku, a native Christian population had done battle with Muslim immigrants. In December 2001, Thalib sent a smaller team of Laskar Jihad trainers to the province of West Papua, where some of the local population, which is non-Muslim, was militating for independence. On February 14, 2002, Thalib traveled to Aceh, another province plagued by secessionist violence, where he formalized the opening of a branch of the FKAWJ. Even conservative Muslim leaders in the troubled province denounced Thalib as a proxy for hard-line elements in the armed forces.

In mid-May 2002, Thalib was again arrested and charged with incitement to violence. Police officials explained that Thalib’s arrest was sparked by a speech he gave on a Muslim-owned radio station in Maluku, in which he appealed to Muslims to defy the peace accord and continue the battle against Christians. Thalib’s arrest provoked a flurry of demonstrations by his supporters across the country. Conservative Islamists, and some independent journalists, accused the government of arresting Thalib so as to create the impression that it supported the U.S.-led campaign against terrorism. A religious conservative and the leader of the country’s largest Muslim party, Vice President Hamzah Haz defied President Megawati and visited Thalib in prison, declaring that he too felt the arrest was politically motivated.

The legal case against Thalib was still unresolved when, on October 12, 2002, someone planted two bombs outside a popular tourist nightspot in Kuta, Bali, killing 200 people, most of them young foreigners. Some in the conservative Muslim press denounced the attack as a provocation instigated by the United States to discredit Indonesia as a haven for international terrorism. A week later (and at the time of this writing), however, the climate of opinion in the mainstream Muslim community seemed to be shifting. Like many of their non-Muslim counterparts, most Muslims in Indonesia are bitterly opposed to the American administration’s policies with regard to Israel-Palestine and Iraq. However, mainstream Muslims were also shocked by the slaughter in Bali and by the idea that such actions might have any place in Islam. They were also concerned that the calamity might send the country into even deeper political and economic crisis. Spurred by this sentiment, on October 19 the

government announced stern measures against organizations and individuals suspected of ties to international terrorism.

Three days after the bombing and before the government put these new regulations into effect, Laskar Jihad officials dissolved their paramilitary, shut down their offices, and closed their site on the World Wide Web. The leadership claimed that the measures had been planned since September and were in no way related to the bombing in Bali. My Muslim contacts in Yogyakarta confirmed that the dissolution of the paramilitary had indeed been under discussion in early September. However, these reports add that many Laskar Jihad officers were actually opposed to dissolving their organization, but were overruled by Thalib, who was said to be under great pressure from former supporters in the military and among military retirees.

The irony to Laskar Jihad’s dissolution is that, of the two domestic organizations identified as possible suspects in the Bali bombings, the Laskar Jihad is the least likely to have been in any way involved. Although when I first interviewed high ranking Laskar Jihad leaders in August 2000 they expressed sympathy for Osama bin Laden, Thalib himself was more cautious. In an interview, he reminded me that he had opted not to work with bin Laden’s forces when in Afghanistan in the 1980s. He also expressed disdain for bin Laden’s understanding of Islam, and took exception to bin Laden’s effort to overthrow the Saudi government.

By contrast, Abu Bakar Ba’asyir, the spiritual leader of the other jihadi grouping regarded as a possible suspect in the Bali bombings (the Council of Indonesian Jihad fighters, a group with ties to the Jemaah Islamiyah and, possibly, al-Qa'ida; see ICG 2002b), has expressed strong support for bin Laden and the attacks on the United States. He did so once again in the course of a long-distance interview he granted me (conducted with the help of a local field assistant) on May 19, 2002. Although Ba asyir denied involvement in any acts of violence, he acknowledged, with a beguiling smile, that some among his students have been “naughty” (nakal) and may have had something to do with “certain actions” in Malaysia and the Philippines. These and other comments provide no indication one way or another of Abu Bakar Ba’syir’s involvement in the Bali bombings. Leaving the question of the bombings aside, however, Ba’asyir’s statements and his international ties place him under a darker cloud of suspicion than Jafar Umar Thalib.

Unlike Thalib’s Laskar Jihad, Ba'asyir’s Council of Jihad Fighters had always kept its distance from armed forces officials, and does not appear to have enjoyed the support of either active or retired members of the military. Indeed, in Yogyakarta, it is an open secret that police and army officials despise the Council, which they associate with the Darul Islam, an Islamist movement against which the military did battle in the 1950s (van Dijk 1981).

In our discussions, Thalib was always careful to distinguish his organization from Ba'asyir's Council. Just like many in the armed forces, Thalib characterized the latter as a Darul Islam front, and described Darul Islam itself as a rebellion that had betrayed the Indonesian nation.

The irony here is that it is precisely because the Laskar Jihad enjoyed a close relationship with some active and retired army officials that, when pressure grew on the Indonesian government to take action against Islamist radicals, the organization was more vulnerable than the rival Council of Jihad Fighters. Elite support and the skillful use of new media technologies had allowed the Laskar Jihad to outflank Indonesia's mainstream Muslim organizations. In so doing, the Laskar Jihad had challenged their moral vision and scaled up a militantly anti-Christian and anti-pluralist interpretation of Islam. Unfortunately for the Laskar Jihad, their radical message, dispersed organization, and, perhaps most important, ties to elite supporters, made them all the more vulnerable to the changing winds of elite politics. Media savvy alone could not save them when some in the shadowy coalition of which they had been a part concluded that the Laskar Jihad had become a political liability.

*** Conclusion

In the last half of the Suharto era, the expansion of education, new media, and a new Muslim leadership brought about a remarkable plu- ralization of the country's Muslim community. Indonesia also witnessed a movement for a civic-pluralist reorientation of Muslim politics that, after contemporary Iran, was arguably the Muslim world's most vibrant. The democracy movement that toppled President Suharto in May 1998 was a multireligious coalition that included Christians and secular nationalists as well as Muslims in its ranks. Among its core theorists, however, was a diverse group of intellectuals interested in devising Islamic grounds for pluralism, democracy, and civil tolerance (see Abdillah 1997, Barton 2002, Hefner 2000).

Although secular-minded theorists may not recognize its importance, a key feature of Muslim politics is that political initiatives must be justified in relation to divine injunctions and religious commentaries. The role of Qur'an and Sunna-based rationales in Muslim politics is so decisive that the scaling up required to develop a civic-pluralist politics must involve not only countervailing powers and a social capital of civil society groupings, but a sustained enunciation of the religious grounds for pluralism and democracy. Indonesia in the 1990s was unusual in that it had an efflorescence of such discourses. Moreover, unlike related efforts in Egypt, Morocco, or Syria, the reorientation of Muslim politics wasn't just the work of a few intellectuals or tiny civil society organizations. On the contrary, the initiative showed one of the key features that political theorists like O'Donnell and Schmitter identify as necessary for a transition from authoritarian rule: a coalitional structure linking "exemplary individuals" to mass-based organizations in society (1986: 48-56). By these twin measures of intellectual vitality and mass base, Indonesia in the late 1990s was one of the most vibrant centers for new Muslim political thinking the modern world has seen.

Sadly, Indonesian Muslims may never get credit for this achievement because their movement to create a civic-pluralist Muslim politics was quickly overtaken by events on the ground. The ethnic and religious violence in Maluku, in particular, dealt a major blow to their efforts. Part, but only one part, of the answer to the question of how this came to be lies in the fact that the new media and technologies of communication that swept Indonesia in the 1990s were more skillfully exploited by jihadi hard-liners than they were civic pluralists. The example provides a sobering reminder that, although new media and mass education are agents of pluralization, they alone cannot guarantee a transition to civic pluralism or democracy.

Just why this is so, just why new media and social pluralism cannot alone generate a culture of civic pluralism, recalls an insight into transitions from authoritarian rule offered a few years ago by the California political sociologist Peter Evans (1996). Evans observed that for a transition to succeed it is not enough that there be a vibrant civil society or reform-minded citizenry. For a transition to move forward, civil and democratic precedents in society have to be scaled up into state institutions capable of amplifying and solidifying civil trends in society. When Evans talks of scaling up, the primary thing he has in mind is the social capital of civic associations and citizen networks. As the Indonesian case shows, however, the scaling up to create a civic-pluralist Islam must be cultural and discursive as well. It requires a cultural capital that legitimates pluralism and civility in Islamic terms, and provides religious grounds for challenging those who would deny the plurality of the modern world through the imposition of a totalizing and repressive unitarianism.

As has been the case with pluralism and democratization in the modern West, there is nothing inevitable about the outcome of this transition. The chances of success are greatly enhanced, however, with the development of new media, mass education, and a participatory and plural public sphere. But the process is made even more secure if the broader political economy creates a multiplicity of social powers, making it difficult for any single class, party, ethnicity, or status group to impose its will on the whole. These pluralizing developments in society remain vulnerable, however, if they are not also accompanied by efforts to implement pluralism-defending structures in the state. It is this scaling up from society to the state that has proved especially difficult for Indonesia’s moderate Muslims. Their task has been complicated by the preference of some in the political elite, local and national, for making common cause with violent radicals rather than with quietistic moderates.

As the aftermath of the Bali bombings has shown, however, the contest between jihadi and moderate Muslims is far from over. Perhaps the greatest advantage enjoyed by the moderates is not simply their numbers, but the depth of their moral opposition to those who would use cruelty and violence in the name of Islam.

** 10. Media Identities for Alevis and Kurds in Turkey

M. Hakan Yavuz

The assertion of identity among Turkey’s diverse religious (Alevi, Nurcu, and Nak^ibendi) and ethnic (Kurdish, Bosniak, Albanian, and Cherkes) groups since the 1980s has taken on new dimensions through expanding communication channels, expansion of the higher education system, and political and economic liberalization. New communication networks have aided the struggles of Alevi and Kurdish groups for public recognition.[56] These networks provide a means for framing socio-political issues, contesting and accommodating different conceptions of identity, and “globalizing” local identities. With the help of new communications technology, for example, Alevis and Kurds frame their local views in terms of universal concepts of human rights, democracy, and self-determination. Even the everyday imaginations of “authentic” and “autonomous” identity are shaped by this synthesis in the expanded public sphere facilitated by a burgeoning of new media (Eickelman and Piscatori 1996: 37-42).

*** Communication Networks as a Space for Identity Creation

Turkey is one of the most media-saturated Muslim countries in the world. It has 10 national newspapers; 20 national, 35 regional, and 350 local television stations; 41 national, 120 regional, and 1234 local radio stations—numbers that far exceed those of any other Muslim country (Sonmez 1996; The Economist 1996).[57] A private television channel. Star One, brought formerly taboo subjects to the public airwaves, and by 1992 Show TV, Kanai 6, Flash TV, HBB, ATV, and TGRT joined the television market.[58] These new communication networks mix and cross-fertilize ideas from ethics to fashion to religion in Turkey. More important, the media outlets—private television and radio stations, newspapers, and magazines— offer new avenues for ethno-religious entrepreneurs to enter the public domain by inventing, legitimizing, disseminating, and shaping national histories and charts of identities (Aziz 1991).

The recent proliferation of television, radio, periodicals, and newspapers has provided a habitat for the evolution of native intellectuals. Through these media outlets, “organic” intellectuals become pivotal in identity-seeking movements. Broad and long-term shifts from an oral to a print culture, based on the spread of mass education, diminish the significance of traditional religious scholars (ulema for Sunni Muslims, dede for Alevis) in favor of urbanized intellectuals better adjusted to new media outlets. Local mechanisms of socialization through neighborhood Qur’anic seminaries or dede-based teaching have gradually lost their authority, leading to searches for new ways of building authority to challenge, articulate, and participate in the formation of identities and ideas on a national scale. The new communications networks promote such shifts in the production and control of knowledge by offering new avenues for the introduction of more abstract and flexible frames of reference to cope with the evolving socio-political landscape. Identity makers, cultural entrepreneurs, and opinion makers all struggle to carve out a space for themselves in these new media by bringing sensitive issues into the public debate.

These new communication networks also bring “hidden others” and “distant others” into the household. Private television channels have offered debates on Alevi practices, homosexuality, feminism, Kurdish nationalism, and other formerly taboo issues. For example, the Siyaset Meydam (Political Forum) of Ali Kirca became a main arena for airing hitherto suppressed ideas and positions in public, hosting an open debate on Alevism on September 24,1994. Such issues are also discussed increasingly in the press.

*** Globalization through New Communication Networks and Privatization

The new communications channels have combined with a wave of Islamic movements to promote sectarian and ethnic minority consciousness by a fusion of local and global identities. Interaction between the state-centered national Turkish culture and Kurdish or Alevi culture has been marked by resistance, acculturation, and borrowing. While modern mass media have promoted a state-centered and territorial Turkish identity, contemporary Alevi and Kurdish identities have been, to a substantial degree, constructed in Berlin, Brussels, Koln, London, and Paris and projected into Turkey via communications networks such as Kurdish MED-TV and Alevi Alcanlar TV based in Berlin. But the impact of all this media is conditioned by the contexts within which messages are embedded, the availability of local idioms to express global ideas, and the institutional rules that regulate the functioning of the media.

In the context of Turkish experience, new communication networks join themes for articulating proper conduct within society and the image of the good life. Besides providing arenas for exploring such questions, their pluralization and privatization contribute to constestation over the definition of identities and to their objectification as commercialization of television networks has shifted their main function of education and state-sanctioned information in service of secular nation-building to entertainment and

alternative life-styles. Even self-styled Islamist television channels, such as Kanai 7, Samanyolu television, and TGRT, which helped objectify Islam, now offer diverse Islamic frames of references, and wrap those in a commercial context.

To attract an audience, for instance, talk shows bring together a variety of perspectives, including Islamist and Alevi. For issues as diverse as the environment and pop music, these shows use scholars to present the “Islamist” or the “Alevi” view (Oncii 1995). Moreover, Islamist television stations and Alevi radio stations compete within a larger common market. In this way, the “new” Islam—what Fethullah Giilen (1995) refers to as the “Islam of Turkey” as opposed to a Turkish (i.e., national) Islam—and Alevi identity are made and sold on television, in newspapers, and on radio. This introduces the competition-based logic of the marketplace into the identity debate and thus, in turn, into the fragmentation of identity.

Privatization of the media has accompanied a shift from passive reception or one-way transmission to active engagement with communicative networks and expanding political rights. One of the popular radio stations, AKRA-Radio, belongs to a Nak§ibendi Sufi order led by Sheikh Esad Co§an. Listeners can call the sheikh and raise questions that might be seen as outside traditional protocol. The station’s programming appears to be directed primarily to supporters of the order. Similarly, Alevi Mozaik Radio also deals with such sensitive issues as Sunni views of women, sex, and alcohol to mold the identity of its listeners.[59]

Cultural solidarity associations, with their financial resources and skills, even more than profit-oriented individuals, can use the new communications networks not only to talk to their audience but also to seek recognition in the public domain. Amir Hassanpour argues that MED-TV “empowered the stateless people to communicate with each other for the first time by disregarding the international borders that have divided them. Many

Kurds felt that the independent body in the sky was a historical step toward sovereignty on earth” (1995: 16). Although new communication networks address a common Kurdish culture in the sky, they also highlight linguistic, religious, and class-based differences within the Kurdish community.

*** Shifting Identities and the Formation of Communicative Spaces

Perhaps most striking, new communication networks combined with economic and political liberalization led to a new debate over identity and citizenship. A popular expression in Erzurum, a conservative town in eastern Turkey, says that “Muslims were forced to change their kihle [the direction one faces for prayer] three times during the last century.” Likewise, citizens of Turkey had to change kihles three times within a generation. National identity in Turkey has been framed first by religion (Islam), then by language (Turkish), and more recently by territory (of the state).

In the Ottoman Empire (prior to 1923), Sultan Abdiilhamid 11 (r. 18761908) created institutions to formalize the union of the Muslim nation (millet} and the state (Yavuz 1993: 184-90). This union of Muslim state and nation was swept away with declaration of the republican state that made language, rather than religion, the unifying factor for constructing a Turkish nation-state. From the 1920s through the 1940s, the republican state treated ethno-religious diversity as a threat to its project of nation building, and it used every means at its disposal to eliminate the causes and consequences of differences (Be^ikci, 1990).[60] The state closely organized and monitored the public sphere as national and secular arena to exclude Alevi, Kurdish, and Islamic identities. This, in turn, transformed Islam into an oppositional identity; even Kurdish identity was contained within this oppositional Islamic identity. There were more than a dozen rebellions between 1924 and 1938. Not until the 1950s did the availability of limited communication networks under a multi-party system enable social groups to articulate their concerns publicly vis-a-vis the center. However, the communications explosion that began in 1980 shattered state-built homogeneity and brought “diversity” to the forefront as an issue. Increased news coverage and the airing of suppressed collective memory and history are regarded with some skepticism by supporters of the state ideology, but this has not prevented ethnic (Kurdish) and religious (Alevi, Nurcu, Nakjjibendi) groups from publishing their own magazines and newspapers. Nurcu publishes Zaman, a newspaper that is also available on a web site (http:// [[http://www.zaman.com][www.zaman.com]]), and it owns the (national) Samanyolu television station. The Nak$ibendi own radio stations, periodicals, and web sites that they use to shape public opinion. According to Esad Cojan, leader of the Iskenderpa^a Nak$ibendi order, the new site of jihad for the faith is the media, and the new frontiers of evangelizing are the radio waves (Co$an 1993: 31-32). The Alevi community in Ankara has opened seven radio stations: Mozaik, Cankaya, Cagda$, Arkada$ Ezgim, Imaj, and Gercek.[61] Radio Mozaik, has become a national station, and the Alevi Cankaya television beams signals to several regions of Turkey.

*** The Alevis: From Co-opted Ally to Imagined Enemy

The Alevis make up 11 to 30 percent of Turkey’s total population (Andrews 1989: 48, 57; Ozum 1997: 11) and have several identities, such as ethnic, regional, and family, stressing one identity over another in any given situation. Alevis are a syncretic religious group whose practices vary from one region to another. Generally, they emphasize inner spirituality and call on members to internalize faith. The Alevi belief is expressed in narratives, poems, songs, legends and popular sayings. In daily practice, Turkish Alevis speak Turkish, and Kurdish Alevis speak Zaza or Kirmanji (dialects of Kurdish); but for both, the liturgy is in Turkish (van Bruinessen 1996b). Scholars such as Nur Yalman and David Shankland essentialize the confessional and communal boundary between the Alevis and Sunni Muslims by reducing it to different interpretations of the five pillars of Islam (Yalman 1969: 53; Shankland 1994); but this approach does not explain how, when, and which cultural differences are politicized. Neither religious- nor descent-based essentialism fully explains the malleability of Alevi identity.

The marking of the boundaries of the Alevi community goes back to the sixteenth and seventeenth centuries, when the Ottoman state viewed the Alevis as a fifth column of Safavid Iran and treated the Alevis as blasphemers and heretics (Imber 1979). The Alevis were targets of frequent massacres by the central government, which forced them into small communities in the mountainous areas of Turkey. Isolation played a key role in maintaining the boundaries of the community, and dissimulation was one way of overcoming Sunni prejudices. This experience of oppression at the hands of the Ottoman state made the Alevi community a supporter of Kemalist reforms, which aimed at instituting a more secular polity. As a multi-party electoral system emerged, the Alevi community supported the Democratic Party (DP) against the Ismet Inonii (r. 1938-1950) government in the 1950 national election. When the DP adopted pro-Islamic (Sunni) positions, the Alevis shifted their support in the 1957 elections to the Republican People's Party (RPP). In October 1966, a group of Alevis formed the Alevi Union Party of Turkey (Tiirkiye Birlik Partisi), which failed to gain a seat in Parliament until 1969.[62]

Expansion of education and urbanization in the 1960s and 1970s led to geographic and social mobility and increased interaction between the Sunni and Alevi communities and heightened the Alevi consciousness. The first urban-born generation of Alevis, those whose parents moved to the squatter towns of major metropolitan areas in the late 1950s and the early 1960s and supported more revolutionary socialist ideas, dominated the identity debate because its members were literate and switched easily between local idioms and universal concepts.

The state and various left-leaning groups saw the Alevis as a group susceptible to secular-progressive or Marxist ideas (Atalay 1991; Co§kun 1990: 104-06; Mardin 1982). The heterodox practices of the Alevis and their collective suffering were articulated in folk music and poetry that became associated with left-wing ideas. This association provided an opportunity for conservative Sunni groups to charge that the Alevis were "Communist."[63] Martin van Bruinessen (1996a: 8), a leading authority on the Alevi and Kurdish minorities, argues that "the radical left, construing the Alevi rebellions of the past as proto-communist movements, considered the Alevis natural allies." Thus, the Alevi community moved in the late 1970s from being the ally of secular forces to being a "communist threat." This, in turn, made the Alevis a target of communal pogroms in 1978-1979.

The leaders of the 1980 coup introduced an Islamization of Turkish nationalism as a move against Kurdish assertiveness, and further alienated the Turkish Alevi community from the state. This state ideology, known as the Turkish-Islamic synthesis, turned the Alevi community into an oppositional minority, and the Alevi community became more isolated and insecure. To overcome this sense of insecurity, many Alevis organized around regional associations and supported specific magazines so as to benefit from the new wave of political and economic liberalization of the late 1980s. With the collapse of socialist ideology and the rise of a Sunni Islamic movement, the Alevi community, using new communication networks, has subsequently transformed syncretic religious practices into communal boundary markers for the purpose of political mobilization.

Alevi assertiveness presents a paradox: modern Alevi identities, objectified by commercial and communicative means, are subjectively rooted in “ancient” histories. These identities have the power to mobilize, but they are prone to fragmentation along differences of class, region, and dialect in the flourishing publication and broadcast media outlet. In the 1990s, different versions of Alevism competed for control of community symbols. A major conflict took place on July 2, 1993, when the Pir Sultan Cultural Association gathered left-wing Alevi intellectuals in Sivas to commemorate the Alevi saint Pir Sultan Abdal (Co$kun 1990). The gathering included the late Aziz Nesin, one of Turkey’s leading atheist Sunni writers, who had translated extracts of Salman Rushdie’s Satanic Verses. A mob, mobilized by pro-Welfare Party (Refah) activists, attacked the hotel where the meeting was taking place, and many of the intellectuals were killed. The incident was filmed by the city police force and the video was leaked to private television channels, where (like the film of the Rodney King beating in Los Angeles) it was rebroadcast continuously for almost a week. The film showed the police making little attempt to disperse the mob.

The government’s response to the attack was a turning point for the Alevi community. The film heightened their security concerns and catalyzed their mobilization and organization. A parliamentary investigative committee blamed Nesin’s inflammatory statements for the conflict, and the police blamed the Alevi association for holding the meeting in a conservative Sunni town (TBMM 1993). Although a court originally sentenced 26 people to fifteen years’ imprisonment and 60 more to three years’ imprisonment, the Alevi community was not placated. Citing state complicity in the Sivas incident and the statements of Erdal Inonli, then a deputy prime minister in the coalition government, Alevi intellectuals made use of the wide availability of diverse communications networks to reject Kemalist secularism as a “surrogate identity” for Alevis and to articulate a more autonomous Alevi identity.

As Alevi magazines, publications, and radio stations became active arenas for political mobilization, the Sunni-Islamist magazine tzlenim, presented the articulation of Alevi identity in public space as the impulse of a community that seeks to “come out from the underground” (Kanber 1993). Subsequently, Turkey’s major newspapers have competed with one another through series of articles on the question of Alevi identity. In 1995, the Kemalist newspaper Cumhuriyet published a week-long series on “What do Alevis want?” (Engin 1995). This practical question brings forth other questions: “Who are the Alevis?” and “How and who will speak for the Alevis?” The media also offer images and concepts from similar cases around the globe for adaptation, borrowing, and participation (Yavuz and Indeoglu 1996).

At the same time, Alevi folk culture has become increasingly intellectu- alized and politicized through media exposure. Media are spaces for cultural elites to articulate and redefine subcultures and to carve a space for themselves in the cultural and political arenas. New private communications channels such as television, radio, and satellite expand the public domain and move global discourses on human rights and self-determination downward while

pulling local identities and prejudices upward. When Gliner Umit, a leading talk-show personality, expressed a common stereotype among Sunnis, that Alevis practice incest, the Alevi community in Istanbul launched a massive demonstration in front of Interstar television on 9 January 1995, and Omit was forced to resign. This event illustrates how new media outlets promote an open discussion of historical prejudices (see also Yaman and Gliner 1995). However, an Islamist magazine, Izlenim, ran an article about an Alevi ritual service in which the reporter claimed, “When I heard the Aievi dede [spiritual leader), Huseyin Orhon, saying to his flock 'do not come to the ritual ceremony (cemayini) without gusid' [Islamic ritual ablution after sexual intercourse], my conviction that the Alevis do not take gusul was shattered” (Kanber 1993: 13). The media can also dispel deeply rooted pejorative images that circulate unchallenged in other channels.

Modern media provide avenues to connect Alevis with Turkey’s national culture and with the global community, too. For example, there are eleven new web sites on the Alevi identity and community. To Alevi youth, the enlarged public space for them allows the options both of belonging to and of feeling free of their community. Through the media, Alevi youth unite the symbols of Ali and Ataturk in their demonstrations. Underneath Ali’s picture, for example, often is written “Guide” (Rehber), and under Ataturk “Leader” (Onder): Ali Rehber, Ata Onder. This cultural reimagination fuses the religious and secular, local and universal, traditional and modern within the modalities brought about by new communication networks and in an environment in which Alevi intellectuals are more dominant than traditional dedes.

*** The Shift of authority from

*** Dede to alevi Intellectuals and Dergah to Magazines

Due to the Ottoman state oppression, the Alevi community institutionalized its religious authority through genealogical origins. The dede has been central to Alevi identity. These itinerant holy men, who controlled esoteric religious knowledge and often claimed descent from the Prophet Muhammad, were “living libraries” who tightly controlled religious knowledge and selectively shared it with their followers. Thus dedes formed a well-functioning network of information throughout the country by belonging to a holy lineage, known as a heart (o(ak). This kin-based religious leadership remained at the center of Alevi practices until print-culture became the dominant medium for constructing knowledge. The role of the dedes has been under challenge for some time, and a new class of intellectuals now leads the community. Nejat Birdogan, for example, a popular writer on Alevi issues, openly challenged the hereditary nature of the institution of the dede and argued that “since Alevism is outside Islam, these dedes cannot be coming from Prophet Muhammad’s lineage” (Birdogan 1994b: 1920). Some Alevis reacted sharply to Birdogan’s interpretation of Alevism as a Turkish “faith system” outside Islam (Aktiiel 1994); under this interpretation, dedes

have almost no role in the new codification of Alevi culture and beliefs. Print media has replaced dedes with journals.

These new forms of journal-based religious authority emerge around people with modern university degrees who have become commanding authorities. For example, in the 1990s the debate over Alevi identity began with the formation of media outlets (Cumhuriyet 1991), and Alevi periodicals such as Cem, Nefes, Genq Erenler, Asura, Kervan, Cagda$ Ziilfikar became forums for debate. New communication networks not only led the shift of authority to modern intellectuals but also decentered the construction of Alevi identity from Istanbul to Koln and Berlin (Mandel 1990). The Federation of European Alevi Union, with 140 associations and 150,000 members, plays an active role in the internationalization of the Alevi identity. Major financial support comes from Europe, where the Alevi community is well organized and where Alevis own local television stations and publish journals that play a prominent role in Turkey's political life. The Alevi community in Berlin, for example, publishes a magazine called Algiil and owns both an Alcanlar radio station and an Alcanlar television station which broadcast four hours a week (Zaptcioglu 1995).

The second major impact of these new media outlets is an historicization of Alevi identity (Bender 1991; Bozkurt 1990). Writings about the historical roots of Alevi culture increasingly deploy a Manichean dualism of good and evil, justice and injustice, freedom and oppression through the narrative of Caliph Ali's sons Hasan and Huseyin and the Ummayad ruler Yezid. Good is represented in the persons of Ali and Huseyin and by Haci Bekta$i Veli and Pir Sultan Abdal, who was executed by Hizir Pasha. Yezid and Hizir Pasha are presented as the personifications of injustice. Significantly, Kemal Ataturk is treated as a "liberator from Sunni hegemony." The myth of collective suffering at the hands of Sunni rulers because of their beliefs and practices has been a mobilizing force in Alevi assertiveness (Eral 1993), popularized through the printed word in a more systematized way than would have been possible through oral tradition. There has been a veritable explosion of books and journals on Alevi culture and practices. Karin Vorhoff, a leading scholar on modern Alevis in Turkey, notes that

At the turn of 1989 to 1990 a press campaign and a deluge of books on Anatolian Alevism not only put an end to the silence that had reigned on Alevi beliefs and practices, but also to the process of dissolution that had grasped the Alevi community and their religious system as a result of secularization, modernization, wide-ranging migration, and the severing of political conflict in the 1970s. (1995: 7)

The debate and literature around the great historic Alevi figure of Haci Bekta^i Veli (d. 1290?) indicates several versions of Haci Bektafji Veli in formation. Some scholars (e.g., Sener 1991) represent Haci Bekta^i Veli as the revolutionary leader of a suppressed community. In this representation, they construct a vision of Alevi culture that reinterprets oral tradition within a global idiom of human rights, democracy, tolerance, and freedom

(Zelyut 1992). This process of blending local folk beliefs and global culture or reading religious culture in secular terms facilitates standardization. Abidin Ozgiinay, editor of the prominent Alevi magazine Cem, argues that “secularism, democracy, the rule of law, and modernity are integral parts of Alevism” (1993: 13). This case indicates how moving communication to a more global context breaks down barriers and reframes integral, local figures in more universalist terms that fragment local frames.

A third major result of new communication networks has been the contestation and pluralization of Alevi identity. Two separate Alevi identities have been presented by two competing Alevi journals. The first revolves around Cem, a magazine funded by affluent Alevis in 1991 with a circulation of about 5,000. Cem is pro-state and pro-Turkish nationalism. To a great extent, it propagates the views of Turkish scholars (Ersoz 1977; Figlah 1994) that the Alevi understanding of Islam originates in a Turkic, semi-nomadic conceptualization. Cem's editorial board champions a liberal economic order and demands official recognition of Alevism. It is dominated by Turkish Alevis, who present Alevism as the “essence of Islam.” Articles in Cem situate Alevism in the Qur’an and the Turkic culture of Ahmed Yasevi and Haci Bekta§i Veli (Noyan 1995: 84). These magazines stress secularism, modernity, and human rights as integral elements of Alevi teaching. The Cem Foundation organized the first international conference on Alevism, held in Istanbul in March 1996, and demanded that the state integrate Alevism into the Directorate of Religious Affairs (Aydin 1996; Camuroglu 1996).[64] The foundation also receives state support.

The Cem Foundation’s leader, Alevi intellectual-Jede, Izzettin Dogan, a professor of international relations at Galatasaray University, argues that “Alevi identity is a synthesis of Turkism and Islamism. This is the Turkish understanding of Islam, which is more tolerant” (Dogan, 1992). One of Dogan’s goals is to introduce courses on Alevism into the schools and to produce television and radio programs explaining the Alevi belief system (Dogan 1995). Dogan also presents Alevism as a guarantor of Kemalist secularism. The mass media, major talk shows, and radio programs have made Dogan a public figure, and his profession adds to his authority: those who are part of the university system become authoritative sources of Alevism.

Some state officials also played Alevism against Kurdish nationalism and mounting Sunni Islamic political activism. In 1991, the Directorate of Religious Affairs organized a series of meetings with prominent Alevi leaders (Aygiin 1991), and the semi-official Foundation of the Directorate of Religious Affairs organized a conference on Alevi belief and Islam in 1992 (Mert 1992). A group of Alevi youth formed the magazine Gem; Erenler in 1995 to disseminate their own understanding of Alevi identity. This group, led by Tugcu Kiitahya, a sociologist at Hacettepe University, stresses the unity of the Turkish state and interprets Alevism within the dominant Sunni paradigm as a folk Turkish culture, not a belief system.

The presentation of Alevism as quintessential Turkish Islam by the Turkish state and Cem has been sharply criticized. Cemsid Bender, a Kurdish-Alevi (1991), argues that Alevism is a Kurdish religion.[65] Kurdish Alevis, mostly Zaza-speakers, tend to integrate Marxist terminology into Alevi discourse to express their universality. Pir Sultan Abdal Kiiltiir Sanat Dergisi, a Marxist, anti-state magazine, argues that Alevism is not “rooted in Islam” but is influenced by Islam, as does Murteza Demir (1993), head of the Pir Sultan Abdal Associations.[66] These associations, which have 35,000 members, refuse to join the Directorate of Religious Affairs because they fear assimilation into the state system.

Intermediate positions between the poles represented by Cem and by Pir Sultan Abdal are associated with other associations and publications. The Haci Bekta^i Association, for example, presents Alevi identity as anti-state and stresses traditional institutions of Alevi identity, such as the dede. Alevi communities in Corum and Amasya, unlike other Alevis, go regularly to mosque and represent themselves as being in accord with Shi'i understandings of Islam through their own magazine, A$sura (§ahin 1995).

*** Turning Alevism against the State and Sunni Islamic Movements: Gaziosmanpasa Incident

In 1995 gunmen opened fire on Alevi tea-houses in the Gaziosmanpasa neighborhood of Istanbul, killing two people and wounding three. The police were slow to react, and a rumor spread in the neighborhood that the local police station might have been involved in the attack. An Alevi detainee had been killed earlier while being held at the same police station, and the rumor galvanized the Alevi community. Alevis from all over Istanbul poured into the neighborhood. The presence of television cameras and journalists encouraged the demonstrators to harden their stance, and they subsequently encircled the police station, demanding justice. When a group of armed demonstrators fired on the police, the police responded in kind, and the clash ended with twenty-two deaths, all Alevis.

This conflict and the one in Sivas show how new avenues of communication, increasing literacy, and political and economic liberalism have transformed Turkish society and previously subsumed identities. By the 1990s, many in the Alevi community viewed the police as hostile. Izzettin Dogan, a prominent Alevi leader, claims that there is “open discrimination against the Alevi communityj;] . . . they are not made governors or accepted into the military high schools.” Dogan presents the view that “many Alevis believe that the state is preventing them from having a higher position in the civil service; they feel marginalized” (Dogan 1995). However, this shared perception did not overcome socio-cultural cleavages within the Alevi community. With opportunities opened by the media and the market, added to state policies to hinder the formation of a unified Alevi front, Alevism has become a zone of contestation among different Alevi groups. Today, more than 170 associations in Istanbul are based primarily on regions of origin. These associations have

become centers for power struggles among Alevi elites, and this in turn leads to fragmentation. To reconcile the competing versions of Alevi beliefs and establish a single representative body, thirteen major Alevi associations convened in Istanbul in 1994 and formed the Assembly of Representatives of Alevi-Bekta§i (Alevi-Bekta^i Temsilciler Meclisi). (The Cem Foundation subsequently broke with the assembly and established its own independent structure.) The assembly council decided to produce a text of common Alevi rituals and practices entitled “Contemporary Anatolian Alevi Charter” (Cagda$ Anadolu Aleviligi Buyrugu}. Unfortunately, the council itself disintegrated in internal strife and disagreement over who had the authority to codify Alevi practices and oral traditions. The second initiative for unification took place in 1996 (Demir 1996).

This move of an oral folk culture into print has created a new forum for diverse versions of Alevi identity. Because Alevis include both ethnic Turks and Kurds, the print media have become a site of contest among different ethnic, linguistic, and educational groups. Since the rise of the (Sunni) Islamist Welfare Party into the government in 1996, secular newspapers such as Cumhuriyet, Milliyet, and Yeni Yiizyd and some state organizations present the Alevi as a natural ally. The Kemalist Republican People’s Party sought to capitalize on the Alevi community’s fear of the rising Sunni Islamic movements.[67] With the changing perception of threat from the left-wing movements to Islamic political movements, the Turkish state is seeking to expand its social base by meeting the demands of Alevis. After the 1995 national elections, the armed forces and the Republican People’s Party regularly invoked Alevi sensibilities to garner political support, and many political commentators argued that the change of the Sivas court verdict from imprisonment to capital punishment was aimed at overcoming Alevi alienation from the state.

*** Politicization of the Kurdish

*** Language and the Law of 1983

A major reason for the military takeover in 1980 was to end leftist use of Alevi culture to penetrate Turkish society; a second reason was the desire to curb Kurdish ethno-nationalism in Turkey. The leaders of the 1980 coup justified their actions in a small booklet (Tiirkiye’de Boliicii ve Yikici Aktmlar} distributed to high-ranking officials with a stamp indicating that it was “secret and not open to public consumption.” The first “divisive and destructive force” they mentioned is the Kurds, who are defined as those “who live in the mountains of eastern Turkey where there is too much snow.” As stated in Tiirkiye’de Boliidi ve Ytkia Akimlar (1982: 43): “Those who walk on this snow create a different noise, and this noise is known as Kurd.” The coup introduced several harsh measures, including a total ban on printing in Kurdish or its use in public spaces. These measures helped crystallize Kurdish identity around language.

A repressive language law, Law 2932, imposed by the military regime on October 22, 1983 (Resmi G azete 1983: 28-29), gave authorities the right to curb Kurdish cultural activities, even in the private sphere. This law prohibits the “utilization of any language in the dissemination, printing, and expression of ideas which is not in the official language recognized by the Turkish state” (Article 2). It declares Turkish as the “mother tongue” of all Turkish citizens and prohibits the use of other languages as a mother tongue (Article 3). This law contributed to the promotion of the Kirmanji dialect as the “official” Kurdish language, which served as a rallying point for Kurdish ethno-nationalism. The main grievance of the Kurds shifted from underdevelopment of the Kurdish populated provinces to the issue of language and cultural rights. When Turkish state officials argued that there was no standardized Kurdish language to be recognized, Kurdish intellectuals mobilized to make the Kirmanji dialect a standardized Kurdish language. Most of the activity took place in Europe, and Sweden and Germany became the centers of standardization and publication in Kurdish.

Partly in response, Turgut Ozal (1983-1991) adopted a new set of domestic and international strategies toward the Kurdish question as part of his goal of making Turkey a regional power in concert with Western strategic interests. He allowed them greater cultural freedom and, for the first time, recognized them as a distinct ethnic group; he introduced a set of bills designed to remove restrictions on the Kurdish language. In 1991 he met with the leaders of two Iraqi Kurdish factions and repealed the draconian Law 2932, in response to European Community conditions for closer European-Turkish relations. Kurds were free to sing songs in Kurdish and to publish in Kurdish, but not to use their language in public. However, military measures against the Kurds continued, and Article 89 of the 1982 Constitution remained in force: it states that “no political party may concern itself with the defense, development, or diffusion of any non-Turkish language or culture; nor may seek to create minorities within our frontiers or to destroy our national unity.”[68]

*** The Formation of a “Literary” Kurdish

From the moment Law 2932 placed the language issue at the center of debate, Kurdish intellectuals mobilized to standardize the Kurdish language. The first Kurdish Institute was opened in Paris in 1983, a second in London in 1984, another in Brussels in 1989, and a subsequent one in Berlin in 1993. In this diasporic space, Kurdish intellectuals in Europe developed a standardized Kurdish language based on the Kirmanji dialect and introduced Kurdish language courses in many European cities. Advances in the technologies of printing and distribution assisted this diasporic “revival” of Kurdish, filtered in through new communication media from grammar books to cassettes, videos, and movies.

The language issue assumed additional dimensions when a group of Kurds in Europe established MED-TV and began to broadcast to Turkey via satellite. A Turkish official has claimed that “MED-TV threatens the security of this nation more than the guerrilla attacks of the PKK [Kurdistan Worker’s Party].”[69] MED-TV programming suggests three interrelated goals: entertainment (articulating a distinct national culture and addressing a collective

memory), education (teaching Kirmanji Kurdish and promulgating the antiquity of Kurdish nationhood), and information (providing news and political debates to promote ethno-linguistic political consciousness) (Has- sanpour 1995).[70] The introduction of MED-TV challenges the state's attempt to promote the Turkish language and control news of ongoing conflicts in the region.

With the proliferation in Sweden, Germany, and France of Kirmanji as the standardized version of Kurdish through broadcasts and cassette distribution and on MED-TV's World Wide Web site on the Internet, a new, full-fledged Kurdish "nation" is being formed by Kurdish cultural entrepreneurs. Using every means possible to historicize the Kurdish nation, these cultural entrepreneurs claim that "MED" stands as proof that Kurds are descended from the Medes (Giirsel 1977: 77).[71] This identity is not constructed within the local space and a stable community but instead within transnational space and by expanding the boundaries of knowledge. A group of jailed Kurdish members of the Turkish parliament argue that

MED-TV brought life to the Kurdish cultural scene the way water and a mirror reflected their reality to them. Thanks to MED-TV, the Kurdish language [Kirmanji) was coming alive, something which threatened those who wanted to suffocate it. MED-TV epitomized the hope of the Kurdish people for recognition; it was a magnet which drew the Kurds together.[72]'

Between MED-TV and printed materials in Hawar (Turkicized Latin) characters, Kurmanji is becoming a "literary" language. In Iraq, official Kurdish is still the Sorani dialect, and it is the only language taught in Kurdish schools there. In Iran, Kirmanji, Sorani, and Zaza dialects are used by the Kurds, but Kirmanji has emerged as the main literary language. There are several Kurdish television and radio stations, most of which broadcast in the Kirmanji dialect.

MED-TV began to air Kurdish and Turkish programs from Europe in March 1995. Most of its programs are prepared by a Belgian communications company, ROJ N.V., while MED-TV itself received licenses from the British Independent Television Committee (ITC) to open studios in London.[73] It first used Polish TELECOM satellites to broadcast to Turkey and northern Iraq, but Turkish government diplomatic intervention prompted the Polish government to halt the broadcasting. MED-TV then rented American INTELSAT satellites for its broadcasting. Through new communications technology Kurdish nationalists have been able to circumvent the Turkish state's attempt to enforce its official ideology.

The Turkish government claims that MED-TV activities are linked to the PKK and to drug trafficking. But INTELSAT is owned by 139 governments—including Turkey—and merely broadcasts programs. According to spokesperson T. Trujillo, "INTELSAT cannot control the content of the programs" (Bozkurt 1996: 13). MED-TV employs its British company to use INTELSAT; that corporation claims that "If MED-TV promotes terrorism, then the Turkish government should pressure the British government to stop the use of the satellite" (Bozkurt 1996: 13). The British government refuses to pressure ITC on the grounds that "there is no

evidence which shows direct connections between the PKK and MED-TV" (Bozkurt 1996: 13). However, Turkish government pressure forced London to conduct a massive police search of the offices of the Kurdish-language satellite station, MED-TV studios in London, and its production company, ROJ N.V., on September 18, 1996. While the investigation of MED-TV is still going on in Europe, it is the most popular TV station among Turkey's Kurds. Sahin Alpay, a journalist who recently visited the region with the help of the military, asked the government to establish its own Kurdish TV station to counter the popular MED-TV (1997).

New communications networks have simultaneously reinforced the consciousness of a shared identity and increased an awareness of difference. MED-TV, which is a powerful agent for the standardization of Kirmanji among the Sunni Kurds of Turkey, is also forcing a competing Kurdish consciousness among Zaza-speaking Alevis and Sorani-speaking Iraqi Kurds. The language of MED-TV is not spoken by most Alevi Kurds living in Turkey, who speak the Zaza dialect. Alevis increasingly refer to themselves more as Zaza than as Kurd, suggesting the emergence of a new language-based identity (van Bruinessen 1992).

*** Conclusion

New communications networks are reshaping political spaces and linking global discourse on human rights and the recognition of alternative ethnic and religious identities of great complexity. These networks have helped to create a new class of cultural entrepreneurs who work as editors, journalists, talk-show personalities, and fiction writers to construct and disseminate reimagined Kurdish or Alevi identities. Significantly, they have displaced older networks of communication that fitted Kurd and Alevi identity to past regimes. Upheavals of the twentieth century exchanged these oral networks for others forged by literacy and by media. Particularly with the reordering of political and economic spaces in the 1980s, Alevi identity has gradually transformed into a political "confessional" identity. The Alevi community is experiencing profound systematization of its oral doctrine, secularization and rationalization of oral Alevi practices and beliefs, and a shift of leadership to those who command the means of these processes.

These processes extend from journals, magazines, and local broadcasting to the introduction of MED-TV, which has made the Kurds the first "satellite" nation. They do not have a seat at the United Nations, but they do have a powerful television frequency with which to shape the imagination of Kurds, at the same time that "Alevi" has been recast in the commercialized environment of more mundane media from exotic marginals to "essentially Turkish." By comparison, "Zaza" identity is a counter-move that shifts the domain to linguistics, again highlighting the changing interplay of community and communication. Communication networks have simultaneously reshaped consciousness of a shared identity previously taken for granted and increased an awareness of differences. The media, by offering many opportunities for politically conscious elites to diffuse their ideas, have brought ethno-linguistic and ethno-religious identities into public space and contributed to the fragmentation of authority by multiplying not just its voices but also their subjects and,

most important, their contexts. Above all, it is the multiplication of media and of media outlets that contributes to this fragmentation. On the one hand, it contributes simplification of previously complex, nuanced identities. On the other, the contribution of media to this process is what, and who, they bring together.

*** NOTES

I would like to thank Amir Hassanpour, Dale E Eickelman, Eric Hooglund, Karin Vorhoff, Jon Anderson, Martin van Bruinessen, and Tayfun Atay for their comments and the MacArthur Foundation Consortium for the opportunity to present an earlier version of this paper at Stanford University, March 7-9, 1997.

[56] Two major cultural cleavages in Turkey are the ethnic split into Turks and Kurds (7 to 20 percent of Turkey’s population) and the religious division into Sunni (orthodox majority) and the Alevi. The Alevi make up 11 to 30 percent of the population. Ethnic and religious divisions partially overlap, and there are Alevi Turks and Alevi Kurds, Sunni Turks and Sunni Kurds.

[57] According to The Economist (1996: 7), “at the last count there were 16 national and 15 regional stations, as well as about 300 local ones. Radio is even more extravagant: 35 national stations, 109 regional and almost 1,000 local ones.” According to the Supreme Board of Radio and Television, a state watchdog that monitors radio and television broadcasts to ensure compliance with the Kemalist principles, 260 TV stations and 1200 radio stations have an official license, and there are many more without license (Zaman, 25 March 1998).

[58] The television revolution began in 1992, when the Magic Box Channel, Star One (a German-based Turkish company, in which President Turgut Ozal’s son was a partner) began beaming programs to Turkey. Article 133 of the 1982 Constitution made television and radio broadcasting the province of the state. This article has become irrelevant as a result of transnational broadcasting.

[59] Mozaik Radio was established and funded by the Koln-based Federation of European Alevi Associations in 1994. For economic reasons, the Federation sold the station to Ali Haydar Veziroglu, a prominent Alevi businessmen, in 1997.

[60] Earlier state-centered studies (Lewis 1968) of Turkey celebrated the homogeneous Turkish nation and its march toward modernity. Recent scholars (for example, Andrews 1989; van Bruinessen 1992) pay attention to Turkey’s diversity.

[61] Genjek, however, is in the process of closing. Almost all these stations are located in or near Ankara, which has the largest Alevi concentration. Most of the Alevis in Dikmen are Kurdish and are economically better off than the Turkish Alevis in Mamak, another Ankara neighborhood. Most political demonstrations take place in Dikmen, where Kurdish identity is expressed through Alevism. Rapidly growing cities such as Istanbul, Ankara, and Adana do not become melting pots but rather agglomerations of coexisting neighborhoods defined by ethnic, religious, and regional origins.

[62] The symbol of the party, a lion, represented Ali, son-in-law of Prophet Muhammed. The party received 2.8 percent of the 1969 national vote and garnered eight seats in the parliament.

[63] Ay$e Giine$ Ayata (1995) argues that, since Alevi migration to urban centers was higher in the 1960s, they became blue-collar workers. She challenges the accepted notion that egalitarianism and democratic thinking are inherent in Alevi culture and argues that these characteristics have only became ensconced in the Alevi culture since the 1960s.

[64] The associations and printing houses that participated in this meeting are Avrupa Alevi Birliklcri Federasyonu, Pir Sultan Abdal Kultur Dernekleri, Haci Bekta$ Veli Kultur Dernekleri, Hollanda-Alevi-Bekta$i Sosyal vc Kultiir Demekleri Federasyonu, fjahkulu Sultan Dernegi, Karacaahmet Dernegi, Semah Kultur ve Ara$tirma Vakfi, Pir Sultan Abdal Kultur Dergisi, Cem Dergisi, Can Yaymlan, Yurrta Birlik Gazetesi, Goniillerin Sesi Gazetesi, and Kervan Dergisi. Six of the thirteen groups owned either a journal or a publishing house.

[65] Two magazines support the connection between Kurdish nationalism and Alevism, Qagdas Ziilfikar (in print since 1994) and Yeni Ziilfikar (June 1996).

[66] Pir Sultan Abdal Kultur Sanat Dergisi, no. 17 (December 1994), p.l.

[67] Ali Haydar Veziroglu is a rich ex-parliamentarian of the Republican People’s Party from Tunceli Province who formed the Democratic Peace Movement (Demokratik Baris Hareketi). Before the 1995 general election, DPM pulled out of the election to allow RPP to overcome the 10 percent hurdle (Siyah Beyaz, December 12, 1995). Almost all DPM candidates were Alevi (for names and provinces, see Siyah Beyaz, December 2, 1995). The slogan of the DPM is “Our first names are different; our last name is Turkey” (Adlarimiz farkli olabilir, soyadimtz Tiirkiye). DPM advertisements stressed the cultural rights of different ethno-religious groups, a non-nationalistic state, and constitutional

citizenship (see Cumhuriyet, July 7, 1996). However, most Alevis do not support the concept of a “confessional” party.

[68] M. Hakan Yavuz, “A Preamble to the Kurdish Question: The Politics of Kurdish Identity,” Introduction to special issue on the Kurds, Journal of Muslim Minority Affiars 18, no. 1 (1998), pp. 9-18.

[69] Interview with high-ranking Turkish military officers in Ankara, June 1996.

[70] Hassanpour offers this breakdown of MED-TV programming for November 1995: information (news, debate, politics), 37 percent of total program; education (youth, children, culture, history, documentary, religion), 35 percent; entertainment (music, film), 35 percent.

[71] The founding charter of the Kurdish Democratic Party of Turkey (Tiirkiye Kurdistan Demokrat Partisi) offers an example of “invented history” by claiming that Kurds derive from the Mede and Karduk civilizations. It argues that Kurds have always lived in independent empires and states.

[72] Cited by the Canadian Kurdish Information Network (CKIN) in a press release condemning Turkish government policies toward MED-TV.

[73] MED Broadcasting Limited is registered in England (Company Number 2960 755 and VAT Number 653 1082 60). Its current director is Hikmet Tabak, a Turkish Kurd.

*** RECENT CHANGES IN TURKISH MEDIA: AN UPDATE

In April 1999, Britain’s Independent Television Commission revoked the license of MED-TV, charging that the station repeatedly flouted its regulations on incitement to violence, and also for sympathizing with Turkey’s Kurdish separatists. Blocked in Britain, Kurdish intellectuals in July 1999 established Medya TV and began broadcasting from Paris via satellite. The Turkish state tried to penalize viewers by, for example, firing five teachers caught listening to Medya TV broadcasts and publicizing the incident (Politika, February 2,2002, <www. ozgurpolitika.org/2002/ 02/02/hab07.html>).

Turkey’s expanding public sphere has both differentiated and unified the cultural and political aspects of Kurdish identity politics. After the 1999 arrest of Abdullah Ocala, the head of the PKK, the right to education in Kurdish became the core issue for Kurdish cultural rights, as for many others in Turkey. A hopeful step toward accommodation started with the European Union’s recognition of Turkey’s “candidate status” for joining the EU in December 1999. On the basis of this new status, the EU asked Ankara to reform its legal system and to recognize Kurdish cultural rights. Turkey responded by allowing "broadcasting in other mother tongues” and amended the Turkish constitution in accord with common EU criteria. Despite these legal changes, the Turkish government expelled thousands of Kurdish university students from their schools when they petitioned for education in Kurdish in 2002.

*** Glossary

Key to abbreviations: Ar, Arabic; Ben, Bangla or Bengali;

In, bahasa Indonesia; Per, Persian; Turk, Turkish

‘ada (In; orig. Ar): custom

abkam (sing.); hukm (Ar): scale of religious precepts, from obligatory to forbidden, applicable to various activities

Alevi (Turk): Shi'i religious sect found in Turkey, Iraq, Syria, and Lebanon
al-kbaliq (Ar): “the Creator,” one of the names of God
al-ntakbluqin (Ar): “the created” (pl.), those subject to God’s rules
Ba'atb (Ar): populist political party, primarily in Syria and Iraq, which combines doctrines of Arab nationalism and socialism

CDLR: Committee for the Defense of Legitimate Rights (Lajnat al-Difa‘ ‘an al-Hurur al-Shar‘iyya), an overseas Saudi oppositional group

CD-ROM: “Compact Disk Read-Only Memory,” permanent storage of computerized data

dalil (Ar): guide to interpretation provided through revelation; scriptural proof

Da'wa (Ar): outreach, proselytizing

dede (Turk): Alevi religious leader

dobbasbi: See punthi

dorud (Ben): a set of Qur’anic verses in which God is implored to bless Muhammad and his family

dowreh (Per): an informal discussion circle, frequently meeting on a regular schedule, among friends in Iran

electronic bulletin boards: See newsgroups

falsafa (Ar): philosophy

fatwa (Ar): religious ruling, decree, advice

fiqh (Ar): Islamic jurisprudence

galabiyya (Egyptian Ar): tunic, ankle-length outer garment

baditb (Ar): oral traditions recounting the actions and sayings of Muhammed
halaqa (In, from Ar): circle, or study circle

hijab (Ar): the “Islamic” head-covering for women, also refers to the practice of wearing one

‘Id (Ar): religious holiday or feast day holiday marked by sacrifice t/ta’(Ar): the giving of nonbinding opinions by a religious authority (mufti) in response to a question

ijma' (Ar): a “consensus” of scholars with respect to interpretations of Islamic law (shari'a)

ijtihad (Ar): striving to interpret correctly the divine path, shari'a, revealed through scripture

infitah (Ar): “opening”; Egypt’s post-1973 “open door” economic policy jaheliyat (Ben; orig. Ar jahiliyya): the pre-Islamic period in Arabia commonly understood as being one of ignorance, paganism, and injustice jihad (Ar): an effort to achieve a determined objective, ranging from military action to solving a legal problem or attaining moral perfection

kapah, (Turk): “closed,” referring to the conservative head-covering common for women

kafir (Ar, also In): unbeliever

khatib (Ar): preacher

ktble (Turk; Ar qibla): the direction one faces for prayer

madrasa (Ar): mosque-university or religious school

marja‘ (Ar): Shi‘i religious authority

mas’ala (Ben; orig. Ar): question, problem, issue

masjid (Ar): mosque

maslaha (Ar): legal doctrine of social interest or utility

Mihna (Ar): inquisition (of a.d. 833-848)

millet (Turk): nation; sectarian community under the Ottoman empire
Moro (orig. Spanish): Muslim ethno-linguistic group in the Philippines
mufti (Ar): the religious authority who delivers a legal opinion
mujahid (Ar): struggler or striver (for a religious cause)

murid (Ar): a Sufi follower or disciple

Nakfibandi (Turk): Sufi order prominent in Turkey and Central Asia
nashid (Ar): martial chant or chanted poem in praise of the Prophet
newsgroups, also electronic bulletin boards: Internet sites where messages and commentary on them may be posted and arranged by topic

niqab (Ar): Saudi-style face veil that covers a woman’s entire head, leaving only a narrow opening for the eyes

pesantren (In, pl.): religious schools

pir (Per): a Sufi master or model

punthi or dobhashi (Ben): Bengali verse or rhymed prose produced by and for semi-literate Bengali Muslims during the nineteenth and early twentieth centuries

qadi (Ar): Islamic judge

ra‘i (Ar, French rai): a hybrid of North African folk music with rock rhythms

sadhu (Ben): classical Bangla

Salafiyya: a liberal movement for reform in late-19th- and early 20th-cen

tury Egypt

salat (Ar): ritual prayers

shari'a (Ar): conventional jurisprudence interpreted by traditionally educated scholars

shura (Ar): consultation, today used for limited parliaments; upper house of the Egyptian parliament

Simay-i-Matlub (Per): “Optimal Image,” Iranian government committee for programs to rival Western music videos for audience appeal

siyasa (Ar): politics; policy

Sufism: Islamic mysticism

sunna (Ar): conduct, especially that modeled on the conduct and precepts of the Prophet Muhammad

Syndicate: officially sponsored professional associations in Egypt and some other Arab countries

‘ulama (Ar): Islamic men of learning. Also ulama (In), ulema (Turk)

umma (Ar): the (religious) community of believers in Islam

waaz mabfil (Ben): public performances of scriptural commentary (in

Bangladesh)

waqf (Ar): pious trust, endowment for religious purpose

ivila’al-umur (Ar): “legitimate rulers”

u>ilayat-i faqih (Per): “government of the jurist,” the sovereignty of jurists over the texts they interpret

zakat (Ar): tithe, one of the five basic Islamic obligations

zawiya (Ar): Sufi religious lodge

*** Contributors

Jon W. Anderson is Professor of Anthropology at the Catholic University of America. From 1992 to 1997 he was editor of the Middle East Studies Association Bulletin, in which capacity he introduced regular coverage of Internet resources for Middle East studies. He has written several articles about the Internet in the Middle East and Muslim worlds, some of which are available on-line from the Internet Society ([[http://www.isoc.org][www.isoc.org]]), the U.S. Institute of Peace ([[http://www.usip.org/oc/virtual_dipl.html][www.usip.org/oc/virtual_dipl.html]]), the Arab Studies Journal ([[http://www.georgetown.edu/sfs/programs/ccas/asj/][www.georgetown.edu/sfs/programs/ccas/asj/]]), and the Middle East Studies Association Bulletin ([[http://www.mesa.arizona.edu/bulletin][www.mesa.arizona.edu/bulletin]]).

Walter Armbrust is the Albert Hourani Fellow of Modern Middle East Studies at St. Antony’s College, University of Oxford. He is the author of Mass Media and Modernism in Egypt (1996), and editor of Mass Mediations: New Approaches to Popular Culture in the Middle East and Beyond (2000).

Dale F. Eickelman is Ralph and Richard Lazarus Professor of Anthropology and Human Relations at Dartmouth College. His books include Knowledge and Power in Morocco (1985), Muslim Politics (co-authored with James Piscatori, 1996), and The Middle East and Central Asia: An Anthropological Approach, 4th edition (2002). He is past president of the Middle East Studies Association, a 1992 Guggenheim Fellow, and a 20002001 fellow at the Wissenschaftskolleg zu Berlin. In 2001-2002 he codirected (with Armando Salvatore) a summer institute for postdoctoral scholars, “The Public Sphere and Muslim Identities,” for the Alexander von Humboldt Foundation.

Yves Gonzalez-Quijano teaches contemporary Arabic literature at the Universite Lyon Il-Louis Lumieres. He has worked previously for the Institut du Monde Arabe in Paris, led a translation project for UNESCO, and created a collection of contemporary Arab writings in translation for the French publishing house Actes Sud. During his academic training at the Institut d’£tudes Politiques de Paris, he worked with Remy Leveau and Gilles Kepel on a research program on Maghrebi immigration to France. He is the author of Les Gens du livre: Edition et champ intellectuel dans l'Egypte republicaine (1998) and numerous articles on popular Arab culture and the impact of information technology on Arab societies.

Robert W. Hefner is Professor of Anthropology, Associate Director of the Institute for the Study of Economic Culture, and Researcher on Religion and Democracy at the Institute on Religion and World Affairs (IRWA) at Boston University. He just completed a Ford Foundation three-year project on “Southeast Pluralisms: Social Resources for Civility and Participation” (1998-2001). He currently directs the project “Civil Democratic Islam: Prospects and Policies for a Changing Muslim World” for the Pew Charitable Trusts and IRWA. His recent books include Civil Islam: Muslims and Democratization in Indonesia (2000) and the edited The Politics of Multiculturalism: Pluralism and Citizenship in Malaysia, Singapore, and Indonesia (2001).

Maimuna Huq is a Ph.D. candidate in Social Anthropology at Columbia University. She is studying contemporary Islamic activism in the Middle East and South Asia, especially Bangladesh.

Augustus Richard Norton is Professor of Anthropology and International Relations at Boston University. From 1991 to 1994 he directed the Civil Society in the Middle East program at New York University, where he was also a visiting research professor. His books include Amal and the Shi'a: Struggle for the Soul of Lebanon (1987) and Civil Society in the Middle East, 2 vols. (1995, 1996), and he has written several articles on the problems of political liberalization in the Middle East. He is also the co-pro- ducer of Quest for Change, a documentary film on civil society in the Middle East. He and Farhad Kazemi are currently working on a book on political reform in the Middle East.

Gregory Starrett is Associate Professor of Anthropology at the University of North Carolina at Charlotte. A graduate of Stanford University, he has written articles on Islamic literature, ritual interpretation, public culture, and religious commodities in Egypt. He has recently published Putting Islam to Work: Education, Politics, and Religious Transformation in Egypt and is currently conducting research on the production and consumption of Islamic intellectual goods.

M. Hakan Yavuz is Assistant Professor of Political Science at the University of Utah and a research fellow at the Faculty of Political Science at Sarajevo University. He has written several articles on the Turkish Refah (Welfare) Party, nationalism, ethnicity, and democratization.

** Note on Transliteration

Any book that draws on materials in Arabic, Hindi, Persian, Turkish, and Urdu, among other languages, poses considerable challenges for transliteration, especially as we incorporate

colloquial as well as literary usages. With as much consistency as possible, we use the system adopted by the International Journal of Middle East Studies for Arabic, Persian, Turkish, and Urdu, using ‘ to represent the Arabic ^cayn, and “ to represent the Arabic hamza, as in Qur”an, which we render as Qur”an. We drop the terminal hamza and full transliteration from words such as ‘ulama (‘idama’, men of learning), fatwa (fatwa), imam (imam), Sufi (Suf), and shaykh that now appear in standard English dictionaries. Sunni (Sunni) and Shi’a (Shi’a) are also rapidly becoming standard English terms, so we have also simplified their transliteration. The plural of words in languages that have “broken” plurals is formed by adding an “s” to the singular, except for ‘ulama, in which the plural form is becoming standard English usage. Only in the glossary are all terms fully transliterated. When persons or writers are known to have a preferred spelling of their name in a European language, we generally use this form.

** Preface

PUBLIC ISLAM AND THE COMMON GOOD

Armando Salvatore and Dale F. Eickelman

Now more than ever, secular and religious Muslims have to confront issues concerning “public Islam and the common good” in open and public debate. Colombia may still lead the world in the number of deaths directly attributable to terrorism, but the events of September 11, 2001, the October 2002 bombings in Bali, May 2003 “kamikaze” attacks in Saudi Arabia and Morocco, and the staccato repetition of bombings and violence elsewhere, including Jerusalem, Baghdad, Gaza, and Ayodhya, test the limits of civility and trust. Ironically, “kamikaze” has become one of the first Japanese words to enter educated Arabic usage, being the word of choice in Moroccan newspapers and transnational Arabic-language newspapers such as al-Sharq al-Awsat (London) because it offers an alternative to calling the perpetrators of such attacks either “martyrs” or “suicide bombers.”

This book aspires to look beyond immediate—and often disturbing—events and to discern long-term trends and developments likely to shape world politics for years to come. It may only be a tiny minority of Muslims who use or condone terrorism in the name of religion, and apologists find a ready stock of counterpart examples among Hindus, Buddhists, Jews, Christians, and followers of other religions. Political trends in the Muslim majority world are often violent and contradictory, due in part to the authoritarian regimes of many states.

“Public Islam” is not immune from such contradictions, but for the most part it works against violence.

A major theme in this book is that advancing levels of education, greater ease of travel, and the rise of new communications media throughout the Muslim-majority world have contributed to the emergence of a public sphere in which large numbers of people, and not just an educated, political, and economic elite, want a say in political and religious issues. The result has been challenges to authoritarianism, the fragmentation of religious and political authority, and increasingly open discussions of issues related to the “common good” (al-maslaha al-amma). At the same time, we recognize that this trend has been uneven and often contradictory. Thus there are several strands of “Euro-Islam,” many of which strongly advocate civility and full participation in the wider civil society dominated by nonMuslims, but within the Muslim majority countries of the Middle East, as in Africa and Asia, it is often difficult to assess the strength of such voices beyond the confines of an educated and ruling elite.

“Public Islam” refers to the highly diverse invocations of Islam as ideas and practices that religious scholars, self-ascribed religious authorities, secular intellectuals, Sufi orders, mothers, students, workers, engineers, and many others make to civic debate and public life. In this “public” capacity, “Islam” makes a difference in configuring the politics and social life of large parts of the globe, and not just for self-ascribed religious authorities. It makes this difference not only as a template for ideas and practices but also as a way of envisioning alternative political realities and, increasingly, in acting on both global and local stages, thus reconfiguring established boundaries of civil and social life. Not all these trends are unique to the modern world. One can read Michael Cook’s (2000) majestic account of “commanding right and forbidding wrong” in Islamic thought, a study that flows from the early Islamic centuries to the present, as an account of an engagement including both Muslim jurists and a wider Muslim public with issues of community concern and conduct. The present book primarily concerns the contemporary Muslim world, but the chapters on the emergence of ideas and communicative practices of the public in the late Ottoman period (Kirli, Chapter 4, and Frierson, Chapter 5 in this volume) indicate that such concerns are profoundly shaped by the course of history.

Many of the emerging new voices and the leaders of movements within this proliferating public space—which is simultaneously physical and communicative—claim to interpret or be inspired by basic religious texts and ideas, and work in local or transnational contexts. These new interpreters of how religion shapes, or should shape, societies and politics, however, like their counterparts in Poland’s Solidarity movement and the liberation theology movements in Latin America in the 1980s, often lack the theological and philosophical sophistication of the religious scholars of earlier eras who previously led such discussions. Such new leaders and spokespeople have nonetheless succeeded in capturing the imagination of large numbers of people. These trends often intensify the ties that bind Muslim communities in the Muslim-majority world with Muslims in Europe, North America, and elsewhere in the world.

Muslims in South Asia, the Middle East, Africa, and the West have developed ideas and practices of the common good that have inspired historical and contemporary thinkers, movements, and associations. Only encyclopedias can aspire to global comprehensiveness. One could equally have drawn on the books and essays dealing with Islam in Southeast Asia, including Indonesia (Hefner 2000; Bowen 2003), Malaysia (Peletz 2002), Central Asia (Rashid 2002), "EuroIslam" (Vertovec and Peach 1997, Modood and Werbner 1997, Allievi and Nielsen 2003), and the importance of Islamic values in redefining the ideas of "public" and "secular" in contemporary Turkey (Qinar 2001, White 2002). We refer to such work, but our primary concern throughout this volume has been to explore issues and themes that increasingly transcend the specifics of region or place. Thus the contemporary "publicization" of Islam is often more commonly rooted in practice than in formal ideology (Adelkhah, Chapter 10 in this volume). It has often created new social spaces, a trend significantly accelerated since the mid-twentieth century, and it has facilitated modern and distinctively open senses of political and religious identity.

Such practices and the resulting social spaces involve both emotional and intellectual engagement among participants in overlapping circles of communication, solidarity, and the building of bonds of identity and trust. Some of these are based on local communities. Others are geographically widespread and targeted to receptive audiences. One example is the use of e-mail among the Indonesian university students who coordinated nationwide campus protests that contributed to the downfall of President Suharto in 1998. These modern practices and new communication technologies create new, effective, and geographically more dispersed bases for effective mobilization—but they can also threaten tolerance and civil society by facilitating publicity and calls to action by extremist groups (Hefner 2003).

Social practices that are based on ideas of the common good and that contribute to shaping public Islam include collective rituals, such as popular festivals and religious and secular commemorations. They also encompass disciplining and performative practices as diverse as Sufi rituals, regional pilgrimages, the informal economy, the routines of modern schooling, and the use of the press and modern communications technologies.

Prevailing theories of modernity and modernization in the midtwentieth century assumed that religious movements, identities, and practice had become increasingly marginal, and that only those religious intellectuals and leaders who attached themselves to the nationstate would continue to play a significant role in public life. These assertions concerning the eclipse of religion in the public life of North America and Europe may have been exaggerated. Casanova (1994) was one of the first to note that by the late 1970s this prevalent view was challenged by the impact of several parallel developments: the Iranian revolution, the rise of the Solidarity movement in Poland, the role of liberation theology in political movements throughout Latin America, and the return of Protestant fundamentalism as a force in American politics. In the Muslim majority world, however, the role of religion in social and community life never receded. This does not mean that it did not change and

develop in ways often underemphasized by Western observers and by Muslims themselves (Zaman 2002). Only in the last decade has the idea of an “Islamic public sphere”—Islamische Offentlichkeit in German—come to the fore in contexts that Reinhard Schulze (2000 [1994]), responding to the work of Jurgen Habermas, discerned as forming the infrastructure of communication and discourse of a new intellectual class, from the classic era of Islamic reform in the late nineteenth century through the structural transformations of the 1960s and 1970s, and the present.

The contributions to this book trace how public Islam—a concept by which we also encompass nonelite practices and interactions and their premodern antecedents—has developed over the last two centuries. We seek to trace the problem of the authority of interpretation of sacred texts from the idea that the wider Islamic community, the umma, will never agree on error, to the essential tension that exists today between transcendent norms with their claims to divine sanction and ideas of the rule of law. The way that a shared sense of public is built into social interactions varies considerably with context and notions of personality, responsibility, welfare, justice and, not least, piety. Notions of public are rooted in those values that define the common good. The form of state authority has also affected how these values are elaborated.

Ideas of the common good are not an immutable heritage of religious or normative traditions, even if some Muslim spokespersons claim otherwise. They are defined by ethical notions and social values contested and redefined through interaction, practice, and transmission over generations. Sectarianism in Christian Europe provided the habitus and the congregational form for developing such ideas and practices, and it is possible to see in the Sufi tradition and other Muslim religious practices a similar contribution to learning to participate in the public sphere, but also to notions of the limits of such participation and to the idea of the public sphere itself. Like the Christian sects, the more orthodox forms of Sufism and other styles of public piety (Soares, Chapter 9 in this volume) have also contributed to shape reasoning selves and to reconfigure the relationship between legitimate authority and independent pursuit of truth. Immanuel Kant was not born in Iraq; public reasoning has, however, a long tradition in Islamic jurisprudence, both Sunni and Shi’a, that flourished in that country and inspired modern Islamic reform.

The processes through which one moves from a locally based practical apprehension of the common good to the level where it is debated in the wider public sphere create various and often fractured forms of public Islam. This process of gaining access to public spaces and shaping them is delimited by discursive traditions—including religious ones—authorized speakers, and the state. It has often been the case in the history of the West that religion has been privatized, as the Church and various Protestant sects were increasingly placed at the margins of public authority and set apart from direct influence on matters of the state. As Casanova (1994) argues, various sectarian movements in Europe played a major role in developing the idea of the modular self, empowered with a moral conscience and confronting the authority both of established religion and the state. In this European trajectory, only when the freedom of individual conscience is recognized and tolerated can a public sphere develop. It is, nonetheless, a more general argument that religious ideas and

practice can foster through different paths the emergence of the public sphere, and we seek in this volume to show the ways that this has taken place in the Muslim-majority world.

The generative source of public Islam is the articulation of the common good in social practice in ways that cannot be captured by the predominantly European dynamics of privatization or deprivatization. There was no Church or churchlike establishment in the Muslim world to disestablish. In an essay on the so-called “inquisition” (mihna) initiated by Caliph al-Ma”mun in 833, lasting until 848, Nimrod Hurvitz (2002) shows how the effort of four successive caliphs to support by force—through the torture and execution of dissidents—the belief that the Qur”an was created, in spite of intensely held popular support for the contrary view that it existed forever, was doomed to failure from the start. The mihna involved both a struggle over people’s imaginations and a contest over boundaries of authority. The result of this struggle—the suppression of the heinous tribunal—was gradually to establish and endow with authority the public space in which men of religious and legal learning, the ‘ulama, could define religious belief and practice and set limits to a field of public action in which subsequent caliphs and temporal rulers intervened only with caution, and in general only to protect society against religious extremism. The modern fundamentalist cry that “religion and state” (din wa-dawla) have always been one and the same in Islam is not borne out by Islamic history, in which there has been a de facto separation of public religion and state authority since at least the eleventh century (Eickelman and Piscatori 1996: 46–47, 55–57).

It is important to incorporate historical and contextual accounts of ideas of public reason and shifting notions and practices of public life and social exchange in the Muslim majority world and elsewhere, rather than to assume, as has often been the case, that there is a single ideal form of the public sphere for all contexts and times. Ideas of the public are historically embedded and have strong links with culturally shared senses of self and community. They are situated at the strategic intersection between practice and discourse. In the context of the contemporary state, modern techniques of authority, persuasion, and control also shape ideas of the public sphere. Such techniques often promote a secular outlook of citizenship and social membership, but these usually coexist with the enduring vitality of religious traditions and the emergence of new socioreligious discourses and leaderships that intersect with and challenge nation-state projects.

How do these developments match views of the public sphere premised on the existence of a religiously neutral, indeed “secular” threshold of access to public debate? Some ideas of “secular” divest participants in public exchanges of their religious and cultural identities, or at least marginalize these identities. But the creation of a public culture promoting exchange and discussion can involve deliberation over issues of common interest, through the invocation of traditions of religious, moral, and legal discourses. It can also encourage the gradual emergence of ever more abstract patterns of membership and citizenship that rest on obligations and rights which increasingly fit a legal vocabulary and a contractual view of society.

Such developments, including the discontinuities between tradition and modernity created by the emergence of a “culture of publicness,” have been the focus of interest of political philosophers, social scientists, and historians alike. It suffices here to mention such diverse authors as Giambattista Vico, Adam Smith, Immanuel Kant, Alexis de Tocqueville, Ferdinand Tonnies, and John Dewey. These thinkers have concentrated on developments in Europe and North America, developments that are specifically Western in our view but that they regarded as exemplary of universal trends.

The contributors to this volume explore the forms that ideas of the public take in social spaces inhabited and shaped primarily by Muslims—and increasingly in a world in which national, territorial, and cultural boundaries can be readily crossed. They also show how engaging Islam through associations and media communications facilitates more often than it impairs change through various trajectories, dynamic tensions, and background understandings of accepted social practice—to use Taylor’s (1993: 213) term, the “social imaginary” of cultural understandings shared by a given people.

This book links the idea of the “public sphere”—a key concept in social thought and social science—to the formation, transmission, and shifting nature of Muslim traditions past and present. Thus in the eyes of some observers, Muslim majority societies—notwithstanding the experience of countries such as Indonesia (Hefner 2000)—are not fertile ground for the development of public debate over the common good. Although the idea of the public sphere has been developed to date primarily on the basis of the European and American experiences, it has often been criticized for not adequately representing the complexity and nuances of developments elsewhere. By focusing on the role of the public sphere in diverse contemporary and historically known Muslim majority societies, we suggest ways in which understandings of the public sphere can be enhanced and developed to encompass the evolution of societies in the non-Western world.

This book has two goals. It suggests answers to how the idea of the public sphere, applied to Muslim majority societies and to Muslim communities elsewhere, contributes to the main currents of social thought, and links these currents to Islamic studies. This book is also intended to encourage those engaged in thinking about historical and contemporary issues concerning Islam and Muslim societies in different parts of the world to look across boundaries of region and academic discipline and to integrate various disciplinary approaches—including history, anthropology, political science, and philosophy—to areabased knowledge.

The editors, like many of the contributors, have become increasingly disenchanted with the presumption that secularism and secularly oriented practical rationality was the exclusive normative base for “modern” public life (Eickelman 2000; Salvatore 1997, 2002). Some of the contributions to this book suggest how religious thought and practice in the Muslim world inspires rational-practical orientations as much as do secular approaches to social action. Some practices, including Sufi (mystical) disciplines (Pinto, Chapter 8, this volume),

interact and sometimes clash with different forms of secularism as incorporated in the ideologies and practices of most states within Muslim-majority societies or where Muslim minorities live (van der Veer, Chapter 2, and Zaman, Chapter 6, this volume).

For both the nineteenth century and the contemporary era, the contributions to this volume seek to identify the norms of exchange and discourse that are the product of these interactions and clashes, and also the creation of a variety of explicit and implicit Muslim forms of civility and publicness. This in turn requires an effort to discern the social history, or genealogy, of the emergence of a sense and structure of public communication and participation in societies shaped by Muslim cultural, religious, and political traditions (see Chapters 4 and 5, by Kirli and Frierson, in this volume).

The present period differs from earlier ones in the speed, intensity, and large numbers of people involved in pushing the contours of tradition, but the publics of an earlier era were equally engaged in doing so. The reshaping of religious identity and forms of communication and publicness in the nineteenth-century Ottoman Empire is especially important in this respect. Kirli and Frierson focus principally on Istanbul, a city inhabited by a religiously, ethnically, and linguistically diverse population who outnumbered the Muslims for a good part of the Ottoman era. The most commonly held assumption is that the confessional communities of the empire lived separately, with minimal reciprocal interaction, and developed social bonds and allegiances exclusively within their own communities. This assumption diverts an appreciation of the mobile and relational aspect of community relations in Ottoman Istanbul, and it says little about the people's sense of identity and of collective allegiance. These two chapters also suggest how an understanding of the ongoing transformations of the Ottoman Empire from the nineteenth century to the present can facilitate a better grasp of the possibilities for change in the contemporary Muslim majority world.

The collective historical experience of coexistence among Muslims and non-Muslims in the Ottoman Empire can be analyzed on the basis of their common interests as members of a vibrant society. In India, the relation between Hindus and Muslims is crucial to the development of ideas of secularism and religiosity in relation to the public sphere. In such an historical and interreligious perspective, the forms of public Islam in the twentieth century appear as contingent crystallizations of much more complex historical processes. For example, imperial encounters have been of great importance to the historical development of public debate in the metropole as well as the colony (van der Veer, Chapter 2; Kirli, Chapter 4; and Frierson, Chapter 5, this volume)—a circumstance that the U.S. occupation of Iraq in 2003 brings once again to light.

Notwithstanding this diversity of experience, most Muslims share inherited conceptions of ideas of the common good. These shared ideas of the past shape contemporary understandings of publicness in Muslim societies (see Eickelman and Salvatore, Chapter 1; Zaman, Chapter 6; and Didier, Chapter 7, this volume). For example, although Islamic

religious scholars, the ‘ulama, claim that God reveals the ideas of the common good to humankind, they also regard these ideas as discernable primarily by themselves—men with expertise in the science of scriptural hermeneutics. Nonetheless, these religious scholars debate vigorously among themselves about what the common good entails. Moreover, they are rarely the only participants in this debate. Their authority remains strong in the modern world, but is increasingly challenged by alternative religious authorities that often lack formal training in the traditional religious sciences. Even the constitution of the Islamic Republic of Iran is based on two conflicting principles, the absolute sovereignty of God (Principles 2 and 56) and the people’s right to determine their own destiny (Principle 3:8) (Islamic Republic of Iran 1980), thus opening the door to wide debate over issues of government and society. Within Sunni Islam, it is also becoming increasingly common for “lay” personalities to lead the Friday prayers at mosques. Thus like the state, the ‘ulama rarely maintain a monopoly over the implicit understandings and formal ethical pronouncements guiding the Muslim community.

The increasing accessibility of the new media, including satellite television, the Internet, and new uses of older media such as video- and audiocassettes and CDs contributes to fragmentation of the traditional structures of religious authority. It also facilitates innovative ideas of religious authority and representing Islam in public in unexpected ways (van der Veer, Chapter 2, and Anderson and Gonzalez- Quijano, Chapter 3, this volume). Several contributions to this volume show various combinations of fragmented and sustained old and new forms of religious authority and influence in the public sphere, making debates about what constitutes “good” or authentic Islam much more competitive than has been the case in the past.

One of the paradoxes of modern Muslim publics is that despite this discursive expansion in many Muslim-majority states and communities, the public good is increasingly defined within the parameters of Islam. Some states, such as republican Turkey, vigorously sought to domesticate and neutralize Islamic institutions and ideas, yet current Turkish politics are defined by a mutual accommodation and tacit bargaining, as the guardians of secularism and those who participate in Turkey’s public sphere and civic life learn to accommodate one another through public debate and practice (White 2002). As Adelkhah (Chapter 10, this volume) indicates for Iran, the most powerful part of the women’s movement is not formal and recognized organizations, all monitored and repressed by the state, but women’s activities in the informal economy and in shaping religious practices. As in the French revolution, Adelkhah argues that such “informal” activities can be at least as powerful a vehicle for changing gender roles and ideas of Islam as explicit ideological statements and formal organizations. In all cases, Islamic ideas of the common good shift in content and elaboration over time and, despite explicit denials, may often converge with Western understandings of such major issues as democracy and tolerance for religious diversity (Hefner 2000; Sulaiman 1998). Thus the role of Islam in shaping understandings of the common good is unlikely to recede in importance in the years to come.

Muslims participate in crafting the idea of the common good in a variety of ways, and they also contribute to shaping the definitions of wider and more inclusive public goods in

societies where Muslims are not a majority, as in Europe (Khosrokhavar 1997; Kepel 1997 [1994]); or, as in Syria and Turkey, they are confronted with a profoundly secular elite; or, as in Iran, with an increasingly unpopular, although powerful, clerical elite (Adelkhah, Chapter 10. this volume). In India, Muslims live in a secular state strongly buffeted by religious extremism (van der Veer, Chapter 2, this volume). Such historically known and contemporary debates argue against efforts to find a single, overarching idea of the common good shared by all Muslim societies, even if some ideologues—both those claiming to represent Islam and those attacking it—make such essentializing claims. It is often the case that such debates or conflicts about what "good" or "true" Islam entails disrupt implicit or even camouflaged conceptions of the public sphere, as in many communities throughout the Muslim world (Didier, Chapter 7, this volume). The analyses of these debates and the contexts in which they occur throw into relief competing claims to speak in public, revealing threads of consensus and points of divergence or rupture.

The participation of religious authorities in public religious debate cannot be understood without an analysis of the audiences to which their discourses are directed and the elements that connect the followers of religious leaders to their persona. The new media, including sermons on tape, popular journals, and local radio broadcasts, may combine with more conventional media (including gossip or published fatwas, or religious interpretations) to widen spheres of participation and make them more complex. The degree to which the participation or influence of these new audiences alters conceptions and implementation of the common good, however, is a question that must always be asked rather than assumed (Eickelman and Salvatore, Chapter 1, and Frierson, Chapter 5, this volume). New authorities or speakers emerge in the space between the state and more traditional religious authorities, and thus come to represent alternative points of power.

Religious authority can be an essential part of the construction of public religious discourse in many different ways. For example, the participation of Sufis in public religious debate combines modern forms of conceptualizing and presenting religious arguments with membership in a hierarchical and intensely personalized religious framework. The public articulation of the common good does not require the equality of all participants in order to raise a claim to truth and justice. The relationship between religious authority— whether claimed by traditional religious scholars or by "new" religious intellectuals (Roy 1994 [1992]) —and the public sphere is therefore profoundly ambiguous and much more complex than conventional Habermasian theories, in spite of their theoretical sophistication, would make us believe (Pinto, Didier, and van der Veer, in this volume). Even in places where there is a state-sponsored Islamic ideology, as in Pakistan and Iran, individuals, groups, and communities often appropriate this ideology to reinforce their position in public religious debate by claiming Islamic credentials for defining the common good, or furthering particular interests in the guise of shared ones—a device common to public spheres everywhere.

Well before September 2001, the growing number of Muslims in Europe and North America had begun to address questions about national identity, citizenship and multiple loyalties, as in France and in Germany. Events since then have further foregrounded the vulnerability of

Muslims living in the diaspora. At times this has lead to efforts to organize for more effective participation in the political life of the societies in question, and at times has lead to waves of self-estrangement, exposing the fragility of multicultural discourse. In these cases, some elements of public Islam become primarily a defense against the contingencies of global events and diaspora society, much as did the Black Panther movement in America in the late 1960s and a movement by the same name that developed shortly thereafter among North African Jewish Mizrahi immigrants in Israel in the 1970s. Even in such a predicament, however, a positive outcome of double estrangement with the home and the receiving societies is to encourage engagement with transnational Muslim causes, especially where Muslims are the victims of human rights abuses. Therefore, the fragilities of the diasporic predicament, exacerbated by the events of September 2001 and subsequently, might in the long run reinforce participation in transnational Muslim publics (Werbner 2002a, 2002b).

The contributions to this volume suggest that there is no singular public Islam, but rather a multiplicity of overlapping forms of practice and discourse that represent the varied historical and political trajectories of Muslim communities and their links and influences with societies elsewhere. Some elements of the approach underlying the chapters in this volume indicate that debates in the public sphere and about the common good encompass both words and practice. They are also profoundly shaped by new practices, new forms of publication and communication, and new ways of thinking about religious and political authority. The contributors to this volume intend this book as a significant port of entry for anyone wishing to understand Islamic debates and practices related to ideas of the public sphere and the common good as they have developed in the past and as they are elaborated and reproduced in modern social and political contexts.

All but one of the contributors to this volume participated in a two-year Summer Institute, “The Public Sphere and Muslim Identities,” that began in July 2001 and concluded in August 2002, funded by the Alexander von Humboldt Foundation (Bonn), administered by the Wissenschaftskolleg zu Berlin on behalf of an international consortium of institutes for advanced study in Europe and the United States and organized by this volume’s editors. This book is not intended as the unique outcome of this project. These efforts share the intent of all the participants to make the study of Islam and Muslim societies a more integral element of the wider currents of social thought. We thank the Wissenschaftskolleg zu Berlin and Dartmouth College for providing the institutional infrastructure needed to realize this project, and Michael Becker for both intellectual and administrative support throughout. Jose Casanova generously commented on parts of the manuscript, Margaret Case read the contributions with the fine eye of a prepublication copyeditor, and Alison Schumitsch prepared the index. We also thank Alev Qinar, Dorothea Schulz, and Pnina Werbner for intensive and mutually enriching exchanges that contributed to the publication of this book.

* Part I: The Public Sphere and Religion in Contemporary Societies

** Chapter One: Muslim Publics{1}

Dale F. Eigkelman and Armando Salvatore

*** The Precolonial Muslim-majority World

The ideas of public accountability and political belonging are not recent in the Arab or the Muslim-majority world. Consider, for example, the oath of allegiance (bay^ca) to the ruler in precolonial Morocco. In that setting, political “belonging” was not based on unquestioned belief but on a continuing process of contest and reaffirmation. From at least the fifteenth century onward, Moroccan monarchs circulated almost continuously throughout their domains. In these royal progresses (harka s) with their entourage, they embodied their personal authority in constantly shifting locales, including the four imperial cities of Fez, Marrakesh, Meknes, and Rabat (Geertz 1983 [1977]: 136—37).

The legal and popular dimensions of the bay‘a shed light on the nature of Morocco’s precolonial public. Bettina Dennerlein (2001), for example, discusses the October 1873 oath of allegiance in Fez to Sultan Mawlay al-Hasan. The artisans of Fez insisted on making the bay^ca contingent on the abolition of certain non-Islamic taxes. The men of learning (‘ulama) and others (notables, and military leaders) who drew up the bay‘a agreed to this provision, although a few days later “certain people” prepared to reinstate the tax. Learning of this development, the tanners of Fez and their followers attacked and plundered the residence of the tax administrator, who took refuge with his family in the shrine of Mawlay Idris, the patron saint of Fez.

A month later, Mawlay al-Hasan announced an amnesty for those involved. When the sultan himself arrived in Fez in April 1884, however, he ordered the non-Islamic taxes restored. Again conflict erupted. This time the royal army besieged the rebellious quarters, killing and pillaging until the inhabitants again accepted the same taxes as had been levied under the ruler’s father and predecessor, Mawlay Muhammad ibn ‘Abdarrahman.

The bay^ca documents that Dennerlein analyzes indicate the contingent nature of collective identities. Kinship, social status, locality, and occupation were all “possible organizing principles for the construction of political belonging.” An important element in achieving notable status was the ability—whether as judge, military leader, descendant of the Prophet (shanf), head of a guild of merchants or artisans, or tribal leader—to secure loyalty and obedience to the ruler. Bayfa documents were read aloud in public in every town in which they were prepared, generally in mosques. Some represented collectivities, others prominent notables, and the texts of various bay‘a s were circulated throughout the monarchy.

The specifics of these texts varied, but the standard components included elements affirming the ruler’s legitimacy and at least implicitly limiting him to rule according to the precepts of Islamic law and “generally accepted standards of how a ruler should act” (Dennerlein 2001: 309). Another element venerated the descendants of the Prophet Muhammad, the shurafa[>]. As Dennerlein concludes, the bay^ca “obviously did not represent a contract freely agreed upon between equal parties and creating mutually binding, immediately obtainable rights and obligations.” Neither, however, did it merely justify autocratic rule by the sultan. Its significance “lay in its contribution to sustaining and acting out a sense of political belonging.” Recognition of the ruler was “rather the result of a combination of different forms and different levels of empirical involvement of individual and collective actors with a particular discourse on political ruler in Islam.” Religious discourse was rarely used to delegitimize a particular ruler, but it “nevertheless created a certain space for debate.” It also indicates that the various social actors were “actively” involved in sustaining the sense of political community (Dennerlein 2001: 310).

The practical workings of the precolonial bay^ca in Morocco point to the existence of a premodern public sphere, offering a wide-ranging flow of discursive social action. In this public sphere, members of the social body monitored one another and acted through a combination of at least partial consensus and a shared hierarchy of leaders of influence. There were some formalized institutional arrangements, such as pious endowments (awqaf), but informal and pervasive patterns of influence, responsibility, and shared expectations were equally important. These arrangements offered a framework for discourse and practice that extended beyond households, villages, and immediate localities, facilitating discussions of the common good and of shifting, continually contested, boundaries of inclusion and exclusion.

The public sphere is thus not limited to “modern” societies. It is the site where contests take place over the definition of the “common good,” and also of the virtues, obligations, and rights that members of society require for the common good to be realized. This emergent sense of public goes hand-in-hand with the sharing of norms that define ideas of community and the responsibilities of those who belong to it. The idea of the public sphere is thus a

wider and at the same time more specific notion than that of civil society. As Shmuel N. Eisenstadt (2002: 141) explains:

<quote>£££civil society entails a public sphere, but not every public sphere entails a civil society, whether of the economic or political variety, as defined in the contemporary discourse, or as it has developed in early modern Europe through direct participation in the political process of corporate bodies or a more or less restricted body of citizens in which private interests play a very important role. We do indeed expect that in every civilization of some complexity and literacy a public sphere will emerge, though not necessarily of the civil society type.£££</quote>

In claiming that the bay^ca in precolonial Morocco suggests the existence of a public sphere, we encounter a limitation, noted by Eisenstadt, that is still at the core of much current social theory. In spite of the fact that several historical and anthropological works on Africa and Asia have shown the elements of transaction and legitimacy present in clan, lineage, and tribally based collectivities, social theory still foregrounds developments in Europe to the detriment of other world regions (see Chakrabarti 2000: 3—6). In the introduction to his sociology of religion, Max Weber (1920: 1) stated that his interest was to explain the combination of factors that resulted in European uniqueness. Later scholars were less cautious. They used European institutions as the comparative basis against which to measure social and cultural institutions elsewhere.

Even if he did not intend to create a yardstick for interregional comparison, Jurgen Habermas, whose name is closely associated with the idea of the public sphere, sees as its essential element the historical emergence in Europe of “rational-critical” discourse among the “reasoning public” of eighteenth-century bourgeois society (Calhoun 1992: 7). The vast international echoes that Habermas’s argument gained after the translation of his book into English and after the fall of the Soviet Union have made his argument on the public sphere an equally powerful token of Eurocentrism in social theory.

*** The Public Sphere: Beyond Europe and Before Modernity

At its base, Habermas’s idea of the public sphere implies a realm separate from the formal structure of political authority and the space of households, kin, and, later, the European “nuclear” family. Habermas defines the public sphere as “a realm of our social life in which something approaching public opinion can be formed. Access is guaranteed to all citizens. A portion of the public sphere comes into being in every conversation in which private citizens assemble to form a public body” (Habermas 2001 [1989]: 102–103). In a notion that can be traced back to Immanuel Kant (1724–1804), the public sphere is for Habermas ideally an intermediate space in which ideas are presented on their own merits by self-reflective moral subjects rather than as emanating from authorities such as preachers, judges, and rulers.

Authority is vested in the public sphere itself. In it, all participants have in principle an equal opportunity to persuade others.

Even for early modern Europe, however, the early Habermas neglected the role of religion in the development and expansion of the public sphere. For example, he ignored the movements of pietism and religious revivalism that were so successful in different parts of Germany, including Prussia, as well as in Scandinavia and other Protestant-majority parts of Western Europe. These movements instituted a sense of legitimacy through congregational forms of deliberation, as opposed to the dominant state-bound Lutheran churches. In later writings, Habermas acknowledged that the process through which norms are produced, which reflect general interest and create an "overlapping consensus" in society, can only be rooted in tradition, familiarity, and culture, through which individuals internalize the procedures of consensus. This also applies to "those who do not belong to the lucky heritage of Jefferson." The communicative presuppositions for generating such a consensus are not the privilege of a particular culture (Habermas 1992: 84—86).

In emphasizing the "rationality potential" of communicative action rooted in the "life world" as the generating source for shared notions of justice, Habermas (1992: 62—77) in his more recent writings has made a major contribution in showing that there is no inherent reason why the notion of public sphere has to be restricted to an idealized European bourgeoisie. Building on Habermas's work in discussing the eighteenth century and later periods, Casanova (1994: 56) reminds us of the "public and political posture of free, congregational, 'leveling,' non-conformist sects or of any disestablished religion ready to clash with an unjust and sinful state."

Although the complex relationship of the Enlightenment to movements of religious renewal was known to European thinkers before Habermas, and has been increasingly evidenced by historians after the translation of Habermas's main work in English (Salvatore 1997: 26), prevailing theories of modernity and modernization in the midtwentieth century assumed that religious movements, identities, and practices had become increasingly marginal to modern societies. These conventional assumptions have also until recently blocked the search for distinctive public spheres in "traditional" societies in general and "Muslim" societies in particular. Ernest Gellner (1994: 211), for example, regarded Islam as imposing "essential" constraints on the conduct and thought of those committed to it. Similarly, consolidated frames of interpretation of the evolution of the Ottoman Empire discouraged consideration of continuities between the religiously legitimated empire and the ensuing secular republic. New approaches to social, political, and economic history point instead to how the Ottoman Empire initiated many of the underlying developments of modern Turkish society, including changing notions of belonging, land, and territory. Modernity as a process antedated the republican era (Meeker 2002; Duben and Behar 1991; Frierson, Chapter 5, this volume).

*** Discerning the Public

In The Public and Its Problems (1927), John Dewey (1859—1952) argues that in no two ages or places is there the same idea of the public. By “public,” Dewey means an institution with recognized common goals and at least an informal leadership, so his notion anticipates Habermas’s concept of the public sphere. Dewey (1927: 33) writes, “What the public may be, what the officials are, and how adequately they perform their functions, are things we have to go to history to discover.” When acting in the public interest, people behave neither like business or professional people transacting private affairs, nor like members of a constitutional order subject to the legal constraints. The state is part of this public insofar as it is seen as legitimately representing the interests of the community. The public is “organized and made effective by means of representatives who as guardians of custom, as legislators, as executives, judges, etc., care for its especial interests by methods intended to regulate the conjoint actions of individuals and groups. Then and in so far, association adds to itself political organization” (Dewey 1927: 35). Dewey reaffirms the necessary role of intermediary institutions and authorities, as against the emphasis that Kant and Habermas place on the freedom of the public sphere from the influence of such authorities. Admittedly, Dewey saw little future role for religion in public life, arguing that “religions now prevent, because of their weight of historic encumbrances, the religious quality of experience from coming to consciousness and finding the expression that is appropriate to present conditions, intellectual and moral” (Dewey 1934: 9).

Antagonistic to the role of religion in modern life, he argued instead for the pervasiveness of religious values, the rational-practical orientation of individuals and communities, that “introduce perspective into the piecemeal and shifting episodes of existence” and sustain the “implicit public interest,” turning into practice the human impulses “toward affection, compassion and justice, equality, and freedom” (Dewey 1934: 24, 28, 80—81). We argue that the dividing line between “religion” and “religious values” is not as hard and fast as Dewey claimed (cf. Ryan 2003: 43).

Dewey’s approach also offers an alternative to treating history in monolithic “chunks” such as “Pre-Axial/Agrarian,” “Axial,” and “Modern,” categories that inadvertently deflect attention away from how societies change. Political forms for Dewey (1927: 84) develop incrementally through “the outcome of a vast series of adaptations and responsive accommodations, each to its own particular situation.” He also cautioned against the idea of technology itself structuring culture. The invention of the printing press, for example, did not inevitably lead to democracy (Dewey 1927: 110). Yet at the same time, inventions such as the electric light bulb contributed vastly to restructuring the use of space and time, just as television has been crucial in constructing the leisure time of privatized and passive late-twentieth-century consumers. For Dewey, writing in the aftermath of World War I, the great transformation was the “machine age,” which had “so enormously expanded, multiplied, intensified and complicated the scope of the indirect consequences” of vast, impersonal economic and political actions. The result is too many “inchoate, conflicting, and uninformed” publics, whose common interests are difficult to discern and construct (Dewey 1927: 126, 131).

If a sense of the public, including “local communal life,” can be established in the modern “machine age,” Dewey argued, then “it will manifest a fullness, variety and freedom of possession and enjoyment of meanings and goods unknown in the contiguous associations of the past.” It will be “alive and flexible as well as stable, responsive to the complex and world-wide scene in which it is enmeshed” (Dewey 1927: 216).

Dewey’s formulation of the public is more open and flexible than that of Habermas and thus can be applied to more historical contexts. Habermas himself has cautiously and indirectly recognized the value of Dewey’s non-Kantian approach (Habermas 1992: 211). Dewey highlights the features of “modern” society—for Dewey, the “machine age” of the 1920s—that distinguish it from earlier eras. At the same time, Dewey eschews the attribution of public to merely one type of society or historical era. He emphasizes the vast number of practices, habits, and responsive adjustments to different situations that contribute to shaping a sense of public based on overlapping interests.

The development of mass higher education in Muslim majority societies since mid-century (Eickelman 1992) and, more recently, increasingly accessible forms of communication and new media have played a significant role in fragmenting and contesting political and religious authority (Eickelman and Anderson 2003). But these recent developments did not call a public sphere into being. Instead, they contributed significantly to reshaping a sense and structure of public—based on shared inherited notions of “common good”—that was already available. The intensified fragmentation of religious and political authority characteristic of the modern era does not lead inevitably to democracy or “civil society,” but the transparency that recent developments—including rapid communications by telephone, fax, Internet, and a greater ease in travel—obliges even the most authoritarian of regimes to justify its actions. It also increases the scope, intensity, and forms of involvement in a multiplicity of overlapping public spheres. Human rights organizations, nongovernmental organizations, women’s rights groups, and religious organizations (including Sufi orders), among others, can operate more quickly and independently across national and regional boundaries in modern conditions. Actors in a repressive “homeland” public sphere can also enter more readily into contact with their “diaspora” counterparts, who often live in circumstances less subject to political control and intimidation.

The increased possibilities for transnational communication also contribute significantly to widening “homeland” public spheres. Some ideas of public can be intensely local; others can be transregional and transnational, expressing multiple ideas of group and community. Participation in the contemporary public sphere implies an openness and at least implicit pluralism in the sense of a capacity to act—or at least communicate—independently from state or ruling authorities.

*** Islam in the Public Sphere: Linking Past and Present

The significance of informal ties in creating a vital public sphere becomes more salient when we focus on accepted and socially legitimated means of accomplishing a task, rather than just on formal institutions authorized or acknowledged by some authority or ruler. These clusters of frameworks for reasoning and dialogue, shared understandings, and practices underpin the public sphere in any historical era (Taylor 1993: 213). Guilds of merchants and craftsmen, although recognized by the Ottoman administration, operated in an autonomous manner, punishing infractions by their members, defining acceptable practice, and settling disputes. Pious foundations (waqf; pl. awqaf) enjoyed a similar autonomy.

Due to their informal organizational character, Sufi orders, or religious brotherhoods offer an excellent locus for understanding historical shifts in the public sphere in Muslim majority societies. In recent centuries these developments have become increasingly entangled with European ones, although they do not necessarily follow the same trajectory.

Although informal, the ties between master and disciple in Sufism have a substance and concreteness as significant as such formal and legally recognized institutions as guilds, pious endowments, and mosque-universities (madrasa s). Acknowledging the change in political forms over time, anthropologist Abdellah Hammoudi (1997) argues that the master-student tie in Sufism serves as the key metaphor and practice by which authority is legitimated throughout the Arab world in general, and Morocco in particular, notwithstanding the formal trappings of parliamentary and other representative institutions since independence.

Hammoudi’s argument can be criticized for imputing to earlier historical contexts the social relationships of later periods. However, other historians show how many Sufi orders shifted in the eighteenth and nineteenth centuries toward more formal and hierarchical organization. This shift allowed some orders to serve as vehicles for social and political change (Levtzion 2002). In some cases the authority of the shaykh expanded beyond the narrow range of both the madrasa and the tariqa (brotherhood) and became a vehicle for internalizing Islamic norms in the wider society. Dealing with the early-nineteenth- century Sudan, Hofheinz (1992—93) pointed out how religious specialists with a high degree of formal schooling worked to spread the norms of scriptural Islam among the illiterate population of smaller towns and the countryside, as opposed to forming a more aloof scholarly or mystical elite. In a manner comparable to the Pietistic missions in the countryside in central and northern Europe, these movements inculcated the know-how needed to adapt emotionally and structurally to the wider socio-political transformations taking place as part of incorporation into the colonial system and the slow formation of nation-states. These transformations are part of what sociologist Norbert Elias (2000 [1939]) called the “civilizing process.” They consisted of the formation among wide sectors of the population of more or less uniform norms that helped anticipate the consequence of one’s behavior in wider society, and therefore created a sense of public interest.

In a similar vein, Sufi leaders and orders in Algeria, long discredited because of their reputation for compromise with French colonial authorities, reemerged in the 1980s together with Islamic associations as a backbone for collective action independent from both Islamic extremists and the state (Rouadjia 1990: 34, 59, 74, 111; Andezian 2001: 76—78, 86—88). As in the example of the Sudan in the nineteenth century, Sufism offered a template—as did other forms of religious association—for developing norms and expectations that encompassed social life in general and not just that of the religious order.

The common element among Sufi organizations in earlier eras and in the present is the tenacity of the master-disciple relationship and its potential for legitimating various forms of religious and political authority (Pinto, Chapter 8, this volume). Sufi orders reached out to a variety of constituencies, using not only madrasa Arabic but also its colloquial counterparts and the vernacular languages of different regions. Ruling authorities were often deeply suspicious of the orders because of their autonomy and capacity for independent action, linking the local with much wider spheres of influence. In fifteenth- century Morocco, for example, saints or “pious ones” (salihun) manifested not only a closeness to the Divine presence (walaya) but also exercised worldly authority (wilaya) (Cornell 1998). Saints embodied a just moral order. Both in practice (for living saints were prominent in North Africa as elsewhere) and as cultural metaphors, saints set limits to the abuse of authority and contributed to the creation of Morocco’s political order.

More generally, the innovative Sufi movements of the eighteenth and nineteenth centuries in many parts of the Muslim world, from the Maghrib to South and Southeast Asia, interpreted texts and practices far beyond the narrower compass offered by scripture- and lawbased religious scholarship. Sufi practices in this period increasingly favored understandings that were less oriented to the esoteric and mystical than to inculcating collective understandings and shared practices that could cut across lines of occupation, wealth, lineage, and region. These notions were still ambiguously poised between the disciplines of mystical self-denial and a more socially oriented disciplined participation in society (Gran 1979: 42—49; Salvatore 1997: 41—48). Still, these shared habits and practices contributed significantly to developing Islam as a principle of the social order.

Sufi “revivalism” in the last three centuries paved the way for a new conception of Islamically legitimated action in public life by implicitly developing the idea of the social Muslim. Sufism asserted the right of individual believers to experiment with the “truth” independent of the sharfa, or accepted practice and the conventions of legal scholarship. Sufi orders, often interconnected over large distances, were usually not directly political but offered a template for intervention in society independent from both the state and from local affinities such as tribe, village, or region (Reichmuth 2000). These orders often offered a secure social role and engendered a strong sense of interdependence. Several revivalist movements in North and West Africa even led to the foundation of new forms of political domination, including Sufi and Mahdist movements in Cyrenaica, Sudan, and Nigeria (Keddie 1994; Reichmuth 1996). These movements became increasingly active in politics—sometimes within major centers of learning and sometimes challenging the

established order. The neoSufi movements often grew in response to European political and economic domination, but responded equally to local developments.

Parallel to the emerging sense of social Islam engendered through Sufi orders by the eighteenth century, religious scholars and the general public alike increasingly began to see the sharfa as more than a specialized juridical-theological notion. The spread of printing, in particular, accelerated the standardization of texts (Robinson 1993). It also encouraged making the sharfa a popular trope rather than just a jurist's notion, encompassing the explicit and implicit, taken- for-granted rules, habits, and practices needed to live a good life as a Muslim. In Egypt, for example, by the late nineteenth century the concept of sharfa took on a new meaning as a template for reasonable, just, and expected social practice—in short, social normativity. In this sense, it acquired a meaning distinct from the concrete law applied by the courts and from the science of jurisprudence (fiqh) charged with making sense of it (Salvatore 2000). This discourse was illustrated and propagated by the rise of a print culture that increasingly incorporated issues of economic prosperity and their associated social and moral requirements into the public virtues of faith (Gasper 2001).

*** The Emerging Public Sphere in Muslim Majority Societies

Even in societies where religious expression and practice are strongly regulated or circumscribed in the public sphere, such as constitutionally secular Turkey—governed as of late 2003 by a political party strongly imbued with religious principles—and Ba'thist Syria, they serve as an important element of the background understandings for most members of society. Adapting such understandings to current social practice, Egypt's Muslim Brotherhood (al-ikhwan al-muslimun) emerged in the late 1920s to become what many observers still consider the only genuinely popular mass political movement in twentieth-century Egypt, reaching its heyday after the Israeli defeat of the combined Arab states in 1948. Royalist Egypt allegedly saw the movement as a sufficiently serious political threat to organize the assassination of its leader, Hasan al-Banna", in 1949. Two years after the 1952 Egyptian revolution, Nasser ruthlessly suppressed the movement for the same reason. Again in 2002, the Egyptian state indicted the movement as a threat to state security in spite of prior tacit approval for some of its key figures to participate in the parliament.

The Egyptian Muslim Brotherhood was well organized for gaining popular support in an earlier era and served as a model for similar movements elsewhere. It retains a strong hold in Egypt. However, popular political and religious movements of more recent origin, including Lebanon's Hizbullah, Palestine's Hamas, and—for the sake of a non-Islamic comparison—Israel's Shas have adapted themselves to play a role in their respective public spheres. It is easy to think of such movements primarily in terms of their political influence. At their base, however, they appeal to their respective constituencies through their implicit and explicit invocation of shared moral understandings of social action. In the case of the

two Arab groups, the social base includes a primary commitment to social work or action (al-iltizam bi-l-amal al-ijtima'i). Morally and religiously inspired social action underlies the building of networks that provide assistance to the needy, basic health care, and education—services that the state often cannot efficiently provide. Such social action can be informally organized, based on affinities of shared habits, expectations, practices, and interests. It can also coalesce around formal institutions and associations. Such movements can also provide nonstate forms of arbitration and justice, media representations, and blueprints formulated for the entire national polity (see Deeb 2002). These associations provide dependable personal ties to cut through poorly understood bureaucratic regulations and indifferent bureaucracies. Religiously based charitable associations, focusing on a wide array of services (medical, educational, family welfare, and emergency assistance), play exactly such a role. They build initially on ties of local trust (Benthall 2000) and community, although they can also provide a base for subsequent political participation.

Such forms of religiously motivated charitable and service association involve an intricate web of informational and expressive transactions, which are constitutive of the public sphere (McQuail 1992: 2). They remind us that the public sphere is composed of more than agents who actively participate in specific institutions or associations, although the existence of such associations is an important element of the public sphere. Other groups lack formal organization and are clustered more on the basis of affinity. This is the case for the groups and activities associated with Fethullah Gulen in Turkey, for example. They lack central organization and coordination—an asset when elements of the state turn repressive and seek to seize assets and people—but their component associations and groups share a common moral orientation to action within society and polity.

An indicator of the dynamic, underlying values on which such informal and formal activities are based is the proliferation of what have been called "Islamic books," a style of writing that appeals to new audiences. These are inexpensive, attractively printed massmarket texts that address such practical questions as how to live as a Muslim in the modern world and the perils of neglecting Islamic obligations. Some offer advice to young women on how to live as a Muslim in modern urban society, and some take the form of popular catechisms. These books articulate basic questions bearing directly on the lives of average citizens. For example, do Islamic traditions and practices—subject to deep and traumatic strains and transformations, especially since the colonial era—still offer sure guidelines for how to conduct one's life, educate one's children, and participate in community affairs, mosque, nation, and community of Muslims worldwide? If not, how can such traditions or practices be restored or adapted to current practice?

Such "Islamic books" break with the cadences of traditional literary Arabic (and with parallel traditions in other languages widely used by Muslims, including Bangla, Urdu, English, and French) and instead are often written in a breezy, colloquial style. They often are sold on sidewalks and outside mosques, and since the 1970s have competed strongly with other types of books in the market (Gonzalez- Quijano 1998: 171–98). The more conventional sort of "grand" intellectual discourse continues, but is often confined to narrow intellectual

circles (Salvatore 1997: 219–41), or is displaced by that of younger intellectuals more geared to wider audiences, who situate themselves between the style of “Islamic books” and the highly restricted fashion of conventional religious scholarship. Equally pervasive are audio- and videocassettes, and popular preachers who have mastered the new media. Some of the more successful, such as Shaykh Yusuf al- Qaradawi, combine multiple media—personal appearances, books (often based on the spoken word), pamphlets, audio- and videocassettes, radio, television, satellite television, and Internet—to reach a variety of audiences.

*** The Public Sphere as the Site of “Shared Anticipation”

The transformations associated with the rise of modern nation-states, bureaucracies, and capitalist sectors within societies are related to a phenomenon that can be termed an “education into anticipation.” This notion builds on Norbert Elias’s (2000 [1939]) concept of the “civilizing process” and overlaps with the notion of habitus as “a matrix of perceptions, appreciations, and actions,” a “generative principle of regulated improvisations that makes possible the achievement of infinitely diverse tasks” (Bourdieu 1977 [1972]: 78, 83). However, the notion of habitus downplays the importance of the “externalities” of discourse in setting rules of communication and interaction (Calhoun 1993: 73–74). Dewey offers a more comprehensive approach, arguing that shared habits and practice, mediated by discourse accepted as authoritative, allow a community to build up a sense of expectation about others.

Equally important are common forms of resistance to the state. Thus Iranian villagers, faced with the disruptions of the Shah’s White Revolution, developed shared practices to deflect or indirectly defeat state intervention in their affairs (Goodell 1986). Iranian youth born since the 1978–1979 revolution are also beginning to participate in a “post-Islamic” public space in which they increasingly ignore regime restrictions on dress, leisure activities, relations between the sexes, and other aspects of life (Khosrokhavar and Roy 1999: 143—205). Throughout the Muslim-majority world, as elsewhere, students learn not only the formal elements of the curriculum in school but also the hidden lessons of bureaucratic indifference, hierarchy, class, ethnicity, and gender identity. In the diverse, rapidly changing conditions of modern society, the state cannot provide guidance from above to shape all activities. More complex ways of inculcating and negotiating background understandings are needed to provide the “connecting tissue” of information, expression, and solidarity.

In drawing attention to the communicative and interconnected aspects of social life that we call the public sphere, Dewey shows how acts become public when their consequences, even if initiated in private, indirectly affect the welfare of many others (Dewey 1927: 13). For this reason, the state or the community also acts to regulate or to limit certain actions of individuals if these actions threaten the community. The public sphere entails awareness among members of a society that discrete acts have a general impact on others. Hence the sense of public is the means through which this perception of the consequences of actions is

generalized. People are “educated” into this perception, anticipating the consequences of one another’s actions. This is the point at which Dewey’s notion of the public and Elias’s of the “civilizing process”—despite their divergent theoretical concerns—show an interesting convergence. Shared anticipation is the condition of possibility of a public sphere.

The emergence of the public coincides here with the opening up of the circles of reciprocity and mutual obligations, which also allows for the crystallization of a notion of social welfare and general interest. The consolidated effect of the socialization that allows people to anticipate the consequences of their actions can also be called “moral agency,” a broader notion than citizenship.

Of course, media-mediated, mass forms of communication that are not face-to-face are also crucial to the modern public sphere. Schooling and television broadcasts (including interview programs and soap operas) contribute to developing a collective sense of anticipation and internalization of norms. These patterns of anticipation are crucial to debates on the common good, but they are not the whole story. Liberal political theory, as exemplified by Kant and Habermas, assumes that participants in the public sphere are engaged in basically free exchanges of opinions unrestricted by considerations of status or authority. Dewey’s approach requires no such idealism. For him, the public sphere is at once more dynamic and more fragile. Speakers and their audiences take a variety of background information into account and engage in a great deal of miscommunication and misapprehension.

In the context of modern, complex societies, shared standards of anticipation must still be based on ties that are perceived as local, even if these “localities”—taking advantage of modern communications—are not local in a geographical sense. Even in the 1920s, Dewey (1927: 216) called for a restoration of “local communal life,” a task perhaps technically easier today than in earlier eras. The public spheres of contemporary societies and polities are made up of highly diverse groups. These groups all possess a strong sense of local knowledge, but not always the same local knowledge, although they, like the public spheres to which they belong, significantly overlap. Modern public spheres are constituted through a frail, overlapping consensus based on shared mechanisms of anticipation. In the Turkish case, for example, nationalists may say that loyalty to the nation transcends all other identities. Yet, as Beller-Hann and Hann (2001: 22) explain, many other identities emerge from the “continuous flow of social interaction.” National identity combines with “identities of a more traditional sort, such as those linked to language, gender, family and religion, and with newer identities that people create in increasingly globalised marketplaces.” Moral agency does not necessarily operate with the same intensity or in the same way in all shared circles of consensus. For example, a media campaign to raise funds for relief work in Bosnia or Palestine, or to provide meat for the poor on Muslim feast days, entails dimensions different from those of a movement based primarily in a single locality.

Among the multiple modern public spheres, the nation-state claims primacy, prescribing models of homogeneous identity formation and ritual constitution for the whole community.

One key ritual, even in authoritarian states, is the general election. The complexity of social life, the modularity of identities, and the contest over primacy cannot be reduced to nor obliterate the importance of “warm” circles of community and obligation. Warm circles offer mutual trust and familiarity. They are also open-ended. They demand loyalty and imply reciprocity, yet loyalties are intersecting, overlapping, and inevitably divided. “Cold” circles of community—those that are formal, distant, and single-stranded—also make claims to primacy, but they are too removed from daily practice and concerns to secure the ultimate loyalty they claim. What is distinctive about the modern public sphere is the rapidity with which cold circles of community can sometimes merge with and incorporate warm ones, creating novel senses of belonging and identity. Thomas Scheff (1990: 22) argued that there has been a paucity of systematic studies of bonds of communal solidarity, with the result that Durkheim’s distinction between mechanical and organic solidarity—or for that matter the distinction between community and society—deflects attention away from the possibility that these two types of solidarity are often interwoven.

Inculcated and shared standards of anticipation, generated and transformed through habit and practice, often are conceived in terms of a stable “tradition” (Elias 1997: 67). In this form, they establish the cohesiveness of norms in modern societies. The reproduction and transmission of these norms always requires an endless capacity for creative adaptation. Nicolas Haddad, a major Egyptian reformer and “proto-sociologist” of early-twentieth-century Egypt, reformulated the tradition of adab (manners) in terms of acquisition of the skills necessary for “social commerce”—a notion that resonates with Elias’s underlying idea of the civilizing process. Haddad maintained that “unlike other species, man’s struggle for survival is associated specifically with two ideas: life expectancy (al-ajal al-madid) and quality of life (al-hazz al-sa‘id, literally, good luck). These two ideas come together in the concept of the future (al-mustaqbal)” (Farag 2001: 109). This new sociology—paralleled for the Turkish context by Ziya Gokalp and for the Iranian context by Ahmad Kasravi (Parsi 2000: 133–39)— was also a new program of education. Haddad’s examples of how normativity works—through teaching anticipation—evokes Gellner’s (1995) conception of building a “modular self,” a modern sense of responsible agency based on a distinction between different fields of social action and action within these fields. Gellner’s notion of the emergence of the modular self may be too regimented, but it presages the sense of “social agency” and the autonomous individual so crucial to modern societies (Giddens 1984: 314).

The way a sense of public is built into social interactions varies considerably with social context and notions of personality, responsibility, and justice inherited from older traditions. In the context of the contemporary nation-state, modern techniques of authority, persuasion, and control must be taken into account. These may limit the construction of a freely flowing sense of social agency. State techniques such as military conscription, policing practices, the perceived pervasiveness of informers, and modern schooling dramatically influence the sense of shared anticipations. In repressive regimes, this is done through persuading the public of the omnipresence of informers.

Less sinister forms of social control also abound. Discussion may often be “channeled,” so that the major media (radio, television, and mass-circulation newspapers) are carefully regulated in what is said and not said, while the “little” media, such as books and magazines of more limited circulation, are given considerably more latitude for expression. Modern censors and state authorities often allow some open forums for discussion, knowing that these media fail to reach the majority of the audience effectively (Eickelman 2003: 39). Not only the state, moreover, but also private organizations and interest groups seek to regulate and control their presentation of self in the public sphere (Jackall and Hirota 2000).

There are many forms of state, as Dewey says, but in most societies the modern state, whether authoritarian or liberal, is strong and pervasive, and there are continuing debates about the proper limits to state authority. The modern state says that it exercises censorship for the good of its citizens, and polices society for the same reason. Whether in Muslim-majority societies or in Europe, the state sets the stage and the rules of conduct. On the other hand, the state may be increasingly challenged or criticized. Such criticism may not always be effective and sometimes may be dangerous to those who utter it and to the state, but most state authorities are increasingly aware that their current secrets or indiscretions, and those of the past, may be the subject of public commentary and discussion.

The existence of a modern nation-state, however, does not inevitably lead to an open public sphere in which the discipline of shared anticipations (only part of which emanates from the state) and the possibility of deliberation on public matters emerge together. For this to occur, other social actors are needed who have some degree of autonomy, who are not instruments of the state (although detractors may impute this role to them), and who communicate through available and effective forums and communications media. The mix of resources will vary. In Syria, it may be the salons of established businessmen and intellectuals, gatherings known to state authorities but tolerated because they are not mentioned in formal media (Al-Azm 2000). Other venues include the new media, audio- and videocassettes, and photocopied leaflets, as well as coffee shops, mosques, and church congregations. They may also include secret or “nondeclared” associations (see van der Veer, Chapter 2, this volume). Just as secret lodges were important for the Enlightenment movement in Europe, organizations neither formally declared to the state nor reported to it often acquire a major significance. Sometimes the same people are involved in both kinds of activities. This was as much the case for French philosophes such as Denis Diderot as for Muslim reformers such as Muhammad ‘Abduh. In the end, however, not all authority ends up being absorbed into the public sphere. There is a constant tension between state and society over the space allowed for the public sphere.

*** Solidarity and Circles of Communication in the Modern Public Sphere

Communications within “warm” circles and the creation of public circuits of communication in wider, “cold” public spheres do not mark two different social types of public. They are crosscurrents within the same societies and the same or overlapping public spheres.

Consider, for example, Egyptian Islamic intellectual and media star Mustafa Mahmud (born 1921). His career, especially after he became identified with Islamic thought and practice, shows how expressive and informational transactions are linked to representations of social solidarity (Salvatore 2001). Mahmud's particular role in the Egyptian public sphere has been to articulate the scholarly discourse of 'ulama with the needs and practices of wider groups, contributing to a "reintellectualization" of Islam in an accessible vernacular form. Before becoming an Islamic intellectual in the 1960s, he was a secularist. Following vigorous protests from some religious figures, in 1956 state authorities confiscated his book Allah wa-l-insan (God and man) on the allegation that it spread atheistic and impious thoughts. By his account, he then began a journey in the search of truth that brought him "from doubt to faith" (min al-shakk ila-l-iman), the title of one of his later best-sellers. He began his "Islamic career" in the late 1960s with the publication of a Qur"anic commentary (tafsir). Its popularity was due to the inclusion of both the vocabulary of the natural sciences (Mahmud was a medical doctor) and the vernacular of everyday experience. This blend of religion, science, and common sense— and showing the consistency among them—proved a winning formula.

His public liked him because he helped them to identify Islam (erected against a wall of doubt elaborated by poorly understood but respected modern science) as a blueprint for social responsibility that transcended material and individual interests. By the early 1970s, Mahmud built up a successful television series, "Science and Faith" (al-ilm wa-l-iman), founded his own mosque, and created a charitable medical association. These actions legitimized his public discourse because the public—primarily Egyptians, but also Palestinians and Jordanians—knew that it was accompanied by concrete social acts.

Mahmud's rapid rise in popularity did not represent the ascendancy of "lay" religious authority over that of the 'ulama. His ascent and the crucial support he received from the Shaykh al-Azhar of the time, 'Abd-al-Halim Mahmud, shows how much he still depended on an implicit association with traditional 'ulama. Nor did the Egyptian public see his style of media authority as radically alternative to that of the leading television preacher of the time, Shaykh Muhammad Mutawalli Sha'rawi (d. 1998). Mahmud's audience considered these two "stars" as different in style but mutually reinforcing. In Mahmud's heyday in the 1980s and early 1990s, his public also listened to him in a different way than they had listened in an earlier era. In an earlier period, Nasser spoke to audiences. Mahmud spoke with them. Families gathered in their living room to watch his program, so that he shared their domestic space. Invoking the master-disciple relationship of Sufism, some people who knew him only through television referred to him as "their" shaykh, a claim made more vivid by knowledge of his charitable works. In his clinics, some patients expected to be treated by him (although he had ceased practicing medicine decades earlier) rather than by the regular clinic staff. Whereas public figures such as Muhammad Shahrur and Sa'id Ramadan al-Buti of Syria represent opposing types with incompatible views, Sha'rawi and Mustafa Mahmud made more of a double billing of complementary personalities in Egypt.

The ability of some actors and messages to transform the “cold” sphere into a “warm” one, as Mustafa Mahmud successfully did, is characteristic of the modern era. This transformative ability is rapidly being accelerated by new interactive media such as the Internet and satellite television—media freed from many conventional state restrictions. The result is an intensified cross-cutting of messages. There has long been a de facto pluralism in the Muslim majority world, although sometimes masked by some groups and leaders asserting their leadership over the umma, the worldwide community of Muslims. Intensified communications have resulted in a sort of horizontal transnationalism of nonstate actors. This may be expressed in a concern for Muslim minorities, the boundaries of accommodation to non-Muslim majorities, and the permeability of the frontiers of Muslim thought and practice. The cross-cutting includes “Western” and “Muslim” circles of communication. The two circles often overlap and are mutually supportive. Debates over “being Muslim” can be intensely local or follow lines of language. They can also be regional or even global, as in a Kuwaiti newspaper debate over whether women should participate in the 1995 Beijing World Conference on women (Shahrur 1998). In these discussions and practices, “being Muslim” is never an exclusive identity, for one also has identities of family, language, nation, region, gender, and others that make identities situational and which also require pragmatic compromise and accommodation.

In modern societies, including authoritarian ones, there are other actors besides the state. For example, engaged Muslims who have the means to do so use media as well as the ability to support collective projects for the public good, creating vehicles for teaching others in words and in deeds how to be a good Muslim. This consciousness of media power and the partial accessibility of some media even in authoritarian sociopolitical contexts also provide alternatives to thinking of Islamic action in immediate political terms. It can equally mean contributing to the construction of an Islamically informed public as a more realistic goal than the establishment of a local or worldwide Islamic state (Yasin 1999: 75–83). This option also corresponds to a Dewey-like gradualistic (in Arabic, mutadarraj) view, which is also a pragmatic means of accommodating to authoritarian states or militant secularism. Following the World Trade Center bombings of September 11, 2001, David Martin (2003) argued against the idea that the relation between religion and modern society can be arrayed on a continuum ranging from minimal relations between the two, as “required” by the “Western Enlightenment,” and the maximal relations between the two, as found in “Islam.” An alternative view is that in all societies, including both Muslim majority ones and those of Europe and North America, religion can play an important role in providing ethical and moral guideposts to individuals as they take responsibility for their lives. This has been the case for liberation theology in South America beginning in the 1970s, and may be one of the currents paramount in the Muslim world today. Such an empowerment of individuals can motivate the actions of small but deadly groups of extremists. It can also support individuals breaking with authoritarian religious and political authority.

*** Conclusion: Whither Modularity?

Modern identities are basically modular and individualistic. They are often inculcated through formal education and state practices, but they always have to be socially sustained

and are subject to change over time. Modularity is never self-sufficient and self-sustaining, but needs underlying, horizontal, ties of solidarity without which social identity is ineffective. There are cultural differences in how collective frameworks of reasoning, or even a “public reason”, are distilled and legitimized out of these overlapping “ties that bind” and how they interact with the “firmest tie,” as Islam is called in the Qur”an (2:256; 31:22). On the other hand, in seeking to understand the link between the public sphere and Muslim identities, we see more than a pure politics of “identity,” of almost optional affinities, as is the case in the entitlement politics of certain U.S. and European contexts. Contemporary Muslim publics encompass the publishing business (magazines, books, and audiocassettes, and their networks of distribution), reading groups, relief associations, solidarity networks and political movements, and—of particular significance—the mosque and the collective Friday prayer and sermon. These media and sites combine in multiple ways. These Muslim publics are grounded in practices that emerge through the complex process of ingraining of Muslim traditions into modern social life. Eisenstadt’s (2000) notion of “multiple modernities” is one way of accounting for these different trajectories and relating them to the idea of the public sphere.

One reason for the importance of seeing continuities between the public spheres of the past and the present is to foreground the element of shared standards of anticipation that make public spheres— and in some cases, democracy—work. This chapter suggests some points of departure for understanding a variety of historical trajectories and cultural and religious traditions that can shape public spheres. It also suggests ways of accommodating some of the Europeancentered main currents of social thought to the variety of ways in which religion continues to play a dynamic, and often constructive, role in shaping public spheres.

** Chapter 2: Secrecy and Publicity in the South Asian Public Arena

Peter van der Veer

Some authors conflate the notions of civil society and public sphere, while others distinguish them sharply and argue for one against the other (Calhoun 1993, Dean 2001). I think that the two belong together. In my reading, civil society comprises institutions and social movements that are independent enough from the state to be critical of it, and the public sphere comprises the spaces, sites, and technologies available for public discourse that is critical of the state. Both concepts carry overtones of liberal political theory. This is especially true of Habermas’s understanding of the public sphere, with its emphasis on a particular kind of secular rationality and subjectivity, excluding the not-yet-modern subject. Despite Habermas’s training in the Frankfurt School, there is much in his analysis of the emergence of the bourgeois public sphere and its transformations that is close to liberal political thought (Habermas 1989 [1962]).[1] His emphasis on freedom of expression combined with rationality of debate reminds one of John Stuart Mill’s famous “Essay on Liberty” (1982 [1859]). For both Habermas and Mill, it is clear that only rational adults can participate in this debate. Habermas writes about the emergence of the bourgeois public sphere in England without any reference to the British Empire. Mill, a colonial administrator, is more direct in his denial of the possibility that the colonized world can create and participate in orderly, public debate. The colonized are like children who have to be educated before they can engage in rational debate. Postcolonial studies have sufficiently shown that this “little England” perspective is a nationalist fallacy. For instance, in her discussion of the concept of freedom in Edmund Burke’s famous reflections on the corruption of the East India Company, Sara Suleri (1992: 24–75) demonstrates clearly how political theories about Britain in the eighteenth century were directly related to thoughts about empire. As I have argued elsewhere (van der Veer 2001: 3–14), imperial encounters have been of great importance for the historical development of public debate in the metropole as well as in the colony. The imaginary of the nation-state itself is a product of

global history. Moreover, it is important to highlight the imperial genealogy of the public sphere in order to understand better the current transformation from the national public sphere to a transnational public sphere. Keck and Sikkink (2000), for instance, rightly point to the antislavery societies of the nineteenth century as precursors to present-day transnational movements and advocacy networks.

Another significant congruence between Habermas's thought and that of J.S. Mill is that neither sees a place for religious argumentation or religious movements in the public sphere, since in their view religion is an obstacle to the freedom and rationality of debate, because of its absolutist claims on truth. Their assumption is that society has to be secular before one can have a critical, public debate. Habermas's public sphere is an ideal-typical construction that fits parts of liberal political thought, and this would explain why his later writings, focusing on procedural democracy, are close to the theories on rational argumentation in liberal democracies developed by the American political theorist Rawls, but antithetical to Foucault's fundamental critique of liberalism.

The limits of liberal political theory for understanding the world do not have to be outlined here, but nevertheless it may be useful to retain some aspects of the notions of civil society and public sphere insofar as they are productive in interpreting the social sources of self, community, and imagination. To do this, one may emphasize the element of "openness," publicity, and open debate that is so clearly conveyed in the German term Offentlichkeit, used by Habermas and translated into English as the "public sphere" in English. At the same time, one may look at the opposite of openness—secrecy—to understand better the nature of a space for criticism of the state.

The aspect of communication and the role of technology therein seem crucial for civil society and public sphere, but also for religion. In this connection it is interesting that Benedict Anderson (1983, 1999) has argued that one media revolution, the rise of print capitalism, has had a profound impact on the way human societies imagine themselves. Although his interest is in the rise of a secular national consciousness—crucial to the formation of civil society and public sphere—he also pays some attention to the ways in which religion has been transformed by later media revolutions. Not only the imagination of community is important here, however, but also the imagination of the "self." The mediation and virtuality involved in new technologies of communication, like the book and now the Internet, may have a profound impact on religious communication. Religion is not only mediated but is also crucially concerned with the forms and practices of mediation. According to William James, religion is founded on the subjective experience of an invisible presence. This may be true, but we only have access to that subjective experience through the mediation of concrete practices, such as speaking, writing, and acts of worship, while at the same time, these acts may be considered to produce the experience. There is a whole range of activities that induce religious dispositions and concern the relation between human subjects and what I call provisionally, for lack of a better term, the "supernatural." Crucial in that mediation is the relative invisibility of the supernatural or, perhaps better, its virtuality. There is always ambivalence in religious mediation about the addressee and the arrival of the message that is connected to epistemological uncertainty.

Not only are communication and “openness” crucial to civil society, public sphere, and religion, but also, paradoxically, so is publicity’s opposite: secrecy. Reinhart Koselleck (1988 [1959]) has argued in a book that appeared three years earlier than that of Habermas and became almost as influential, that the emergence of secret societies of freemasonry were crucial in the development of Enlightenment critique of the absolutist state.[2] In the mid-eighteenth century, the Masonic lodges saw an immense increase in membership and can be seen as the most important sites for the new sociability of the Enlightenment, besides the more public ones such as coffeehouses, clubs, salons, and literary societies. The important point here is that these lodges were able to erect a wall of protection for their debates and rituals against both intrusion from the state and intrusion from the “profane” world.

Religion is a privileged site for examining an aspect of secrecy that is simultaneously the opposite of the public sphere and foundational for it. Religious movements and religious sites are often suspected of secret conspiracy by the powers that be. And it is precisely the moving away from state institutions and official politics that gives possibilities for fundamental moral critique. It should be clear that this critique can take an unpleasant and terrorist form, as it did in the Jacobin ideology of the French revolution. This uncomfortable dialectic is what German theorists like Koselleck and Habermas were interested in after the Nazi period. The events after September 11, 2001, have put this element of secrecy and terrorism again sharply into focus. The al-Qa’ida campaign to attack in a number of covert operations what it perceives to be the hegemonic force of the United States has become a major challenge for the functioning of modern, liberal society in many parts of the world. The government of the United States has responded with a war on terrorism that furthers national security by limiting civil liberties and the functioning of the public sphere. The specific operations of the U.S. government within that war, such as the removal of the regime in Iraq, are, however, themselves legitimated by secret intelligence that is only partly revealed in the public sphere and put to democratic scrutiny. The theme of secrecy and public discussion in an open society is therefore wider and more fundamental than that of secret groups that have to be countered by liberal states that are controlled by representatives of the people. The debates in 2003, especially in Britain, surrounding the decisions to wage a war against Iraq without U.N. support, show its significance even after a military victory.

In this chapter, I first examine the emergence of the public sphere in colonial India as part of colonial modernity. Second, I discuss the use of Protestantism as a model for understanding the effects of the print revolution on other modern religions. Finally, I examine the dialectic of openness and secrecy in two major religious movements in South Asia today: the Tablighi Jama’at and the Vishva Hindu Parishad.

*** The Colonial Public Sphere

One finds a new configuration in the modern nation-state that allows citizens to follow different religions without immediately raising the question of political loyalty. The loyalty to one's king and state no longer follows from religious affiliation, but from national identity, of which religion can be one ingredient among others. Nationalism replaces religion in this regard, and one can come to nationalism by way of a variety of religious affiliations. Another way of expressing this is that in the modern era, religions are nationalized. Separation of Church and State does not lead to the decline of the social and political importance of religion, but with the rise of the nation-state there is an enormous shift in what religion means. Religion produces the secular as much as vice versa, and this interaction can only be understood in the context of the emergence of nationalism in the nineteenth century.

In India, the religious neutrality of the colonial state left the public sphere open for missionary activities of Christian organizations. A great number of Hindu, Muslim, and Sikh organizations emerged in the nineteenth century to resist the Christian missionary project. This dialectic of aggressive missionizing and Hindu resistance contributed to the formation of a public sphere in British India in the nineteenth century that is not at all secular. Secularity and religion receive particular historical meanings in this atmosphere of debate, however. The administration and upkeep of Hindu temples and rituals fell to new, emergent elites that used the British legal apparatus to create a new "corporate Hinduism" that was fully modern. These elites were not only interested in controlling Hindu institutions, which especially in south India, were quite powerful and immediately connected to political control. They also had a reformist agenda concerning religious education, ritual action, and customs that is crucial even today.

The colonial state not only attempted not to interfere with native religions but also did much to disavow any connection to the missionary project and to Christianity as such. One can indeed speak of a secularity of the British state in India that was much stronger than that in Britain itself. The British considered a sharp separation of Church and State essential to their ability to govern India. Their attempts to develop a neutral religious policy in a society in which religious institutions played an important political role could not be anything but ambivalent. In the management of both south Indian Hindu temples and north Indian Sikh and Muslim shrines, the colonial government remained involved, despite all efforts to the contrary. Nevertheless, externality and neutrality became the tropes of a state that tried to project itself as playing the role of a transcendent arbiter in a country divided along religious lines. Again, however, this did not contribute to a secular atmosphere in society. Indian religions were transformed in opposition to the state, and religion became more important in the emergent public sphere. As in Britain, religion was transformed and molded in a national form, but that form defined itself in opposition to the colonizing state.

The denial of participation in the political institutions of the colony led Indians to develop an alternative set of institutions of a jointly political and religious nature. Indians did not conceive of the colonial state as neutral and secular, but rather as fundamentally Christian. Similarly, popular conceptions of British rule, as evident in the Cow Protection Movement of the 1880s, portrayed it as having an alien, Christian nature. When in 1888 the North-Western Provincial High Court decreed that the cow was not a sacred object and thus did not have to

be protected by the state, the decision galvanized the movement not only against Muslims but also against Christian rule by “cow-eaters.” When the state started to use religion among its census categories, it came itself to be understood in terms of religious categories. Although the legitimizing rituals and discourses of the colonial state were those of development, progress, and evolution, and were meant to be secular, they could indeed easily be understood as essentially Christian. The response provoked by both the state and the missionary societies was also decidedly religious. Hindu and Islamic forms of modernism led to the establishment of modern Hindu and Muslim schools, universities, and hospitals, superseding or marginalizing precolonial forms of education. Far from having a secularizing influence on Indian society, the modernizing project of the secular, colonial state in fact gave modern religion a strong new impulse.

The development of a public sphere of debate, petitions, and pamphlets is in Habermas’s view the privilege of a literate, bourgeois public. In the later part of the nineteenth century this public sphere, according to Habermas, deteriorates in democratic mass politics, in which critical debate is replaced by agitation. Habermas raises the important issue of elites versus the masses. A number of studies explore whether we can speak of a rise of a bourgeoisie in nineteenth-century India or whether more fundamentally the category “bourgeoisie” is significant in a society that is stratified by caste and not by class. I would think that it is, and that it is signified by the emergence of a literate group of businessmen, educators, and administrators whose careers show the geographical range of imperial business. The spread of education, the improvement of transport, and the modern need for mobility make this possible. The fact that caste endogamy is still practiced does not mean that this is not a bourgeoisie, but it is a bourgeoisie fractured, as in many parts of the modern world, by ethnic and religious bonds. According to Dipesh Chakrabarty (2000), the formation of the bourgeois individual has been incomplete in India because one does not find an interiorized, “private” self that is reflected in autobiographies, novels, diaries, and so on. This kind of formation of the self does belong to a particular Western history, of which Protestant Christianity is one of the most important sources. But although this is true, I do not take it to imply that there are no Hindu individuals or Muslim individuals with private selves and public personae, but that the discursive sources of the self are different. Moreover, there are a number of technologies of the self, such as modern education, novel writing, autobiographies, newspapers, and modern art, that emerge in India in the nineteenth century as they do in Britain. Similarly, there are technologies of public debate, such as pamphlets, petitions, newspapers, but also processions in public arenas, that emerge in India as carriers of “public opinion” outside of the older patterns of elite patronage and influence (Freitag 1989).

Partha Chatterjee (1993) has argued for the rise in India of another kind of private and public distinction under colonial rule. This is a division of the world of social institutions and practices into two domains—the material and the spiritual. In Chatterjee’s analysis, it is the private sphere of the household that is the site of spirituality and has to be protected against colonial materialism. Reforms of the household, female education, and the transformation of marriage practices, however, are all the subjects of public debate. The modern notion of spirituality that appears in the imperial encounter between Britain and India is not,

moreover, against materialist science. Hindu nationalists claim that science is part of India's spiritual heritage, and they find support among Britain's theosophists and spiritualists.

The rise of mass politics, of a politics of numbers in both the metropole and in colony, transforms the public sphere in major ways at the end of the nineteenth and the beginning of the twentieth centuries. In the absence of democratic participation, it leads in India to the development of mass agitation in the form of political rituals such as Tilak's Ganapati festival in Maharashtra. It also leads to the representation of Hinduism as a majority religion and Islam and Christianity as minority religions. In the context of a politics of numbers, questions of untouchability, Dravidianism, and Sufi syncretism acquire new meanings, and in this transformation of the public sphere the print revolution is of great importance. In the analysis of the transformation of religious communication through the print revolution Protestantism is often used as a model.

*** Is Protestantism an Appropriate Model?

Historical sociology has always highlighted the profound effects of the rise of the market for printed books on Christianity in Europe. The expansion of Protestantism is generally thought to have been connected to that historical phenomenon. Benedict Anderson highlights how central Luther was to the great expansion of the market for printed books in Germany in the early decades of the sixteenth century. Protestantism was the main product on the vernacular print market and created new reading publics, essential for the rise of national consciousness. Before the novel, we have the printed bible and the huge proliferation of religious tracts that enabled Christians to have direct, personal access to religious truth without the mediation of a class of priests; this even involved, in some cases, the abolition of a priesthood. What is important here is that the modern reading public is a religious public. This is true not only for the period of early Protestantism in the sixteenth and seventeenth centuries but also for the eighteenth and nineteenth centuries, the centuries that witnessed the emergence of both a national and an imperial consciousness. Protestantism plays a role in the shift from hierarchical, mediated-access societies to horizontal, direct-access societies. As Charles Taylor (1998: 39) argues, hierarchy and mediated access went together in the ancien regime, and modernity implies an image of direct access. Like Habermas and Anderson, Taylor understands this within a larger narrative of liberation from religion. Protestantism is then seen as a step in the unfolding story of secularization. If one does not accept that story, however, it is possible to arrive at a better understanding of the religious public sphere and the religious subject under modern conditions of direct access through literacy and mass education.

Not enough has yet been done to understand the effects of literacy and the availability of a printed religious literature on the construction of the Christian subject and his or her communication with the supernatural. But study of the effects of developments like print and literacy on the construction of the Hindu or the Muslim subject has hardly begun. The consequences of low and gendered literacy rates like those in Pakistan, Bangladesh, and

India for the spread of certain forms of religiosity rather than others are insufficiently examined. What we find in South Asia is a not yet fully developed market for reading that competes with a rapidly expanding market for viewing films, videos, and television. In this and other cases, the ideal-typical comparison with Protestantism opens up certain questions, but forecloses others.

Nevertheless, there are a great number of interesting attempts to use the sociological interpretation of the rise of Protestantism as a model for understanding transformations in Hinduism and Islam. These studies emphasize the commonality of the search for the authentic authority of the basic texts and the circumvention of received authority by reading these texts directly or by reading pamphlets that refer to them. Crucial to this search is a religious notion of scripture as the ultimate source of truth. This notion is readily available in religions in South Asia such as Islam and Sikhism, and to a lesser extent in Buddhism and Hinduism. According to Gombrich and Obeyesekere (1988: 15—29), who use an explicitly Weberian approach, Theravada Buddhism in Sri Lanka derives its authority from the teachings of the Buddha as given in the Pali Canon. At the same time, however, they acknowledge the fact that the religious life of Sinhalese Buddhists has always included belief and action that was not authorized in Buddhist scripture. They describe the development of what they call a Protestant Buddhism, which stresses the authority of scripture as against that of monastic hierarchy, as well as the development of what they call spirit religion, in which divine possession is central and positively valued.

The status of scripture in Hinduism is even more complicated than in Buddhism. On the one hand, there is the great authority of the Vedic tradition but, on the other, that tradition can hardly be made available for moral guidance outside of the strictly ritual sphere that is dominated by highly specialized priests. Something similar can be said about more regional scriptural traditions, such as the Agamas that are crucial in south Indian temple practice. Nevertheless, even Hinduism has witnessed some quasi-Protestant movements, such as the successful Arya Samaj that advocates a return to the Vedic tradition while at the same time completely transforming it. Similarly, in south India there has been a strong lay movement to force Brahman priests to make a scriptural knowledge of the Agamas more central to their practice.

The comparison with Christian Protestantism is often forcefully made in the case of Islam. The attack on traditional Islam characterized by the veneration of Sufi saints may strike us as a Protestant iconoclasm. This attack also entails the undermining of the traditional authority of Sufi shaykhs and ‘ulama with the ascendancy of the literate middle class. Islam has in the Qur”an something similar to the Bible, a central scripture that can be used to give moral guidance, but it is important to observe that Qur”anic interpretation has never been carried out in one centralized authority structure like a church.

It is striking that the Islamic world rejected printing until the later part of the nineteenth century, and that it was only in the 1920s that the Egyptian standard edition of the Qur”an

rolled from the presses. Francis Robinson (1993) argues that the negative Muslim response to printing has to be explained by the nature of Islamic transmission of knowledge. He neglects the extent to which imperial structures such as the Ottoman and Mughal empires have been obstacles for the spread of print, but he certainly brings out an important element. For Muslims, the Qur”an is God’s word. It has always been transmitted orally. Learning the Qur”an by heart and reciting has for a long time been the defining feature of Islamic education in madrasas. This system is also the basis of the transmission of other knowledge. Written texts are only used as aide-memoire (often in rhyme) for learning by heart. The oral tradition passed from person to person, always with reference back to the original author, is superior to writing. Muslims only adopted print, according to Robinson, when it was felt to be a necessary weapon in the defense of Islam against the attacks of Christian missionaries. This emphasizes the fact that the idealtypical comparison with Protestantism should not obscure the real influence of Christianity on other religions in the colonized world.

The first Islamic books printed in South Asia, where one-fourth of the world’s Muslims live, were the revivalist books by Sayyid Ahmad Barelvi (1768—1831) in the first part of the nineteenth century. In the latter part of the nineteenth century, revivalists at Deoband in northern India started a major program of translating Arabic and Persian works into Urdu. This—and the emergence of Muslim newspapers—enabled an interest in things Islamic to extend beyond the South Asian region to a larger part of the Muslim world. The most important change was, however, the decline of the authority of the ‘ulama in relation to the well-educated laity. Their challengers were modernists like Syed Ahmed Khan, founder of Aligarh Muslim University, and Islamists like Sayyid Abu Ala Maududi, founder of the Jama’a-i Islami. Both were laymen who were not traditionally educated.

Although the ideal-typical comparison with Protestantism offers a number of important parallels with the history of other religions,

such as Islam and Hinduism, it is crucial to recognize that the place of scriptural authority and the nature of scripture are quite different in different religions and thus cannot be easily compared. If we can show that the authority of scripture becomes more important in a kind of Protestant revolution in a number of religions in the modern period, this does not imply that therefore the construction of scriptural authority has the same or even similar religious and political effects. Not only is the text different but also the context. The Protestant revolution is a sixteenth-century phenomenon in Europe that is not easily comparable to nineteenth- or twentieth-century developments elsewhere.

In the next section I examine the role of openness and secrecy as well as orality and visuality in two contemporary movements that are crucial in the transformation of the public sphere in South Asia.

*** Islam: The case of the Tablighi

At least two major developments affect the mediation of modern Islam: mass education and mass communication. These developments result in a certain measure of objectification and packaging of religion. Dale Eickelman (1992: 643) calls objectification “the process by which three kinds of questions come to be foregrounded in the consciousness of large numbers of believers: What is my religion? Why is it important to my life? and How do my beliefs guide my conduct?” Eickelman argues that the fact that a large number of people debate these questions is a distinctively modern phenomenon. He observes that engineers (like the leaders of the Islamic Virtue Party in Turkey), journalists (like Mawdudi), literary critics (like Qutb in Egypt), and Sorbonne-trained lawyers (like the Sudanese leader Hasan al-Turabi) have replaced ‘ulama as leaders of religious opinion. Islam, like Sinhalese Buddhism, has now seen the emergence of the notion of a religious curriculum and of a catechism. These developments are crucial in the “objectification” of religion. Religious statements become more explicit and less contextualized when broadcast on television and radio or put in general textbooks.

It is interesting that the new media simultaneously build on the earlier Muslim preference for orality and presence, and enable decon- textualization and objectification of religious messages. Eickelman (1992) points out that Islam becomes a subject that has to be explained or understood. Some local group’s particular understanding of Islam can become a subject of transnational debate thanks to the new media. Since religious and political activists often try to dominate the debate about religion in the new media, the control over the media is of paramount political significance. As elsewhere, states try to limit and control these debates, but they face great difficulties in doing so.

The objectification of Islam in mass education is paralleled by the packaging of Islam on television. In an analysis of the emergence of commercial television in Turkey in the 1990s, Ayse Oncu speaks of the “issuetization” of Islam on television: “Islam, as packaged for consumption by heterogeneous audiences, becomes an ‘issue’—something that has to be addressed and confronted—demanding each and every member of the audience to make a choice and decide where they stand, for or against” (Oncu 1995). Whereas the secular state television had made Islam invisible, as it were, commercial television packages it either as a “viewpoint” on a number of issues and thus part of democratic debate, or as a “global machination” that is a matter of international conspiracies. Oncu’s general point is that Islam is not any more something relegated to tradition or to “the bazar mentality of small town shopkeepers,” but through the packaging on commercial television is part of the culture of the present. The effects for Turkish politics, but also for the Muslim subject, are significant. Nevertheless, it remains important to realize that the so- called “impact” of new media on audiences is always multifaceted and complex as well as contradictory (cf. Anderson and Gonzalez, Chapter 3, this volume). Tradition is certainly not swept away by television, but television is an important new element in a process of transformation inherent in living traditions.

This argument about the centrality of mass media and mass education in Islam today is challenged in interesting ways by the most successful transnational movement in Islam: the Tablighi Jama'at. This is an internal missionary movement among Muslims, founded in north India in 1926. It is associated with the famous seminary of Deoband (with which the Taliban are also associated; see Metcalf 2001), but less focused on learning and more on simple preaching. Its origins are only understandable in the colonial context in which a politics of numbers and communal competition made it essential for both Hindu and Muslim movements to strengthen their ranks and numbers. Hindu purification (shuddhi) movements tried to "invite back" and reconvert Muslim communities that had recognizable Hindu customs. Movements like the Tablighi Jama'at tried to counteract this by asking such communities to reform their practices and become "good Muslims." Like the Jehovah's Witnesses, they go in small groups from community to community to "invite" Muslims to join them and perform simple Islamic tasks such as going regularly to the mosque and reading the Qur"an. They have annual gatherings, some of which, such as the ones in Raiwind in Pakistan and Tong in Bangladesh, are, except for the annual pilgrimage to Mecca, the largest gatherings of Muslims in the world (some two million). There are three important elements in the Tablighi Jama'at discussed in this chapter —their attitudes toward media, politics, and the creation of a transnational space.

Research on the Tablighi is difficult because, unlike many Islamist movements, they put no value in media such as books, pamphlets, and certainly not video—or audio—tapes in spreading their message. They have some official publications, such as transcripts of lectures delivered by leading Tablighi, mostly containing simple short, edifying stories. There are also some hagiographies of the founder of the movement, Muhammad Ilyas, and some leading figures. This kind of literature is fundamentally antihistorical. Like stories of the behavior of the Prophet and his companions, they have value only as models for behavior. History is a worldly (duniyavi) pursuit and simply distracts from ritual observance (din). The message is spread through small groups who go to Muslims and speak to them. The focus is not on reading but on ritual observance. The movement is definitely secretive in its way of organizing. Communication between Tablighi activists is largely oral, and letters are destroyed after being read. Still, some letters have been retained, and this allows researchers to do some historical research on the spread of the movement.

Yoginder Sikand argues in his recent study of the Tablighi that, despite the turn away from reading, they remind him of the early Protestants. Like the early Protestants, Tablighi leaders call for stern self-control, hard work, thrift, a simple lifestyle, abstinence from excessive worldly indulgence, the giving up of wasteful customs and ceremonies involving great expenditure not sanctioned by the sharia and proper, measured use of time— all ingredients of an inner-wordly asceticism of the Protestant sort that Weber has described (Sikand 2002: 260).

What is indeed striking is the focus on individual, behavioral change connected with the creation of a unmediated public sphere of huge gatherings (ijtima^cat) and taking time off to go in groups

(jama^cat). It is a kind of pietistic quietism that wants to change the world (and make it a place controlled by Islamic Law) by transforming the Self.

To what extent does the Tablighi Jama'at belong to civil society and provide a space for criticism of the state? The answer is ambiguous, since the Tablighi explicitly do not want to be of this world and explicitly do not want to be political. Nevertheless, the movement's stress on personal matters such as "Islamic" dress and education brings it into direct confrontation with the agenda of the secular nation-state, which cannot refrain from intervening in the ways communities organize their lives. When Tablighi immigrate into Western societies, they cannot help but come into conflict with secular arrangements in schools and so on. Integration into secular societies is the opposite of what this movement wants to achieve. Their personal jihad may be less overtly political than the jihad of Islamist groups, but within the conditions of modern state formation it is still of great political significance. Khalid Masud (2000: 111—18) reproduces a 1971 letter in Urdu from a Tablighi missionary in Flint, Michigan, to the headquarters in Delhi that is full of severe criticism of the consumerism and racism of American society, which is, according to the letter, largely controlled by Jews. The ardent, deeply emotional tone of its condemnation is striking, and there seem to be two possible outcomes: rejection and passive pietism, or moving on to a more active struggle as offered in the Islamist groups.

The Tablighi Jama'at is the largest transnational Islamic movement in the world. Thanks to its universalist message, it can escape from the claims of national societies and play a significant role in providing models for migrant communities. The studies collected in Masud's volume show how Tablighi cope with the different circumstances in Canada, South Africa, Morocco, France, Belgium, and Germany. By being in a transnational space, these migrants can create a sphere of their own that is relatively independent of their daily breadwinning activities. This sphere offers them a dignity and routine that is unavailable in the leisure activities offered by the host societies. It allows for a moral condemnation of the state without taking any political responsibility, just as Koselleck (1988) describes the sphere of criticism in Masonic lodges.

*** Hinduism: The Vishva Hindu Parishad

The twentieth-century impact of media on religious transformation in South Asia is not limited to printed words, but is significantly broader in that it includes printed devotional posters, audiocassettes, videocassettes, movies, radio, and television. It is difficult to separate strictly religious communication with the supernatural from broader communal communication. The use of Sanskrit or Arabic (in the South Asian context) would safeguard the linguistic marking of the religious situation, but much of religious communication is carried out in vernaculars that in the second half of the nineteenth century have become increasingly communalized. David Lelyveld (1993) points out how vehemently contested the language of All-India Radio was before Independence, since Hindi was considered to be Hindu, Urdu Muslim, and Hindustani the syncretistic solution for an undivided India.

Similarly, in the field of music the interactions between Muslim and Hindu devotionalism are reinforced by the linguistic conventions of popular film songs. Themes and styles connect more strictly religious performances with broader popular ones. On the other hand, it is necessary to relate this broad interactive field of daily practice with discursive traditions that carry a debate about how to conceptualize textuality and visuality from a religious perspective.

In Hinduism, there are at least two elements in the debate about textual and visual mediation that deserve our attention. In the first place, there is the notion that the Word is God or that the utterance of the mantra is tantamount to the presence of the supernatural. Perhaps even more than in Hinduism, the power of the Word is explicit in Jainism where it is believed that the founder, the Jina, emanated a divine sound when he achieved liberation form suffering. All living beings in the universe turn to listen to that sound. That is why Jains refer to themselves as s hravakas, listeners. In Hinduism there is a complex theology connected to the transmission of the mantra and the divine character of powerful words. Because of the esoteric nature and secrecy of the transmission, there are serious limitations to the formation of religious communities that transcend guru-disciple networks. This is true even in the face of globalization, in which these networks are formed through the constant travel of gurus like Bombay's Swami Chinmayanand, the founder of the Vishva Hindu Parishad. This can be assisted by the new media and especially audiotapes and videotapes, as in the case of the Swadhyaya movement, which involves more than one million people worldwide (Little 1995). They use tapes by means of which the guru's sermon (pravacan) is distributed to the various centers in the world. Television sets are garlanded when the video is played, marking a sacred event. The circulation of the videos is restricted to group gatherings (satsangs). Despite these possibilities of global devotional gatherings, the importance of a personal relation with a guru continues to be a crucial element of mediation even in this form of Hinduism. Videos can enable the globalization of religious sermons and devotional gatherings, but they cannot provide the secrecy necessary for the transmission of the mantra. Wherever that relation is replaced or superseded by an unmediated relation with the Word, we see the potential for the formation of more stable groups, such as the Sikhs or the Arya Samajis.

The other element is visuality. This is a field in which mass media play a major role. Central to Hindu worship is darshan, or "sacred seeing." The viewing of a divine image brings one into the presence of the supernatural. Certainly some images are more powerful than others, so that indeed Hindus go on long pilgrimages to be in the presence of divine power. Also time is important in this regard: some spaces are more powerful at some moments. Nevertheless, the mass reproduction and dissemination of certain images have a strong influence on religious experience. To use Lawrence Babb's (1995: 3) terminology, it has made an increasing mobility of images possible. This in turn allowed for the spread of certain devotional cults not only spatially but also socially, beyond the social circles in which they originated.

The processes of objectification and packaging through mass education and mass media are not limited to Islam. Similar processes can also be detected in Hinduism. As in the packaging

of the Ramaya»a and Mahabharata on Indian television. Considering the significance of visuality in Hindu practices, it is important to note that television makes dramatic performances and mythical places, such as Ayodhya, visible in a way that is simultaneously decontextualized and “superreal.” For many centuries, pilgrimage to Ayodhya in Uttar Pradesh was a regional affair of limited significance. “Ayodhya” of the Ramaya»a, however, has always been visited in the mind by those who read any of many Ramaya»as. This virtual pilgrimage received a visual actualization in the televised version of the Ramaya»a that helped the political packaging of Ayodhya. It is not simply a question of whether the televised Ramaya»a has replaced or marginalized the rich variation of popular performances of the Ramaya»a in India. I agree with Philip Lutgendorf (1990) when he argues that the televised Ramaya»a incorporates older forms of Hindi Katha and Ralrla traditions and that it should be seen as adding to that rich variation of performances. Central to it is darshan, and there for me is the crucial question of the form of mediation between the viewer and the sacred view. To transform the streets of Ayodhya into the sacred streets of heavenly Ayodhya (Saket) depends on a deliberate, meditative effort by the viewer, assisted by the priest or monk who takes him around in actual, historical Ayodhya. Or it depends on a particular, theatrical framing in a Ralrla performance. On television, however, viewing is not guided by theologically inspired meditative practice. Television’s melodramatic conventions may derive from Ralrla performances, but its virtuality relates in novel ways to religion’s virtuality by making the viewing “superreal,” but theologically undisciplined. To travel to Ayodhya by actual pilgrimage transforms a person into a pilgrim, but to travel to it by way of television transforms a person in someone who might have an opinion. In the end, it is these transformations of religious mediation that enable political interventions of the kind we have witnessed in India over the last decade. The major agent in these transformations has been the largest transnational movement in Hinduism, the Visva Hindu Parishad.

The Visva Hindu Parishad (VHP), or World Hindu Council, is of much later date than the Tablrghr Jama’at. It is an initiative taken in 1964 to “unite the Hindus” worldwide in order to recapture the Indian state from the Nehruvian socialists who dominated it and to prevent conversions from the Hindu fold to Islam. The Rashtriya Swayamsevak Sangh (RSS) plays an important role in the VHP. This militant organization emerged in the 1920s and has been continuously involved in communal violence against Muslims since then. The ideology of the VHP is not much different from that of other Hindu Unity (sangathan) movements over the past century. It expresses the need to reassert Hindu dignity and pride in the face of alleged attempts of the state to secularize society and appease the Muslim community. It sees itself as an alternative to parliamentary politics in Delhi, but its organization, which depends on changing alliances between religious leaders, is very unclear and secretive. Its secular leadership, which derives from the RSS, depends on decisions taken in a public debate among religious leaders in what is called a

Parliament of Hindu Religion (dharm samsad) which convenes in one of the big Hindu bathing festivals, the last being the Kumbh Mela in February 2000 in Allahabad (Hindu name: Prayag), where more than twenty million pilgrims and monks convened for a holy dip in the Ganges. The tone in these meetings is highly critical and demands a change in the policies of the government toward the Hindu community. The

political role of the VHP is indirect but very important, since its campaigns have led to electoral successes of the allied BJP, which dominates the current Indian government.

The VHP had its first success on a terrain very similar to the one in which the Tablighi Jama'at originated: the context of mass conversion as part of a politics of numbers and communal competition. After the oil crisis of 1973, there had been an explosion of allegations and violence centering on the idea that conversions to Islam were induced, it was alleged, by oil money. The most important of such conflicts related to Meenakshipuram, a south Indian village in which an untouchable community converted to Islam in 1981. The VHP successfully mobilized some of the nation's Hindu majority by arousing fears of being overwhelmed by the Muslim minority, and saw its following increase to the extent that it could mobilize support for a far-reaching attack on the Babar Mosque in Ayodhya, which was destroyed in 1992.

In contrast to the Tablighi Jama'at, the VHP has nothing against the use of media for spreading its religious message. Although its religious leaders are ascetic renouncers, the movement also has nothing against acting in the world as such, but everything against secularism and Islam. It is highly conscious of the positive impact that the religious soap operas on Indian television in the 1980s have had on their campaigns. Moreover, as visuality (darshan) is a central medium of worship and communication in Hindu belief, its challenge is to capture this field of visual imagery in a market that is saturated with cable television broadcasting fashion shows, advertising, and music clips. The most interesting aspect of this is the way in which the VHP is able to capture both a peasant audience in rural India and an urban, middle class. It does so by packaging its message in campaigns that are modeled on Gandhi's Salt March and involve the traversing of the country by motorized processions that are simultaneously packaged in video messages and websites. The VHP is very astute in using religious symbolism in its campaigns. In doing so it is informed by the long Bollywood tradition of cinematic melodrama. An important aspect of this is its syncretism, the creation of a unified, national religion that can bridge the gaps between the various strands that make up the Hindu tradition. Not only is this new religious unity excellent for use outside of India, it is in fact created in a transnational space in which transnational migrants contribute to the transformation of religion at home. A guru in India can only be called successful if he can show support from Hindu followers abroad. These networks are enabled by constant air travel, like that of the late Chinmayanand, the founder of the VHP, but also increasingly by digital religion, that is websites where one can "click a deity," as in [[http://www.prarthana.com][www.prarthana.com]].

The VHP is a movement that is very active globally, and one of the prime agents of the globalization of Hinduism. It performs an important function for professionals who increasingly operate in this transnational space. I am referring here to what are called "astronauts," software engineers and entrepreneurs who shuttle from India to the United States to create and maintain a transnational service industry. In the United States, the VHP has been active since 1974, following sizable immigration from India. The anti-Muslim politics that is central to its activities in India does not make much sense in America, and is not emphasized. Antiglobalization rhetoric is also conspicuously absent from VHP

propaganda in the United States, since its supporters there are strongly in favor of the liberalization and globalization of the economy (Rajagopal 1997). As nonresident Indians, they have also direct personal advantage in the free flow of capital. The focus of the VHP in the United States is, as with many religious movements globally, on the family. Indian migrants struggle to reproduce Hindu culture in a foreign environment in order to socialize their children in the hybridity of Indian-Americans. Their fear is often that the children will lose all touch with the culture of the parents and thus, in some sense, be lost to them. Both Internet chat groups and youth camps are organized by the VHP to keep Hinduism alive among young Indians in America. As Arvind Rajagopal (1997) rightly observes, the VHP needs different tactics, different objectives in different places in order to be able to recruit members. In India, it is a Hindu nationalist movement, but in the United States it is a global religious movement. Arjun Appadurai's work on globalization has reminded us how important it is to keep these dis- junctures and differences in global flows in view (see Appadurai 1996).

The globalization of production and consumption, including the flexibility and mobility of labor, is addressed by movements like the Vishva Hindu Parishad and is a major element in their nationalist politics of "belonging." The idea that "symbolic analysts"—to use Robert Reich's (1992) term—are rootless because they are highly mobile misunderstands the imaginary nature of roots. To have roots requires a lot of work for the imagination (dream work). One element of that dream work is that pride in one's nation of origin is important in the construction of self-esteem in the place of immigration. It gives a different feeling to admit that one is from a country ravaged by famines and floods than to say with pride that one is from a superior civilization that is also very good in high-tech developments (see van der Veer 1995). The coherence of a Hindu modernity tied to the sovereignty of India's past and territory has gradually given way to a postmodern bricolage of deterritorialized and dehistoricized discourses on family values and cyberspirituality that is very hard to capture. Contrary to what their opponents think, these movements are not "outside" of modernity—they have been very much part of it and are now moving beyond it.

*** Conclusion

There are six general conclusions to be drawn from this discussion. First, the transnational public sphere today is the successor of a public sphere that in many societies is formed in the context of the interaction between empire and the nation-state. When one examines the colonial context of British India, one finds a public sphere that is perhaps better characterized as a public arena in which religious movements challenge the colonial state and each other. The form of criticism is not only debate, although public oratory (as for example in religious polemic, such as shastrartha in Hinduism), and pamphlets as well as lithographic posters are crucial, but also includes religious symbolism and ritual processions.

Second, religious issues and movements that articulate them are crucial in the formation of the public sphere. A politics of numbers in the context of democratic politics in a colonial or national state is the context of the articulation of religious issues such as conversion. The debates around them do involve critical, rational discussion of history and geography, but also violent attacks on the symbols of the other community. It is striking how many of current forms of mass mobilization in South Asia are prefigured in the colonial period.

Third, mass education, mass media, and mass politics are essential elements of the transformation of the public sphere. Religious movements, however, such as the Tablighi Jama'at and the VHP, challenge generalizations in this field. The Tablighi can easily communicate without a focus on reading and writing and modern media. The VHP continues some of the older forms of communication, such as processions, while also connecting to the religious melodramas in the mass media.

Fourth, transnational migration is a defining element in these new religious movements and in the emergence of a transnational public sphere. The technologies of transport and communication developed under the present conditions of global forms of production define the transformation of the life worlds of a growing number of people, but also the religious responses to it. It is especially the constant shuttling between countries of origin and countries of immigration that constitutes such a transnational field.

Fifth, technologies of communication, such as print or the Internet, create a new sense not only of community and the public sphere but also of the self. The act of reading in private shields one off from direct interactions with the immediate life worlds, while linking one to a larger world of virtual interactions. The same seems to be true for the Internet. The act of reading and writing constitutes the world of print but also the world of the Internet. The kind of virtual interactions enabled by the Web is characterized by indeterminacy and secrecy. The decentralized nature of the Internet even allows secrecy at the level of authorship, which copyright has made difficult in the world of print. Again, as in religious movements, it seems also that in cyber salons the play between publicity and secrecy constitutes a critical debate.

Finally, in the contemporary world moral visions with different genealogies clash in a transnational public sphere. These visions are communicated in media that mix the genres of the virtuous and the virtual. In an unbounded media landscape with mixed genres, terrorist attacks by engineers look like video games and the responses to it have a mimetic quality. Public debate itself about the virtues of imagined world orders (enlightened, Islamic, or otherwise) seems not to be able to escape the indeterminate, continuous, secret nature of contemporary technologies of communication (see van der Veer and Munshi 2004).

** Chapter 3: Technological Mediation and the Emergence of Transnational Muslim Publics{2}

Jon W. Anderson and Yves Gonzalez-Quijano

Contemporary Islam is swept up in transformations that move discourse conventionally bound to institutions into more open “publics,” alter the balance of topics and emphases of public talk, and forge new alliances for cultural production, all the while attempting to exploit, expand, or renew ideas and discussion about what “being Muslim” now entails. These moves involve all media from down-market cheap print and cassette tapes to the mass market of satellite television and the increasingly transnational hypermarket of the Internet. These new media bring messages into the forums of mosque, madrasa, and other sites of conventionalized discourse of and about religion that range from religious courts to the more informal settings of lesson circles and others characterized by “lay” hosting. On the Internet, particularly, they range from “chat” groups, to old-line religious schools’ posting scholarly texts, to a mushrooming of sites dedicated to women asking for and discussing religious guidance. In these contexts, mediatized messages and channels complement, displace, and expand discourse of and about Islam, much as the arrival of print a century ago facilitated new people and ideas moving into the public sphere of Islam. Then as now, religious renewal movements, the rise of religious parties, increasing levels of literacy, and new modes of consumption facilitated by rising mass education are leading to a technological reshaping of the political economy of meaning. Both technologically and sociologically, the Internet represents a similar leading edge: it includes features of other media and forges a new public sphere through its capacity for potentially infinite linkages, notably within disapora populations but today also with a growing “native” audience, reshaping public priorities, interests, capacities, and practices deemed Islamic. As the print revolution fostered new classes, styles, and sites of Islamic interpretation complementing the ‘ulama-based ones of mosque and madrasa, the Internet provides a similar site and body of technical practice in the contemporary public spheres of the Muslim majority world. The aim of this chapter is to tie the emergence of new Muslim publics to particular forms of media.

*** Mediated Communication and the Public Sphere

Connections between media and the public sphere are widely assumed to be pervasive and profound, but the generalizability of models linking them is problematic. The basis of modern media studies is the general theory of communication first articulated by Claude Shannon (Shannon and Weaver 1949), who drew on new theories of information as the reduction of uncertainty to conceptualize communication in terms of improving choices (Rogers 1994). This had the effect of focusing on the enhancement of individual decision making or agency by receivers of messages, and in time converged with the development among European theorists of more reflexive “readerresponse” theories (Holub 1992) concerned with “completion” of messages in reading or their use as structural features of input loops. Such views applied particularly to mass media, with their structure of few senders and many receivers, and focused on analyzing the responsibility of recipients of messages, in both critical-deconstructive (European) and pragmatic-applied (American) perspectives on media. Manipulation, conscious or unconscious, critical or not, by but above all of receivers, is central in such perspectives.

Such narrowing of focus to receivers' agency and of its scope to effects on their choices, even in resistance and reflection, is sociologically weak. It discounts the material base and social fields of media and of communication generally, and treats the nodes in systems of communication as black boxes. More comprehensive interpretive approaches can open up the black boxes by providing fuller accounts of senders and receivers. Even these, however, can still fall short of accounting for the social life of media to the extent that they focus on messages in a unified fashion. Thus, an unreflective emphasis on "impacts" and global measures deflects attention from the social organization of communication and techniques of media (Anderson 2000). It also leaves aside accounts of the wider social settings that are the context of mediated communication, except to assume that they are modern. Where media actually "fit" is only thinly described, implicitly modeled on the mass media and generalized from their modern form (e.g., Lerner 1958), thereby limiting sociological analysis to the assembling of audiences and to identifying the public sphere with a consensus of opinion or market share.

In contrast to these approaches, the perspectives ofJurgen Habermas (1962) and Benedict Anderson (1990) start instead from the mechanisms of communication in the public sphere. Each places media in crucial, even causal, relation to the emergence of bourgeois public spheres, although neither is specifically focused on the media per se. Both focus more on the content of messages, although for some critics their approach is still insufficiently attentive to gender, class, and non-European experience. In particular, they draw attention to the social contours of media as the practical composition of the public sphere. Each locates the process in the social dynamics of the onset of modernity rather than in the later or "high" modernity of mass industrial society that is the focus of most media studies theory.

For Habermas, the public sphere has prototypical sites where relatively unrestricted communication flourishes and becomes established as a normative alternative, such as the salons and coffee houses of early modern European cities. In these locations, diverse people gather outside the restricted spheres of private domesticity and the public sphere of ritual communicative acts that enact privilege and justify status. Instead, relatively unencumbered by responsibilities for ritual representation, speakers' words and utterances must convey their own responsibility without the crutch of the speaker's status. Habermas's various elaborations of this view (most systematically in Habermas 1989 [1980]) have been roundly criticized for, among other things, disregarding gender distinctions, the implicit privileging of the bourgeois over other social classes, and equating "rationality" with "freedom" and even more narrowly with modernity (for example, see Calhoun 1992, Benhabib 1992, Fraser 1992). From an anthropological perspective, in which communication is seen as a socially organized process, the value in Habermas's analysis is less in identifying a public sphere of opinion, which is still problematic, than in identifying a more pragmatic sphere of communication relatively free from demands of status representation, particularly representation of authority (royal or ecclesiastical). Semiprivate but quasi-public in its original typesites, Habermas's bourgeois public sphere emerges structurally over time. It develops from an intermediate site between the private and the public into an arena of debate within a limited public identified with appropriate communicative skills, and finally as a generalized social space with a new and evolving kind of authority that is not fundamentally dependent on status and ritual responsibilities.

Another virtue of Habermas's view is that it is developmental, which makes it useful in contexts beyond the unfolding of early European modernity in which he set it, and which is obscured by retrospective views of the public sphere from within its later settings, which Habermas himself came to view with suspicion as a late bourgeois counterpart to earlier royal and ecclesiastical spectacle. The public sphere unfolds through practices that in time set their own generalized context. Although concentrating on responsibility to the exclusion of other issues, his concept of a bourgeois (as opposed to a royal or ecclesiastical) public sphere usefully calls attention to the relocation of responsibility in alternative sites of communication, and thus to its dispersal or—from the point of view of existing authorities—its dilution. A more serious limitation lies in its flattened view of communication that limits it to denotative rationality (Habermas 1989: 77ff.) that ultimately becomes a type of ritual, which was his point of departure.

Benedict Anderson compensates for this shortcoming in Habermas's theory by locating the origin of a public sphere earlier in creolization. Anderson's (1990) approach, like that of Habermas, is situational and dialectical but more strongly tied to an experiential and material base in an alternative sense of community (of dynastic states or religious identity) that became attached to shared linguistic practice in the earliest period of European expansion in Latin America and Southeast Asia. There, Anderson identified a new sense of community—of a "public" in Habermas's terms—in the experience of "creole journeys" on the margins of empire that found expression in the form and medium of "print capitalism." Anderson focused on how shared ideas of ethnolinguistic community emerged as seemingly "natural" with no experiential basis other than common language and a growing sense of "reading together" in a shared time-out-of-time.

His notion of creoles lacks a full linguist's sense that they are not so much mixed languages as intermediate speech communities; but it is sensitive to how language expresses identity and feeling beyond referential meaning, and to media. Central to his whole theory is the emergence of print capitalism—with forms and genres of writing from newspapers to novels to standardized "national" languages—as magnifying and focusing the experiences, practices, and techniques of creole journeys. The public sphere for Benedict Anderson—although he does not use the term, preferring instead to speak of "imagined community"—is thus a mediated one conveyed by and exemplified in media that separate messages from senders into a separate marketplace of and for ideas and alternative ways of expressing them.

Our interest is in the generalizable features of the close identifications of emerging public spheres with changing practices of communication and institutions of new media. Public spheres develop out of practices of communication that become instantiated in media, which in turn have careers that leave their own origins and originators of messages behind. State and market are part of this context, evolving with it and, as Anderson noted, beyond it to the point that they seem natural. The Muslim world today is experiencing something similar to Anderson's creole journeys in seeking to extend the margins of what being Muslim

can mean in the modern world, and something similar to the structural transformation of the public sphere that Habermas identified with the emergence of bourgeois consciousness as its frame. We would insist that this is a contingent and ongoing process that has to be placed in historical context to avoid anachronism. Key features of this development include the emergence of intermediate social-communicative spaces with media as their tools and expressions. These public spheres are mediatized in ways not predicted by models derived from mass media of mature modernity, but are similar to earlier print revolutions. We suggest the utility of directing attention to the relatively neglected material base and practical techniques of media and to the social milieus in which they become new resources or factors of production that help project communicative practices aligned with new—often but not always emergent—social strata. Social milieus, material bases, forms of communication, techniques of media, intermediate social spaces, and wider bodies of practice compose this public sphere and its habitus in the actions of individuals drawn to it.

*** The Media Ecology of Islam Today

The leading-edge communication technology in the Muslim world today is arguably the Internet. Less popular or less widely utilized than television, or even print, structurally it includes their features of multiple channels and thus of choice, to which it adds its own hypermedia of potentially infinite links. The ease of creating such links blurs distinctions between cultural production and consumption, and at a very low cost opens production as much as consumption to new participants and to deeper participation in cultural production through more interactive engagements than mass media provide. Early theorists of the social impact of the networked computing model in the Internet (for example, Pool 1990) put this as convergences of information streams, user control that reverses the mass media revolution, and the “death of distance” including social distance (see also Cairncross 1997). To the mass media world of few senders and many receivers, the Internet counterposes a many-to-many model of communications, interactivity, and an underlying mode of production more comparable to the early days of print than to the later days of broadcasting.

The Internet in the Muslim world likewise has a trajectory more like that of the print revolution than like broadcasting, which everywhere in the Muslim world was until recently a state monopoly and closely tied to the centralizing, nation-building states of the independence period of the mid-twentieth century. Widespread use of print came relatively late to the Muslim world in comparison to Europe and as a late-stage accompaniment to industrialization, urban growth, and modernization in the era of colonial domination. Print brought newspapers in a relatively developed form—not as shipping news, from which they originated, but as political news and commentary into which they developed under nineteenth-century “official” nationalism. Mechanical printing stimulated book publishing, including Islamic publishing, and the new voices that came, like newspapers, with projects to inform and to express sensibilities attendant upon or stimulated by challenges of modernization under the conditions of imperialism. Among their innovations was Islamic publishing in the vernacular and for what were no longer conceived as classically trained audiences (see Gonzalez-Quijano 1991).

In this new creole space, intermediate between classic and vernacular discourse and between secular rulers and the masses, the exemplary, defining figure might be Muhammad Rashid Rida (1865–1935). Rida was the scion of Syrian village notables; he obtained both a religious and modern education and became a journalist in Cairo in the 1890s (Cole 1983). In a city of 168 periodicals and newspapers, he founded a religious journal with the aim of linking orthodox Sunni jurisprudence to journalism in order to “guide the faithful in the ways of progress and civilization” (Hamzah 2002). Hamzah describes his expository technique as a “discrete” and “discontinuous” journalistic style that Rida applied to writing about religion, in contrast to the intensely intertextual style of the ‘ulama, a style that requires their professional guidance to read. Although the content of his writings is about Islam, his style is not the rigorous demonstrative one of jurisprudential categories or of religious rulings (fatwa) but the “omniscient and omnipresent” style of writing in science or medicine (Hamzah 2002). Articles were in turn to be assembled into books, previously the domain of the ‘ulama, whom Rida invited to join him in his mission to free Muslim lands and institute a viable political system compliant with both Muslim identity and modern conditions. Hamzah points out that Rida’s approach also involved a knowledge of market conditions and required a determination to shape the public sphere through both commentary and public debate.

The result was thoroughly the product of a creole journey tied to an emerging public sphere, which Rida conceptualized as the “common good” (al-maslaha al-amma) that was forged partly through the new print media of his day and that found its way to India, repeated across the range of Muslim responses to British imperialism from Deobandi revivalists to Aligarh integrationists (Metcalf 1982). In this context, Rida is an intermediate figure, who collaborated with Muhammad ‘Abduh, a key leader of the Salafi renewal movement among nineteenth-century ‘ulama, and influenced the Muslim Brotherhood, founded in 1928, that came to define political Islamic activism in the twentieth century.

Rida’s efforts and the contexts they addressed help identify the material bases and social fields of a mediatized public sphere. The contexts include rising levels of education, but more mixed forms of education than the classical disciplines imparted in madrasa are implied by the alternative style of writing about Islam that aims to persuade on its own rather than by adherence to demonstrative conventions. Rida represents more than an alternative voice using a new medium. New vehicles of communication, from mechanical printing itself to the newspapers and the book trade (Gonzalez-Quijano 1991), were profoundly modifying the shape of the intellectual field as a mode of production, as well. Rida’s activities were part of the diversification of discourse of and about Islam initiated in the religious-intellectual field through a new medium (journalism) tied to a material base (mechanical printing) in a social context of rapid urban growth in a colonial economy that, more than fully formed institutions, was the setting of creole journeys like his that made the links.

Today, a similar pattern is playing out with the advent of digital technologies. Arabic word processing first appeared in the mid-1980s, which facilitated a recreation of Arabic

newspapers to reach a worldwide readership through the Internet. These range from the explicitly transnational al-Sharq al-Awsat, published in London since 1978, to the conversion of the Lebanon-based al-Hayat, to a fully computerized editorial process after 1987 (Gonzalez-Quijano 2003). Nearly every major Arabic-language newspaper now has an on-line edition, and hundreds of Arabic publications are available on the Internet: some six hundred are linked on a site, [[http://www.mafhoum.com][www.mafhoum.com]], maintained by a Syrian computer technologist in Paris. Preceding and surrounding this development is a burgeoning of publishing activity in venues small and large that include local and regional papers (Eickelman and Anderson 1997) and a new genre of modern "Islamic books" that address contemporary topics and are written in the vernacular (Gonzalez-Quijano 1998), all facilitated by the spread of personal computers and Arabic-language software.

The context of all this activity includes other media technologies. Since the 1970s and the period leading up to the Iranian revolution, sermons have circulated on audiocassette tapes, which are widely available in audio shops alongside popular music and oral performances of folklore. Religious shaykhs now routinely appear on television dispensing fatwas to callers, engage in question-and-answer exchanges with moderators, and offer formal televised lessons and Friday sermons, later sold on video tapes or even CD-ROM. These various media share a common body of technique and patterns of consumption as well as the technology. Religious texts and teaching materials, particularly for children, are widely produced by software companies, which often acquire the content from others and then "program" it much as they do calculus lessons or large text databases of secular material from parliamentary proceedings and government regulations to business guides and the archives of newspapers, such as currently on offer from al-Hayat. These new media combine production values and intellectual techniques shared with contemporary products of popular culture and what Starrett (1996: 11) has called a "functionalist" approach to education as training that imparts syncretic and highly creolized qualities to the Islamic discourse that migrates to these media. In turn, consumption of that discourse is set not only in well- established religious practices but also in the habits developed around commercial popular culture (see Hirschkind 2001).

This migration is importantly a function of another wave of people who join the new technology and contemporary Muslim discourse in the intermediate public space that their activities are forming. These activities range from conscious efforts like Rida's to open Islamic discourse to wider audiences through alternate discursive forms, broadening its authority, to the forging of new links and practical alliances not based on ideological motives but in the practices of organizing and delivering media on a market basis. These new links and alliances unfold in contexts where computer use and Internet growth are hemmed in by costs and limited infrastructure that initially shape the social field. Although the extension of Islam's emerging public sphere to the Internet is in its infancy, the Internet's "horizontal" format, in which peers comment on one another's ideas and arguments, especially among the rising generation, bypasses the more "vertical" hierarchies of authority and creates a public beyond earlier, established religious authorities.

Like the earlier print revolution, the Internet today involves a material base and social field that is already transnational. This includes the Internet itself, but also a recentering of the worldwide Muslim diaspora in a transnational sphere associated with middle classes, professional educations, and the global diffusion of an emerging industrial regime centered on practices of what are called “knowledge industries” (e.g., Pool 1990) or, more prosaically, on the service sectors that make it work and to a considerable extent are its work. Their roles and influence are both functional and expressive. Beginning in the 1980s, these middle classes acquired the skills and access to the technology before the national governments and ruling elites in Muslim countries from Malaysia to Morocco came (in the later 1990s) to see the Internet’s potential role as a development tool and as a potential development sector in itself (Anderson 1997). They were not only drawn to the Internet professionally, however, but also early claimed a place for Islam in it.

*** A Tri-Phased History of Islamic Media

At the time that the Internet itself was being formed in the 1980s, students who went from Muslim countries to leading Western universities and research institutes that were developing it soon followed the example of their colleagues by bringing avocational interests into what began as an engineers’ work tool (Anderson 1998). In pious acts of witness, they scanned and placed on line texts of the Holy Qur”an and hadith of the Prophet. These students and a penumbra of emigre and other diaspora Muslims who joined them on line engaged in often fierce discussions of how to apply Muslim rules and interpretations to conditions of modern life—particularly modern life in non-Muslim-majority societies that lacked many familiar reference points, extended family life, and public institutions. Their discussions were often focused on conditions of diaspora life in Western societies, international affairs, and practical issues such as how to find a mosque or a halal butcher, cheap flights home, or matrimonial services that betoken continuing links.

These discussions were characterized by an absence of contributions from ‘ulama, and they did not show much training in religious hermeneutics. Used to the methods of the physical sciences, contributors to these discussions had a habit of sanctioning interpretation by quick recourse to texts treated analytically as sources to be reasoned about objectively (Anderson 2003), much as Eickelman (1992) has described with the spread of modern education in Muslim countries themselves. This gave early on-line discussion of Islam a widely ranging character that, as much as the medium, attracted the attention of more conventional spokespersons of official Islams and of oppositional or militant voices as the Internet became more public with the advent of the World Wide Web in the early 1990s (Fandy 1999, Mandaville 2001, Sreberny 2002). Citing needs to present interpretations and views of Islam that they define as “correct,” Muslim governments and oppositional movements or parties began establishing publication-like websites that purvey more institutional views of religious establishments and of oppositions to them. Some classic dawa organizations brought their conventional apologetics on-line in a context of free-for-all ijtihad (see Bunt 2000). Most were also located in the Muslim world’s emigres to Europe and North America, where Internet expertise and infrastructure were available and were also being

tapped by Arab media conglomerates that were likewise establishing initial presences in cyberspace (Anderson 1997). Generally, these second-round Web sites were static, often directly transposed from other media, and preserved their formats and the diction of formal, official pronouncements.

This second phase is giving way to a more modulated one, orthodox in theology and mainstream in interpretation but more dynamically attuned to developing an audience or public on line. This phase takes technological advantage of the development of the World Wide Web to provide more interactive content and sociological advantage of the Internet's demographics to reach a transnational population of middleclass professionals. Their habits of work and often of leisure bring them on line for news and information that they extend to finding an Islam that is expressively and in its focus attuned to their interests, problems, resources, and practices of information seeking. These sites use the latest Web techniques of instant polling, searchable databases, on- the-fly formatting of results, and email queries to engage a base of users and build sites that respond to their interests and grow with them. This may include databases of fatwas and also of advice of a more social and psychological sort, material for religious instruction of children as well as formal sermons, news with a Muslim interest and other kinds of religious commentary on current issues. The format is shared with portals that organize and provide links to other sites and with newspapers whose on-line editions adopt continuously changing content, searchable databases, other query features, and user-modifiable interfaces that invite interaction of users with a website. Indeed, the style is indistinguishable from that toward which news, and newspaper, sites have evolved, exemplified in the completely online multilingual news portal, Albawaba.com, produced in Jordan.

These sites are distinguished by the ideological profiles they project and their practical profiles. An example is the website of Shaykh Hussein Fadlallah, the spiritual authority of Hizbullah, in Lebanon, which has replaced Hizbullah's own earlier static collection of pronouncements and position papers with a growing collection of the shaykh's fatwas, sermons, and links to extensive Shi'a websites in Iran that provide access to libraries of digitized religious documents, including those produced by 'ulama. From the Sunni world, the website of Islamonline.net features perhaps the currently most famous Sunni preacher, Shaykh Yusuf al-Qaradawr, and a cohort of other "young Azharis" (Zeghal 1999) who contribute sermons, fatwas, social and psychological advice, lessons, and commentary that is modern in expression, orthodox in theology, and middle-of-the-road in interpretation.

This fully bilingual site is produced in Arabic and English versions by a company in Qatar that also designed and maintains the website for al-Jazeera Satellite Television. Its content is produced in Cairo, where Shaykh Yusuf and his colleagues are based near al- Azhar University. Others range from strict Salafi and Wahhabi to Sufi "outreach," and from Iran's religious universities to hybrid organizations of local and national Muslim organizations in Western countries. Whatever their ideology, their styles are modern, engaging, and oriented to pious middle-class professionals who seek an Islam that is orthodox and accessible and that addresses how to lead a Muslim life in a modern society, whether Muslim-majority or where Muslims are a minority and immigrants.

These phases are not mutually exclusive. The first phase is characterized by technological adepts in diasporic settings who reached out through the Internet for a shared Muslim community, which they primarily found with each other. They were tied not only by the Internet but also to the world of universities and research centers that produced it and housed them and provided their skills and social base. This is a contemporary diaspora population that in addition to students includes professionals pursuing careers in adopted countries as well as exiles and other emigres. They place online an Islam of textual objects and intellectual techniques rooted more in professional milieus into which they have been tracked from early schooling than in the hermeneutics that is the forte of ‘ulama training and interpretation that requires them.

A second phase was dominated by content providers who restored interpretive contexts that surround the texts, and hence claims to interpretive privilege, both in traditional and in political Islams. Here, technological prowess took a back seat or was purchased, often from outsiders with additional media skills lacking among the technological adepts of the initial phase. Formal and formulaic expression returned, often in the conventional apologetics of da^cwa, or missionary (literally, call) organizations, but primarily in English, the lingua franca of the Internet—it was in but not of the diaspora. A third phase presents a coming together of content providers and programmers in a transnational population of Arabic speakers, Muslims, and modern professionals including modern shaykhs, who are at home with the Internet, with which many of them work and which some of them are building. What they are building is a transnational composite of business practices and religious outreach, both of which are mobile and can be produced from multiple locations, just as the Internet is consumed in multiple locations. Indeed, these initiatives open alternatives in cyberspace that may not be available locally and which produce a new “deterritorialized” Islam specific to the Internet (Roy 2002).

The result is not an interest-group Islam, for it lacks the sharp edges and singular focus distinctive to special interest groups and their activism. It is multidimensional, user-oriented, modulated to the settings and concerns of professionals, and set within the concerns of pious middle classes. It implicitly mobilizes Muslim traditions of choice in seeking guidance by providing more rather than less information through the linking capabilities of the World Wide Web’s technology, which is not only hyper-linked but also increasingly interactive. Above all, this is a social field of people on the move or potentially ready and able to move. Through cyberspace they find organized expressions of Islam and communities that are unavailable closer to home. In this respect, they mirror the model of the creole journey, forming a sort of inner diaspora that is a counterpart in the region to the diaspora outside it and in some respects continuous with it.

This is an “inner” diaspora in several respects. It is scattered in modern occupations and high-tech corners in the Muslim world, but rarely in numbers sufficient to constitute a local community with enough patronage to shape a distinctive religious profile. It is highly mobile population, like Benedict Anderson’s creole journeymen, or the technological adepts of the

first phase, but also able to pursue modern careers from their homelands through the Internet without emigrating, or in moves within the region or to neighboring countries and on shorter cycles than long-term international migrants. These practices carry over to seeking out others like themselves in cyberspace and extending to religious lives the habits of working with others at a distance developed through the Internet. The diaspora of the third phase is also inner, in that the process of bringing Islam on line that began in the external diaspora and centered on its characteristics comes full circle in a transnational public whose primary concerns are increasingly post-Islamist (Roy 1999; see also Kepel 2002).

The institutional side of this process is deeply enmeshed in the market, but in an unexpected way. Just as Arabic-language newspapers have not been commercial ventures but are supported by special interests, so also getting Islam on line has been an important motive and a source of support for companies that develop and provide services and products for Arabic text processing. In the experimental period marked by technological adepts, a fully searchable Arabic text of the Holy Qur”an was the first product of what developed into the largest Arab software firm with a full range of programs for processing Arabic text. Although some content activists turned initially to foreign firms, religious patronage has been crucial in developing the businesses that Arabize content, and crucial to businesses created to provide web hosting, site design, text-processing software, and graphics that today compose Web technology. Services that were often sought initially from foreign firms are shifting to local firms, which assemble their own network of suppliers that further embed the Internet in institutions and practices of the marketplace and make religious interests important factors in that market’s priorities.

*** Technological Mediation and the Public Sphere

Transnational Islam is recentering diasporic contexts, and in those contexts is linking new sensibilities of minority status to the concerns and habits of professionals, middle-class priorities, and marketplace practices. Much attention has focused on political and particularly on militant Islam; but contemporary Islamic-oriented discourse actually engages a much broader range of concerns and practices. It ranges over social, personal, and identity issues, psychological matters and behavioral issues, over questions of authority that are often implicit and made problematic by increasing choice. Indeed, it has been argued (Kepel 2002) that the discourse of political Islam is receding at least partly in favor of social and psychological discourses focused more on personal and behavioral issues than on political constitution and governance. If this is so, it is not yet clear how much it is an artifact of observation, although the observation gains strength as attention turns from intellectuals (for example, Moussalli 1992, Lawrence 1989, Rahnema 1994) to wider publics that would be called “lay” in Christian terms. Issues engaged in this context have focused on authority, its multiplication, and the dilution implicit in that. Evidence suggests that the range is broader still, and that it includes the techniques of media, from journalism’s pithy formats that feed the discursive style of political Islam to the capacities for linkage that make the Internet “smart” and increasingly interactive.

Little of this is captured in easy dichotomies such as Barber's popular "Jihad vs. McWorld" (1996) and others that would relegate Islam and information technologies to clashing sides of a great divide or project one as the impediment of the other. Such formulas draw on too narrow views of both Islamic activism—not to say of Muslims— and information technology that not only excise their histories but also miss the real sociology of their intersections. Those intersections include the spread of mass education and before that of print in Muslim countries, on the one hand, and the diasporas of Muslims, on the other hand, that increasingly extend to mobile professionals in the global information economy. They also miss the more interesting contribution of religious patronage in actually developing this information economy, both internationally and in Muslim-majority countries, and the contemporary internal diaspora of professional middle classes that it unites through the medium of information technology.

In drawing these processes together, it is easy to overstate the role of new media. Muslims throughout the world have multiple channels for religious expression and for seeking religious guidance. Many such messages, and messengers, "migrate" to new media, whose contribution is to delocalize choices and voices. In this sense, newer media join older ones as channels for religious expression and outreach, but do not necessarily accept all their established conventions. Each has a material base, a corpus of practices, and a network of actors who produce them. Migrations of Islamic discourse into new media are accompanied by vernacularization, whether in print or on television or on the Internet, and by their location in the market space of commodities (Starrett 1995, Gonzalez-Quijano 2003: 72–76) rather than as circulated ritual objects. Thus, an Osama bin Laden might pose before a library of bound classical commentaries while recording a video message in ordinary Arabic, whereas the traditional 'ulama deploy classical Arabic and a more esoteric diction that recalls books that are out of sight. Not apparent on the surface but implicit in such migrations and the transformations that accompany media- tization are altered conditions of cultural production that bring new skills, practices, and habits, and a new constellation of actors to the media ecology of Islam.

Applying models of mass media to the Internet aligns modes of consumption but not their modes of production, which with the Internet reduce social distance between producers and consumers. The Internet joins the mass media of modern print and broadcasting by adding to an already expanding range of choices for consumption. In this model, a newsstand, a television with fifty or two hundred channels delivered by cable or satellite, and the Internet are equated as media characterized by choices, which in modern media theory express the agency of actors (Rogers 1994). Such comparison makes them contemporary, but at the expense of recognizing the different stages at which each is present. Print is relatively mature and broadcasting a maturing medium in comparison to the Internet, whose early stages are not yet obscured by years of later development, history of reconceptualization, and reflexive understandings that have their own lives.

One important history that is obscured by the comparison to mass media is the technological development of the medium itself. Here, the Internet stands apart in that the basic technologies diffused quickly and then experienced local development, not just application, in context that already included the print and broadcast computing technologies, mass education, and economic globalization which particularly privileges the technologically adept and the knowledge worker. Development, which had commenced in Arabic text processing that made on-line Arabic newspapers practical, has been followed by Internet-servicing businesses that draw support from religious customers and utilize the highest available Internet technology to service their needs and capabilities to interact with users, who are not just an audience but also a community, this time in “cyberspace.”

More than a century after the widespread diffusion of print technology in the Middle East, cultural production under conditions of globalization also ties the Internet particularly to a diasporic sphere. The Internet revolution is fluid, transnational, and connects stocks of knowledge, common orders of practice, and similar social actors. Islam on the Internet began in the diaspora; and the Internet increasingly resonates in Muslim-majority countries as a channel for expressions, interests, populations, and projects of an inner diaspora that is the late modern counterpart to early modern creole journeys. Likewise, its habits and techniques are the practices of the emerging public sphere that is transnational, not because it is Muslim but because those practices are.

* Part II: The Historical Emergence of Publics in the Ottoman Empire

** Chapter Four: Coffeehouses: Public Opinion in the Nineteenth-century Ottoman Empire

Cengiz Kirli

*** Informers and the Making of Public Opinion

If it were possible to travel back to Istanbul in the 1840s to find out what was going on in the Ottoman Empire, not even the only newspaper that existed at the time, Takvim-i Vakayi, would satisfy your curiosity. It would reveal only the promotions and demotions in the higher bureaucracy and the accomplishments of the Ottoman state in a bland official narrative. Walking into one of the thousands of coffeehouses, however, would allow you to catch up with the latest developments and current events. Going from one coffeehouse to the next, eavesdropping on conversations carried out at different tables, you would feel as if you were turning the pages of a newspaper.

If you wanted to find out the intricate politics behind the promotions and dismissals in the bureaucracy, the coffeehouses along the Divan Yolu near the Topkapi palace would be your best bet. There, you could hear the internal gossip from the clerks working in these offices. If you were interested in learning about the latest developments in the near and distant provinces of the empire, you would visit the coffeehouses built into the dwellings of the inns in several districts of the capital. If you were curious about the state of trade in the Mediterranean, you would listen intently to the conversations of ship captains in the coffeehouses of Galata and the nearby small docks. Even information about the European states would not be beyond your reach. The places that would provide you with that kind of information were not the embassies in Beyollu, but rather the coffeehouses in Galata, where you could find residents and merchants from various European nations chatting about European politics, economy, and international relations.

The coffeehouse was essentially a place where coffee was served, but after its introduction to Istanbul in the mid-sixteenth century, it emerged as the most important site of public sociability—at least for adult males, if not for women and children, who were excluded from it altogether. As Lumieres, a nineteenth-century French traveler, said (in Georgeon 1997:

39), Istanbul looked like “a big coffeehouse.” There was one coffeehouse for every six or seven commercial shops, and perhaps as many as 2,500 Istanbul coffeehouses in the first half of the nineteenth century (White 1845: 282).

Throughout its long history, the coffeehouse as a ubiquitous place of sociability has served multiple functions. Coffeehouses were places of leisure where Istanbul men met, played games, smoked tobacco, listened to political fables told by story tellers, and laughed at the grotesque characters of shadow theater that displayed profanity, irony, and humor with a highly political subtext. They served as commercial venues where merchants struck deals, ship captains arranged their next load, and brokers looked for potential customers. They were occupational spheres where practitioners of different professions and trades frequented particular coffeehouses, where employers found new laborers and laborers found new employers. They were the nodal points of migration networks where new immigrants found temporary and sometimes even permanent shelter, and established contacts in setting up a new life in Istanbul. They also were spheres of manifest resistance and opposition. They were used as headquarters for the janissaries, the elite soldiers of the sultan that significantly shaped Ottoman politics from the seventeenth century until the corps was abolished in 1826.

Coffeehouses were the primary place where people gathered to talk and exchange news, information, and opinions. Modern means of mass communication such as newspapers did not exist until the late nineteenth century, but there was hardly a demand for them by the predominantly illiterate public. Nonetheless, this public had a dense oral communication network running through rumor and gossip, and the coffeehouse was at its center. Displaying an unending appetite to know and to inform others about the events affecting their lives, the people were especially curious about politics and affairs of state, even though they were supposedly not involved in political discourse.

What did they talk about? How did they make sense of the events affecting their lives? When it comes to ordinary people’s actual dialogues and conversations, the historian usually runs into a wall of silence. We are fortunate, however, in having access to an unusual set of documents in the Ottoman archives. These documents, dating from the period between 1840 and 1845, contain gossip, rumor, and hearsay told by Istanbul men about current events in various public places. In hundreds of pages, there are thousands of paragraphs, each containing the record of a comment or a rumor on various social and political issues. Upon close reading, it becomes clear that these documents were the reports recorded by spies and informers in charge of listening to anything said in public places.[3]

Given the relative absence of evidence reflecting ordinary people’s views on social and political issues surrounding them, these spy reports—jjumals as they were called then—are of exceptional value for providing that rare glimpse. They enable us to suggest people’s perceptions of, and reactions to, the rebellion in Egypt by Mehmet Ali Pasha, views on the new tax system, gossip about the new appointments in the

administrative bureaucracy, complaints about prices and living standards in Istanbul and in the provinces, attitudes toward other confessional communities in Istanbul and elsewhere, opinions about ethnic movements in the Balkans, and assessment of the Ottoman Empire's relations with European powers. In short, capturing the ordinary language of the people, these spy reports provide an ample opportunity to trace a distinct trajectory of public opinion in the mid-nineteenth-century Ottoman Empire.[4]

Other than the reports themselves, our information regarding the details of this systematic spying activity is inadequate. We do not know, for instance, how the reports were prepared or who the informers were. What is certain, however, is that these reports occupied a central place in the Ottoman administrative system. As the cover page on each set of reports indicates, they went up as far as Sultan Abdulmecit (1839–1861). Each week the chief of police collated some of these public conversations gathered by his spies and presented them to the grand vizier, who in turn submitted them to the sultan to keep him informed about what was being talked about in public.

Informers were mainly stationed in coffeehouses, a perfect locale for the informer to "steal information" in the form of rumors, grumbling, and criticisms both from local residents and from transients coming from the provinces or abroad. In a rough estimate, coffeehouse conversations constituted half of the available reports. Coffeehouses played a central role in circulating information for the conduct of daily business in Istanbul, and for this reason they were the primary focus of attention for informers. However, informers operated in other settings, including barber shops, mosques, streets, public baths, lighter-boats, cemeteries, and even private homes and hotel rooms.

The lack of information about the informers prevents us from shedding light on how they were recruited. We do not know if they were trained employees from the security department or recruited from among the people. Some indicators scattered between the lines in the reports, however, support the assumption that the informers may have been recruited from among locals. There are several instances indicating that the informers were personally acquainted with the purveyor. Sometimes we find the informer sitting in a shop and engaging in a heated debate with friends, sometimes walking down a street encouraging acquaintances to talk, asking "What's the latest?"

It is also very likely that some of these informers were recruited from among coffeehouse keepers. An English traveler who resided in Istanbul in the early 1840s wrote: "Here the gossips and quidnuncs of the quarter assemble to discuss private as well as public affairs.... The coffee-houses are therefore watched by the police, and in many instances the cahvagees [coffeehouse keepers] are paid spies" (White 1845: 282).

The characteristic tone of these reports is monotony; the same narrative style is used throughout the reports. All begin with "it has been heard that" in such and such place, so

and so person said this or that. Some of the conversations are written in a dialogue form. The wording and composition of the reports indicate that the informers offer almost no personal interpretation; every word is in narrative form and seems to have been directly quoted from the initial author. Informers were not passive listeners, however. They would occasionally intervene as direct participants or ask questions to direct the conversation. To be sure, informers did not invent questions on their own initiative. They can be likened to modern questioners who conduct opinion polls. Undoubtedly, they were instructed to pull words out of people, and their reporting served to measure popular opinions on certain issues for the Ottoman administration.

Reading these reports, one is struck by the precision about who and where the rumors were uttered. There are almost no impersonal expressions referring to the authors. In these reports it is extremely rare to find usage of subjects like “they,” “people,” or expressions such as “they think that,” or “people say that.” Only occasionally do we come across the grumbling of a group of people, without any names mentioned. Details were so obsessively noted that it is not uncommon to find in which month, day, and even at what time the rumor was uttered. As for the people whose words were reported, not only their names and titles recorded, but also their occupations, places of residence, and even marital status. If the person in question was a transient, where he came from and where he was staying in Istanbul were also punctiliously recorded.

There is no indication that the purveyors of the rumors recorded in the reports were persecuted for their involvement in political discourse.[5] In other words, it seems certain that the reason for the reports’ persistence in individuating the source of a rumor was not to find and to persecute his purveyor. Surveillance of the public in minute detail by the state and the emergence of public opinion as a legitimate force in the business of governance are the constituents of the same historical process. In other words, the state’s appeal to public opinion inevitably brought about an active involvement of the state in people’s daily lives. In this sense, the operation of spying on the people in the mid-nineteenth-century Ottoman Empire bore strong resemblances to, for example, spying in eighteenth century France or the late- nineteenth-century Ottoman Empire during the reign of Abdulhamid II (1876—1909). In the latter, however, the chief purpose of spying was the denunciation of subversive political discourse and its perpetrators, although capturing public opinion was also an important concern (see Farge 1995, Darnton 1995: 232—46, and Darnton 2000). Inevitably, the vast majority of such police reports recorded only those who were, at least potentially, criminals, and not the large majority of the population who went about their daily business.

The main purpose of spying on the people in the mid-nineteenthcentury Ottoman Empire, however, was to capture public opinion, evident in the spy reports’ apparent lack of concern to record sedition or subversion in order to build an indictment for criminal conduct. These spy reports are therefore not strictly conventional police reports, and at least potentially were more comprehensive in reflecting popular opinions than the spy reports produced in eighteenth-century France or the late-nineteenth-century Ottoman Empire.

Now let us turn to the content of the reports and provide examples.

*** Mehmet Ali Pasha and Egypt

In 1840, the major topic of conversation in Istanbul coffeehouses was the war with Mehmet Ali Pasha, the rebellious governor of Egypt. Starting his long career as the Ottoman governor of Egypt in 1805, Mehmet Ali Pasha, unlike his predecessors, managed to establish effective control over this lucrative province, and proved his loyalty to Sultan Mahmut II (1808—1839) on several occasions by suppressing rebellions with his powerful army in different parts of the empire (see Marsot 1984, Fahmy 1997). Once a loyal governor, he then turned against the sultan in the early 1830s in an attempt to secure hereditary governorship of Egypt. He defeated Ottoman armies repeatedly and conquered a substantial portion of Ottoman lands that stretched from the neighboring province of Syria to inland Anatolia. The first episode of the ordeal ended with a peace agreement in 1833, with the assistance of Russia, but the struggle between Cairo and Istanbul was far from over. The final episode started with yet another defeat of Ottoman armies in 1839 by Mehmet Ali's forces led by his son (brahim Pasha. Mahmut II died just before the news of disaster reached Istanbul, and his son Abdulmecit ascended the throne when he was only sixteen.

The repercussions of the events surrounding the Mehmet Ali affair were strongly felt on the streets of Istanbul. The helplessness of the Ottoman government and this very direct and concrete challenge against the sultan were translated into a fearful anxiety among the ordinary people. Feelings of loss of trust, pessimism for the future, and the expectations of chaos are palpable in the reports that started to record public mood in the midst of this unparalleled political crisis. Mustafa was heard saying in a Yenikoy coffeehouse that "Ottoman lands will be lost whether we fight or not (ID 1038, September 28, 1840). Public weariness with the continuing uncertainty of the situation was reflected in Veli Mehmet A[a's desire that "things would take their course in one way or the other as soon as possible; then, at least, we would have peace of mind" (ID 1038, September 28, 1840).

This weariness and pessimism were accompanied by rising rage against the source of this chaos. Coffeehouse conversations are full of examples of anger and hate focusing on the person of Mehmet Ali. His name, when uttered, was accompanied by cursing and swearing. People in coffeehouses told each other elaborate methods of torture they would inflict if he fell into their hands (ID 1210, November 13, 1840).

The rage against Mehmet Ali was compounded by the fact that this was a conflict among Muslims and that it resulted in the intervention of non-Muslims. The ordinary folk of Istanbul were humiliated and profoundly confused when the Ottomans sought help from Russia, their longtime nemesis, to solve an internal problem. The thorny problem that the empire was on the verge of destruction by a Muslim was resolved in the popular consciousness by declaring Mehmet Ali an "infidel." "If somebody rebels against his sultan, he becomes an infidel; he

rebels against God, too. Mehmet Ali is not a Muslim" (ID 1210, November 13, 1840). Through gossip, people in Istanbul were propping up their confidence and further justifying the perception that Mehmet Ali was committing the greatest of sins, rebelling against God's will; he was supposed to have said, "Allah cannot dictate. I can do whatever I want to do" (ID 1210, November 13, 1840). Two soldiers who fought in the battle of Nezip were heard telling one another what they had heard there: in a moment of anger Mehmet Ali's son (brahim Pasha drank his liquor by tossing his glass against God, saying that "God, you make me angry. Look, I am drinking my arak in your face" (ID 1210, November 13, 1840).

This threatening state of events was intensified when the Grand Admiral Ahmet Pasha, nicknamed "the Traitor," defected and handed over the entire Ottoman fleet to Mehmet Ali Pasha in July 1839. From the reports we learn that the people in Istanbul were anxiously waiting for the fleet to return to the capital, and their anxieties crystallized around political maneuvering at the highest level of the empire. The people were convinced that the reason for Ahmet Pasha's "treason" was the appointment of Husrev Pasha, a long-standing nemesis of Mehmet Ali Pasha, as grand vizier (Cevdet-Dahiliye, 12037, undated).

The enmity between Mehmet Ali and Husrev dates from 1801, when both joined the Ottoman navy sent to Egypt to fight against Napoleon's army. At the time, Husrev Pasha was a protege of the grand admiral and Mehmet Ali was his subordinate, commanding the troops of Albanian origin. After Napoleon's army was evicted from Egypt, Husrev was appointed as the governor. Soon after his appointment Albanian troops, provoked by Mehmet Ali, revolted against him. Mehmet Ali took Husrev prisoner, deported him from Egypt, and eventually was appointed as the new governor in 1805. The bitter rivalry and enmity between the two continued for another three decades, and it was the common belief that Husrev would do everything in his power to dispose of his foe. Upon the succession of Abdulmecit to the throne in 1839 by snatching the imperial seal, Husrev Pasha appointed himself as the grand vizier. This act created much dismay on the part of Mehmet Ali Pasha, who later launched a campaign to have him deposed (Fahmy 1997: 285—90).

Husrev was not immediately dismissed, but his term of office lasted less than a year. Despite the official statement that Husrev resigned due to old age, the people inferred that he was dismissed from office because of the Mehmet Ali affair. In Istanbul coffeehouses, the whole issue was seen as a concession to Mehmet Ali. Rumor circulated that Abbas Pasha, Mehmet Ali's son, brought a letter from his father to the sultan, asking for Husrev's dismissal (Fahmy 1997: 285–90). Although this concession was to some extent seen as a sign of weakness of the Ottoman administration, the great joy over Husrev's dismissal prevailed over the sense of humiliation that the sultan was taking orders from his insurgent governor. Not only did people hold Husrev as much responsible as Mehmet Ali in this ordeal, they also blamed him for seeking the assistance of Russia, probably the most notorious country in the popular perception. In an exemplary instance of how inside information from an office found its way almost immediately to coffeehouses throughout Istanbul, we hear "fresh news" from a clerk who overheard the conversation in a meeting of the Supreme Council for Judicial Ordinances: "Husrev Pasha said we should take care of Mehmet Ali. Let us send for Russia and hand

Istanbul over to them. Then we can be at ease" (Cevdet-Dahiliye, 12037, undated). The reliability of this information is trivial in itself. What is important was the people's readiness to believe information that derived its credibility from their distrust of Husrev. In the eyes of the people, his image was already tainted with rumors of bribery, nepotism, and his self-serving character: "It is very good that Husrev Pasha was dismissed. This relieved a great burden from everybody's shoulders. Even the ground he is stepping on should be removed" (Cevdet- Zaptiye, 1833, undated).

The reception of Husrev Pasha's case shows us the search of the ordinary people for something to hold onto in periods of crisis. People quickly turned his dismissal into a sign of hope. "The moment he was dismissed from office" said Haci Hasan in Uskudar, "the curse on us has been lifted. With God's will, we will be given our salaries at the beginning of each month as it used to be" (Cevdet-Zaptiye, 315, undated). Mehmet talking in a Mahmutpaa coffeehouse, said that "he was such a cruel man. During his term all business stopped. We all became indebted" (Cevdet-Zaptiye, 315, undated).

The abundant evidence of political conversations throughout the reports reveals that one of the most important functions of gathering rumors was to uncover popular sentiments toward the sultan in the wake of the Mehmet Ali affair. This crisis, which shook the empire and threatened to bring an end to the Ottoman dynasty, and was defused only by Mehmet Ali's hesitation and British help, caused concern for the Ottoman ruler's legitimacy. It is no surprise, then, that the reports include several public utterances directly about the sultan himself. The following report, composed and narrated in an unusual way, demonstrates the informer's impressions and interpretation about the mood of the populace:

<quote>£££Your humble servant has observed in the past month that the people's dislike and hatred against Mehmet Ali has aggravated to such an extent that they are praying from the bottom of their hearts for his wretchedness. Even more, hearing the roars of cannons last night on the occasion of the birth in the palace, the people in coffeehouses and other places felt immense joy, for they assumed that "God willing! Egypt was conquered" or "(brahim Pasha was caught and brought to Istanbul" (ID 1210, November 13, 1840).£££</quote>

The reports are full of extremely positive remarks about the sultan. Muslims and non-Muslims prayed for him, cherished him, and cursed his opponents. Are we to believe that informers did not come across anyone in Istanbul who opposed the sultan? Despite the impossibility of answering this question authoritatively, three possibilities could be raised to tackle this conspicuous absence.

First, even though some people had uttered insolent words about the sultan, informers might have distorted the reports in an attempt to protect gossipmongers from possible punishment. Second, people were aware of the pervasiveness of informers and therefore

held their tongues in check. Although, as mentioned earlier, surveillance of the population was not primarily intended to punish sedition or subversion, gossipmongers, and possibly informers themselves, were not necessarily aware of that. A strong fear of being punished for talking about affairs of state can easily be detected in their voices. When a politically sensitive subject comes up, most of the time we find the purveyor warning his friends not to leak the information he provided by such cautionary remarks as “this is between you and me,” or “don’t tell this to anyone, spies are everywhere.” Third, it is possible that these reports were not distorted by informers or their superiors, and that the people thought positively about the sultan. This is also a strong possibility, because one of the main tenets of the premodern popular consciousness in relation to the ruler was that esoteric power was usually attributed to the ruler. He was not merely human but had a power and authority that emanated directly from God. For ordinary people, his power could not fully be comprehended but only marveled at and obeyed.

Consider, for instance, the following example:

<quote>

smail A[a, residing at }ekerci Street in Aksaray, said in the coffeehouse next to the Katip mosque that I read the new issue of the Takvim [a newspaper]. May God protect our mighty sultan, he conquered many places. Nobody can cope with sultans; they possess power of sanctity that creates miracles, and their breath melts stones and mountains. Once Sultan Beyazid was having a mosque built, a European king’s envoy came and deliver the message that his king had declared war. Our mighty sultan said “Go and tell your king, when I move my fingers, I make him blind.” Then the king goes blind. You see. Sultans possess the power to make such miracles (ID 1232, November 20, 1840).

</quote>

Since the ruler was perceived as having supernatural attributes, reconstructing the popular imagination of the state, which was embodied in the ruler, is an exceptionally difficult task. The otherworldliness of the ruler makes his popular representation ambivalent. This ambivalence does not emerge immediately from a literal reading of the reports; rather it becomes salient in between the lines and through metaphors. What could be a more suitable medium than fairytales to articulate fears, anxieties, expectations, and hopes? Through the instrumentalization of fantasy, there is in almost each fairytale a sociopolitical statement about existing conditions (Zipes 1979, 1988) In other words, fairytales and legends were the means through which the ordinary people could articulate and convey the world as they experience it. For example:

<quote>

(brahim, the son in law of petitioner Huseyin Efendi residing in Ugler neighborhood, said in his own shop: “[Once upon a time] a child was born in Egypt. His mother puts him in his cradle and goes inside to knead dough. Then the child gets up, eats and drinks whatever he

finds in the house, and sits on the sofa. After a while, his mother comes and sees that her child is not in the cradle, and somebody is sitting in the sofa. ‘Mother,’ says the child, ‘I ate everything in the house.’ Then his father shows up, and then their neighbors. Unable to understand how this was possible, they eventually decide to inform the governor. When the governor questions the child, the child says, ‘I am hungry and thirsty, how can I talk like this.’ They give him a table full of food, and he eats them all and asks for more. Another round of food comes, and he again eats it all, and asks for more, then again, then again. After eating three or four such full tables of food, he says, ‘Let me tell now.’ There will be much drought, blood will run as water, and a messiah will appear in 75 [1275/1859]. The governor says he would rather be dead than alive, and orders his execution. For three or five days, the knife cannot sever his head from his body, so they kill him by hammering on his head (ID 1210, November 13, 1840).

</quote>

This fairytale feeds into a desire for mystical, unusual, and impossible happenings but can also be read as foreshadowing the biography of Mehmet Ali seen through the eyes of the Ottoman state. Just like the greedy child in the tale, Mehmet Ali Pasha could enhance his power to unprecedented proportions almost from nothing. During his reign for over thirty years, his preemptive actions were accepted and his endless demands were fulfilled, and these in turn carried him to the doors of the capital. This is not to say that replacing Mehmet Ali Pasha with the greedy child of the tale was necessarily what the teller had in mind. Its ambiguity served as a buffer against accusations of uttering antiregime sentiments. What prompted him to tell a fairytale like this is more important. Telling a story is a complex process. In between the lines of tales, fantasy and reality are intertwined; and the real and the imaginary characters often collapse into one another. Fairytales offer imaginary, yet desired, solutions to real problems (Zipes 1979: 4). Mehmet Ali’s head was never smashed, but the story nonetheless underlines the desire to challenge his authority.

The unease in Istanbul coffeehouses was further compounded in the summer of 1840, when the Ottoman, British, Russian, Prussian, and Austrian delegates convened in London to discuss the Mehmet Ali affair. According to the subsequent agreement, Mehmet Ali was offered the hereditary governorship of Egypt and Acre in return for the evacuation of his armies from Hijaz, Syria, Crete, and Adana, as well as the immediate return of the Ottoman fleet. The terms of agreement sent to Mehmet Ali in the form of an ultimatum quickly began to echo in Istanbul’s streets. The diplomatic traffic between Ottoman and European officials was being monitored in minute detail by the people. The arrival of every foreign noncommercial ship into the Bosphorus was taken as a sign of arrival of a European ambassador to discuss the matters relating to Mehmet Ali’s answer to the ultimatum, and the news of these landings hastily spread to streets and coffeehouses and fueled speculation.

The popular hope for peace swiftly turned into dismay when war became inevitable upon Mehmet Ali’s rejection of the ultimatum. Public mood changed swiftly as contradictory news led to conflicting views, speculations, and opinions grafted onto changing circumstances.

One day, the biggest concern was whether France would fight along with Mehmet Ali's forces against the Ottomans and its allies. As some people were spreading news that France was mobilizing its forces against the Ottomans, others were convincing their friends that France would never fight against Britain and Russia over Egypt (ID 1210, November 13, 1840). The next day, new concerns and new opinions were generating novel perspectives. Conversations often included certain traits attributed to the people of other countries, friends and foes. The imaginative content in these attributions supported the rumors in circulation. In Ismail's coffeehouse in the district of Sultan Mahmut, Huseyin Aga, a glazier, raised his concern that British forces could easily be defeated by Mehmet Ali's army because England had not fought a war for several decades. Russians from ages seven to seventy, on the other hand, were all considered warriors, and untrustworthy (ID 1210, November 13, 1840). In the same coffeehouse Mustafa Aga kept his hopes high by attributing fraudulence to Arabs, whom he thought "will react against Mehmet Ali as soon as they understand how much trouble he is in" (ID 1210, November 13, 1840).

The pessimism and anxiety haunting the streets of Istanbul in early 1840 was transformed into an air of optimism toward the end of the year, when the Ottoman-British alliance defeated Mehmet Ali Pasha's army and ended his rule over the province of Syria. News of fresh developments reached Istanbul quickly during the course of the war. While an Austrian merchant in a Galata coffeehouse was bringing the news that British forces besieged port Alexandria, Ismail Aga read out the capture of Acre recounted in Takvim-i Vakayi in an Aksaray coffeehouse (ID 1232, November 20, 1840). Istanbul echoed with joy at the news of the victory, and the general mood of the public was enthusiastically reflected in the reports of the informers: "Your humble servant reports that in most coffeehouses in Istanbul and its environs, the people are indulged in pleasure and jubilation, and pray for our mighty sultan" (ID 1232, November 20, 1840).

Popular comments, however, did not constitute a monody. "I am surprised by how quickly Acre was captured. It cannot be our navy. It must be the British or Austrian navy," said someone in response to a newspaper read out in a Kemeralti coffeehouse (ID 1232, November 20, 1840). Informers were curious regarding the popular reception of the news of the triumph. An informer commented to incite others: "Egypt is over. We hear that they have been devastated in each fight." "Wait and see the end. There must be something else in this," replied Haci Mustafa, expressing weariness in his response (ID 1232, November 20, 1840).

Ambivalent and discontented voices were also loud after the peace between Mehmet Ali and the Ottoman government in May 1841.

For Osman Efendi, granting Mehmet Ali the hereditary governorship of Egypt was a complete disgrace to the Ottoman government. "They have not had the peace published in the Takvim [newspaper]. They must be embarrassed" (ID 1776, April 14, 1841). Similarly, Yorgaki was not content with the outcome, saying to his friend Anata of Ankara in

his home, “What kind of a peace is this? They put the other four kings to shame as well. For the sake of four sancaks [administrative units] they depleted the whole treasury. You’ll see, this dude would take them back anyway and all this money spent would be in vain. They call this peace. He is called Mehmet Ali, you’ll see the end” (ID 1776, April 14, 1841).

There are voices in these reports that also remind us the fact that this was a conflict within the empire that had contradictory repercussions for its various subjects. Kostandi, a Greek broker, told in a Karakoy coffeehouse the story of an Arab he witnessed the other day on a lighter boat crying after his family trapped in Egypt (ID 1210, November 13, 1840). Two Arab shopkeepers watching the parade of Egyptian prisoners of war in Sultan Beyazid said, “they are all soldiers of Egypt. Some are our brothers, some our relatives. Even in our own lands our children perish like this. God damn Mehmet Ali” (ID 1210, November 13, 1840). These examples challenge the misleading black-and-white picture that draws a clear-cut boundary between the Ottoman as self and Egypt as the other, as the enemy. It was a victory, albeit a broken one. There were plenty of those who were wounded and disenchanted caught within the jubilant atmosphere of the Istanbul streets and coffeehouses. These voices not only frame the gray and shady areas of the picture but also give depth and perspective to it.

What triggered conversations in coffeehouses were events and circumstances. As the Mehmet Ali problem was settled in the summer of 1841, popular talk about it slowly faded away. Whereas one day it was rumors of a war against Russia, the next it was war against Greece that invaded the smoky coffeehouses. Yet again, in between sips of coffee, for a time the Druze uprising was the most favorite topic; another time, it was the Serbian rebellion.

“Domestic news,” however, was not all the people talked about. “International news” constituted no less an important topic of conversation. One source of this news was European newspapers that were read aloud by merchants, especially in coffeehouses in Galata— the heart of international commerce in Istanbul—and then dissem- mated quickly to other parts of the city by word of mouth. The popularity of topics regarding international politics among ordinary people was matched by the keen interest of informers in eavesdropping on the conversations of foreign merchants trading between Istanbul and European ports. Although information from the European Great Powers took up much of the space in the reports because of their centrality to Ottoman affairs, some seemingly less inconsequential news for the Ottomans—ranging from the Portuguese king’s visit to France to the British opium war in China—were also discussed by the people and recorded by informers. Despite the fact that the rumors recorded in the reports were written in simple Ottoman Turkish, reflecting the language of the streets, sometimes the informer mentioned the original language of the conversation that he had overheard and translated into Turkish. Throughout the reports, one finds records of conversations translated into Turkish from Arabic, Persian, Greek, Bulgarian, Russian, English, French, German, and Rumanian. The variety of languages suggests that informers were widely recruited from among the non-Muslim as well as Muslim communities. It also points to the extent of the spying activity.

*** State Officials

Besides the changing topics determined by political atmosphere, there were other persistent themes. One of these was the overall discontent and frustration against state officials. Although popular criticism of the sultan was never direct but rather hidden and latent, when state officials and local functionaries were concerned, the populace was direct and uninhibited in articulating discontent. Thus, in expressing condemnation, people, as Rude (1980: 31) aptly writes, “tended to prefer the ‘devil they know’ to the one they did not know.”

While Istanbul locals were preoccupied with palace officials, immigrants and transients continued to grumble about the officials in the provinces. For instance, we hear constant complaints coming from people from the Erzurum province about Hafiz Pasha, the governor. “There can’t be any vizier as ruthless as Hafiz Pasha. He is forcefully taking money from the villagers. If he were to be dismissed many would be happy,” said dervish Hasan from Arapkir (Cevdet- Zaptiye, 2474, undated).

Centrally appointed tax collectors (muhassil) were one of the main targets of complaints. They were seen as instigators of disorder, corruption, and havoc. In 1840, the first year in which the spy reports started to record popular opinions, the Ottoman state launched a cadastral survey to identify the tax base. There are numerous grumblings in the reports regarding the inconsistency and arbitrariness of the survey. Zekeriya from Ni[de complained that their muhassil was registering land in Ni[de and people in Nevehir (Cevdet-Zaptiye, 1833, undated). Let us listen to Mehmet of Yalakabat talking in Kadir A[a’s coffeehouse in Sultan Beyazid: “In our district we were supposed to pay according to our lands. Then, notables said we were to pay 250 guru per head. Yet again, they began to ask 500 guru per household. But still not being satisfied they told us to pay 1200 guru. The poor came to the Porte and submitted a petition. Let’s see how it’s going to turn out” (Cevdet-Zaptiye, 1833, undated).

Discontent did not remain only in the form of coffeehouse grumbling. In several places muhassils were killed by peasants, and some muhassils resigned due to fear (Cevdet-Zaptiye, 2474, undated). The people of Istanbul were no less unhappy about their taxes. Migirdi^, an Armenian shopkeeper, complained that he was asked for 15 percent of the value of his newly built house as tax. He said, “I applied to higher offices and they said to me: ‘Look, infidel, this 15 percent is an emergency tax.’ I don’t know what to do. Now we are in the hands of God. There is no kadi, no court, who is to look after our case?” (ID 1038, September 28, 1840).

All this popular discontent boiled down to an overarching moaning about the difficulty of life and times. Disgruntlement was articulated and expressed by people as it impinged upon their subsistence or economic well-being. If people were angry at Mehmet Ali Pasha, it was

because they believed that he obliged the Ottoman government to print worthless paper money instead of silver coins for the first time, or that he blocked the importation of flour from Egypt and made them buy expensive dark bread. If people raged against muhassils, it was because they saw or heard of people dying due to famine in their lands. If people hated Husrev Pasha, it was because they believed that during his tenure business slowed down. We hear plenty of stories from those who have immigrated to Istanbul with the dream of building a better and more secure life, almost always to be disappointed in the end. Albanian Zeynel A[a remorsefully remembers that he did not listen to those who told him not to move to Istanbul while he was in Edirne: “Just as they told me I regret my decision thousands of times” (ID 1038, September 28, 1840).

Thanks to the informers’ style, we can learn about individual life stories in a strikingly vivid fashion, in contrast to the layers of rhetorical cloaking of critiques of high officials. Neither poverty nor misery is wrapped up in blandly general or impressionistic accounts, obscuring the singularity of the voices of ordinary people who lived in the first half of the nineteenth century. From among many let us hear one:

<quote>£££It has been heard that the retired captain Mehmet A[a of Ayntab who migrated from Tripoli said in the barbershop next to the restaurant in Irgat Pazari: It’s no longer possible to secure a living in Istanbul. I regret that I moved out from Tripoli. They are giving me a ninety guru salary. If I were to seek to be a subject of another country, they would not accept me because I’m a former officer. I am now thinking of going back to Tripoli. It seems that there are only two places left to make a living, one is Baghdad, the other is Tripoli.... My subordinates have now become captains or colonels. The wife kicked me out after thirty-one days. I divorced her, then I heard that I had a child. They make me pay thirty guru alimony per month. I don’t know what to do. I’m going to drift away (ID 1232, November 20, 1840).£££</quote>

*** Intercommunal Relations: Differentiated Opinions?

Popular voices reflected in the reports were not homogeneous, though the topics of conversation were not significantly different from one neighborhood to another or from one coffeehouse to the next, for certain events that affected people incited these conversations. Popular opinions were always reflexive, interactive, and related directly to the developments and to other opinions. As much as there were agreements, there were also disagreements and opposing views, and moreover, within agreements and disagreements, there were nuances, fine differences, and a persisting ambivalence reflecting multivocal- ity and resistance to the idea of public opinion in the singular.

On what basis, then, did opinions differ? More particularly, is it possible to discern clear patterns in this heterogeneous and multidimensional public opinion that distinguished Muslims from nonMuslims, and one non-Muslim community from another? Looking for

possible differentiation of opinions along confessional lines allows us to use these unique forms of evidence to question both Ottoman historiography and Ottoman history.

The dominant Ottoman scholarship has stubbornly imagined the different confessional communities of Istanbul in hermetically sealed boxes, a city that was inhabited by a religiously, ethnically, and linguistically diverse population. Instead of trying to recapture the social meanings of the nineteenth century in the dynamics and the interactions of its complex social world, the accepted historiographical paradigm obscures this complexity with superimposed contemporary categories and conceptual tools that are heavily loaded, and often tainted by nationalist imaginations even when the empirical evidence suggess otherwise.

To overcome this methodological fallacy, the first order of business is to refute the idea of the compartmentalization of Ottoman society along confessional lines. In so doing, I do not mean to imply that religious affiliation was trivial, or that it did not contribute to making sense of the self and the other. Religion did matter, of course, and provided a significant foundation for people in organizing their mental universes. Religious identities did not restrict people's sense of society above and beyond confessional lines, however. Opinions were formed dialogically; social meanings were created through dialogues between the different confessional communities in the course of everyday life practices in an urban context.

The reports make it strikingly apparent that opinions routinely crossed confessional lines to create a common discourse. As much as confessional differences divided, poverty and power unified. For many people, Muslims and non-Muslims alike, the feeling that they were on the same boat was very strong. Kostandi of Tatavla, a broker, was heard complaining in a Galata coffeehouse about the missionary activities of the British and the French, arguing that the non-Muslim communities of the Empire were unified in their opposition against "these Franks" (ID 1210, November 13, 1840). Hurit Aga, recounting a conversation he had witnessed among some non-Muslims, was telling his friend that he heard them saying: "Thanks to the Ottoman state for years our ancestors have been living peacefully. Now the Great Powers are intervening in our state affairs and chained the [Ottoman] state to themselves. God protect the Ottoman state and God forbid us from slipping into their hands" (ID 1210, November 13, 1840). Dimitri of Kayseri said in Silivrikapi: "I went to Buyukdere the other day. The English fell upon me and told me, 'Come let's make you a British citizen.' And I replied to them, 'My lineage is Ottoman. I can't do it.' These people are offering this to anybody they see" (Cevdet-Zaptiye, 556, undated).

A romanticized interpretation of popular opinions that assume the harmonious coexistence of the different confessional communities, even if it were acknowledged that that popular opinions did not necessarily differentiate along confessional lines, would be equally erroneous. The populace expressed their opinions in response to ever-changing events and circumstances. Thus, in order to better understand the dynamics of everyday life in Istanbul

and the molding of public opinion among the ordinary people in the mid-nineteenth century —especially regarding the issue of relations between and within confessional communities— popular opinion needs to be contextualized in the larger world of the Ottoman Empire. Only a decade before, Greece had become a separate state, and the separatist movements in the Balkans were gaining momentum at this very period. Although in general the sense of Ottoman imperial identity remained strong among the populace, this identity was strongly challenged by the rising nationalist tide. The Christian subjects of the Ottoman Empire in particular were standing at a crossroads that provided them with options and alternatives in crafting their identities. In this period, incentives to redefine themselves allowed them to acquire powerful European patrons, and to take advantage of the economic benefits that the Ottoman Empire granted to several European states. Numerous Greek subjects acquired British or Greek citizenship, Armenian Catholics French, and Gregorian Armenians Russian. Austrian (spiro's words reveal how easy it was to acquire various citizenships: "If a non-Muslim approaches me to ask for a citizenship, I can get the passport of the state he chooses, whatever that may be.... Lately an Armenian came and asked for a Wallachian passport.... He gave me three hundred guru in return. I can do the same for anybody" (ID 1776, April 14, 1841).

Precisely because the Ottoman imperial imagination, and the set of values, allegiances, desires that came with it, had a strong presences in shaping the beliefs and projections of the ordinary men of Istanbul, the rebellious turmoil around and within the Ottoman Empire ignited animosities at the heart of the Ottoman society. Those who were being left behind to sail on the imperial ship that was getting increasingly leakier were translating their disenchantment into anger and animosity against those who had already left or who were trying to jump ship. This was especially apparent among the edgy segments of the Muslim population. The reports reveal a few examples that convey feelings of abandonment, fear of losing their lives as they knew them, and blame toward the non-Muslim peoples of the empire for these problems.

(brahim Efendi, talking on the tailors' street in the bazaar, said that "In the old days these tailors were all Muslims. Now there aren't any left, they are all non-Muslims. Muslims are becoming extinct. God help us" (ID 2704, March 23, 1842). A Muslim in a Samatya coffeehouse was heard saying that "In the old days these non-Muslims did not wear furs. Even if they did they would not walk in the streets in them. In today's order furs belong to them, I wonder what will be left for us in the next order" (ID 4191, February 11, 1844).

Further, despite the common identification of Christians as a group, reflected in Ottoman historiography to date, popular opinions captured in the reports testify to the absence of a homogeneous Greek identity in the imperial capital. On the one hand, we read of a perceivable anxiety among the subjects of the recently established state of Greece. Most of them believed that a war between the Greek state and the Ottoman Empire was inevitable, and this anxiety was especially salient among import-export merchants who were burdened by "an unprecedented customs duty on imports from Greece" (ID 1776, April 14, 1841). Widespread rumors began to circulate in Istanbul streets that the subjects of Greece living in Istanbul would be deported. A pharmacist called Yanni was heard saying that his embassy

advised him not to further increase his stocks since the shops were in danger of being closed down (ID 1038, September 28, 1840).

On the other hand, the words of Yanko remind us of the persistence of imperial allegiance among the Greek subjects of the Ottoman Empire: “Nowadays the Greek [Rum] millet has so much freedom.... Everybody supports the sultan. If this had been the case before, the people of Morea [Greece] wouldn’t have fought the war and perished like that. They would continue to be the subjects of the [Ottoman] state” (ID 3218, August 21, 1842).

*** Conclusion: Opinions versus Public Opinion

“Word on the street travels quicker than fire,” said an officer of the US forces ruling Iraq in a report published in the Chicago Tribune (July 11, 2003). This proverbial statement reflected one of the most important concerns of the U.S. occupiers in the months following the military collapse of the Iraqi regime. That “night-vision goggles let soldiers see through women’s clothes”; that “the country’s oil is being piped to Israel”; and that “U.S. authorities are keeping power off in Baghdad as punishment” for attacks against American troops were among the rumors circulating, according to the newspaper report, among Iraqis who were living in a regime of uncertainty and doubts. It was exactly this kind of uncontrollable rumor that worried U.S. authorities most, rather than the more than 130 Arabic-language newspapers published across the country since the occupation of Iraq, despite the fact that many newspapers oppose the U.S.-led regime. Newspapers could be silenced at will, rumors cannot. Recognizing the mobilizing capacity of rumor for dissent, U.S. authorities reportedly devised measures to counter the rumors, including handing night-vision goggles to local imams, who are considered to be among the main sources of dissemination of rumors, “to prove the limits of their power” (ibid.). If modern technology will be capable of penetrating Iraqi minds as much as it does Iraq nights remains to be seen. But, as a high-level U.S. official in Iraq bitterly acknowledged, “we are losing the information war” (ibid.). The war on public opinion was indeed one that the U.S. and the nineteenth-century Ottoman state alike waged desperately and usually ineffectively.

Complex, disjointed, ever-changing, and fragmented, popular opinions of mid-nineteenth-century Istanbul examined in this article revealed that the floating of information in the streets, shops, and coffeehouses of Istanbul was a process intertwined with personal interactions in the public sphere. Unlike contemporary times, when news is heard through professionalized medium, information in the nineteenth-century Ottoman Empire was never reified. It was always coupled with intimate life stories of the people, directly related with the life of the teller. The developments regarding Mehmet Ali Pasha or Husrev Pasha or any other public figure were attached to the personal concerns of a Mustafa or a Migirdic or a Manol or a Mehahim.

Does the sum of individual opinions amount to public opinion? Habermas, whose writings on the historical formation of public sphere continue to inform the burgeoning scholarship on public opinion, answers the question negatively, making a clear distinction between opinion and public opinion. He argues: “Whereas mere opinions (things taken for granted as part of a culture, normative convictions, collective prejudices, and judgments) seem to persist unchanged in their quasi-natural structure as a kind of sediment of history, public opinion, in terms of its very idea, can be formed only if a public that engages in rational discussion exists” (Habermas 1991: 399). In the examination of popular opinions here, however, it makes little sense to make a clear-cut distinction between mere opinions and public opinion. These mere opinions that Habermas relegated to the “sediment of history” were not private exercises but utterances produced in the intimate atmosphere of public sociability. Every individual opinion articulated in a public setting incited comment from others, then further disseminated through the word of mouth, and ultimately contributed to the formation of public opinion. The means of written communication networks such as newspapers, which in part led Habermas to distinguish between opinion and public opinion in the “specific constellation” of an idealized Western European history, did not exist, but neither does a serious need for them in the dense oral information network in nineteenth-century Istanbul.

Neither did the Ottoman state of the mid-nineteenth century perceive these opinions simply as collective prejudices enveloped in rumor and gossip. If general characteristics of rumor are its orality, anonymity and elusiveness, then individual opinions recorded in the spy reports show none of these. By recording these opinions without the purpose of persecuting political gossipmongers, the state turned the oral into the literal, the anonymous into the authored, and the elusive into the tangible. This was, in fact, the process in which rumor became news; and the individual opinions that were hitherto persecuted for their political content became a public opinion to which the nineteenth-century Ottoman state was obliged to appeal.

** Chapter Five: Gender, Consumption and Patriotism: the Emergence of an Ottoman Public Sphere

Elizabeth B. Frierson

When our Summer Institute first met in Berlin in July of 2001, we thought, spoke, and wrote against a rich backdrop of encounters between everyday beliefs in twenty-first-century Europe: headscarf controversies in France, unassimilated and assimilated German Turks, homosexuality and conservative Muslim clerics in the Netherlands were all conflicts between secularism and faith communities, but also between what should be public and what should be private. In these encounters, ordinary objects played extraordinarily important roles: a piece of cloth on a woman’s head as she attempted to teach in a state school, or work in other state (and therefore rigorously secularized) spaces; or barbecue grills in public parks in Berlin; or, of course, newspapers, magazines, cassette tapes, computers, radios, and televisions. Little did we know that our scholarly discussions of the importance of making literacy “ordinary” in the Middle East, of widening spheres of literate or informed debate beyond palaces to schoolyards, and of how everyday objects assume vast symbolic importance were soon to be thrown into a harsher light by the weaponizing of an increasingly ordinary and, in the last decade, cheaper mode of transport. In a sense, the 9/11 bombings were a militant takeover of advanced Western technology, and an attempt to use this technology to sear the hearts and minds of heedless Westerners with anti-Western rage at the global costs of Westernization and U.S. foreign and domestic policies in particular.

Then, as we met again in August 2002, U.S. voters and armed forces were being prepared for an invasion of Iraq and a continuing occupation of Afghanistan in terms that most of us, as scholars of the modern Middle East and North Africa, found specious. And, as we go to print in 2003, the causal links between 9/11 and Saddam Hussein are collapsing like poorly wrought tin passing as steel. In a story often pushed to the background of war coverage, the United States' staunchest ally in the region, Turkey, has been transforming its internal terms of debate and reform, and its foreign policies, in terms that are increasingly Muslim, and straining for autonomy from NATO and the United States. The country that once sent its troops to fight and die alongside U.S. troops in Korea, and in the winter of 2001 sent troops to serve in Afghanistan, refused to open its airbases to facilitate a U.S. invasion of Iraq from the north. In July of 2003, Turkish politicians were still refusing to send Turkish troops in to support U.S. forces in Iraq; in the words of one national leader, "Turkish soldiers should not be human shields for American soldiers" (Temel Karamollaollu, quoted in the Turkish Daily News online edition, "Political Parties against Sending Troops to Iraq," July 23, 2003). Some observers have drawn a direct line between the rising prominence of moderate Muslims in Turkish politics (first as reformist mayors of Istanbul and other major cities, and then as politicians on the national stage pursuing diplomatic contacts with Islamic regimes), and Turkey's reluctance to wage war on Iraq. They articulate the fear that one of our "secular" allies in the region will become a haven for "Muslim fanatics"—even as Turkey struggles to comply with European Union conditions for full participation in the E.U. (see Turkish Daily News online edition, "Turkey Adjusts Press Law to EU Standards," July 23, 2003).

In fact, Turkey has a long history of adapting Western ideas and technologies to its own internal purposes, and of moderating both Western ideas and Muslim ideas to create compounds of modernity closely tied to regional and local realities, and fueled by active trade economies and diplomatic wrangling with Western powers. Turkey also stands as an object lesson in regime change, first from empire to nation-state, then to its own tutelary regime under a reformist strongman, then to multiparty secular democracy, and now to a democracy that can accommodate religious beliefs informing political action. Ottomans' and then Turks' insistence on setting their own terms for modernity, including how, when, where, for what reasons, and in what quantities their people would communicate with one another, is a consistent theme from the outset of their efforts at modernization. Here I present the prelude to a regime change that proved important not only for who held ruling authority but also for who had voice in what the state should be to its subjects and later its citizens. This prelude played out in the most ordinary of ways—family magazines, discussions of fashion, children's schooling, good nutrition, and gossip—and as such, its themes were carried forward seamlessly into the otherwise startlingly new national culture of modern Turkey.

*** Empire to Nation-State

Historians and social scientists writing on Japan have long referred to the period from 1895 through 1945 as the "fifty years war." This term denotes an era when the Japanese state was either preparing for or actively waging war with one or more Western powers or its neighbors in East Asia. In addition, the era is portrayed as containing the fundamental

moments that defined how Japan would become a modern nation-state, since it encompasses the formation of a constitutional monarchy, and the development among ruling elites of the aspiration to become a stable, modern state, a leader in East Asia, and, ultimately, a world power. Japanese politicians and intellectuals devoted much of these fifty years to training Japanese subjects to become “modern,” devoted to the Japanese state. They sought to retrain the public into a new relationship with the state, inducing patriotism and individual responsibility for the Japanese public (Hane 1986; Gluck 1985; Jansen 2000).

One can draw similar brackets around spans of war-torn decades that cross regimes to encompass the massive political, social, and economic changes that comprise the foundations of the modern nation-states in the Middle East and North Africa. For each successor state of the Ottoman Empire, the bracketed era bears different dates. To construct Egypt’s timeline of modernization, for example, one could begin with the aggressive industrialization of Egypt in the time of Mehmet Ali (r. 1805–1848), or with the era of expanding public education for ordinary Egyptians under Khedive Ismail at midcentury, punctuated through the 1960s with efforts to restrict public education (under the British) or expand it (under the Free Officers). For Iraq, state-led reform began in earnest under the reformist Ottoman governor, Midhat Pasha in the late 1800s, and then lurched forward by degrees between 1920 and 1932 under the uneasy alliances between British Mandate forces, local notables from different ethnoreligious communities, and the imported royal family; then forward again with oil wealth; then the great leap forward in expanding public education under the early Ba’th regime of the 1960s. In both these cases, various education and literacy agendas were forwarded most often as complexes of selective adaptation of Western models combined with local Muslim traditions or, for minority communities both in and out of state systems of education, as Western models less critically adopted by Christian and Jewish educators born or educated in the West.

For the creation of modern Turkey, the roughly fifty years spanning 1876 and 1928 mark an era containing three major regime changes, starting when the Ottoman sultan aborted his brief experiment in constitutional monarchy in 1876, and ending five years after the establishment of modern Turkey as a secular nation-state in 1928. This era begins with a significant reinvestment of interest and energy in saving an empire from colonial and military encroachment, largely through weaving new ideas about Muslim identity and Islamic statesmanship into the fabric of Ottoman daily lives. It ends with a modern state whose leaders turned their backs in anger and mistrust on the people and ideologies affiliated with a modern Islamic polity, and with a charismatic state founder who in hundreds of speeches equated Islam with superstition and despotism at a state and individual level. At the same time that Ataturk was pushing Islam out of definitions of the public good—whether with speeches, or laws, or with the execution of clerics—he built popular support for radical changes by borrowing liberally from the tool kit of the despotic reform and liberation ideologies that preceded him in Ottoman territories. He assessed and utilized the resources of the people for a forced march to modernity. Islam was replaced with Turkishness as the prime identifier after 1923, but reform-minded elites continued to motivate people to serve state agendas by appealing to a public good and delineating how, precisely, individuals could serve it.

In this chapter I argue that a modern public sphere took shape in Middle Eastern state-society relations as early as the 1890s in the Ottoman capital of Istanbul. It differed from previous articulations of the public good in its reliance on a rapidly expanding print sector; rising enrollment in primary schools that produced potential readers and respondents to print production, increasing interaction among commerce, advertising, and etatism; modern wartime economies, and ethnic self-identification tied to patriotic values. As an exercise in comparative history, positing a modern Ottoman public sphere allows us not only to illuminate hidden or forgotten state-society

interactions in Ottoman society but also to interrogate relations of power both within and across state boundaries of the late imperial age. Central to the purposes of this volume, the Islamic despot, Sultan Abdulhamid II (r. 1876–1909) and his revolutionary successors, the Young Turks (r. 1908–1923), and the founder of modern Turkey, Mustafa Kemal Ataturk (r. 1923–1938), all based their policies in a rhetoric of the public good (Haniollu 1995, 2001).

One key marker in understanding the continuities and the real (as opposed to the fictive) breaks with the past in the late nineteenth century is the way Islam was defined and utilized by state actors. It was articulated as one element among many contributing to the public good of the Ottoman Empire and the Muslim world. By the beginning of the twentieth century, “Islam” was increasingly used as an identifier superseding the ethnicity of refugees pouring into the empire from the Balkans. Finally, by the Republican era, the ruling elite saw “Islam” as a wrapper in which to discard the inconvenient events and mentalites of the nineteenth century. Of signal importance in this articulation were cheap, and free, illustrated publications that had wide circulation in public schools, news kiosks, and home subscriptions beginning in the Hamidian era and continuing until today. Twentieth-century Turkey’s vibrant, complicated, and raucous print culture, with its overlapping spheres of contestation over the meanings of modernity, had its origins in the last decades of the reign of Sultan Abdulhamid II and has continued to the present.[6]

*** An Ottoman Public Sphere

Sultan Abdulhamid II took control of a state apparatus vastly changed in the decades preceding his reign. From the 1820s forward, Ottoman sultans and reformers recentralized the state apparatus, using for this purpose a number of pedagogical and quasi-pedagogical projects that also carried direct benefits, such as founding new school—from kindergartens through professional training academies—recruiting the military from among ordinary subjects of the empire, and using the latest communication technologies to recruit civilians among the populace into the new ideologies articulated in heterogeneous and often competing formulations by the empire’s ruling elites. Sultan Abdulhamid II took these practices and added the new technologies of communication as they became available—first, teaching more Ottoman subjects to read, then expanding the number and thematic breadth of publications for them to read, and also making abundant use of telegraphs and

improved postal technologies internal and external to the empire. As a result of these and other state initiatives, what one could reasonably call a public sphere had expanded exponentially by the late 1890s.

Since its articulation in 1962, Jurgen Habermas's notion of Offentlich-keit ("publicness" or "public sphere") has been tested, prodded, expanded, stretched to the breaking point to fit different cultural settings, and not infrequently dismissed as irrelevant. A number of scholars of non-European popular presses have also used the public sphere paradigm against non-European settings. In particular, Gary Marker (1985) and Louise McReynolds (1991) have both challenged and drawn on Habermas's model in their studies of the imperial Russian press in ways that are relevant to the Ottoman case.

Roughly stated, the Ottoman public sphere was compounded of three sectors: first, the state apparatus, divided into servants of the Porte and servants of the sultan, and the sultan himself; second, the press, divided into its larger, official and loyalist, group, and its smaller, opposition, group; and third, unofficial and private society. These three categories are useful only insofar as they mark out the boundaries of interaction among elements in each sector. The Hamidian cheap, illustrated press can be read today to understand the points of rigidity, flexibility, and permeability of these boundaries on specific topics. The late Ottoman cheap, illustrated press made a major contribution to the political public sphere because of the highly flexible practices of censorship, the cheapness of serial publications and their illustrated sections to aid unsophisticated readers, the high numbers of participants in its production, as well as the topics discussed. The critical thrust of this sector of the press was not, however, like Habermas's public sphere, aimed at the indigenous monarch but rather at loci of power and secrecy formally external to the Ottoman polity. By the late nineteenth century, this type of press was deeply interwoven into Ottoman daily political, social, and commercial life. Journalists and their readers engaged in long-running discussions of the modern empires of Europe and the Americas. Europeans and Americans, both external to and resident within Ottoman territories, and their clients among non-Muslim communities within the empire, played a central role in popular constructions of new Ottoman identities. Late-Ottoman journalists and their readers articulated criticisms of the rising power of Europe and the Americas to constrict both the material and mental, as well as the spiritual autonomy of Ottoman state and societal developments.

This chapter is based primarily on the cheap, illustrated press for families, including women and children, including not only serials but also pocketbooks and pamphlets of the official and (apparently) unofficial presses of Istanbul. The several thousand pages of print material to which I refer represent only a fraction of an extremely active print sector. The prevailing narrative, that Hamidian censorship was highly effective at suppressing critical rhetoric, is a myth. As with new print sectors in other state settings, Ottoman print capitalism was a compound of state support, entrepreneurship, and ideologies that both competed with and overlapped each other. As others (Gelbart 1987; Judge 1996) have documented for prerevolutionary France and China, Ottoman regimes of censorship until 1909 were effective in promoting reams of loyalist print but less effective in catching all criticism of internal events in the empire. Moreover, there is clear archival evidence of officials from ministries,

such as Interior or the Police, intervening to protect their client publishers from shutdown and exile by other ministries such as Education, which tried to use press laws and codes to silence critical response to their policies (Frierson 1996: 58—63). Understanding censorship as a continual series of negotiations allows us to see more complexity in the prerevolutionary Ottoman press than is allowed by most current historiography.

*** Family and Women’s Magazines

In addition to the women’s supplements to journals primarily addressed to men, publications entirely for women were founded with some frequency. Many folded after a short run, whereas others achieved an impressive longevity. Hanlmlar (Ladies), for example, was founded in 1882 and published only one issue, whereas Mtirtivvet (Munificence) published nine issues in 1887. Kadin (Woman), was one of several publications bearing this title, as opposed to “Ladies,” after the 1908 revolution. It began publication in 1911. Twenty-six biweekly magazines were issued before it closed in 1912. The hardy survivor of these magazines was Hanimlara mahsus gazete (Ladies’ own gazette, cited below as HMG). It not only thrived for fourteen years (1895—1909) but also published its own supplement for girls and a separate gazette for children, and was financially successful enough to found its own press. It circulated throughout the empire, Europe, and Russia. In its pages we can trace the results of Hamidian reforms in education as well as changes in the economic and social environment. Although Hanimlara mahsus gazete has been mentioned occasionally in earlier studies of Turkish women, it has generally been dismissed as an upper-class phenomenon, a publication severely restricted by stiff Hamidian censorship, and in any case unreadable by women—as the vast proportion of women were presumed to be illiterate In short, many have assumed it a pre-Kemalist failure, a fiction of literacy.

In fact, although the first writers for this magazine, and almost all writers for earlier publications, were indeed daughters of high civic officials and an occasional princess presented to the public with layers of protective attributions such as edibane (cultured, master/mistress of erudition), by 1896 professional journalists and schoolteachers almost entirely took over writing for the magazine, a trend that was to continue through the Young Turk and early Kemalist eras. The journalists, schoolteachers, and entrepreneurs of Hanimlara mahsus gazete and its less successful competitors, along with the writers of hundreds of letters to the editors and authors, have left us a record of how their attitudes and activities were increasingly tied to a general conception of the public good, patriotic service given through everyday civilian activities such as raising and educating children, dressing appropriately for leaving the house, and shopping for a family’s needs.

At the same time, the success of this magazine, as with its successors in the Young Turk and Kemalist eras, may also be attributed to state or high bureaucratic patronage, or at the least

to a savvy negotiation of censorship and self-censorship. The founding goals of the magazine, pronatalist and proeducation, also survived in the women's press through war and regime changes: to enable women to continue their education after leaving school and, more fundamentally to train women to be good Muslims (later, good Turks), good wives, and able mothers of loyal Ottoman subjects (later, patriotic Turks). Its scope rapidly exceeded this goal, or perhaps expanded the parameters of what being a good Muslim and a good mother entailed, as the parameters of Ottoman identity narrowed to exclude Greeks, Armenians, and other "suspect" subjects of the empire. Hanmlara mahsus gazete presented short items in nearly every issue about foreign women entering professional life, qualifying as doctors, forming unions, or being invited to join professional honorary associations. The editors frequently included statistics on the numbers of Western women in various professions, such as secretarial, accounting, architecture, publishing, and advertising. At the same time, these exemplars of Western progress were set against frequent discussions of Ottoman and Muslim women's productive and reproductive capabilities framed in an anticolonial rhetoric, presenting an Islamic critique of capitalism and Western mores, which were identified increasingly with minority communities within the empire. In addition, the greatly expanded public education system under Abdulhamid II was both a conduit toward and site for women's employment as schoolteachers, skilled workers, and footsoldiers in the front lines of the economic warfare over markets and manufacture.

As with other changing sectors of society and state, women's family life, their education, and economic life as both producers and consumers were ceaselessly debated by the editors, writers, and readers of this type of cheap, illustrated family magazines in the Hamidian era. Within the family, the women's traditional role—raising healthy, devout, ethical, and responsible children—was examined and adapted to the demands of a modernizing state and society to add to maternal duties those that fostered a sense of patriotism. Many of these roles were taken from family elders (commonly mothers-in-law, aunts, and grandmothers) and transmitted to relatively young women, new brides who were also heads of conjugal instead of extended households (Duben and Behar 1991). Even stepmothers, in the serial monogamy set into motion by death or divorce in many upper-middle-class and upper-class households, were given hundreds of column inches of prescriptive and hortatory literature to guide them in their family roles. The meaning of education also changed dramatically. It came to mean not only literacy and recitative memory but also knowledge of the life sciences, ethics, religious traditions, commerce, geography, and logical reasoning, knowledge of which allowed a woman to steer herself and her family through the ever more chaotic and crowded pathways of information available to Ottoman subjects. Women were also encouraged to learn skills that could turn them into economically productive members of society, branching out from traditional arenas of female entrepreneurship and piecework, such as the textile and clothing industry, into factory work and skilled technical work.

This latter trend became especially evident as the wars of the 1870s were followed by the wars of the 1880s, bringing Balkan refugees into the Ottoman heartlands and creating the necessity of incorporating them into state and society at all levels. Constant warfare at the frontiers translated at the local level into a steep drop in the male population and sharp rises

in the number of Muslims proportional to ethnic minorities throughout the empire (Shaw and Shaw 1977: 115–18). These Muslims complicated the pan-Islamic project of the Hamidian state in the sense that they had assimilated into Balkan society and had to be retrained for life in Istanbul and other refugee centers in Anatolia. Throughout these changes and the debates that accompanied them, religious and then ethnic identities became threads that were constantly reworked into new patterns and textures in the fabric of public life.

The late nineteenth century saw increasing numbers of new working women on Ottoman city streets, such as factory girls, teachers, and telegraph operators, cutting a wider swath in the streetcars, steam ferries, traditional manufacture, commercial districts, government offices, and the streets of the city. The state sought to regulate these new demographic currents through the ancient practice of sumptuary laws, prescribing frockcoats, tailored trousers, cravats and fezzes for men and the much looser category of “modest dress” for women (and postrevolutionary regimes used sumptuary laws well into the early days of the Republic to effect a new public order). The result was something similar to Revolutionary France as depicted by Lynn Hunt (1998: 224—49): men became drab and uniform in their dress, while women stepped over old boundaries and into new patterns of display. In Istanbul as in Paris, much to the delight or dismay of many observers, women fought bitterly among themselves over the semiotics of dress. To the dictates of reformist concerns shared by French revolutionaries and Ottoman loyalist reformers, we must add the multivalent, vexing question of Ottoman Christian identity and all that it came to convey by the turn of the twentieth century: wealth (seen as unfairly won by ethnic minorities), social prestige (gained by association with and protection of powerful foreign powers), potential treason and disorder (ethnic-nationalist movements, often supported by foreign powers), and religious competition (sparked by missionaries and their schools, orphanages, and hospitals). Increasingly these questions were put and answered on the streets of Istanbul and other port cities of the empire—arson, architecture, print capital, and patriotic consumerism reformulated an Ottoman modernity.

*** Editors’ Prescriptions and Readers’ Responses on the Streets

Modernist Islam was on display in Istanbul in its model factories, new governmental architecture, piped-in gas and water, and neighborhoods constantly being rebuilt in the spirit of Haussmann, Viviani, and the Vienna Ringstrasse, as frequent fires burned away Istanbul’s old wooden houses (Qelik 1986, 1992). The resulting cityscape conveyed in physical form many distinctive mixes of Ottoman Westernization and Islamic neotraditionalism that were constantly crafted and recrafted by journalists and their readers. The new stone and brick architecture was on display not only to pedestrians on the old, narrow streets and the new, widened boulevards but also to those plying the Bosphorus in caiques or the new steam ferryboats. The waterway in a sense opened the city to view and also became a dividing line between the most modern and the most traditional parts of the city. As earthquake, fire (both arson and accidental), and renovation remade the city, however, this sharp division between the new and the old, and the foreign and the familiar, began to be recreated in hairline fractures within neighborhoods with old wooden houses and artisanal quarters cheek by jowl with new mansions, apartment houses for conjugal households, and dormitories for

foreign and migrant workers—the latter being a new form of the old bekarhanes, or bachelor hostels, that had always vexed city administrators.

With the addition of display windows to new department stores in Pera and Galata, and the competition these stores represented to the cloth merchants and tailors of the old city, the nature of displaying goods and shopping was changed. Shoppers themselves also became part of street scenes, with goods displayed on their bodies. The presence of, among others, European capitalists, diplomats, engineers, doctors, merchants, teachers, and missionaries, combined with people's aspirations to link Western fashions in the popular mind with wealth, education, and power. The new culture of display seems, however, to have presented an immediate problem for Muslim women: how could they display their mastery and adaptations of the new European fashions, which included the new notions of health and physical fitness, while remaining in keeping with traditions of Islamic modesty, which dictated full and loose coverage from head to instep? By contrast, minority and European women were relatively free to adopt the new hats and corseted styles, and thus to display a streamlined, rocksolid profile of modernity—a profile that traced their cultural and commercial connections with European wealth, power, and privileges such as the extraterritoriality that had been exploited for commercial and political purposes by Europeans and their minority clients for centuries.

Recently, we have come to see the veil and its accompanying overcoat or sheet of fabric covering the body as an option increasingly chosen by religious Muslim women in secular states such as Algeria, Turkey, France, or Germany, or as a black bag dropped by ayatollahs and Revolutionary Guards over the bodies of Iranian women forcibly abducted into the modernists' past. In the Ottoman era, however, tesetttir (literally, being veiled, curtained, hidden, shrouded; or, concealed) was a custom, a matter for sumptuary law, and a street marker of ethnic identity among several different types of headgear. Its forms, primarily a type of overcoat (ferace), or sheet of fabric ($araf), loose skirt and mantle or pelerin (also referred to as faraf), and a veil (yamak, pefe), were legislated by sultans, tussled over by police and women, and contested in ordinary, everyday encounters between women, and between women and men, on the street. These everyday encounters became increasingly aggressive and even dangerous as the veil took on new meanings, moving from a basic marker of ethnic identity and family status and honor to become also a means of display of fashion and of wealth in an increasingly monetized economy. Through richness of fabric, embroidery, ornamentation, and color in even the cheapest of cotton overcoats and headscarves, and in sheerness or strategic draping of the veil and overcoat, women's curtain from observation (pefe) had become a bold statement of identity and access to goods, as well as of the politics of shopping. As such, it became a contested object in arguments not only over standards of modesty but also against consumption of European and Christian goods and against adopting, wholesale, European fashions and behaviors.

In the last quarter of the nineteenth century, the upper-class uniform offerace and yamak, reinforced by the protection of livery, maids, and chaperones, began to appear more frequently on the streets, on the bodies of less high-ranking Muslim

women who were unaccompanied by chaperones and male servants. The wives and daughters of upwardly mobile bureaucrats, for example, as well as female journalists, schoolteachers, businesswomen, and housewives added to the numbers of middle- and upper-ranking women visibly active in the public life of Istanbul. Perhaps in an effort to cloak themselves against the effects of this unaccustomed visibility, women began increasingly to adopt the two types of garaf, a move that aroused the anger of ferace manufacturers and merchants who were losing profits to the new fashion, as the garaf took less fabric and time to sew (Issawi 1980: 305). It is perhaps precisely for this reason that it became popular with women, who were able to afford more variety in their outerwear, a variety that was both functional—as they were out in the dirt of the city more often—and more productive of varieties of display. The municipality of Beyiktay attempted to forbid the wearing of farafs, but to no avail as they gradually replaced ferace s for all but the most formal occasions such as visits to the palace (Tascioglu 1958: 23–24).

In 1900, the translator, journalist, and novelist Gulistan (smet posed a question for the readers of Hanmlara mahsus gazette (HMG): “Where does fashion come from?” Although she never really answered her opening question, she argued forcefully against the expense and wastefulness of fashion, but with compassion for its victims. They were either interested in fashion and were caught up in competitiveness and covetousness, or they ignored fashion altogether and were then subject to mockery and contempt. Her only recourse was to recommend moderation—that women seek harmony and appropriateness to their own persons in their choice of clothes, in essence arguing for timeless fashions immune to the latest trend from Paris, and thus requiring less frequent expenditure (HMG December 9, 1900: 3).

In the next issue of the same magazine, the journalist Mustafa Asim related a Salonican Frenchwoman’s description of the Istanbul two- piece $araf and pe$e as revealing and highly ornamented with braids and laces, and thus out of keeping with Islam—not all that different, in fact, from Parisian pelerines and voilettes. The author agreed, adding his own opinion that these styles were not only improper but also expensive and soon outdated, leading to wasteful expense. “We are absolutely convinced that we are heading for great dangers if our women continue for the sake of show their practices of day by day reducing their veiling in imitation of each other, and increasing their ornamentation and toilette” (HMG December 13, 1900: 3–4). In this respect, women’s changing fashions were a burden on the head of household. In late-Ottoman sociopolitical dialect as elsewhere, the household was the building block of the nation and women bore ultimate responsibility for the soundness of the household (Duben and Behar 1991; Frierson 1995). Thus, in its transmutation from protector of honor to destroyer of household finances, the outerwear of Muslim women had come to endanger national security at its foundation.

*** Underpinnings of Modernity

The seemingly trivial matter of what people wore had profound effects on the Ottoman economy. Istanbul was especially suited to serve as a matrix for interwoven enterprises of factory, sweatshops, and home industries. Hundreds of thousands of Balkan refugees in 1877—1878 and from other conflicts through the end of World War I and the Turkish War of Independence made the city's labor pool vast and inexpensive. Coincidentally, these survivors of the flight to Dar ul- Islam brought with them fresh resentments against Europeans and Christians and aroused pity and anger among the Istanbul population, as well. The survivors fed a pool of cheap labor that, along with the new and growing infrastructures of communication and transport at the disposal of merchants, made "Istanbul particularly suitable for the emerging low-wage industries of the late nineteenth century" (Quataert 1993: 55—56). Modern factories and free-enterprise zones were key elements in Istanbul's display of its mastery of Western technology both at home and abroad through the endeavors of photographers extensively subsidized and patronized by Abdulhamid II (Qelik 1986: 35—38). These photographs were published in the dozens of papers circulating in the city in European languages, and in Arabic, Armenian, Greek, Persian, Turkish, Russian, and mixtures of all of the above (Frierson 1996: 49—58). Home-produced lace, rugs, and embroidered goods were also increasingly important for domestic and export markets, and shoemaking and ready-made clothing became growth sectors of domestic manufacture that relied on sweatshops, home manufacture, and advertising in the cheap, illustrated press (Quataert 1993: 56—57). Although at the moment the experiences and attitudes of these low-wage workers have been captured only partially and in the aggregate through statistics, foreign and Ottoman reportage, and strikes, for the middle-ranking participants in late- Ottoman manufacture, a familiar dynamic was at work in the textile industries. Just as the Hamidian government undercut the European monopoly on tobacco (the Regie) by not enforcing antismuggling laws, so it supported the emergence of new Muslim entrepreneurs and retailers to compete with Europeans, especially in Istanbul, through a variety of formal and informal means.

Ottoman consumers were increasingly urged to buy local, and popular writers hastened to support this effort by denigrating the quality of imported goods, and their poor ratio of cost to value. Even though, or perhaps because, Muslim manufactures were on the rise, feelings against minority landowners, merchants, factory owners, and retailers ran higher and higher as the century wound up. The cheap, illustrated press was intimately tied to the textile industry, as display space for Ottoman progress in manufactures; in advertising fabrics, ready-made clothes, and tailoring services; and in instructing the public what to wear, how and when to wear it, and, if necessary, how to sew it. Women's gazettes in particular were closely tied to fabric, fashion, and handicrafts from their inception. Merchants and manufacturers in textiles and other dry goods were the first to make use of advertising in the cheap, illustrated press, as in the first advertisement appearing in Terakki in 1879: "Osman Efendi sells all types of Trabzon bezi (linen or cotton cloth) at low prices in the number two room of Baltaci han in Tahtakale" (Terakki July 18, 1879: 4). This brief announcement was one of two in this particular issue, the other presenting a new book, written in "very clear Turkish," available at all newspaper stands, and entitled Ekonomi Politik. The editors promised that the book would be useful to both male and female readers, as it discussed how individuals could earn money and, on a society wide level, how wealth is attained.

By the 1890s, basic tailoring and embroidery were taught in magazines as part of a package of scientific housewifery that drew on traditional Ottoman handicrafts. Patterns for lace, embroidery, and clothing made up most of the illustrated sections of general interest magazines or women's and girls' magazines. The rest of the sections were generally taken up with "tableaux" such as a woman or girl in Western-style clothing displaying her educational interests or accomplishments. The illustrations came with instructions, and in 1901—1902 Gulistan (smet translated an entire Western sewing manual, including instructions to make the corset-requiring wasp-waisted fashions of the day. Serialized as feature articles over a period of several weeks, this manual was greeted with eagerness and expressions of gratitude, but ultimately not with unmitigated delight. Readers wrote to the translator in extreme frustration with the instructions, to which she responded that her translations were accurately transmitting what was in the original text, and, with all humble apologies to her respected readers, she was doing the best she could with a very difficult book (HMG October 31, 1901-May 15, 1902).

In the midst of Gulistan Ismet's sewing lessons, however, yet another article on the corset appeared, this time in the imperative "Do not wear the corset" (HMG April 17, 1902: 1–2). There were sixteen feature articles devoted to this topic over fourteen years in this magazine alone, and writers of hundreds of general articles on health, physical fitness, and exercise usually managed to fit in a bad word or two against the corset. Illustrated with diagrams of crushed ribs and dislocated organs, these articles must have left readers in a quandary as to how they were to fit their bodies into the wasp- waisted fashions featured under the heading of Son Moda Libaslar, or "Clothes in the Latest Fashion." Whatever lexical and pictorial confusion may have reigned in the press, the temper of the times was clearly for European fashions, especially if they could be bought in Muslim stores or sewn from fabric bought in Muslim stores. A number of state decrees prohibited Muslim women from shopping in Christian stores, a prohibition that was easily skirted or defied. Still, there are signs that this idea was in force in subtle and not so subtle ways.

Many goods were advertised in the press with illustrations and Greek, Armenian, Latin, or even Japanese characters to convey a foreign cachet. Muslim tailors and retailers received different treatment in the advertisement section of Hammlara mahsus gazette. They were presented, generally without illustrations, as editors' announcements or recommendations. This format was originally developed to announce the services and addresses of Muslim men of the new professions, describing in detail their Ottoman or Western degrees, honors, and honorable characters (Frierson 1996: 204—206). By the late 1890s, editors began to describe Ottoman female entrepreneurs in similarly glowing terms. Raide Hanim's bridal shop near the Bayezid complex, for example, was given an endorsement for her "appropriate" fashions at low prices: blouses, jackets, skirts, bridal gowns, dresses, and overcoats, as well as jewelry and supplies for banquets (HMG December 13, 1900: 6). In format, then, the Muslim purveyors of Istanbul fashions and services were on equal footing with the new experts in the critical fields of medicine and health, a significant promotion in professional status achieved entirely through their Muslim identities, honest characters, and national loyalties.

Journalists argued for informal boycotts of foreign manufactures, and for patronizing Ottoman stores and buying Ottoman, and more particularly Muslim, manufactures. The Young Turks reified these and similar attitudes in their National Economic Program in 1914, but consumers had learned to think and act protectively towards Ottoman products well before the 1908 revolution (Zurcher 1993; Toprak 1982). In this light, the Son Moda Libaslar and Tablo features take on an added meaning. Whereas these sections ostensibly gave models, descriptions, and sometimes instructions and patterns for the latest fashions, I could not find illustrations of veils or cana/s “in the latest fashion” portrayed on a human body, or indeed anything that would identify the women in more Westernized fashion illustrations as Muslim or even Ottoman minorities. The fashions shown on bodies, rather than sketched and hanging on empty air, were, in fact, Western women on display, and the constant iteration of the corset’s ill effects no doubt gave the thinking woman pause before imagining and then putting herself physically into some version of son moda libaslar. With the corset’s physical and psychological discomforts as a foundation, as well as an air of national betrayal hovering around any new allafranga, or European, suit, one has to wonder if the whole ensemble did not provide wear with all the comfort of a hairshirt woven of interethnic tensions and conflicting self-perceptions.

As if crushed ribs and low treason were not enough weight to put on such slight confections as embroidered belts and pin-tucked blouses, even a woman who had hidden her corseted body under the loosest of (or^af, on the street was bombarded with enough images of half-naked women in corsets to add an element of impropriety to the simple act of getting dressed. An illustrator’s convention of depicting European salonieres, actresses, and female authors with one sleeve dropping off the shoulder was frequently deployed in corset illustrations, implying that women who wore corsets were as suspect in their morality as the most bold and forward of European women. Unlike the economic protectionist agenda and the corset’s physically harmful effects, however, this latter point could cut two ways, either to make the new fashions unthinkable or to make them infinitely more entertaining to wear. Portraits of two or three generations of women in one family suggest that both perspectives held sway.

Whatever the individual Ottoman woman’s sense of her son moda libaslar may have been, she could create her own version of the latest fashions by watching and judging European women on the street and in vitrines from behind the anonymity of her veil and overcoat of honor. A second means of observation lay in the press, as she could be an entirely anonymous viewer of Western women who had been flattened, despite their exaggerated curves, into two-dimensional, monochromatic caricatures of fashionable creatures.

Tesettur and the Enforcement of Identity

Ottoman women’s clothes could have had any number of points of origin and transmission. They could have been imported ready-made, tailored out of imported or local cloth by Muslim or minority seamstresses, sewn at home with directions from women’s magazines, manufactured by factory workers from local or imported fabrics, and ornamented with lace made in Silivri by Jewish girls, or sewn with embroideries by women in Bosphorus villages (Quataert 1993: 56). By the turn of the century, the vast majority of middling to elite women of all ethnicities showed remarkable though not uniform similarity in their suits, dresses, and toilettes. Once in overcoats and headgear on the street, however, even minute details of appearance became ground for contests between popular will and allafranga aspirations. Police officials made various failed attempts to dictate and enforce height of hemlines and thickness of veils, but they were often compelled to withdraw their announcements or see them ignored altogether.

Mary Mills Patrick described an effort by the police to reinstitute thicker veils and longer skirts, launched with this notice: “The adoption of new forms of apparel has become a public scandal in Constantinople. All Mohammedan women are given two days in which to lengthen their skirts and to substitute thick veils for thin ones.” The police notice caused an uproar.

At sight of this notice, the wives of Turkish aristocrats, of ministers, and of high government officials united in general indignation. All the women’s organizations threatened to stop work unless the order was rescinded. The following day this very humble notice appeared:

<quote>

“We regret that, because of the meddling of certain old women, a subordinate of the police department attempted to regulate the length of women’s dresses. The police department regrets the blunder and cancels the previous order” (Patrick 1934: 303—304).

</quote>

Patrick’s observations about the continuing vitality of sumptuary laws and their inevitable corollary, difficulties in enforcement, are borne out by a directive from the Ministry of the Interior in 1901 in response to a police request to hire and train female police detectives. They were pushed to this innovation by women’s strategies for evading interrogation, which relied largely on Muslim female etiquette in refusing to speak with “strange men” (policemen), even as they walked the boulevards of the city in close-fitting fashions adapted from Paris and London (Frierson, 1996). Far more effective at holding the line against European fashion was day-to-day enforcement on the street. Selma Ekrem, granddaughter of Namik Kemal, suffered constant harassment over her beloved hats; here, she was accompanying her elder sister who was that day gladly wearing her garaf and veil for the first time:

We left the house, mother and Abla in their tcharshafs and Beraet and I walking behind in our hats. Abla had thrown back her veil and her face was proud and self-conscious. We walked from our ill-paved street to a steep hill lined with little shops where the pounding of hammers filled our ears and the windows were cluttered with shining copper kettles and bowls. The copper drew me to it when suddenly I heard angry voices in my ears.

“To what days are we left? Women going about open to the world! Hey, hanim, do you want your daughter to go to hell? Cover her face!”

I looked into the angry eyes of a turbaned hodja [sic] who was waving a finger at Abla. We quickened our pace but the hodja was following us threateningly.

“It is the like of you who bring ruin to this nation! Imitating the Christians, showing your face!” the hodja screamed out.

A crowd was about us, mother was almost running and Abla threw down her black veil over her face. We children were hurrying along but I felt my heart turn blazing hot with fury. Why should that old priest interfere? By what right should he chase us and heap maledictions on our heads?

“What is it to you, you narrow-headed priest!” I screamed back, but mother dragged me away so fast that my words fell on the dumb stones. But my anger could not be pacified with my broken words. I wished I had been big and strong and had crashed my mother’s umbrella over that hodja’s [sic] head. But the crowd would then have closed over me and crushed me as the sea crushes pebbles into sand (Ekrem 1947: 180—81).

There was clearly a class component to this encounter. The Ekrem family were long-time residents of wealth and modernist standing in their neighborhood. More glaringly apparent than any criticism of consumption habits, though, is the hoca’s rage that this mother is dressing her daughters like Christians, and in so doing abandoning the good fight for Muslim female integrity and beauty on its own turf and in its own terms, as defined against the standards set by minorities and Europeans with their myriad unfair advantages and suspect morality.

*** Politics in the Latest Fashion

Muslim women exploited their ability to be anonymous as well as their female identity to achieve political ends. They acted as couriers for opposition groups in the empire, concealing correspondence, and probably banned newspapers and books as well, under

their inviolable overcoats. Women's protests over arrears in pensions and salaries were frequent, furthermore, and were generally expressed both vocally and as written petitions stuck onto the points of umbrellas and shoved through the railings of iron gates locked against them in front of modern ministry buildings. One foreign resident spoke with admiration of their persistence during a pension protest: "they filled every corridor, blocked every door they could find, and made the building resound with lamentations and clamors for payment... the authorities bowed before 'the might of weakness,' and made the best terms they could induce the victors to accept" (van Millingen 1906: 250–51). With the rise of ethnonationalist terrorism and the wars of the last quarter of the nineteenth century and the first quarter of the twentieth century, public expressions of discontent became both more loaded with dangerous meaning and more direct in their anger at Europeans and their proxies, local Christians. The last years of the Hamidian era were marked by riots, strikes, and massacres, and it was this popular discontent that facilitated the constitutional revolution that brought the Young Turks to power in 1908.

At the very outset of their rule, the Young Turks attempted to use public protest to their own ends, as when they called for boycotts of Austrian goods after the Habsburg's formal annexation of Bosnia and Herzegovina on October 5, 1908. Religious students and Young Turk ideologues led demonstrations in front of the Ministry of War three days later, but the field of operations rapidly moved to the shopping districts and the docks as demonstrators blocked customers' entry to Austrian stores. On October 10, appeals began to appear in the newspapers, calling for revenge in the name of the Ottoman nation. For its part, the state fez factory increased production to make up for a projected shortfall in Austrian fezzes that, along with sugar, were the main Austrian export to the empire. Austrian Lloyd ships stood laden in the harbors of Istanbul and Salonica, as the lightermen's and dockworkers' guilds refused to unload their goods.

Although the boycott was rumored to be ending on October 10, on October 11 religious scholars and military officers urged a crowd of roughly 15,000 in Sultan Ahmet Square to continue. Although the retail boycott was not initially effective, the port workers' continued refusal to deal with goods from Austrian Lloyd ships began both to cost the Austrian firms and local merchants time and money, and to cut the number of goods reaching the shops. When the guild refused to obey the grand vezir's command to stop the boycott, the Young Turks stepped in and took over the boycott as a weapon both against the Austrians and in their struggles with the Sublime Porte and the Palace. On November 3, a committee was set up to run the boycott, and this committee launched a Union of Economic Warfare, in charge of issuing certificates for display to merchants who complied with the boycott, and denouncing those who did not. The leaders of the boycott demanded reparations from Austria for the annexation, ironically and aptly in the form of taking on part of the Ottoman public debt. Porters and lightermen continued during the winter at ports throughout the empire to refuse to disembark passengers, mail, or goods from Austrian ships, despite increasing pressure from the grand vezir and the minister of commerce and public works. A brief effort by Greek lightermen to unload the ships in Istanbul was rapidly quashed with forced oaths of allegiance. Efforts by Lloyd to bring in its own workers met with a warning from the minister of police that he could not guarantee their safety, and the boycott syndicate ultimately controlled receipt or refusal of all European goods coming in to the port.

When an agreement containing Austrian concessions was signed on February 26, the grand vezir ordered that Austrian ships be unloaded immediately, but the minister of interior argued that as it was the people's boycott, the people should be allowed to decide when it ended. The next day the porters accepted the arguments of a prominent Young Turk ideologue and agreed to end the boycott, but lightermen pressed for better pay and the removal of foreign workers. Ultimately, after a strike from March 4 to 11, all foreign shipping firms agreed to the lightermen's terms, bringing to an end this five-month contest among guilds, import/export merchants, ministers, shopkeepers, consumers, and foreign capitalists. Ultimately, the Kurdish porters used the Greek attempt to break the boycott against them, eliminating Greeks from the porters' guild, as they had eliminated Armenians in 1895 by more brutal means (Zurcher 1993: 86—88). In 1908—1909, they succeeded in defeating the Armenian plea for reinstatement and maintained their hegemony over the docks (Quataert 1993: 121—45).

The matter-of-fact conclusion of the following announcement in Kadin (Woman) on the third anniversary of the Young Turk Revolution shows that protectionist agendas survived the Young Turk revolution, and in fact became even more part of what journalists hoped would become a popular consciousness:

<quote>

To our honored readers...

In order not to be overwhelmed or deceived by the deep torrents of Istanbul trade; if you wish to make a visit that is pleasant, elegant, graceful, and good-natured ... if you would both encourage an Ottoman place of business and also be of service to our nation then, dear readers, we sincerely recommend that you visit the Nejidler Store, next to the Qomanto Han, for inexpensive, elegant, sound and beautiful $arafs, fabric for clothes, laces, cords and ribbons and so forth, all of these things inexpensive to an astonishing degree, our hope being that Ottoman money would stay in the Ottoman state (Kadin July 23, 1911: 13).

</quote>

*** Capital and Nation

From this point forward, disillusionment with Western goods, Western economic policy, and the social outriders of Western capitalism came to play increasingly greater parts in the construction of a Turkish identity in the press and in other public spaces. In the 1909 counterrevolution against the Young Turks, manned largely by religious students, the revolutionaries demanded an end to such Western intrusions as bars, theatres, photography,

and women’s presence in public life. In the course of the uprising, a woman’s club was burned down, and after the suppression of the revolutionaries, Hanimlara mah- sus gazete Publishing House, which had published political journals in the period 1908—1909, apparently ceased operations (Zurcher 1993: 100). Although the counterrevolution was suppressed and women continued to increase their public presence in new jobs and socially, for the first time in the company of their husbands, there was an acceleration in the move away from the sheer veils and colorful (ar^afs of the nineteenth century and toward the more puritanical and neotraditional (araf with a thick veil that could be worn down or thrown back. When the Young Turks allowed Muslim Turkish girls for the first time officially to enter the American Constantinople Women’s College, which Gulistan (smet had attended secretly and illegally during the reign of Abdulhamid II, the headmistress noted that the “fashion in Turkish dress at that time no longer included the gay colors and white veils of the early days; loose black outer garments and thin black veils were worn. It constantly thrilled us to welcome groups of these black-robed students, eager for a life of study. Once across the threshold, the black veils disappeared, and modern seekers for knowledge came to view” (Patrick 1934: 210).

The stringencies of revolution, wartime, and British occupation during the War of Independence heightened the closeness with which Ottomans scrutinized each other’s behavior and beliefs, and in novels Westernized women changed from figures of fun to traitors, showing “a primary preoccupation with the moral decay that Westernization creates in women, or rather a predilection for female characters as the ideal bearers of corruption and decay” (Kandiyoti 1988: 42—43). As during the Hamidian era, however, the women of the Young Turk era were as adept at negotiating with the paternalist state to open new avenues for themselves as the state was in finding new uses for women. Telegraph operators formed their own union and political clubs blossomed, even after one of them was targeted and destroyed during the 1909 counterrevolution. Hundreds of women became nurses and postal clerks, appointed by the government, and a group of women founded and ran their own dry goods store in Pera (Qakir 1993). The Young Turk era, as well as the physical misery of poverty and shortages experienced by Istanbul at war and then under occupation between 1911 and 1922, led to the dampening of women’s displays of beauty and fashion, and perhaps this closure in conjunction with women’s increasing public visibility as nurses, clerks, and public speakers can illuminate the rigidity, fragility, and quest for legitimacy of the postrevolutionary state. In the rising tide of antiWestern sentiment and the bitterness of defeat and occupation, the politics of display became too risky, and too costly. Sheer veils and streamlined, ornamented bodies came to represent a force that at a carefully measured distance had held enormous appeal, but which as an enemy and arbiter of national shame and destruction became intolerable.

*** Conclusion

In this essay I have argued that producers, consumers, and regulators of public information created a modern public sphere in the last decades of the Ottoman Empire, with its most consistent critical component being directed at Western states and societies. Looking West from the East allows us to question the degree of freedom of allegedly free presses in

Europe or elsewhere. The Western press, like its counterparts in the Ottoman Empire, was entangled in relations of power and structures of authority, and the very familiarity and commonality of human experience in the face of state structures built in conformity with or in apparent rebellion against Abrahamic world views common to rulers—de facto or de jure—of Europe, Asia, and Africa at the turn of the twentieth century. In an era of increasing intrusion by the Ottoman state on individual subjects' lives, print culture became a vibrant realm of contestation over prescriptive literatures, modern practices and ideas, and the duties and responsibilities (vaz- ife ve mesuliyet) of Ottoman men, women, and children in the struggle to save the empire. At the same time, this process was both ancient and extremely new. For example, prescriptive literature grew directly out of the adab/edeb or advice literature offered for centuries in the Mediterranean and Mespotamian regions before and after the advent of Islam. Classical adab literature, however, was written for rulers and their elite core of state servants, whereas Hamidian adab literature was written for the newly literate masses, giving them for the first time in Muslim history a key civic role, a patriotism, that required continuous exercise of will and independent reason, fluidity in social definitions of self and other, and active intellectual involvement in deciding the fate of the empire.

In modern Ottoman patriotism, subjects were presented a value set that reduced the ancient duty of loyalty to the ruler to one of many loyalties—to one's fellow Muslims, to Ottoman civilization, modernity, and progress, and against parts of Western culture that were deemed dangerous or weakening—and they were urged through the new world of widespread print culture to incorporate this value set into every act of their daily lives. The activities encouraged included bearing healthy children, "shopping local," refusing to become fashion victims of the West, and surrendering one's sons and husbands to lifetime terms of conscription on the shrinking frontiers of empire. Ultimately, ordinary Ottoman men, women, and children were made responsible for the public good of the empire and its subjects, regardless of ethnicity (though religious identity became increasingly important in including and excluding groups from perceptions of the public good), family relations or the lack of family ties, or any of the traditional ties to neighborhood, guild, or Sufi order. The state, in the persons of hundreds of reformers great and humble, reached into individuals' lives and turned these traditional loyalties toward the state and the larger society in crisis that surrounded most Ottomans in the cities of the empire. The revolutions of 1908, and the great project of building a modern Turkish republic in the 1920s, were able to succeed insofar as they did because their leaders inherited a population steeped through public schools and new urban architecture and print culture in modern patriotism, accustomed to the mental and physical processes of self-correction, and committed to becoming edibane, no longer meaning just cultured and civilized, but also modern and progressive.

* Part III: Religious Authority and the Common Good

** Chapter Six: the ‘ulama of Contemporary Islam and Their Conceptions of the Common Good

Muhammad Qasim Zaman

As scholars of Islamic law and the traditions of the Prophet Muhammad, as exegetes of the Qur”an and religious guides, the ‘ulama have shaped or contributed to the dominant religious discourses in Muslim societies for more than a millennium. Their position has varied in different Muslim societies, and their views—no less varied—have scarcely ever remained uncontested by rivals within or outside their ranks. Yet they have carried, and in many cases continue to enjoy, considerable influence in Muslim societies. The impact of mass education, new technologies for disseminating knowledge and information, and dramatically changed social, economic, and political contexts have led to a “fragmentation” of religious authority since the nineteenth century; and the traditionally educated scholars, the ‘ulama, have paid a considerable price on account of these changes (Eickelman 1992; Eickelman and Piscatori 1996: 37–79, 131–35). Yet they have also adapted to these changes in ways that have often enabled them to expand their influence, forge new alliances at the local, national and

transnational levels, and participate in new ways in religious and political discourse in contemporary Islam (Zaman 2002).

The ‘ulama self-consciously represent a complex scholarly tradition that they typically see not so much as being inseparable from Islam as constituting its very definition. It is with reference to this tradition that they view themselves and the world around them, express their ideas of an Islamic society and state, and elaborate their conceptions of the common good. The ‘ulama’s conceptions of the common good are important for understanding not just their thought but also the processes through which facets of that thought are articulated, as well as the public sphere in which they are constituted. Yet what these conceptions of the common good are and how they relate to the ‘ulama’s long-standing tradition—as well as to their contemporary contexts—are questions that have seldom been asked. This chapter represents a preliminary effort to address these questions in a broadly comparative framework.

*** The “Common Good”

The common good, what it consists in, and how it is best realized, are matters of contestation in any society—a contestation that is central to any adequate understanding of how the common good is itself constituted (cf. Mansbridge 1998: 3–19; Calhoun 1998: 20–35).[7] This suggests, as Calhoun (1998: 20–35, esp. 20) argues in his critique of communitarianism, that the common good cannot be seen “ahistor- ically in substantive terms—for example, as rooted in communities that always already exist or in Aristotelian virtues.” Given, moreover, that the conception of the common good is produced by ongoing public contestation, there can scarcely be a single conception of it, nor can it simply be equated with that which is best for most people. In the former case, it is the dominant group that ends up defining what ought to count as the common or public good. And in the latter case, that which best suits most people may not conform to the minorities’ sense of the good (Calhoun 1998: 29). The common good is best seen, therefore, as expressing itself in a variety and diversity of forms rather than in a single, idealized formulation (Calhoun 1998: 20–35).

How do these conceptions of the common good relate to the ‘ulama? They often exemplify many of the things that Calhoun and Mansbridge caution against in understandings of the common good. The ‘ulama typically imagine the common good as something discoverable rather than as a “social and cultural project.” If they can have their way, they would not like this concept—or any other, for that matter—to be a subject of contestation, as Mansbridge thinks such concepts ought to be. And many of their conceptions of society would be unsuitable for, if not hostile to, liberal conceptions of a civil society.

Yet, however much the ‘ulama might wish to be able to define the dominant discourses in contemporary Muslim societies, their voices are at best only one of several competing views and voices. And inasmuch as they are part of this landscape, and are often loud, even articulate, contributors to public debate, the ‘ulama help shape the public sphere. Indeed, their discourses contribute in practice to precisely the sort of contestation that constitutes not just the public sphere but also notions of its common good. For all the ‘ulama’s wish simply to discover and enunciate concepts rather than acknowledge creating them, it is precisely through a long history of discourse and contestation that the tradition in terms of which they define themselves has been constituted. The ‘ulama’s discourses in the present are not just articulated in contestation with other, rival voices in society but are also in constant dialogue and argumentation with the resources their own tradition offers.

A number of doctrines and methods in medieval Islamic jurisprudence concern themselves with what may be regarded as matters of the common good. In their writings on the principles or foundations of the law (usul al-fiqh), medieval jurists often posited five fundamental values as encapsulating the “purposes” of God’s law, the sharfa. These values—religion, life, progeny, property, and rationality—were based not on any explicit listing of their contents in the foundational texts but were derived, the jurists believed, through what Wael Hallaq has characterized as “inductive corroboration.” These fundamental values converged on the preservation, within the limits prescribed God, of the interests of human beings—their individual and collective good.[8]

The concept that best expresses this concern with securing the interests of the people, and around which much of the discussion on the purposes of the sharfa revolves, is maslaha (pl. masalih). Maslaha (or, more precisely, maslaha ‘dmma, “public interest”) can, broadly speaking, be understood as the “common good,” though it is more accurate to see it as a means, or a legal criterion, through which the common good is realized. Yet because considerations of maslaha usually lacked explicit justifications for themselves in the foundational texts, it was a rather controversial doctrine in medieval jurisprudence (Hallaq 1997: 112–13, 214). Those inclined to the use of maslaha did, however, come to find support for it in terms of the general purposes of the law—purposes that maslaha was thought to promote. And several medieval scholars, most notably the Hanbali jurist al- Tufi (d. 1316) and the Spanish Maliki jurist al-Shatibi (d. 1388), gave maslaha considerable importance in their writings.[9]

The doctrine of maslaha came to enjoy a new salience in modern legal thinking. Muslim reformers of the twentieth century extensively invoked it to justify reformulating their legal tradition. Among the best known of these was the Syrian Muhammad Rashid Rida (d. 1935) who, as Malcolm Kerr has shown in some detail, saw maslaha as the cornerstone of “a utilitarian methodology” in terms of which to reform the sharia (Kerr 1960, part 1: 101 and passim; Kerr 1966: 187–208). In this venture, Rida sought to muster the support of figures from the medieval Islamic tradition, reintroducing his audience to the works of Tufi and Shatibi.[10] He argued that

considerations of maslaha were far more pervasive in Islamic jurisprudence than was commonly recognized (Rida n.d.: 143–44).

I will briefly discuss maslaha with reference to certain scholars more recent than Rashid Rida. Although the idea of maslaha comes closest to the topic of this chapter, my concern here is much broader than maslaha in the conventional juristic sense. It is to understand the ‘ulama’s notions of the common good even when they do not necessarily use a particular term or phrase that translates as such, and even when they are not specifically discussing issues of law and legal theory.

Maslaha and the Contemporary ^cuiUmw,

In the work of Rashid Rida, as Kerr (1966) has demonstrated, maslaha or public interest becomes the principal means of effecting legal change. Rida argued that although matters of liturgical practice (‘ibadat) as laid down in the sharia remain immutable, God and the Prophet intended for the laws regulating the affairs and interactions of people in the community to remain receptive to change. The criterion for rethinking and change was the public interest or the common good. Tuff’s controversial view—that instead of necessarily basing considerations of maslaha on explicit indications in the foundational texts, the texts themselves should be interpreted in light of maslaha— was one that Rida found congenial to his own way of thinking (Kerr 1966: 194; on the break with medieval jurisprudence that this entailed, cf. ibid.: 196, and Hallaq 1997: 219).

Yet, as Kerr (1966: 203–208) points out, there is a highly instructive tension in Rida’s legal thought that reveals his discomfort with the implications of his own proposals. As concerned as he was with demonstrating—and making room for—the responsiveness of the law to changing needs, the case for such responsiveness threatened to make this law appear as a product of human effort, a matter of historical evolution, rather than as a divine blueprint. Rida could not have it both ways; and his discomfort with seeing the divine and sacred dimension of the sharia dissipated by the emphasis on its historical dimension is best illustrated by his polemics against those who seemed to him to emphasize the human and historical dimension of the sharia.

Rida’s dilemma has not quite been resolved by more recent scholars and activists. The Qatar-based Egyptian scholar Yusuf al- Qaradawi—a major figure among the contemporary ‘ulama—who has written on maslaha in addition to many other themes, seems to be aware of the dilemma but wants to steer clear of it.[11] His book, al-Siyasa al-shaliyya f daW al-nusus al-sharla wa maqasidiha (“Governance according to the sharia in light of the texts and purposes of sacred law,” 2000), offers a substantial discussion of maslaha. This book is part of a series of his writings that “treat diverse intellectual issues— of law and legal theory, faith and practice—where

the [true] path might have become obscured.” In clarifying these intellectual issues, the series focuses each of its published or planned volumes on one or more of the “Twenty Principles” enunciated by Hasan al-Banna” (d. 1949), the founder of the Muslim Brotherhood. [12] Qaradawi’s al- Siyasa al-shariyya is one volume in this series.

Qaradawi discusses maslaha primarily in the context of areas where, according to Banna”, one ought to act in accordance with the opinion of the ruler (imam/walt al-amr). Three such areas are identified: matters that are not explicitly regulated by indications in the foundational texts; matters on which several different options are available; and matters of maslaha (Qaradawi 2000: 65–98). Qaradawi largely follows the medieval jurist al-Ghazali (d. 1111) in characterizing considerations of maslaha as themselves being of three kinds: those for which the sharfa provides clear indications, and which therefore are clearly authoritative; those against which the sharta provides clear indications, and which consequently are clearly inadmissible; and, finally, those on which the foundational texts provide neither clear support nor reasons for rejection. Ghazali’s argument for maslaha rests on the sharta’s purposes—themselves classifiable as matters of “necessity,” important “need,” and finally, “amenity.” Foremost among these purposes are the five necessities of religion, life, progeny, property, and rationality that the divine Lawgiver is presumed most interested in preserving. It is around these issues that considerations of maslaha must revolve (al-Ghazali 1995, I: 257–59; Qaradawi, 2000: 76–80).

Maslaha, Ghazali is careful to note, is not just a matter of seeking that which is beneficial and warding off what is injurious. Instead, it signifies the safeguarding of the sharta’s aforementioned purposes (al-Ghazali 1995, I: 258). The criterion of what counts as maslaha is therefore provided by the sharta itself rather than by the people, for all that it is the latter who are the beneficiaries of the sharta’s concerns. Qaradawi concurs with this crucial qualification, but he also wants to make Ghazali’s category of the “necessities” that the sharta protects through maslaha more expansive. He writes:

<quote>£££If I were to add to Ghazali’s definition of maslaha, I would use his original formulation but say [the following]: “By maslaha, we mean safeguarding the purpose [s] of the sharfa. And the purpose [s] of the sharfa for the people are to protect their religion, life, rationality, progeny, property, honor, peace, rights and freedoms, the institution of justice and shared responsibility in [what ought to be] a model community, and everything [else] that makes life easier for them, removes oppression, perfects their character, and guides them to what is best in manners and customs, in [social] arrangements and in interactions.” I don’t think that our imam, Ghazali, would object to such an addition [to his definition], for it conforms to his goals in [showing] the link between maslaha and the purposes of the

sharfa; and what we have mentioned is, without doubt, a part [of those purposes] (Qaradawi 2000: 84).£££</quote>

It is uncertain whether Ghazali would have concurred with Qaradawi on this extended list. A more pertinent issue is how maslaha is the cornerstone—as it was for Rida—of Qaradawi's vision of an ideal Islamic society and state. Maslaha, Qaradawi writes, is central to codification of the law as well as to legislation on matters not regulated by the sharfa but necessary for the proper ordering of a modern society. Discretionary punishments need to be legislated, he says, to curb usury, bribery, usurpation of the rights of the orphan, neglecting prayers, harassment or assaulting of women on the streets, and other evils. "Sermon and admonition is not a sufficient deterrent [against such evils], and it is known that God restrains with [political] authority what He does not restrain through the Qur"an [alone]. There are hundreds of sins, forms of opposition [to the divine law], and wrongs that the sharfa has forbidden, or has commanded doing the opposite of, but it has not established a specific penalty for them; and so they need legislation" (2000: 95–96). The distinction between sin and crime, and between moral and legal infractions, collapses here. Qaradawi seeks the regulation of both through new legislation, and he sees the justification for such initiatives in maslaha—public interest and the common good.

Public interest likewise requires the codification of the law, as was attempted, Qaradawi says, by the Ottoman Majalla (1869–1876). Unlike the nineteenth-century Majalla, however, which was a partial codification of civil law on the basis of the Hanafi legal tradition, Qaradawi seeks a codification that brings together the resources of the different schools of law, even opinions that are no longer part of any recognizable or existing school of law. Such resources would include matters not previously regulated by the sharfa in terms of definite penalties, but the imam is now to exercise his discretion in how to implement them (Qaradawi 2000: 96). Yet although maslaha falls, for Qaradawi, within the purview of things that are to be left to the imam or ruler, the overall impression is that the religious scholars, the 'ulama, determine whether considerations of maslaha can legitimately be taken into account in a particular legal issue. The purposes of the shari^ca guide considerations of maslaha, of course, but only if there are no explicitly contravening indications in the foundational texts against the resort to maslaha. The scholars of the sharia, he implies, are best qualified to determine this (see Salvatore 1997: 202–204).

The question of possible contradictions between maslaha and the purport of specific sharia rulings is important, and Qaradawi devotes considerable attention to it. It is in this context that he defends the medieval Hanbali jurist Tufi against the criticism that he had ranked maslaha above even the foundational texts. Though Tufi did not always make this explicit, it is clear, Qaradawi says, that maslaha can override indications in the foundational texts only when such indications are not a matter of certainty as to their meaning. When, however, they are, there

can be no question but that maslaha must be subordinate to them, and Tufi never asserted otherwise (Qaradawi 2000: 145—50).

Qaradawi’s reading of Tufi enables him to navigate between what he takes to be two extremes concerning maslaha. On the one hand, there are those who exclusively follow the literal meaning of specific rulings, ignoring their broader aims and thereby keeping the law frozen in time (Qaradawi 2000: 214—27). At the other extreme are those who profess to base themselves only on what they discern as the larger purposes of the law irrespective of whether such putative purposes contradict the explicit injunctions of the foundational texts. Tuffs views are taken, without justification, as a major justification by such people (Qaradawi 2000: 228—42).

The third group, among whom Qaradawi no doubt counts himself, comprises the “moderates.” They base themselves on the specifics of the law, without however, losing sight of its larger purposes; and they are guided by considerations of public interest, but only insofar as such considerations are not contradicted by the foundational texts. And it is here, with this group, that medieval scholars like Tufi and Shatibi are held to belong (Qaradawi 2000: 243—64). This is the group that, for Qaradawi, ensures the receptivity of the sharia to change and to the common good through the resources provided by the sharia itself rather than at its expense.

If Qaradawi thinks that his discussion of maslaha avoids Rida’s dilemma, he doesn’t say so. Indeed, Rida is conspicuously absent from Qaradawi’s discussion, even when he lists the names of the major modern scholars of Islamic law (fuqaha al-asr) who have written on matters of maslaha (Qaradawi 2000: 94–95).[13] This remarkable absence can scarcely be imputed to anything but Qaradawi’s distaste for Rida’s position on maslaha, whereby it had essentially become a none too subtle means of circumventing the legal tradition itself.

Rida’s name, however, is not the only thing missing from Qaradawi’s discussion. Given that Qaradawi’s book is on “governance according to shari^ca norms” (siyasa shaliyya), it is striking that he says so little on the question of how the ruler’s authority and his exercise of maslaha are regulated. Qaradawi would probably respond to this objection by noting that, unlike Rida, he sees considerations of maslaha firmly embedded in the foundational texts, and that this removes the dangers of willful manipulation on the part of the ruler or anyone else who wants to invoke maslaha for self-serving ends. More generally, and in the spirit of other writings, Qaradawi refers to the ‘ulama as a check on the ruler’s “governance according to sharia norms.” Yet, if sharia norms in themselves are not necessarily a check on the morals of society—as he himself acknowledges, and which is why he wants new penal laws to be enacted even where the sharia had previously done without them—the norms of the

sharia would be even less of a constraint on the ruler's authority.[14] And how far the 'ulama can constrain the ruler is anything but certain.

For all his apparent awareness of the danger that maslaha can become a plaything in the wrong hands, that is precisely the danger that lurks in Qaradawi's delineation of "governance according to sharia norms." It is this danger that has led other contemporary 'ulama to take a more stringent view of maslaha. The ambivalence toward maslaha comes out strongly in a detailed legal opinion on the legitimacy of land reforms by Mufti Muhammad Taqi 'Uthmani, a former judge of the Shari'at Appellate Bench of the Supreme Court of Pakistan and the Vice President of the Dar al-'ulum of Karachi, a major Deobandi madrasa of Pakistan ('Uthmani 1993a). With its categories of the lawful and the forbidden, Islam regulates the means through which property might be acquired or augmented, he says; but if property is acquired through lawful means, then there is no restriction on the amount acquired ('Uthmani 1993a: 20). Taqi 'Uthmani acknowledges that an "Islamic government" (Islami hukumat) would be within its rights if it were to impose some restrictions (for example, on the amount of landed property that one can own) in view of public interest. But such restrictions, or the usurpation of property beyond a prescribed limit, must only be temporary, not permanent. He writes that permanent restrictions of this sort would imply that the government was making forbidden something that was explicitly allowed by God ('Uthmani 1993a: 24–27). Furthermore, it is not enough merely to invoke "a vague justification in the public interest" for either the limitation on the ceiling within which one can own property or for the government's takeover of property beyond that ceiling; to be legitimately undertaken, such measures require a careful determination of "necessity" (darura), and this necessity is only applicable in life-threatening or other extremely desperate straits 'Uthmani 1993a: 115—16, 139; quotation from 116).

All this might suggest a deep-seated unwillingness to allow any substantial change in the legal tradition. Yet it is worth noting that Taqi 'Uthmani never explicitly says that more substantial change is inadmissible, just that such change does not seem to him to be necessary in the instances in question. The overall framework in which the Deobandi (and many other) 'ulama of South Asia typically operate is that of taqlid, adherence to the established doctrines of their own school of law—which in their case means the Hanafi school of Sunni law.[15] Yet while insisting on this overall framework, 'ulama like Taqi 'Uthmani are careful not to rule out possibilities of jihad—creative rethinking in light of the foundational texts to arrive at new rulings (cf. 'Uthmani 1993b). But unlike the "modernist" interpreters of Islam, who are typically in charge of formulating state policy in Pakistan, 'ulama like Taqi 'Uthmani are reluctant to invoke ijtihad or maslaha as an excuse for stepping outside the established juristic tradition except in the most pressing circumstances.[16] Their objections against the indiscriminate use of "necessity" are similarly motivated. This distrust is not merely a continuation of the ambivalence that even medieval jurists sometimes felt toward maslaha. It is, rather, a facet of the misgivings toward the state that many 'ulama feel, an attitude with deep medieval roots (Zaman 2002: 87–110). Considerations of public interest and the common good thus become suspect not just because their relationship with the foundational texts might be tenuous. To many 'ulama, they are also suspect because the state and its

modernist elite can easily wield them for their own ends. To Taqi ‘Uthmani, as to many others all the way back to Ghazali, the good in maslaha is defined by the sharfa. The sharfa’s good is meant for the people—and it is common or public in that sense—yet it is not the people who determine it. The importance of the common good in the overall vision of the sharfa is recognized and indeed stressed, but any such idea only holds inasmuch as it is grounded in the sharfa.

*** Contestation on the Common Good: Illustrations

Is there more to the ‘ulama’s conception of the common good than the assertion, on the one hand, that the sharfa is concerned with it and, on the other, that modernist constructions of the common good violate rather than further the sharfa’s concerns? Where, in other words, might we locate more specific discussions of matters relating to the common good? I argue that the ‘ulama’s general and often vague assertions on how the sharCa secures such good are not the primary site of their discussions on these issues—although such assertions, too, cannot be dismissed lightly. Instead, their conceptions of the common good, and their contribution to the further articulation of such conceptions, are to be located in how they seek to deal with particular issues and specific problems in their societies.

My first example concerns arguments about the dissolution of marriage in India. In colonial India, Muslims were a minority, and they remain so in contemporary India. In both contexts, issues relating to the laws of personal status (marriage, divorce, and inheritance) and especially the dissolution of marriage have caused severe controversies. In colonial India, the issue often centered on the absence of Muslim judges who, the ‘ulama believed, were required for the implementation of sharfa rules on matters of personal status. Many ‘ulama had argued that in the absence of such judges, even simple legal provisions of the sharfa about the dissolution of marriage could not be implemented. The implications of such a view were unbearable for many Muslim women in the Punjab. Because Hanafi law considered apostasy one of the grounds for the dissolution of marriage, many women apos- tasized in the 1920s in order to end undesirable marriages. Eventually the leading Deobandi scholar Mawlana Ashraf ‘Ali Thanawi (d. 1943) devised a formula to make it possible for undesirable marriages to be dissolved by recourse to certain provisions in the Maliki (as opposed to the Hanafi) school of law, even as that formula closed the door of apostasy from Islam (Zaman 2002: 21—31). In the 1980s, issues of personal status again came to the fore with the Shah Bano controversy: the Indian Supreme Court ruled that a divorced Muslim woman had the right to demand alimony from her former husband, even though the sharfa made no such provision. This initiative of a Hindu-dominated court, which also involved the court’s venturing its own reading of the Qur”an in justifying its verdict, had considerable support from India’s Muslim modernists, but it was vigorously opposed by the ‘ulama; and it was the latter who played an important role in eventually having this decision reversed through parliamentary legislation (Zaman 2002: 167—70).

Neither of these instances does much to inspire great confidence in the ‘ulama’s concern with the general community good. Ashraf ‘Ali Thanawi’s initiative made it easier for women to secure the dissolution of a marriage, but he took this initiative only after Muslim women had begun to renounce Islam in order to dissolve their marriages. And the Shah Bano case illustrated that safeguarding the sharfa norms was a greater good for the ‘ulama than protecting the rights of indigent women. Yet both of these episodes make better sense when we recall that the common good for the ‘ulama lies not just in following the sharfa but also in making the sharfa itself the arbiter of the common good.

If the ‘ulama’s common good is not a sum of individual interests, a recent initiative of the Indian ‘ulama reveals considerable recognition of the need to make a greater effort to reconcile the sharfa- centered common good with individual interests. The Muslim marriage contract is notorious for the ease, and indeed the arbitrariness, with which it allows the husband to divorce his wife. Many modern Muslim states have taken measures to restrict this arbitrariness, though the ability to end an undesired or undesirable marriage remains unequally distributed between women and men. In 1995, India’s Islamic Fiqh Academy gathered leading Indian scholars to deliberate on the question of whether it was permissible from the Islamic legal viewpoint to add specific clauses to the standard contract of marriages in the interest of ameliorating the rights available in a marriage to men and women (Qasimi n.d. [ca. 1992]). The ‘ulama freely recognized the social ills entailed by irresponsible resort to divorce, and they submitted formal responses to the questions posed to them in this regard by the Fiqh Academy. These responses, together with some of the ensuing discussion, were later published in the form of a book on the question of “a conditional marriage contract” (mashrut nikah).

Not all ‘ulama were equally eager to see much change in the existing contract, and they invoked different legal authorities to defend or criticize the various proposals. There was genuine debate on the matter; and many members of the seminar convened to consider the question eventually agreed that as long as the basic goals of marriage or the basic rights conferred by the sharfa on the spouses were not violated, additional conditions could validly be attached to the marriage contract. Not all ‘ulama agreed on what this meant in practice, although many took it to mean that a woman could add the condition that her husband would not object to her pursuing a career, that the amount of the dower payable by the husband to his wife would be substantially augmented if the husband divorced her without valid grounds, and that the right to end the marriage in certain circumstances would be delegated by the husband to his wife (or to local scholars or notables) at the time the marriage was solemnized. A model marriage contract, drafted for further deliberation, was sent to leading ‘ulama and also made part of the published volume in order to elicit further commentary and debate.

Debates of this sort do not necessarily lead to dramatic results. Even so, answers to a question such as the Fiqh Academy had set for itself are not necessarily predictable, and the ‘ulama of different contemporary societies or of the same society disagree among

themselves and with others on how to approach them. They often approach them, however, in the form of public or publicized debates, as in the case of the initiative to rethink the marriage contract, or by mobilizing public opinion, as in case of the Shah Bano controversy. The debates on such matters and the public contestation that they generate may be a more significant contribution to the discourses on the common good than the precise conclusions that emerge from them.

Examples of such public contestation—on where the common good lies and how to realize it—are varied. For instance, while Yusuf al- Qaradawi would like to see a ruler “governing according to sharfa norms” legislate penal laws even for moral infractions and thus extend the reach of the sharfa in new, unprecedented areas of individual and collective life, Pakistan’s Taqi ‘Uthmani resolutely seeks to restrict the scope of maslaha even when resorted to by an Islamic state. And Taqi ‘Uthmani’s elder brother, Muhammad Rafi’ ‘Uthmani, who is the president of the madrasa at which they both teach in Karachi, seeks to restrict the interference of the state in the lives of its citizens even further. The latter’s views, discussed below, shed further light on conceptions of the common good and the ‘ulama’s ambiguities in this regard.

Referring to the sharfa law of retaliation (qisas) and blood money for personal injury (diya), which Prime Minister Nawaz Sharif had introduced as part of his initiatives toward the implementation of the sharfa during his first tenure in office (1990–1993),[17] Rafi’ ‘Uthmani argues that the state should have little to do with such matters. It is the right of the injured party or his kin to decide whether they want retaliation for a death or injury, or monetary compensation for it, or else that they want to forgive the offending party altogether. Such decisions belong to those who have been affected directly by a crime, Rafi’ ‘Uthmani argues, and it was one of the grave injustices of British colonial rule to make the state an arbiter in such matters. Having the state take up such matters means that the aggrieved party often gets no recompense: the corrupt and inefficient courts fail effectively to punish a crime, and there is no question of monetary compensation even if the aggrieved party should desire that option. Conversely, because the offender is thrown in jail, his family also loses what may well have been its sole breadwinner. Both families thus suffer on account not only of the crime itself but also of the state’s arrogation to itself of the right to settle it. But the sharfa laws of qisas and diya allow for the matter be settled among private individuals or by their ‘aqila. Traditionally, the ‘aqila has meant the family, kin, or tribe of the parties to a dispute; but, as Rafi’ ‘Uthmani notes, a labor union of which the offender (for example, a taxi driver guilty of involuntary manslaughter) might be a member, may equally be seen as an ‘aqila. Such an organization may well be made responsible for the payment of the blood money if the offender himself is unable to do so. Not only does this enable the payment to be effectively made, he writes, but the members of the trade union would now also come to have a vested interest in preventing crimes or acts of negligence for which they might end up becoming financially liable (‘Uthmani 1999:10–25).

This is a remarkable vision of the practice of the sharfa. It is remarkable for how little it concedes to the changed modern context in which the sharfa is to be implemented, except in such things as the innovative equation between the ‘aqila and the labor union. The state is, of course, the guarantor of the implementation of the sharfa: in the matter of qisas and diya, it sees that private claims are adequately settled between the parties concerned. But the state is otherwise external to such settlements and the common good is seen not just in the proper implementation of the sharfa but also in the state’s not intruding beyond what is essential for such implementation.

Rafi’ ‘Uthmani’s vision of the practical working of the sharfa is also remarkable for what it leaves out: the question of the abuses to which the private settlement of claims might lead. There have been cases in Pakistan where the killing of a girl by her own father—because the unmarried girl was suspected of pregnancy—was “forgiven” by the victim’s immediate kin (Dawn, July 27, 2002b). In another incident that took place in the Punjab province of Pakistan in July 2002, eight young girls were to be given “in marriage” to a rival family as part of a settlement—that also involved a large sum of money—in exchange for which the receiving family would forgive the murder of two of its members. Four members of the family providing the girls and the money were on death row for these murders. The understanding was that the state would not execute them provided that the plaintiff family forgave the defendants. This deal, brokered by local notables, was said to follow ancient custom in its surrender of virgin girls to the rival clan as part of the price of reconciliation. The state was expected to honor this arrangement as a form of blood money (diya). As it turned out, the state intervened as soon as the incident was reported in the national press, and the grooms of the rival clan were forced to divorce the young girls before the marriages had been consummated. Significantly, however, the state’s intervention was only against what was seen as the local custom involving the girls, not against the rest of the settlement, which the representatives of the state in fact endorsed. Thus, even as it voided the “marriages,” the state recognized the right of the parties to settle their own dispute privately, that is, to forgive the murderers on the basis of monetary compensation (Dawn, July 24–27 and 29, 2002; News, July 24 and 26–27, 2002).

Rafi’ ‘Uthmani would probably approve of the intervention of the state in the aforementioned incident and take it as indicating the proper limits of such intervention—in this instance, against custom so the sharia can do its work. But the ambiguities in the sharia’s own practice in such instances remain unaddressed. This practice not only divests the modern state of some of its basic functions; it also divests particular individuals—for instance, the girl who was murdered by her own father, or the eight girls who were part of the settlement agreement in the murder case—of recourse against their fate. How the common good is being furthered in instances such as these, apart from the fact that the sharia is supposedly in effect and that that is deemed to be a good in itself, remains unclear.

The question of the role that the state is to play in making and keeping a society “Islamic” is only one of the countless issues relating to the common good on which the ‘ulama disagree. Of these, I take as my final example in this section the question of what an Islamic society looks like—that is, a society which is the embodiment of the common good. Qaradawi (1996) addresses this question explicitly and at length in a book entitled Malamih al-mujtama^c al- islami alladhi nunshiduh (Features of the Muslim society that we seek).

Qaradawi writes that there are two sets of ideas of that Muslims ought to rid themselves on their path to an ideal Islamic society. The first kind are those which Muslims have acquired in the course of their intellectual decline. They include such things as confusing reliance on God with indifference to one’s condition, predestinari- anism, and a servile imitation of earlier legal opinions. The second set of ideas derives from the modern West, and they have come to define everything “relating to religion and the world, man and woman, [standards of] excellence and degradation, freedom and rigidity, progress and backwardness, the permissible and the forbidden” (Qaradawi 1996: 85–86). It is for the ‘ulama and the intellectuals of the “moderate school” to lay down properly Islamic norms to take the place of the prevalent non-Islamic ones. They ought to do this by “bringing together [ideas derived through] reason with [those drawn from] the transmitted tradition; religion and the world, the ordinances of the sharfa, and the needs of the age” (Qaradawi 1996: 86—87; quote from 87).

Qaradawi’s vision of Islamic society not only has a moral foundation, there is no real differentiation between moral and other norms in it. As he says with some emphasis, “There is no separation in this society between knowledge and morality (akhlaq), art and morality, economics and morality, politics and morality, or between war and morality. Morality is, indeed, an element that guards all facets of life—the small and the large, the individual and the collective” (Qaradawi 1996: 110). This idea returns us, of course, to his view that even moral infractions should be subject to penal regulation. Yet Qaradawi seems not to think that this vision of an Islamic society might scare some people away from it. On the contrary, despite the high degree of moral regulation in such a society, he is clearly at pains to depict it in what he considers appealing colors. His emphasis on moderation, and on combining the old and the new, is part of that effort. But unlike most other contemporary ‘ulama, let alone the college- or university-educated “Islamist” (or “fundamentalist”) activists, his vision of an Islamic society also includes attention to such things as forms of entertainment in that society. “Entertainment and the arts are among the most complex of issues relating to the Islamic society,” he writes, for people have fallen between the extremes of either imagining their society in ascetic terms or, conversely, of losing sight of all constraints in pursuit of pleasure (Qaradawi 1996: 265–66; quotation from 265).[18] Again, Qaradawi invokes a path of moderation, and suggests that such moderation has ample room for legitimate arts and acceptable forms of entertainment. Even listening to music, he argues, is not forbidden, so long as it is enjoyed within limits. The “ancient jurists”—of whom his prime example is Ghazali—were more permissive of music than latter-day jurists, and this reflects a general preference of the former for that which was easier for people to follow as contrasted to the inclination of the latter-day scholars for the more demanding course of action in all matters (Qaradawi 1996: 305). Extremes are forbidden

even in religious practice, he says, which makes self-evident the avoidance of extremes in matters such as entertainment (Qaradawi 1996: 301). As to where the limits lie in listening to music, and how to navigate the proper path in this respect, Qaradawi (1996: 298—301) cautions against anything that excites the passions, content that violates the teachings of Islam, or anything that is accompanied by such forbidden matters as drinking or the free mixing of the sexes. In other respects, he says, “every listener is his own jurist and his own mufti” in deciding where the precise limits of his action ought to lie (Qaradawi 1996: 301).

At least in Qaradawi’s extended and self-conscious attention to arts and entertainment, his vision of an “Islamic society” can be read as a rejoinder not just to Islamist views of a morally upright and puritanical community but also to scholarly depictions of what Olivier Roy (1996: 195—97) has characterized as Islamism’s “bleak society.” Yet many Islamists and ‘ulama would find Qaradawi’s Islamic society altogether too permissive, making every listener of music his own mufti simply too dangerous. Mawlana Taqi ‘Uthmani, for instance, is scarcely among the most stringent of the Pakistani ‘ulama, yet in his madrasa’s monthly journal, al-Balagh, he has repeatedly decried the media’s role in corrupting the country’s youth through music and film, and lamented the irony that an “Islamic state” should not just tolerate but promote them on national television (see ‘Uthmani 1994: 7—59). Again, what Qaradawi would see as part of the common good in his Islamic society is, in this respect, quite different from Taqi ‘Uthmani’s vision of either that society or of its goods.

*** Public Contestation, the ‘Ulama, and the Muslim Public Sphere

The ‘ulama usually agree—with each other and with their forbears— that the common good lies in following the sharfa, and that it is from within the resources provided by the sharfa that the common good is further defined and sought. Yet, as we have seen, the ‘ulama often have very specific notions of what the common good is or how it is to be realized in a particular situation. They differ not only with non-‘ulama but also amongst themselves, and not always with civility. Even if sometimes lacking civility, these debates are usually very public. The ‘ulama are not the only ones contributing to religious debates in Muslim societies and to discussions of the common good. Indeed, the “new” religious intellectuals are often more vocal and more prolific on these matters (see Eickelman and Piscatori 1996: 13, 43—44, 77, 180). Nor do the ‘ulama’s contributions to public discourses alleviate the fragmentation of the public sphere. The public sphere remains an arena of contestation, with the ‘ulama’s discourses a part of it. But inasmuch as the common good itself is not ahis- torical—it is defined through contestation—the ‘ulama are important contributors to the public discourse about it.

I am not suggesting that this is necessarily how the ‘ulama themselves see their contribution to articulating common good. Their conception of how it is realized is not that ofJane Mansbridge or Craig Calhoun. The ‘ulama typically argue that the sharfa is ultimately the criterion of what counts as the common good, and that devices such as

maslaha merely extend, to better realize, what is already provided for in the sharfa. All this being so, the fact remains that they have constantly to debate with their peers and others over the meaning of “true” Islam, what Islam asks of people in any situation, the goods that Islam secures (beyond, say, the five fundamental values safeguarded by the sharfa, and how even these are to be ranked, or just how they are to be safeguarded). This is the sort of public discourse through which the common good becomes the site of contestation, an ongoing “social and cultural project”—even when the parties involved, especially the ‘ulama, have no desire to encourage contestation.

However, not all ‘ulama are equally wary of contestation. Indeed, Qaradawi has written a book (2001) whose title bespeaks its concerns in this regard: “How Should We Deal with the Heritage, with the Difference of Schools, and with Disagreement.” The “disagreement” to which he refers is primarily that of the jurists in their legal opinions, long a recognized and crucially important area of Islamic law. Such disagreement, Qaradawi writes, is a human necessity (Qaradawi 2001: 140). It can be a blessing, for some legal opinions suit certain times better than do others, and it is a “treasure” whose richness ought to be valued (Qaradawi 2001: 141, 144–47. That the sharfa’s record of earlier disagreements can relate to contemporary thought suggests that disagreements among present-day scholars ought to be tolerated as well, and the idea that every competent jurist can be right in his judgment even when jurists disagree on any given issue should be taken seriously (Qaradawi 2001: 148–209 and passim).

Yet Qaradawi is not inviting his audience to open or unconstrained public debate and contestation. Following Ibn Taymiyya, he distinguishes between disagreement that produces “variety” (ikhtilaf al- tanawwU) and that which amounts to “opposition” or “contradiction” (al-tadadd). The former is not merely acceptable but welcome; but the latter sort is forbidden (Qaradawi 2001: 210–15). Besides the disagreements of the jurists, those of the kind that constitute “variety” are all largely benign—for example, the differences in ritual practice or in readings of the Qur”an (Qaradawi 2001: 211–12). Qaradawi’s claims about the tolerance of difference are, however, more expansive than his own examples suggest:

<quote>£££Great civilizations are those that make room for variety in their midst.... For instance, the civilization of Islam, in the days of its flowering, accommodated religions and cultures within it, as well as different peoples, nations and races. Its slogans were “tolerance for all” and “deriving benefit from everyone.” Consequently, many different religions and customs participated in its formation and preservation; and they lived therein as honored [inhabitants] (Qaradawi 2001: 211).£££</quote>

In historical terms, this may not be an inaccurate picture of many societies in medieval Islam. But Qaradawi’s firm distinction between disagreement as variety and as opposition or contradiction does not allow much room for a similar present-day society. Significantly, he

does not enter into a discussion of disagreement as contradiction, even as he asserts that, for all their particular differences, committed Muslims are in agreement in their overall orientation (Qaradawi 2001: 213–15). The disagreement that Qaradawi lauds turns out, then, to be only among otherwise likeminded people, rather than a contestation among people committed to divergent epistemological assumptions.

Yet, inasmuch as ‘ulama like Qaradawi or Taqi ‘Uthmani challenge intellectuals representing divergent assumptions and orientations, they (as well as numerous other, less distinguished ‘ulama) help constitute and sustain the Muslim public sphere, just as they help constitute conceptions of the common good. Contestation between the ‘ulama and others, and among the ‘ulama themselves, keeps public discourse vibrant even in authoritarian states, where opportunities for debate are otherwise severely constrained. Conversely, as became strikingly apparent in Iraq with the fall of Saddam Hussein’s regime in the spring of 2003, even decades of severe repression had left the Shi’i ‘ulama with sufficient authority, appeal, resources, and networks to become major players in the effort to fill in the political vacuum resulting from the regime’s collapse as well as from the inability of the occupying U.S. and British coalition forces to quickly establish their own authority in the country. There continues to be severe rivalry for influence and authority within the ranks of Iraq’s Shi’i ‘ulama—to take this as our final example—just as there are competing views on the extent to which these and other ‘ulama ought to directly involve themselves in the effort to shape Iraqi politics.[19] Despite repeated expressions of the wish, or the need, to forge a new unity between Iraq’s Sunni minority and the long-repressed Shi’i majority, there remain grave fears that the latter would want to settle old scores (cf. al-Hayat, July 3, 2003); and there are many, and not just among the coalition forces, who find the ‘ulama’s influence and their attempts at mobilizing support menacing for prospects of a civil, pluralistic, and democratic society. Yet, for all that, the Sunni and the Shi’i mosque preachers of Baghdad and other cities and, in particular, both the high ranking as well as the young, low-level, Shi’i ‘ulama have been among the most prominent of those shaping or contesting conceptions of the common good and its loci in a time of radical change in Iraq.[20]

Such contestation was evident in a June 2003 fatwa by Ayat Allah ‘All al-Sistani, one of the most influential of Iraq’s Shi’i scholars, questioning the authority of the coalition forces to oversee the making of the new constitution for Iraq: there was no guarantee, he said, that a constitution drafted by appointees of the coalition forces, rather than by the people’s elected representatives, would “conform to the supreme interests (al-masalih al-ulya) of the Iraqi people and express their national unity, among whose basic pillars is the true religion of Islam” (al-Hayat, June 30, 2003). But this contestation was illustrated no less clearly in the assertion of Farqad al-Qazwini, the scion of a Shi’i scholarly family and director of a Shi’i religious college in al-Hilla, that strident fatwas by other Shi’i scholars requiring the veiling of women or permitting the burning down of liquor stores were based on “a lack of understanding of the real public interest of the country (al-maslaha al-waqi^ciyya li’l-bilad) at the present time,” a public interest and a common good that, he strongly implied, lay rather in working constructively with the coalition forces (al-Hayat, June 29, 2003). Some of al-Qazwini’s Shi’i opponents sought, for their part, to discredit him by alleging that he had once collaborated with the fallen regime—a highly incriminating accusation of which this, however, was

scarcely the only invocation (Tyler 2003; for other accusations, cf. al-Hayat, July 13, 2003).

Members of the Shi'i religious establishment and other, secular, contenders for political influence in the anarchic aftermath of Iraq's occupation also competed with one another in founding newspapers, sometimes testing the limits of the occupying coalition's own endurance for what the latter thought were especially strident voices. Furthermore, and like Islamist groups in many other countries, lower-ranking Shi'i 'ulama were at the forefront of efforts to oversee the provision of urgently needed relief work, but they were hardly averse to also probing ways in which they could extend their own oversight to newly emerging professional and civil society associations (cf. Shadid 2003; Moaveni 2003).

The contestation among the 'ulama, and between them and others—of which post-Saddam Hussein Iraq is but the latest instance— does more, however, than help constitute the public sphere. As we have seen throughout this chapter, this contestation also suggests that, within the larger and generally accepted framework of the sharfa's equation with the common good, there is in fact considerable disagreement among the 'ulama themselves on how the sharfa advances the common good. This is a point worth emphasizing for several reasons. It allows us to move beyond any simple equation of the sharfa with the common good, even from the perspective of the 'ulama, and it lets us hear them ask specific questions about how the common good is realized in specific situations. It also enables us to see that their opposition to any simple utilitarian approach to the sharfa does not necessarily entail a lack of responsiveness to the needs of their own local or larger communities.

*** Conclusion

In concluding this chapter, I would like to touch briefly upon two rival views of the role of public religion in modern Western societies as a way of further elucidating the 'ulama's conceptions of the common good. Neither of these views takes any account of Islam, let alone of the 'ulama, but they both have bearing on how we might better understand the modern 'ulama and the meaning and significance of their discourses.

The sociologist Jose Casanova has argued that the presence of religion in the public sphere "force[s] modern societies to reflect publicly or collectively upon their normative structures" (Casanova 1994: 228). "Public religions" bring moral and ethical perspectives to bear on issues of politics and economics, even as they shape public discourses in ways that reflect their conviction that the common good is more than the sum of individual interests (Casanova 1994: 228–34). A religion's public roles are acceptable, however, and indeed become valuable, only when they unequivocally recognize the functional differentiation of social spheres—that is, when they agree to operate within the framework of secularization. This sense of secularization is the only one (as opposed to secularization as either the

decline or the privatization of religion) defensible on both empirical and theoretical grounds, he argues, and this is the sense in which Catholic and Protestant traditions have become “public religions” since the late twentieth century (Casanova 1994: 11–39).

Casanova is highly optimistic about what public religions can, under his terms, contribute to modern societies and to discussions of the common good, but the moral philosopher Alasdair MacIntyre (1998 [1997]) is equally pessimistic of any such prospects. MacIntyre argues that contemporary liberal societies tend systematically to exclude any serious discussion of the foundations on which those societies themselves rest, that the modern “compartmentalization” of society into particular spheres means in effect that professional politicians and big business interests are the only ones that make all the decisions that matter, and that, for this and other reasons, any shared deliberation on the common good has become impossible in such societies. Whereas Casanova (1994: 225) sees globalization as creating new prospects for public religions to contribute to discussions of the common good beyond national borders, MacIntyre thinks that the sheer scale on which modern societies operate makes any meaningful discourse on the common good an illusion. And where, for Casanova, the functional differentiation of modern societies is the precondition for an acceptable public role of religion, MacIntyre (1998 [1997]: 243) considers precisely this differentiation—or compartmentalization, as he calls it—as foreclosing opportunities for shared participation in “asking those questions that most need to be asked.” MacIntyre’s proposal is consequently to form small, local communities that have a shared commitment to their own traditions; and it is in such communities that he sees the best prospects of collectively devising understandings of, and of realizing, the common good according to values and criteria recommended by the tradition in question. He recognizes that “there can only be continuing conflict” (MacIntyre 1998 [1997]: 252) between such communities, on the one hand, and the modern state and the market, on the other, although he does not say how that conflict is to be mediated or resolved.

It is tempting to see the ‘ulama’s conceptions of the common good along lines sketched by MacIntyre. Elsewhere, I have argued that MacIntyre’s idea of “tradition” as an ongoing engagement with internal interlocutors and external critics over the practices and virtues that constitute that tradition can—especially as mediated by the work of anthropologist Talal Asad (1999)—lend itself well to understanding the world of the ‘ulama and their views of Islam (Zaman 2002: 3–11 and passim). In Mawlana Raff ‘Uthmani’s equation of the common good with the government leaving the people alone to work out their disputes according to sharfa norms, we might perhaps see a rough analogue to MacIntyre’s local communities in practice. From a different set of premises, Yusuf al-Qaradawi’s notion of the best sort of disagreements being those which arise among people committed to a shared larger worldview again puts us in mind of MacIntyre’s view that, if there is to be any meaningful discourse on the common good, local communities must have a shared commitment to a tradition and its attendant practices. If some of MacIntyre’s views seem to approach those of the ‘ulama, however, some of Casanova’s conditions clearly distance his public religions from what many ‘ulama would like to see as Islam’s public roles. Irrespective of the ways in which a functional differentiation of spheres is often accepted by the ‘ulama in practice (Zaman 2002: 60–86), their theory does not allow for such differentiation, that is,

for the sort of secularization Casanova requires for any acceptable role for a religion in a modern society.

It should be clear from the foregoing that the ‘ulama bring to public discourse many of precisely the sort of issues—the moral and religious dimensions of public policy, the normative foundations of the polity, and the common good—that Casanova commends modern religions for representing in the public sphere. Casanova’s argument requires, of course, that issues of this sort be brought to the public sphere within a larger framework that is defined by certain other agreements over the structure and orientation of society. Yet others would contend that such agreements—over the public and the private, for instance, or over the proper role or scope of public religions—are in fact much more elusive even in contemporary Western societies than Casanova allows (cf. Asad 1999). It is not my intention to force Casanova’s criteria onto the ‘ulama, any more than it is to commend what the latter do or say in the Muslim public sphere. It is simply to suggest, once again, that the ‘ulama’s discourses and the contestations they provoke or sustain are constitutive of the public sphere, and that they bring to this sphere issues similar to what public religions and their representatives do anywhere else. It is from such issues and the contestation on them that ideas of the common good emerge—in contemporary Islam as elsewhere.

** Chapter Seven: When Disputes Turn Public: Heresy, the Common Good, and the State in South India

Brian J. Didier

This chapter explores how a religious conflict became transformed as it was propelled into the public sphere. I take it for granted that when any debate or conflict goes public, public opinion will alter its course. Here I will consider whether “going public” exacerbated tensions inherent in an enduring religious conflict that has weighed heavily on the Muslim community of Androth Island, one of ten inhabited atolls of India’s Union Territory of Lakshadweep. What started as a benign dispute between the island’s ‘ulama and a nascent Sufi brotherhood known as the Shamsiyya over questions of ritual practice became increasingly acrimonious during the 1980s as the participants experimented with new forms of disputation. Their use of heresy accusations (takfr), public debates, shan‘a protection committees and fatwas of condemnation—all familiar instruments in the arsenal of South Asian sectarian conflict—signaled that Islam on Androth, mirroring trends throughout the Muslim world, was “going public” (Casanova 1994). The fact that island Islam was not merely going public but was doing so in disconcerting ways became all too apparent in 1986 when the Androth ‘ulama decided to forfeit the civility of persuasion for unprecedented and violent coercion. Unsatisfied with the rhetoric embodied in the fatwa, the ‘ulama felt compelled to enforce their condemnation with social sanctions including mosque expulsion and a modest degree of violence against the alleged kafirs (infidels), the Shamsiyya. When their members attempted to enter the island’s only Friday mosque, fights broke out around the island. In order to avoid any additional post-fatwa confrontations and to maintain civil order, the island police simply shut the mosque while the local administration pushed the parties to resolve their dispute through the civil courts.

A conflict such as that described here offers insight into the dynamics of the public sphere. If the public sphere is defined generally as an intermediary site between the individual and the state—yet excluding neither—where disputes are conducted over both the definition of the “common good” and those virtues required to implement such a conception, then it follows that the presence of some form of a public sphere is culturally ubiquitous, yet often amorphous and evanescent (see Eickelman and Salvatore, Chapter 1, this volume; also Calhoun 1998: 20, and Freitag 1989: 177–96). One of the best ways of illuminating the public sphere is to highlight precisely those moments when the political atmosphere becomes charged by the collision of competing conceptions of the common good. A public debate, a

fatwa of condemnation, a fight over mosque entry, and a high court ruling mark some of the more significant episodes of a conflict that foreground the island public sphere. By tracing the trajectory of the island conflict as it evolved from private dispute to public conflict, we can explore in detail both the emergence of a public sphere around the issue of what constitutes good Islam and the consequences that follow when such a debate becomes public.

In this chapter I will focus on one of the conflict's most critical episodes: the public debate of 1980. If the violence that followed the 'ulama's fatwa in 1986 marked the end of civility, then it was the public debate six years earlier, I argue, that represents the fulcrum upon which the balance of this conflict tipped from civility to incivility and from "private" interaction to "public" performance. Although certainly not inevitable, the intolerance and acrimony of the fatwa and its violence were the culmination of a process that found public expression in the debate of 1980. I use the metaphor of a tipping balance here intentionally, for I do not want to give the impression of a sudden and comprehensive shift in the nature of the conflict. The public debate was a novel form of disputation for the islanders, but elements of publicness and acrimony can certainly be detected in the quarreling that came before it. The public debate thus represents more the "intermeshing of public and private spheres" than a clean break between them (Casanova 1994: 7).

My assertion that the island situation gradually became public implies that conflict and contention often extend beyond the limits of the public sphere. Logically, our conception of the public sphere presupposes something that it is not. Empirically, we know that the origins and trajectories of conflicts often lie outside the public sphere in the sense that they are not always about the common good, or that they command only limited attention. Whether or not we categorize such phases or spaces as "private," it remains the case that if the cluster of concepts relating to publicness is to have analytic value, then there must be something that they do not encompass. As I have argued elsewhere (Didier 2004), the histrionics of public sphere activities should not obscure from view the routine, unspectacular, and often discreet negotiations of difference that make up much of the conflict process. Private or "less-than-public" forms of disputation are certainly more difficult to document, but they must be known to appreciate the genesis of conflict.

The trajectory of the island conflict also allows us to paint a more detailed picture of political Islam in the subcontinent. We know much, for instance, about the debates produced within and among South Asia's prominent Islamic movements, including the Deoband, Farangi Mahall, the Ahl-e Sunnat and the Jama'at-i Islami (see Metcalf 1982, Robinson 2001, Sanyal 1996, and Nasr 1994). Unfortunately, we know relatively little of the analogous discourse produced by less distinguished and "peripheral" 'ulama administering Islam beyond these centers of grand intellectual production (see Zaman 2002: 131). Equally, we know little of how the caustic discourse of the 'ulama, prominent or otherwise, alters the social relations and religious behavior of attentive audiences at the local level. Usha Sanyal, for example, provides a rich account of Ahmad Riza Khan's condemnation of fellow clerics. Urging his followers to shun Muslim opponents and kafirs, he demanded: "If they fall ill, don't ask about them, if they die, don't join their funeral. ... Don't sit near

them, don't drink or eat with them, don't marry them" (Sanyal 1996: 205). It is uncertain, however, if any of his followers were listening and willing to put into practice what he was preaching. If inconsequential in terms of wider political or intellectual impact, we do know that the discourse of the island 'ulama produced serious local repercussions in the form of mosque expulsion, social ostracism, and physical assault. That the 'ulama sought to render their theological verdict into collective social action thus allows us to explore the relationship between religious discourse and practice.

Finally, there are a few points regarding the relationship between conflict and violence that need reiterating, particularly in light of a world transformed by the horrific violence committed recently in the name of Islam. The first is that conflict in any society or religious community is normal, quotidian, and often productive. The second is that not all religious politics are contentious or coercive. The question that arises, therefore, is not why Muslims engage in religious conflict but rather how are religious conflicts are transformed from civil engagement to coercive force, from routine politics to "transgressive contention" (Tarrow 2001: 7). Muslims engage in religious disputes all the time, be it with coreligionists or non-Muslims, and they are hardly unique in this regard. It is certainly not the case that such conflicts invariably involve coercion or violence. Unfortunately, a myopic focus on the public sphere, or on the contentious politics and violence performed in the public sphere—an astigmatism shared not only by the popular media but also by many of us who study religious politics—risks distorting the picture of how Muslims engage in conflict. As I intend to show, by the time conflicts enter the public sphere serious transformations have already occurred: publics have become involved, legitimacy is at stake, disputational strategies have changed, and the state is usually extra vigilant. I am not suggesting that all public politics are tainted by incivility, or that politics conducted outside the public sphere are idyllic. Rather, my point is that contentious and violent religious politics generally are found in the public sphere. Therefore, if we want to appreciate the conditions under which conflicts become more contentious and if we want to explore how disputes are often conducted without the use of violence, then our purview must extend beyond the public sphere. In short, in order to understand the unfortunate outcomes of religious politics, Muslim or otherwise, we must consider the full trajectory of the religious conflicts that produce them. The islanders' conflict is compelling precisely because they made use of both civility and coercion, thus providing a unique window onto the world of Muslim politics "going public."

*** Private Admonishment: The Androth Conflict's Early Phases

Because such events occurred some time ago and outside the "public" eye, there is a dearth of detailed information regarding the nature of the initial confrontation between the 'ulama and the Shamsiyya. We do know that the dispute began before the public debate in 1980, and that the 'ulama expressed concerns before making their allegations so forcefully in public. Less clear is how the 'ulama expressed this initial discontent.

In order to shed indirect light on the conduct of the early conflict, consider a more recent and unrelated confrontation involving the island ‘ulama and the shaykh of Androth’s oldest and largest Sufi brotherhood. As we consider this and the Shamsiyya confrontation, two points should be kept in mind. The first is that virtually all of the island ‘ulama are themselves members of a Sufi brotherhood. In fact, all of the leading ‘ulama whom I interviewed—many of whom signed the fatwa against the Shamsiyya—were quite explicit about the fact that every Muslim ought to complement the path of the sharia with that of the tariqa. In reference to the potential banality of faith tied exclusively to the law, one island ‘alim quipped: “La illaha illallah... it only makes you a Muslim, like a light bulb with low voltage.” Although many island clerics were affiliated with the more sober and “orthodox” of the island brotherhoods, they were willing not only to tolerate but also to defend the ecstatic and intercessionary ritual practices of their island coreligionists. Among other things, these “howling dervishes” performed dramatic and boisterous rituals of drumming, chanting, and self-mortification that emphasized the Rifa’i side of their spiritual legacy (see van der Veer 1992). According to most of the ‘ulama, as long as such things were done in a pious frame of mind, they were legitimate and salutary forms of worship (‘ibadat). We should keep in mind, therefore, that the clerics’ opposition to the Shamsiyya was not part of any resolute antiSufi reform movement. Such movements, though common throughout the Indian subcontinent and much of the Muslim world, did not exist in any institutional form on Androth during the course of this conflict.

All the Androth Sufis I interviewed (which included the shaykhs of all three island brotherhoods) confirmed that although tariqa supplemented the sharia, it never took priority over the sharia. Moreover, in recognizing the primacy of the sharia, the Sufis also acknowledged the authority of the ‘ulama when evaluating the practice of Islamic law. When the Shamsiyya agreed to take part in the public debate with the Androth ‘ulama, their interlocutor was not the shaykh but a follower from the mainland who was also a trained ‘alim.. As we shall see, this cleric did not challenge the place of ‘ulama at the top of the island religious hierarchy. He did, however, question the integrity of the Androth men who held such office. A consequence of this obeisance on the part of the island Sufis was that while they often disputed the details of the ‘ulama’s allegations, they never questioned the nature of their authority to nurture and defend island orthodoxy. Thus when the shaykh of Androth’s oldest brotherhood, known as Shattariyya ul-Qadiriyya wa Rifa’iyya, recounted his spat with the ‘ulama, he readily admitted: “As ‘ulama, it is their job to see that we Sufis do not exceed the limits of the shan^ca.”

Part of the legacy of the Shamsiyya conflict was the closing of the Juma Masjid in 1986. Given this closure and the subsequent dispersion of the congregation to various smaller mosques around the island, the shaykh of Shattariyya ul-Qadiriyya wa Rifa’iyya decided to conduct Friday prayer by himself at home. When the ‘ulama noticed that he had been absent, they approached him for an explanation. The shaykh was told that if someone missed Friday prayer too often, he would be considered a kafir (an unbeliever). The shaykh’s response was to tell the visiting ‘ulama a story of when the Prophet Mohammed demanded that a mosque be destroyed. As the story goes, some people of

suspect loyalty invited the Prophet to their newly built mosque and begged him to consecrate it with his prayers and presence. When he discovered that this group represented a potential threat to his young community, the Prophet sent men to burn the structure and condemned those who built any mosques out of opposition (see the Qur”an, Sura 9). The shaykh’s simple reply to the ‘ulama was: “If the Prophet came to Androth he would surely destroy all the mosques, since they too were built out of opposition. And if the Prophet would destroy them, why should I go?”

The dynamics of this exchange and the nature of the accusations are important, particularly in contrast to those that emerged in the public debate and later stages of the Shamsiyya dispute. Of particular interest is that the two sides met face-to-face in an informal encounter. While the ‘ulama expressed their concerns in person, the shaykh was also given a chance to defend himself in what appears to have been a creative and civil dialogue. The ‘ulama’s suggestion of kufr (disbelief) was indirect and private. The scene was not played out in the company of the shaykh’s followers, which would cause some embarrassment, but took place in the relative privacy of his home. They did not demand that the shaykh justify his absence from the mosque in a public forum, nor did they make formal, by means of pulpit preaching or publication, their accusation against him. They certainly did not call a meeting of the shan‘a protection committee to issue a collective fatwa of condemnation against him.

Much the same can be said of the shaykh’s reply. He neither returned the accusation nor paraded his defense in public. Obviously, the shaykh was not hesitant to engage the ‘ulama on the shared ground of the sharfa and its sources. He neither denied his actions nor attempted to justify his behavior through the exposition of some esoteric Sufi doctrine. Instead, he defended himself with a clever yet straightforward interpretation of the orthodox sources of Islamic law. Regardless of whether the ‘ulama found his defense theologically convincing, it appears that they left without further confrontation. Having made their respective points without offending one another, the issue appears to have been dropped, or at least tabled. Perhaps what was most important from the perspective of the ‘ulama was that the shaykh offered a legitimate defense of his position and yet did not recommend that others adopt his position. Both parties knew that not attending Friday prayer was at best unorthodox, and at worst a serious threat to the principle of solidarity behind the congregational prayer. The ‘ulama’s quiet challenge served as a warning that such behavior ought not to be emulated, whereas the shaykh’s defense preserved a sphere of personal religious expression. At the time of my interview, no further confrontations regarding this issue had taken place, and the shaykh continued to conduct Friday prayer at home.

With regards to the accusations made, it is clear that ‘ulama were exhibiting not a kind of “zero orthodoxy” in which the slightest deviations from recognized orthodoxy requires an explicit accusation of heresy and firm application of repression. Instead, they exhibited a rather more flexible “orthodoxy-in-the-making” that accommodates the kind of minor deviations, individual or idiosyncratic expressions of piety, and minor tinkering that we see in the case above (see Knysh 1993: 64—65). An equally compelling example of this kind of

flexible orthodoxy can be found in the ‘ulama’s willingness to indulge the local system of matrilineal descent and inheritance, which they recognize as unorthodox, in order to prevent social disarray (see Dube 1967). As one prominent cleric argued, the social disadvantages and chaos that would surely result from an attempt to uproot customary matriliny in favor of Qur”anic patriliny far outweigh the benefits of strict adherence to the shan^ca. Moreover, “the Prophet would surely disapprove of such a social disturbance.” The ‘ulama here do not act as aggressive morality police and do not seize every opportunity to confront “un-Islamic” behavior. Recognizing that the shaykh’s behavior was neither persistently nor outrageously deviant, the ‘ulama put into practice the Augustinian principle that “not every error is a heresy” (Kurtz 1983: 1088). Were the early confrontations between the Shamsiyya and the ‘ulama of the same character? It appears that during the early days of the Shamsiyya’s emergence during the 1960s, the ‘ulama had no reason to approach them in anything but a quiet and nonconfrontational manner.

In the dispute’s initial stages, we know that the nascent brotherhood and its founder, Shaykh Attakoya, found themselves under the suspicion of numerous island ‘ulama almost immediately after the group’s establishment in the mid 1960s. Having left the islands to undertake a spiritual journey, Attakoya returned a “shaykh” with the license (ijaza) to initiate his own followers and thus establish a distinct Sufi tanqa. Members of the Shamsiyya claim that the ‘ulama’s opposition was the result of jealousy; apparently Shaykh Attakoya attracted many island followers at the expense of the other island brotherhoods. Other islanders confirm that Attakoya met with immediate success, but offer a more intriguing explanation for this achievement and his subsequent troubles. Shaykh Attakoya, it seems, had some novel ritual techniques to offer his new followers. The exact nature of these practices is difficult to determine. Virtually all of his opponents agreed that Shaykh Attakoya’s early followers would lie on the beach during mid-day and “worship” the sun; hence the derogatory name “Shamsiyya” applied to the group and grudgingly tolerated by its members (shams is the Arabic word for sun). More neutral voices assured me that it was only “sun-staring”—an innovative if hazardous form of meditation. A few followers of the Shamsiyya reluctantly admitted that it was a misguided, yet innocent healing technique for those who suffered eye disorders.

Whatever the exact nature of the practice, it seems that Shaykh Attakoya made use of some rather curious ritual or healing methods that soon drew the attention of a number of the island ‘ulama. His innovations upon an already unconventional repertoire of religious practices (including the self-mutilation rituals and matrilineal descent patterns noted above) were apparently more than the ‘ulama could countenance. But what kind of attention did the shaykh receive? One of the authors of the 1986 fatwa impressed on me that at this early stage he only “advised” Attakoya to abandon the practices.

Another cleric I interviewed claimed that he wrote a fatwa against the Shamsiyya in the late 1960s, but he had no copy of the fatwa and claimed no co-authors. (The ‘ulama did not form their shan‘a protection committee until much later, in 1986.) Although the exact nature of the encounters remains unclear, it seems the case, given the lack of evidence to the contrary, that this dispute, like the one over Friday prayers discussed

above, required no dramatic public airing, no collaborative opposition on the part of the ‘ulama, and no aggressive condemnation.

*** Public Debate

At the time of Attakoya’s death in 1980, the dispute between him and his opponents had failed to escalate into anything more than a tedious pattern of informal allegations. For the ‘ulama in particular, such a situation ought to have been acceptable. Given that the Shamsiyya’s island membership had been decimated by lingering suspicions of un-Islamic tendencies, they no longer formed a thriving island brotherhood. What is more, it appears that the practices in question (the sun-staring/sun-worship) had been abandoned years before. A feeble island brotherhood suffering the loss of its charismatic founder seems hardly worth the risk of a bitter and public confrontation, let alone of incurring the wrath of an irritated Indian state. Within a year of the shaykh’s death, however, this initial period of tolerant coexistence came to an abrupt end as the ‘ulama’s restrained warnings of unorthodox practices turned to provocative accusations of infidelity, and the Shamsiyya’s compliance turned to resentment and angry recriminations.

A number of factors appear to have disrupted the fragile detente between the Shamsiyya and the loose collection of concerned ‘ulama. Foremost was the death of Attakoya. For one reason or another, this eccentric shaykh never gave in to the temptation to combat his accusers vigorously. His successor, however, was not so willing to endure the persistent ridicule. According to many of the islanders who knew him, Shaykh Pookoya had high ambitions for the faltering brotherhood. The nagging questions regarding ritual orthodoxy needed to be addressed and the defensive strategy of non-confrontation adopted by Attakoya apparently had done little to stem the flow of allegations. The strategy that the Shamsiyya adopted is vital for explaining the shift to public debate and acrimony. As the situation on Andro th remained tense, Shaykh Pookoya focused much of his attention on the less hostile environment of Muslim Malabar, and met with great success. While island membership declined, the set of followers in Kerala (the Indian state nearest the islands) expanded dramatically. A number of this Kerala-based cohort were trained ‘ulama, and it appears that they were the ones chosen to lead the Shamsiyya’s defense. The confrontation that served as the immediate catalyst for the public debate occurred in an island mosque when one of these well-trained followers became embroiled in a debate with an island Sufi of another brotherhood, Qadiriyya Sufiyya. Crucially, this was the brotherhood to which many of the opposing ‘ulama were affiliated. Their debate, which apparently entailed each accusing the opposing shaykh of associating with God (shirk) and of cataloging the ritual innovations (bida) of the other, soon spread. In consultation with the administrative officer on the island, it was decided that a more formal public debate should take place.

The public debate as a forum for airing disagreements within the religious community—although an apparent innovation upon the island repertoire of collective behavior—has been

a prominent mode of religious disputation in the subcontinent for some time. Barbara Metcalf's (1982) detailed account of the emergence of these debates during the nineteenth century provides us with useful points of comparison. Such debates, she argues (1982: 216), were "part of the general trend toward increased public role for Indians," and in particular became a forum in which rival interpretations of Islam could compete for recognition. To borrow the words of Sandria Freitag, these debates formed part of an "alternative world" of collective activities that provided "legitimacy and recognition to a range of actors and values denied place in the imperial order" (Freitag 1989: 6). Apparently, this was especially true for South Asian 'ulama. Suffering from the decline of the Mughal Empire, and having lost the benefits it bestowed on its courtly class, the 'ulama took advantage of the public debates as an instrument for boosting their own religious and political fortunes, and for forging a sense of religious identity among their followers in colonial India.

In stark contrast to the decorous debates of the Indian courts, and any idealized version of dialectical exchange in the public sphere, the nature of interaction in these debates was not only "intense and

bitter" but provided little "occasion for serious intellectual exchange" (Metcalf 1982: 215). As the participants engaged in verbal sparring, "the spokesmen tended to argue within their respective ideological systems and to develop a series of stereotyped points that satisfied their supporters more than their opponents" (Metcalf 1982: 232). More combative than collegial, the new style of religious debates emerging in this period minimized dialogic exchange among interlocutors, circumscribed communities while confirming the differences between them, and thus propelled disputes down a path of incivility.

Well over a century later, the public debate continues to serve many of the same functions. Of course the island 'ulama had experienced no precipitous fall from imperial heights, but their use of the public debates coincides with a period of political uncertainty. Their choice of an unconventional mode of disputation can be explained in part by the fact that as the conflict escalated during the 1970s and 1980s there was little political convention on which to rely. Although nominally under external authority from the Ali Rajas (and Bibis) of Cannanore in the eighteenth century and the Malabar Collector and the Madras Presidency in the twentieth century, the islanders' remote location afforded them a degree of political autonomy. Such "indict rule" ended in 1964, when India's centrally imposed island administration shifted from its home on the coast (in Calicut) to its permanent location on Kavaratti Island (see Bhargava and Samal 2001). By the late 1960s, we see the traditional land tenure system decline and the fortunes of the landowning class diminished. They had previously held a monopoly on positions of local administration and adjudication. Island councils (made up of elite family heads) were disbanded and replaced with a centralized bureaucratic administration, a professional judiciary, and a police force that left few islanders in positions of authority. With so little political authority left to contest, it seems that the remaining contests became more intense and required new arenas.

Although the Indian state imposed itself quite heavily on most spheres of island life, it left considerable room for the expression of authority in the religious sphere. Like the colonial state before it, the Indian state withdrew itself from the “alternative cultural space” in which local expressions of cultural or religious value could flourish (Freitag 1996: 213). In fact, one could argue that the religious sphere on the islands is even wider than that of other Muslim communities in India. Due to the peculiar administrative design of this Union Territory and the government’s desire to tailor judicial and bureaucratic policy to fit a strategic border area, the Shari’at Act of 1937, which defines the realm of personal law for most Indian Muslims, does not apply on the islands.[21] The state largely abdicated the authority to adjudicate on matters concerning Islam. Thus, when the opportunity arose to debate the nature of good Islam and to identify the kafir, those endowed with religious authority seized it.

No transcript of the islanders’ debate exists, but witnesses’ accounts confirm that in many ways it resembled that of their nineteenth-century coreligionists and was in stark contrast to their own period of discreet and unprovocative negotiation. The debate was well attended, but without a moderator or formal means for determining an outcome. It was conducted openly and forcefully by competing sets of ‘ulama who presented their respective cases in the form of monologues delivered to the audience. Although certainly aware of the events taking place, the tanqa shaykhs neither participated nor attended. The result of the islanders’ debate, like those described by Metcalf, was inconclusive. Both sides claimed victory in what was an aggressive exchange of insults and reciprocal accusations of kufr.

A significant difference between the early phase of private admonishment and that of public debate is audience participation. The public’s role is largely incidental in the case of private or discreet admonishment, although a wider audience beyond immediate participants may come to know of a confrontation by means of gossip, and thus indirectly participate. Public debate, however, is obviously designed to reach or create wider audiences. In their reliance on “the public” or “public opinion,” those who participate in the public debates confirm Talal Asad’s crucial observation that religious authority is “a collaborative achievement between narrator and audience” (1993: 210). Reflecting this collaboration, those engaging in the oral debates offer arguments less to their interlocutors than to those in attendance. The public’s presence, therefore, is hardly inert and rarely neutral. There is little doubt that those debating hope to bring the weight of public opinion or public humiliation to bear on their opponents. In this sense, the public becomes an instrumental and potentially coercive force. What makes this public terrain hazardous, however, is the fact that public opinion is not easy to manipulate. When making strong arguments and allegations in public, those responsible also face the scrutiny of the audience and can be held to account. With regards to the island conflict, many were convinced by the arguments made against the Shamsiyya, and in this sense the ‘ulama’s persuasion was successful. Such success, however, would not last forever when discourse was combined with what many perceived an inappropriate means of coercion. Although many islanders believed that those involved with the Shamsiyya were indeed kafirs, and ostracized them on account of this, they were not willing to convert that alienation into violence. Such indifference on the part of so many islanders is an illuminating example of the public exercising its own power as a third party.

When the ‘ulama resorted to more extreme forms of disputation and accusation, they did not anticipate that their intemperance would stimulate alternative sources of religious authority.

*** Accusations of Heresy

Given the nature of the islanders’ debate, it is hardly surprising that little resolution was achieved as a result. The gross allegations alone indicate that resolve for persuasive reconciliation was waning and that a moral divide was being constructed, rhetorically at least, between the Shamsiyya and the island ‘ulama. In seeking to construct this divide, the islanders relied not only on the public debate but also on the shared idiom of heresy accusations or takfir. Publicly accusing an opponent of heresy is a popular and provocative tool that Muslim clerics in the region use to denigrate their rivals. Curiously, however, the nature of takfir and its role in buttressing the ideological and social divide between Muslim factions and constructing exclusive sectarian identities in the subcontinent remains unappreciated.[22]

Recent studies on medieval Islam and Christianity suggest that heresies and heretics serve a number of religious and political functions.

One the one hand, heresy plays an integral role in forming any religious orthodoxy by forcing religious authorities “to define its doctrines and to anathematize deviant theological opinions” (see Lambert 1992: 3). Although it is obvious that Islam has no Church or ecclesiastical council invested with the authority to determine or enforce a universally accepted dogma, it does have a consensual orthodoxy. Moreover, religious authorities in Islam are perfectly capable of producing—and here coercion is sometimes needed to reach consensus—layers of thick local orthodoxy to which their audiences subscribe. Islam has had its own heresiologists and has a rich vocabulary for distinguishing degrees of infidelity (see Lewis 1953, Taylor 1967, Peters and De Vries 1977, and Knysh 1993). As Knysh (1993: 52) notes, the polemics that surround the definition and identification of kufr and kafirs often result in a “reformulation” of disputed beliefs. The dispute over the Shamsiyya’s ritual innovations resulted in a public statement of the alleged unbelief during the debate, and a published account of kufr in the form of the 1986 fatwa of condemnation. Thus, the debate was the first step in the ‘ulama’s attempt to produce an explicit conception of the “common good” defined in terms of their own version of Islamic orthodoxy. It is no surprise, however, that not everyone shared this interpretation of the common good.

In addition to intellectual or theological functions, heresy debates also serve as a vehicle for identity politics and organizational power. Heresy is a particularly effective way of creating or maintaining the religious identity of a community through the identification of a dangerous internal threat. One can, of course, use external “others”— such as Hindus, Christians, foreigners, or the secular state—as the negative standard against which to

construct affiliation. But with few of these others present or available on the island, the internal dissident represented an available option. Heresy accusations can also serve institutional elites by allowing them to fortify their authority by taking the lead role in the identification and suppression of a common enemy (see Kurtz 1983: 1085–87). Following this pattern, accusations of kufr catapulted the island ‘ulama into public prominence. As discussed above, those making public accusations of heresy are at some risk if the accusations are seen to be unjust or the application of punishment excessive. This is particularly true when the public is invited to serve as a participant and witness in public debate.

The island debate was about more than sun-staring and other alleged innovations of the Androth brotherhoods. Behind their lofty concerns over sacred matters and the spiritual well-being of fellow islanders lies a more profane dispute about religious authority that appears to confirm the heresiologist’s hypothesis that “what is immediately at stake in any specific incident of heresy is the authority to judge the Truth” (Asad 1986: 355). Not every ritual error warrants a provocative and public accusation of kufr. We also know that the island ‘ulama can admonish without making use of the forceful condemnation of heresy. Why then the need to go public and caustic? When the Shamsiyya were compelled to defend themselves after the death of their founding shaykh, they employed mainland ‘ulama to go on the offensive against their local counterparts. Rather than explaining or justifying their own rather ignominious ritual past, the Shamsiyya ‘ulama attacked the religious integrity of their accusers by pointing out their own ritual infidelities and kufr. It was a brave and provocative strategy, but ultimately a conservative one designed to preserve their own orthodoxy. They did not, for example, employ a strategy adopted by many Islamic reformists who condemn the ‘ulama as authoritarian and mired in legal tradition, and thus unqualified to lead the Muslim community. The Shamsiyya recognized that if you attack the role of the ‘ulama as those most qualified to interpret Islamic law and their place atop the island interpretive hierarchy, the whole concept of island orthodoxy would tumble, and with it the legitimacy of the Sufi brotherhoods. Such a strategy coming from a brotherhood would have been self-defeating. Instead, the Shamsiyya questioned the integrity of the incumbent Androth ‘ulama in two different ways. First, they invited outside ‘ulama with identical ideological stances to conduct their debate, thus hoping to send the message that these were more qualified and competent clerics. Second, by accusing their Androth opponents of jealousy, political motivation, and kufr, the Shamsiyya called into question their moral integrity to act as ‘ulama. These two tactics together constituted a serious assault on the intellectual and moral qualifications of the incumbent island ‘ulama, but not of ‘ulama in general.

Two clues offered by the Androth ‘ulama themselves help confirm that what tipped the balance toward acrimonious accusation was the Shamsiyya’s challenge to their religious authority. In the fatwa of condemnation issued in 1986, the ‘ulama list the ritual and doctrinal errors of the Shamsiyya. The final allegation is explicit in stating that part of what constitutes kufr was the Shamsiyya’s contempt for the ‘ulama and their accusations. According to the fatwa, the Shamsiyya had “declared, without proper reason, that the recognized scholars were kafirs.” In conversation, one of the prominent island

‘ulama also admitted to me that it was only when “they introduced ‘ulama from Kerala” that the Androth clerics became resolute in their opposition.

The combination of the public debate and takfr served multiple functions. The public’s subsequent debate over what constitutes heterodoxy and what counts as an appropriate response has helped create a religious identity or religious self-consciousness that did not exists before their conflict. Moreover, by anathematizing the Shamsiyya, the island ‘ulama were able to reformulate island orthodoxy, making it more impervious to novel innovations and threats. In the short term at least, the debate and accusations of heresy also served to highlight the authority of the ‘ulama. In their attempt to impose a version of the “common good”—defined in terms of Islamic orthodoxy—the ‘ulama made a claim for a more public and prominent role in the public sphere. In would be inappropriate, however, to mistake function and consequence for cause. There is little or no evidence to suggest that behind the shift in strategies lie grand ambitions, and this is particularly true for the ‘ulama. It would be easy, for instance, to strip them to their naked political ambitions, as many islanders did when arguing that the conflict was not about religion but “politics.” Although it may be true that “few heresy accusations were ever launched out of pure concern for purity of doctrine” (Lambert 1992: 15), one cannot exclude the possibility that such concerns form part of the conflict equation. The fact that many of the Androth ‘ulama maintained their case against the Shamsiyya in spite of a later Indian Court ruling that seriously circumscribed their authority to impose religious conformity suggests that piety was mixed with religious politics.

*** Conflict, Community and the State

The Indian state was virtually absent during the early stages of this conflict. Only at a later date did the administration, police, and courts intervene. Between the inception of the dispute in the mid-1960s and the violence following the fatwa in 1986, the state was apparently willing to let the islanders resolve the conflict on their own. An equally plausible explanation is that the minor bureaucrats and policemen posted on the island from Kerala would have known little of the conflict until it boiled over. Given the lack of earlier island religious conflict, they did not expect the islanders to resort to acrimony and violence. One can certainly argue that the state left the islanders bereft of “traditional” means of adjudication. The conflict, however, took place in an environment largely determined by the state that—in both the private and public spheres—kept the possibilities wide enough to allow the islanders to conduct their own conflict and inflict their own damage. To suggest that the state was somehow responsible for the escalating conflict through its own inaction ignores the agency and actions of the islanders themselves.

When the state and its agencies eventually weighed in after the modest violence, they did so heavily. The police closed the contentious mosques in 1986, and years later were responsible for the shooting deaths of two islanders during a confrontation at the Juma Masjid. Opposing the police in the aftermath of the mosque expulsion, the island

administration, through its Androth magistrate, tried to keep the contentious sites open while referring the matter to the Kerala High Court. In a compelling decision, the Muslim judge argued, relying on court precedent, that a Muslim could worship in any mosque, regardless of “sect” (see Shamsuddin 1987: 762). Since followers of the Shamsiyya fulfilled the minimum requirements for being a Muslim—which according to the Court entailed embracing the principles of the shahada—they could not be banished from Androth religious sites. Having overruled the ‘ulama’s decision regarding the Shamsiyya’s kufr, the High Court Justice then turned to the ‘ulama’s authority to “excommunicate.” In a remarkable aside from the immediate issues of the case, the judge argued that for Sunni Muslims the “power of ex-communication” is not an integral part of the faith (Shamsuddin 1987: 768). The High Court’s decision thus reveals the ultimate irony of this conflict: despite the intentions of the island religious authorities to preserve the integrity of island Islam and to leave the religious hierarchy intact, a source of authority critical of the existing orthodoxy emerged in the form of the Indian state.

Viewed from this post-fatwa perspective, one might be tempted to see this contest between the ‘ulama and the Indian state as an inevitable collision, virtually predetermined by the hegemonic inclinations of those involved. On the one hand we have a religious conflict propelled into the public sphere by religious men who see themselves as representatives of Islamic law and who either don’t recognize the distinction between religious and political spheres or intend to shape the public sphere with their own narrow interpretation of the common good. On the other, we have an ever-expanding, centralizing, and interventionist state seeking to impose its authority on the public and private lives of its constituent communities and individuals. Thus, any attempt by the ‘ulama to exercise public authority necessarily represents a threat to the state’s apparent hegemony (see Das 1995: 91), while any attempt by the state to limit the conflict and make its own claims on Islam necessarily represents a threat to the authority of the ‘ulama. Meanwhile, somewhere in between lie individuals and communities squeezed by the aspiration to authority of the others.

The island conflict presented here paints a complicated picture of the relationship between religious authority, community, and the state as played out in the public sphere. First, the islanders’ conflict reveals that the state is neither monolithic in its objectives nor hegemonic in its power to implement its objectives. To assume that the modern bureaucratic state is either willing or able “to establish a monopoly over ethical pronouncements” (Das 1995: 92) or “to bring all areas of life under its regulation” (Zaman 2002: 1) is to overestimate its power and misinterpret its multiple and often contradictory objectives. Arguing for a more nuanced approach to the state, Robert Hefner has noted that “Postmodern and Foucauldian theories greatly oversimplify our world when they assert that modern politics has involved no more than the ever-greater intrusion of a ‘panopticon’ state into the public sphere and our private lives” (Hefner 1998: 10). The Indian state’s hesitant, inconsistent, sometimes coercive, often magnanimous behavior throughout the conflict belies this popular model of a one-dimensional and voracious institution. Instead, the state appears more like the inchoate institution sketched by Alasdair MacIntyre (1998 [1997]): “a large, complex and often ramshackle set of interlocking institutions” (236), which he argues “needs and has a ragbag of assorted values, from which it can select in an ad hoc way what will serve its purpose in this or that particular situation with this or that particular group” (245).

Ultimately, the Indian state intruded on the public and religious spheres of the island, but it did so haltingly. Moreover, what prompted the imposition was neither that the ‘ulama were exercising their authority on matters of orthodoxy nor that they were asserting political authority in the public sphere. Rather, what induced the police, the administration, and the courts to act was the ‘ulama’s decision to forego civility for violent coercion.

A conflict between the islanders and various state agencies regarding the use of violence and the abuse of religious authority was also a conflict within the community. Exhibiting the competitive and often nasty politics of local community, the island conflict leaves little room for what Veena Das has called the “nostalgic rendering of the community” (1995: 51). Although there was scant disagreement over the nature of local orthodoxy defined by the ‘ulama, and little local opposition to the attempt by the ‘ulama to fuse religious orthodoxy with the common good, their exercise of authority within the public sphere did not go unchallenged. From the Shamsiyya came challenges to the Androth ‘ulama’s integrity in the form of alternative and combative ‘ulama from Kerala and civil court litigation. Perhaps most surprising was the challenge from the public itself, as many opposed the more extreme methods used by the ‘ulama when enforcing orthodoxy. Exercising their own religious authority, many chose a strategy of indifference or nonparticipation.

Finally, the islanders’ conflict reveals a compelling picture of the ‘ulama themselves. Often portrayed as impulsive and reactive, steeped in static tradition and intolerant of doctrinal or liturgical innovation, the ‘ulama of Androth reveal a striking degree of patience, tolerance, and latitudinarian thought with regard to dissent and religious innovation. Even when confronting un-Islamic behavior, they proved capable of doing so in unprovocative ways. Unfortunately, when faced with the challenges posed by the Shamsiyya, the ‘ulama chose the path of incivility. Their fatwa and attempted mosque expulsion were actions of last resort designed to maintain religious orthodoxy and their own authority to define it when other less provocative modes of disputation proved ineffective. The consequence of their decision is that their authority to act in the public sphere has been severely circumscribed by both the state and the community. The ‘ulama, however, have not disappeared. If not a “resurgence of great moment,” it seems likely that their performance in this conflict was only the first step toward a more public and prominent role in the religious and political life of this Muslim community (Zaman 2002: 1).

* Part IV: Ambivalence in the Practice and Public Staging of Islam

** Chapter Eight: the Limits of the Public: Sufism and the Religious Debate in Syria

Paulo G. Pinto

Sufism constitutes one of the main forms of social expression of Islam in contemporary Syria, attracting followers from all social strata. The social relevance of Sufi identities make them an important element in the constitution of the public sphere in Muslim majority societies such as Syria, where religious identities often provide the conceptual and practical framework for public participation (Eickelman and Piscatori 1996: 108–31). The notion of "public sphere," defined by Jurgen Habermas (1989 [1962]: 27–30) as a space of disputes and negotiations structured by rational discourse, was historically connected with the emergence of open and inclusive spaces for debate in the bourgeois milieus of eighteenth- and nineteenth-century Europe.

Habermas's focus on the European genesis of the modern public sphere must be put into perspective by the fact that Middle Eastern societies also had spaces for social participation in which "contests take place over the definition of 'common good,' and also of the virtues, obligations and rights that members of society require for the common good to be realized" (Eickelman and Salvatore Chapter 1). Furthermore, Habermas's emphasis on the rational aspects of the public sphere overlooks the importance of religious identities in the creation and organization of the public sphere. The role of religious identities in the production of the public sphere became evident with the rise of "public religions," that is, of religious communities engaged in what Jose Casanova defined as the "repoliticization of the private religious and moral spheres and renormativization of the public economic and political spheres" (Casanova 1994: 5—6). This process of "deprivatization" happened within various religious traditions, including Islam, and in societies with different cultural, political, and economic realities, such as the United States, Brazil, and the Middle Eastern societies (Casanova 1994: 6).

This chapter has two goals. The first is to explain how Sufism contributes to the production of the public sphere in Syria. The second is to understand the constraints and possibilities created for public debate among Sufis in Syria when their religious identities are defined by their emotional attachment to the persona of their shaykh, or religious guide. The answer to these questions highlights important issues connected to the emergence of "public religions" on modern public spheres.[23]

There are several levels of Sufi participation in the organization and dynamics of the public sphere in Syria. Sufi identities provide its adherents with cognitive, emotional, and practical dispositions that shape their understandings, perceptions and actions in the public sphere. These dispositions, which constitute what Pierre Bourdieu (1997 [1972]: 78–95) calls habitus, are expressed in forms of presentation and use of the body, affective ties, and moral feelings. Sufism offers normative models of what constitutes the “common good” and how social relations and individual lives should be managed and organized. The Sufis understand and experience their communities as an experiential path embodied in the affective links between the Sufi master (murshid) and his disciples (murid, pl. muridun). Sufism also constitutes one of the main topics in public religious debate in Syria, where the polemics over the Islamic credentials of Sufi doctrines and practices reflect the disputes over the definition of the boundaries of Islam as a religious system.

*** Public Limits: Syria under the Ba^cth

The political order that emerged after the independence of Syria in 1946 was plagued with structural instability due its limited social support beyond the small urban elite that controlled the state (Ahsan 1984: 302). After there were a series of coups and a brief political union with Egypt, military officers linked to the Ba’th, a socialist- oriented Arab nationalist party, seized power in 1963. Ba’th rule was marked by its struggle against the economic and political power of the traditional elite. Land reform was implemented, and banks and factories were nationalized (Ahsan 1984: 306–308, Picard 1980: 163–64). A 1970 coup d’etat brought Hafiz al-Asad to the leadership of the Ba’th party and the presidency of Syria. Asad started a policy of limited economic liberalization, and he increased state control over Syrian society by institutionalizing the surveillance and intimidation of actual or potential opponents by the security services (mukhabarat) (Le Gac 1991: 124—43).

The control of Asad’s regime over Syrian society was implemented both through repressive measures and the cooptation of many social sectors. The institutions of civil society, such as trade unions, were transformed into instruments for coopting the working class into a corporatist framework controlled by the state. In addition, the inefficiency and corruption of the state bureaucracy made more necessary the resource to bribery and personal mediation (wasta) to provide access to resources and services; this facilitated the integration of individuals and communities into clientelistic networks under state patronage (Perthes 1995: 133—203).

The loss of substance of political debate under Ba’th rule, which reduced debate to the repetition of empty slogans (Le Gac 1991: 118—23), enhanced the role of public debate on religion as an instrument of participation and open dispute. Discourses of dissent and discontent could be publicly voiced—even if opaquely—as the moral condemnation of the

regime and its policies, while direct political debate offered a much narrower range of discursive possibilities. Furthermore, the political and social mobilization of large strata of Syrian society through their Muslim identities was facilitated by Asad's use of 'Alawi sectarian ties for assuring a cohesive social base for his regime (Van Dam 1996: 62–74).[24] The combination of sectarian mobilization and political repression was the breeding ground for Islamic militancy against the regime. The Islamic opposition attracted members from widely differing social backgrounds ranging from traditional artisans and the trading bourgeoisie to the professional middle classes, including lawyers, engineers, and doctors (Batatu 1988: 129).

Although the Muslim Brothers (al-Ikhwan al-Muslimun) had a leading role in the Islamic opposition, Sufi shaykhs and their followers also joined the struggle and mobilized militants across class divisions.[25] The Syrian Muslim Brothers had close links with Sufism, and some Muslim Brotherhood leaders had a Sufi background, such as the late Sa'id Hawa (Geoffroy 1997: 13). In the late 1970s, the various groups that composed the Islamic opposition united under the Islamic Front of Syria and began to carry out violent acts against the regime (Le Gac 1991: 138–39; Seurat 1989: 72–83). The conflict degraded into a spiral of violence that culminated in the military defeat of the Islamic Front after a major confrontation with the Syrian army in the city of Hama in 1982, resulting in the destruction of most of the city and the massacre of many of its inhabitants.[26] The destruction of Hama marked the end of an organized political Islamic opposition and reaffirmed the state's control over Syria. After Hama, Asad slowly adopted a more accommodating position toward the public expression of Islam and started a gradual liberalization of the regime. The hopes for faster reforms that rose with the accession of Asad's son, Bashar al-Asad, to the presidency of Syria in 2000 have not been met, however, and the political debate remains under tight state control.

*** Sufism and the Production of Public Islam in Syria

After the tragedy of Hama, the overtly political and militant Islam fostered by the Islamic Front sharply declined in Syria. Nevertheless, in the last two decades in Syria there was a visible increase in the public display of individual signs of Muslim piety and religiosity, such as mosque attendance and veiling. This phenomenon is particularly present in cities such as Aleppo, where religious and local urban identities are combined as an affirmation of difference and resistance toward the secular order of the state and the dominance of Damascus (Seurat 1989: 103–109). Although most Sufis in Syria come from the rural or urban working class, there are clear signs of the internal renewal and social expansion of Sufism and sharia-minded Sufi orders attract many followers from the professional middle classes as well as state cadres. The appeal of Sufi disciplines to the professional middle classes and the economic and political elite resides on their possibility of channeling individual expectations and anxieties while accommodating to the hierarchical structures that frame Syrian society.

Women have been important carriers of Sufi identities into the urban middle classes, for Sufism offers several channels and forms of female religiosity. Sufi identities also provide women with a culturally and morally legitimate channel to engage actively in the religious public sphere. The participation of women in Sufism was enhanced among the sharia-minded Sufi orders, such as the Kuftariyya, which created female branches in which women can participate as disciples or even as deputies (khalifa, pl. khulafa^) of the shaykh (Bottcher 1999: 129—30). In Syria there are also female Sufi orders leaded by female shaykhas, such as the Qubaiysiyya. The importance of reading circles and religious education as instruments of socialization in these female orders expresses their orientation toward a highly educated public of women from the urban elite (Geoffroy 1997: 16).

The continual production of a “public Islam,” understood as the objectification and systematization of Islamic values and practices as a normative model for the moral order of society (Salvatore 1998: 91), based on the display of individual piety, has a pervasive influence on the public sphere in Syria. This framework for the creation of an Islamic society as the cumulative effect of the moral reform of each individual has a strong doctrinal and practical influence of Sufism (Roy 1992: 102—17). The relative indifference of this religious trend toward political projects centered on the state allowed for an easier accommodation with the Ba’th regime, which started to encourage pietistic forms of religiosity in order to channel and coopt the production of a public Islam into its political agenda. The production of state-sanctioned piety in Syria parallels similar strategies of cooptation of public Islam used by the Egyptian state (Salvatore 1998: 91). The policies of the Syrian regime range from sponsoring of the Kuftariyya Sufi order (Bottcher 1998: 137) to broadcasting on state TV programs that emphasize social order, national cohesiveness, and religious morality during the month of Ramadan

(Christmann 2001). Nevertheless, this diffuse form of public Islam is difficult to control and effective in spreading its conception of the “common good” throughout Syrian society.

Sufism is one on the main sources of this individualistic and pietis- tic public Islam, for it is centered on the individual mystical search for the dissolution in God (fana fi-llah). The emphasis that Sufism places on the control of the self (nafs) and the devaluation of the external, or manifest (zahin) truth in opposition to the esoteric, or hidden (batini) one in the path toward the divine reality (haqiqa) are powerful mechanisms for subjectification, meaning the production of a morally and socially bounded individual self through a process of inward reflexivity (Asad 1993: 165—67; Foucault 1998 [1978]: 17—35). The individualized social actors thus produced can cope with the challenges posed by a society that it changing and mobile, albeit authoritarian and crossed by traditional values, such as contemporary Syria. Furthermore, Sufi identities are produced and expressed in a hierarchical framework based upon the personal relation between shaykh and murid, which gives to individuals community support as well as an effective mechanism to fit into the clientelistic networks that structure Syrian society.

A possible parallel can be traced with the emergence of the romantic model of individual in nineteenth-century Germany, in which the core of the “true” self was an emotional and intellectual inner life that had no place for expression in the authoritarian structures of society (Elias 2000: 5—35). Another useful comparison is with contemporary Iran, where traditional themes of poetic self-awareness and social righteousness are being transformed into an individualizing social ethic (Adelkhah 2000: 18—46). The psychological and moral models of individualization present in the German romanticism and in contemporary Iranian ethics are very similar to the mystical one present in Sufism, for they consider individuals to be constituted by a reflexive, emotional, and moral “inner self” that is only partially expressed through their “social self,” due the constraints imposed by the social order. In all these cases, individualistic values and social actors can emerge from and articulate with hierarchical and/or traditional social structures without necessarily causing their disappearance or fragmentation.

The model that arises from these examples gives a view of “modernity” as a process in which traditional and modern values and structures are differently articulated and confronted according to each particular social context, thus going beyond the dichotomy between tradition and modernity that pervades the main anthropological theories on Sufism. For example, Ernest Gellner (1993 [1981]: 56–69) considered Sufism as inherently incompatible with modernity, which according to him can only coexist with Salafi Islam. A more complex approach can be seen in Michael Gilsenan’s analysis of Sufism in Egypt, which pointed to the shan^ca-minded, centralized, and bureaucratized Sufi orders as adaptations to the rationalization of modern Egyptian society (Gilsenan 2000 [1982]: 237—50). Gilsenan’s analysis was still informed, however, by a static model of modernity and tradition, for while reformed Sufi orders survived and expanded throughout the all strata of Egyptian society the same occurred to “traditional” orders such as the Burhaniyya, which became the fastest growing Sufi order in Egypt in the 1990s despite its heterodox practices and doctrines (Luizard 1991: 40—46). Similar patterns can be seen in Syria, where both reformed and traditional expressions of Sufism take part in the production of local and national forms of public Islam.

In Syria, the Sufi conceptions of the self are confronted not only with other moral constructions of Muslim identities but also with the secular “civic self” that the Ba’thist regime tries to mold in the individuals in order to construct its secular moral order. The Ba’thist political project is centered in the creation of the material basis for the expression of the Arab nation through the transformation and modernization of the Syrian society. The production of social agents committed to the Ba’thist ideology has a central role in this political project, which can be seen in the political and ideological investment of the Syrian regime in the control of the educational system. While in the primary and secondary schools the curriculum is filled with Ba’thist ideals and the teachers are compelled to join the party, in the universities party membership and ideological correctness are as important as intellectual excellence for achieving academic success (Le Gac 1991: 141—42; Seurat 1980: 137—39).

The production of the “civic self” of the Ba’thist project also required the organization of individuals in corporate groups that could harmonize and direct individual efforts toward the construction of the nation. The innumerous Ba’thist organizations, such as those destined to assemble workers, peasants, youth, or women, have the role of creating groups with a definite and complementary role to perform in the larger nationalist project (Perthes 1995: 170—72).

These organizations therefore have a role complementary to that of the educational system in disciplining the “civic self” of individuals as carriers of the Ba’thist project by providing them roles and expectations that are connected to their social persona.

In Ba’thist ideology, the Arab nation is not the political result of social and political processes that different social groups create through their actions, but rather a transcendent reality that can only be achieved through submission to the political leader. Thus, as the Sufi shaykh embodies the path toward esoteric truth, the Ba’thist the leader embodies the political and social path toward the “true” Arab nation. Another similarity between Sufism and the political metaphysics of the Ba’th is the opposition between an imperfect reality that is manifest and a perfect one that is hidden from our ordinary senses. This means that the social and political realities of Syria do not reflect the actual potentialities of the Arab nation, which can only be fully expressed in a social and moral order constructed under the enlightened guidance of the leader.

The role of the leader in connecting the “civic self” of the individuals with the supreme reality of the Arab nation in the Ba’thist system can be seen in the metaphysical epithets that are still used to designate Bashar al-Asad, such as “our eternal leader” (qa’iduna ila al-abad) or “the great leader” (al-qa’id al-a^im), which can be seen repeated in the posters and banners that covered much of the surface of public buildings in Syria. Similarly the existential character of the relationship between the individuals and the leader is expressed in emotional terms. For example, an inscription painted on an arch over one of Aleppo’s major streets stated that “in our hearts there is love for our eternal leader and devotion to the nation” (f qulubina hubb ila qa’idina ila al-abad wa ikhlas ila al-watan), showing how belonging to the nation is fused with emotional attachment to the leader in the Ba’thist political discourse.[27]

The anthropologist Abdellah Hammoudi (1997: 150—58) suggested that the homologies between the hierarchical moral order of Sufism and the authoritarian political order in the Morocco could be the expression of a cultural model present in all Arab societies. Analysis of the Syrian case reveals, however, a picture more complex than the political replication of cultural models originated from Sufi notions of authority. Although there are many points of convergence and articulation between the Sufi communities and the Ba’thist regime, there are also important differences and contradictions that can be potential sources of conflict between them. Despite all the ideological emphasis on the creation of a “new man,” the Syrian regime focused its efforts on the insertion of social groups into its web of patronage

as a way to implement its project of social governance. The allegiance with traditional social groups allowed for a more accommodating relation between regime and society, which was needed for the stabilization of the regime after the conflict with the religious opposition.

On the individual level, this meant that the regime required the performance of the outward signs of allegiance to the regime and its leader. This can be seen in the innumerable forms of devotion to the figure of Hafiz and Bashar al-Asad that the Syrians of all social strata ostentatiously express. All commercial establishments in Syria have a picture of the president, all public speeches start with a formulaic praises to the leader, and even in personal conversations in public settings one often hears ritualized flattering comments on the president's intelligence, strong will and character. Despite the pervasive presence of the personality cult elaborated around the figure of the president, and the hyperbolic and sometimes absurd character of many of the slogans and images that constitute it, however, there is no monitoring of the effect of these ideological devices on the subjectivity of the individuals. The simple enunciation of the slogans and the display of the pictures of the president are signs of allegiance to the regime accepted as sufficient by the security forces (Perthes 1995: 189).

The emphasis on the strictly public forms of allegiance to the regime has allowed individual Sufis as well as Sufi communities to negotiate their insertion in the Ba'thist political order. The compromise between the moral order fostered by Sufism and the political order of the Ba'th regime is based on the outward and performative level of the social identities of their adepts, which is devalued by the Sufis as being part of the deceptive universe of appearances (zahiri). This compromise leaves untouched the realm of the inner self, which constitute the core of Sufi identities. The structural similarity between the Sufi and the Ba'thist two-layered construction of reality is crossed by their practical emphasis on distinct levels of the individual subjectivity as the main focus for the normative investment of their disciplinary mechanisms, creating a large margin for practical accommodation between the two systems. Indeed one can find Sufi shaykhs and their communities integrated in all levels of the networks of power relations that connect the Ba'thist regime with Syrian society. The Sufi engagement with the regime can range from the establishment of semi-institutional links with the state apparatus by Sufi orders such as the Kuftariyya, to the participation of Sufi shaykhs in diffuse webs of reciprocity and patronage that connect the neighborhoods in Aleppo to the power centers of the regime, ensuring local support to state policies.

The participation of Sufi communities and their leaders in the networks of patronage that structure local forms of social governance does not mean, however, their complete incorporation into the state apparatus. The relation between the Sufi communities and the Ba'th regime in Syria is marked by a constant tension over the boundaries that define their areas of cooperation, indifference, and opposition, with the Sufis jealously guarding their autonomy and social status from state control. Even among the Sufis who are integrated in the state-sponsored networks, the commitment to the Ba'thist order is less imbedded their identities than the allegiance to their shaykh. This means that the Sufi communities that participate in the structure of governance of the Ba'thist regime may

distance themselves or even break their ties with it if they become alienated by or dissatisfied with state policies. I could see this process of rupture going on in some zawiya s in Aleppo in May 2002, during the height of the Israeli repression of the Palestinian upheaval, when many of their members expressed harsh comments of dissatisfaction and criticism of the government’s inaction in the face of what one of the shaykhs called “the murder of our Muslim brothers.”

By keeping its internal autonomy, the network of Sufi leaders and their communities have the capacity to survive the fall or disintegration of the regime and to emerge as the main producers of order and meaning in the local level. This seems to be the case of the Shi’i religious leaders in Iraq, who appeared as major political and social actors with a strong local and regional constituency immediately after the destruction of Ba’th regime by the Anglo-American war against it in 2003. These religious leaders were probably already working and gathering followers within the state-sponsored networks of patronage much before the war, which explains the short amount of time they needed to emerge as an organized social and political force, and the fact that they passed unnoticed by most observers of the situation in Iraq before the war.

*** Sufism and Public Religious Debate in Syria

The debate over the Islamic legitimacy of particular doctrines and practices has effects on the definition of the “common good” in Syrian society, for it aims to define which traditions will constitute the normative framework of society and who has the full rights to implement it. Sufism is a central object of religious debate in Syria, with Its critics arguing that Sufi doctrines and practices are “blamable” innovations (bid ^ca) created by the founding saints (wall, pl. awliya.’) of the Sufi orders (tarlqa, pl. turuq) which should be eliminated in order to restore Islam to its original purity.

The polemics over Sufism reaches a vast audience beyond the restricted circle of religious specialists, such as the ‘ulama or Sufi shaykhs, through books, TV programs, and religious preaching. In order to answer their critics, many Sufis try to make more clear and explicit, thus more public, the connections between their doctrines and practices and the texts of the Qur”an and the hadlth, or sayings of the Prophet. The contemporary resonance of the accusations against Sufism with the religious consciousness among literate social milieus requires more than simple apologetic responses by the Sufis (Eickelman 1995: 261–66). This challenge pushed some shaykhs to engage in the publication of the mystical literature produced by their tanqa. For example, the Damascene branches of the tanqa Rifa’iyya have published both classical and new texts (Jong 1986: 215), in particular doctrinal treatises. The emphasis on doctrinal texts can be understood as a strategy to fight the widespread image of the Rifa’iyya as a heterodox order that thrives among illiterate and popular milieus.

This effort of making accessible the doctrinal basis of the various Sufi traditions and incorporating them into the public religious debate was paralleled by a process of self-criticism and reform within Sufism itself which led to the “objectification” of the Sufi religious consciousness (Eickelman and Piscatori 1996: 37—45). In Syria, reformed versions of Sufism are currently promoted by major figures in the national religious scene, such as Shaykh Ahmad Kuftaru, the mufti of Syria as well as the leading shaykh of the Naqshbandiyya Kuftariyya order, which carries his family’s name. He uses his dual identity as religious scholar (‘alim) and Sufi shaykh to foster an Islam that is both centered on the textual tradition and open to Sufi moral and mystical concerns. Kuftaru tries to reshape Sufism into a moral system subordinated to the doctrinal and ritual principles systematized by the sharia and the Qur”an (Habbash 1996: 264–68). This textcentered mysticism is responsible for spreading Sufism among the upper and middle classes.

Although there are national and transnational dimensions in the public religious debate, the understanding and appropriation of the ideas and values that they convey is always done within local social and cultural conditions. Therefore, the prestige and the relevance of authors and texts in the public debate varies from one local community to another despite the fact that there are figures of undisputed national or international reputation. In Aleppo, where Muslim identities are connected to both traditional forms of urban sociability and political militancy, the main promoter of a reformist Sufism was ‘Abd al-Qadir ‘Isa, the shaykh of the tanqa Qadiriyya Shadhiliyya Darqawiyya ‘Alawiyya (‘Isa 1993: 627—29), and imam at the ‘Adiliyya mosque in Aleppo. ‘Isa’s commitment to a socially engaged Sufism led to his involvement with the Islamic opposition to the Ba’th regime and to his exile in Jordan after 1982.

‘Isa’s major book, Haqa’iq ^can al-Tasawwuf (Truths about Sufism), is widely read in Aleppo by the followers of all trends in Sufism as well as non-Sufis. ‘Isa presented his book as a systematic explanation of Sufism, in order to combat the “deliberate calumny” (al-ta^cn al-maqsud) and the “violent aggression” (al-hujum al-anif) directed against it by secular and Salafi critics (‘Isa 1993: 8). The esoteric dimension of Sufism was played down in ‘Isa’s model because he defined Sufism as the moral consciousness of the Islamic community, which he considered as defined by the principles of the sharia (‘Isa 1993: 473—77).

‘(sa was clearly thinking of the construction of a large community of moral agents able to act in society and transform it according to the principles of Islam, which required the codification of religious experience in a doctrinal discourse (see Whitehouse 2000: 3—5). It is not surprising, therefore, that he constructed his exposition of the principles of Sufism as a “disciplinary” text in the sense of producing an impersonal and reflexive tool through which the religious discourse can ‘“regulate, inform and construct religious selves” (Asad 1993: 125). The moral qualities required from the Sufis, such as tawba (repentance) or sidq (righteousness), and their function in the Sufi path are explained in a very clear and pedagogic way (‘Isa 1993: 284–310) that differs significantly from the metaphorical or poetic exposition present in Sufi classical treatises or in the hagio- graphic literature. The text in ‘Isa’s book follows modern editorial

style, including footnotes and an index that allows readers quickly to locate the desired information. These editing techniques suppose a reading public that has had modern schooling, allowing the use of the text without any supervision and according to personal needs. This style was one of the causes of success of this book beyond Sufi milieus.

The emergence of reformed forms of Sufism changed the configuration of forces in the public religious debate in Syria by presenting a form of Sufism easier to integrate with the sharia-centered Salafi definition of Islam. As a result of this new challenge, many Sufi shaykhs in Aleppo started to make explicit the connections between their practices and doctrines and the Qur”an by doing commented readings of Sufi texts and organizing study groups after Sufi gatherings (hadras). Sufi ritual practices that had no direct reference in the Qur”an, such as the darab al-shish (body piercing with skewers), were discontinued in many zawiiyas of Aleppo, in particular those in which the participants had a higher educational level and thus were more exposed to the polemics concerning these rituals.

The convergence of Sufi and non-Sufi reformist positions encourages the rise of a Sunni consensus in the definition of the common good. This process is similar to the creation of a shared legal and ritual universe through the downplay of the differences among the four Sunni legal schools (madhhab, pl. madhahib) that occurred during the last century. Such a phenomenon could be easily replicated in Syria today, where there is no sharp division between Salafi and Sufi practice, with many practitioners fusing the two religious identities. Sa’id Hawa, the later leader of the Syrian Muslim Brothers who was also a Sufi, proposed the creation of a “Salafi Sufism” as a necessary step in the creation of an Islamic society that can effectively respond to the challenges posed by secularism (Hawa 1979: 217—18). These ideas find echo in the preaching of Shaykh Kuftaru, who proposes the transformation of Sufism into the moral consciousness of the sharia and the change of its name to ihsan (Geoffroy 1997: 14).

Nevertheless, such a consensus is not likely to be created in the nearby future. Important divergences still exist between reformist Sufis and other Muslims. Reformed and traditional Sufis alike see the hierarchical relationship between master and disciple as the pivotal element in Sufism. Shaykh Kuftaru is the absolute leader of his tariqa and his followers are personally committed to him and his deputies. Similarly, ‘Abd al-Qadir ‘Isa’s writings defend the religious primacy of the Sufi shaykhs, saying that “the legalistic [zahir] ‘ulama guard the borders of the sharia, while the Sufi scholars guard its morals and its soul” (‘Isa 1993: 476—77). Furthermore, Sufis consider the power of their shaykhs to be connected to the baraka (grace) that they receive from God and express in their karamat (miraculous deeds), but many other Muslims see this as bid‘a (blamable innovation) and shirk (polytheism).[28]

The reproduction of the hierarchical relationship between Sufi shaykhs and their disciples as the defining element of Sufi identities in the public sphere shows a different trend in the constitution of a “public Islam.” The hierarchical links between master and disciple are not based on the monopoly of doctrinal discourse by the former, but rather on the capacity of the shaykh to discipline as legitimate mystical experiences the emotional and sensory elements that are induced by the performance of Sufi rituals. The analysis of the role that Sufi identities play as constitutive elements of the Syrian public sphere must therefore take into account the effects of the power relations that they embody and reproduce as emotional attachments.

*** Individual Limits: The Experiential Character of Sufi Identities

The Sufi path is constituted by experiential states that are based on a set of bodily sensations and emotions, such as love (hubb), which are induced and disciplined according to the Sufi concepts linked to each mystical stage (maqam) reached by the disciple. Therefore, the mystical experiences that define the Sufi path consist of emotional and sensorial elements that are induced, combined, and mobilized in social contexts and for cultural purposes legitimized by the Sufi tradition. Sufis base their doctrines on the distinction between the manifest and hidden dimensions of reality, with the latter being closer to the divine truth. The epistemological consequence of this conception of knowledge is that the “real” meaning of things can only be unveiled by those who had a direct experience of the divine truth.

The process of Sufi initiation (tarbiyya) starts with the study of the manifest zahin tradition, which consists of the sharia and the doctrinal and ritual basis of Sufism. It presents a version of the Sufi path in close connection with the religious rules prescribed by the sharia and slowly moves to texts with a deeper esoteric (batin) message. The importance of the Sufi textual tradition in providing adepts with the conceptual apparatus for constructing their mystical experience suggests how higher degrees of literacy can change power relations. Nevertheless, the Sufi conception of religious knowledge requires the tutorial figure of the shaykh because it values existential over intellectual understandings of religious truth. This point was nicely summarized by a Qadiri shaykh who, after showing me some volumes from his private library, told me that “it is one thing to be knowledgeable on Sufism, studying it from books, and a very different thing to be a Sufi. ... The haqiqa is something that you feel in the heart (tash^caruha fi-l-qalb). ... I can read five hundred books on Sufism, but if after that I am still the same, I am not a Sufi” (personal communication, June 2000).

This statement shows how the transformation of the self is the core of Sufi initiation. Such an existential transformation is the result of mystical exercises with both physical and spiritual implications, which can only be effective if performed under the continuous supervision of the shaykh. One of the first tasks that the disciple has to accomplish in the process of

initiation is to purify his heart through repetition of the devotional formula (wird) received during the performance of his oath of allegiance (bayl) to the shaykh. The repetition of the wird is a form of performing the dhikr, or mystical evocation of God, which is one of the main Sufi rituals. The mystical exercises that constitute the Sufi path aim at producing mystical states (hal, pl. ahwal) that are experienced as God's presence in the heart of the faithful. Therefore, the disciple must concentrate not only on performing the task but also on a search for the emotions and physical sensations that inform him of the success of his effort in "engraving the name of God in his heart," as a disciple of a Rifa'i shaykh in Aleppo explained.

A shaykh's guidance is fundamental in shaping the efforts of the disciple into effective mystical practice. Most shaykhs have weekly meetings with their disciples, where they address the whole group and each disciple individually. During these meetings the shaykh usually explains the features of one mystical exercise—the kind of sensations one should expect to attain by performing it, and the relation between these sensations and the stages of the Sufi path. Once I witnessed a meeting between a Shadhili shaykh and his disciples. The shaykh delivered a sermon on the importance of "fighting against the nafs (self)" in order to avoid the sin of kibr (pride) that led Satan to revolt against God. He concluded by saying that one only begins to win this fight when he attains the state of dhikr from the heart. Then he invited all the present to perform the dhikr, repeating Allah while moving the head back and forth. During the ritual the shaykh sat in front of each one of the disciples in turn, pressed his finger on the heart of each one, and said "This is your heart; you will feel God here. At the beginning you will feel nothing, but love (hubb) will open your heart to him. You will feel it like life coming out from an egg." While still pressing his finger on the disciple's heart, he repeated Allah, Allah, Allah, Allah, Allah, and then moved on to the next disciple.

This example shows how the teachings and the ritual guidance of the shaykh induce in his disciples the anticipation of a sequence of sensations that will allow them to recognize their success in performing the dhikr correctly. The shaykh made sure that the description in words of mystical emotional sensation and love was accompanied by the physical sensation of pressure over one's heart while the name of God was repeated. In resembling the pressure that a newly formed life makes on the egg that contains it, this sensation reveals in an experiential way the meaning of one of God's name, Hayy (Living One). '

The emotional and physical intimacy that pervades the relationship between the Sufi shaykh and his disciples raises some problems when there are female disciples of male shaykhs, which is the usual situation in traditional zawiya s. The love and complete submission that the disciple must devote to the shaykh stand in opposition to the shared understandings of female honor and gender roles that prevail in Muslim religious milieus. Although these tensions are minimized in Sufi orders such as the Kuftariyya, which have a female branch in which female deputies of the shaykh mediate between the world of privacy

and honor and the universe of public devotion, they are only completely solved in female orders that have a female shaykha, such as the Qubaysiyya. The relation between these shaykhas and their murida s has a strong emotional drive of devotion and dedication constructed within a framework of puritanical piety and strict discipline. The Sufi path fostered by shaykhas tends to combine the public observation of the norms of veiling and modesty with practices of self-accountability and reflexivity. For example, in Aleppo it is possible to recognize the disciples of a famous shaykha linked to the Naqshbandiyya order because, besides being fully veiled in black, they carry a small counting machine where they register every wird they recite. The goal pursued here is the establishment of a permanent connection to the shaykha in a perpetual state of dhikr, and the total number of prayers achieved in lifetime is expected to count as a proof of good deeds and pious thoughts on Judgment Day.

Similar efforts to achieve complete control over the self (nafs) are pursued in male zawiya s within the framework of ascetic practices, such as spiritual retreat (khalwa). The khalwa is a traditional practice among many Sufi orders, consisting of a period during which a shaykh's disciples engage in a total retreat from the world, living in the zawiya in complete isolation, meditating, and fasting in order to advance on the mystical path. Although the khalwa has been adapted to the constraints of modern life—its period has been shortened from forty to four days—it still is performed in many zawiyas in Aleppo. During the periods of seclusion in individual cells or rooms, the shaykh assigns specific positions or body movements to the disciples to perform while meditating on their personal wird.

The khalwa contributes to the embodiment of the power relations that constitute the Sufi community via the emotions and bodily sensations that it produces in the Sufi neophytes, thus inscribing the hierarchical relationship between shaykh and disciple into the corporeal dimension of the latter. For example, a middle-class professional from Aleppo who is the disciple of a Shadhili shaykh told me that he had to perform the khalwa for four days: "[I was] in complete isolation in a dark room. On the wall there was a picture of the shaykh and there was a light over it. I had to stay there for hours staring at the picture and reciting the tasbih (prayer beads) over my heart and repeating Allah with my tongue pressing on the palate. After a while I could feel God's presence and I felt that the shaykh was the link between Him and me. ... The same love that I felt for God I could see in my shaykh and I could feel that he [the shaykh] was part of the haqiqa."

This example reveals how the sensations produced in the disciples by the disciplinary practices of Sufi initiation relate to symbols and images in order to produce an emotional and physical experience of the divine nature of the shaykh's authority. The shaykh has a central role in inculcating the mystical formulas of training, so that the emotions and experience associated with it are reworked from the ordinary experience of the disciples until they execute the normative models transmitted by the Sufi tradition. This is a fundamental element in the incorporation of the shaykh's authority as part of the emotional

basis of Sufi identities, for it leads the disciple to identify the affection that he has toward his master with the love that he devotes to God.

The disciplinary efficacy of continuous training and exercising in body techniques—the culturally determined ways of using the body to achieve expected social and physical results (Mauss 1995 [1934]: 371–72), which are transmitted by the mystical path—is constantly tested during the collective performance of the dhikr at the weekly hadra. The organizational principles of the dhikr also produce and reinforce emotional attachments to the figure of the shaykh among the participants, even beyond the circle of the initiated. The shaykh is the focal point of the ritual, the efficacy of which is attributed to his baraka. The hierarchical organization of the ritual centered on the shaykh's mystical persona produces the notion that the differences among individual experiences come from the degree of personal attachment and physical proximity that each participant has to the shaykh. Furthermore, karamat (miraculous deeds) performed by a shaykh or attributed to him by his followers create a sense of respect and awe among those who hear the accounts of these acts or see them happen during the ritual practices. Thus, the religious persona of the Sufi shaykh is experienced by his followers as the main element in the production and definition of their Sufi identities, which means that the power relations that exist in their relationship are fused with affective ties of love, gratitude, and devotion.

*** The Limits of the Public: Sufi Identities and Forms of Participation in the Public Sphere

The various biographic and hagiographic accounts of living and dead shaykhs that are published and circulate among Sufi groups in Syria show how Sufis consider their shaykhs as central to their own religious identities. Some of the texts downplay their miraculous deeds and emphasize their religious and legal knowledge or their moral virtues. However, when these texts circulate within the Sufi communities, they are complemented by oral accounts of karamat that shift the base of the shaykh's persona from his knowledge and piety to his baraka (see Chih 1997: 32–34). This apparent contradiction between the biographical texts and their use by Sufis is the result of a strategy displayed in the composition of these narratives, which aims at facilitating the acceptance of the authority of Sufi shaykhs among non-Sufi Muslims in public religious debate.

The emphasis on textual and doctrinal aspects of the religious authority of Sufi shaykhs is the result both of the strategies of the Sufis and the structure of the public religious debate itself. This debate in Syria is centered on the doctrinal aspects of the Islamic textual tradition, showing that the doctrinal challenges posed by the reform-minded trends in Islam have a social appeal strong enough to define the central topics of public religious debate. Although this phenomenon affected certain areas of Sufism, it left untouched elements that constitute the core of Sufi identities, such as the emotional attachments that link Sufis to their shaykhs. The absence of public discourse on the emotional and experiential elements of Sufi identities in Syrian religious debate is not the result of their supposedly idiosyncratic

nature but of the bodily nature of the disciplinary mechanisms used to produce them. Furthermore, although it is true that doctrinal texts are not particularly suitable to convey emotional states or individual experiences, this can be done by other literary genres, such as autobiographical narratives. For example, the vast circulation and consumption of novels, romances, and confessional autobiographies in nineteenth-century Europe delimited and disciplined an experiential universe of emotions and sexual impulses as the “inner self” that defined the bourgeois individual (Foucault 1998 [1976]: 17—35).

There are no equivalent literary genres among the Sufi texts produced in Syria. The biographies and hagiographies follow formulaic rules of composition that prevent a deeper description or analysis of the emotional universe of the individual. Traditional Sufi poetry and literature is too allegorical to provide the readers with reflexive disciplinary mechanisms that could work independently from the tutelage of a shaykh. Even the mystical manuals, both traditional, such as the Dala’il al-Khayrat, and modern ones, such as the Haqa’iq ^can al-Tasawwuf, which are widely read in the Sufi circles of Aleppo, are not suitable to create mechanisms of “rationalization” of the mystical experiences. These manuals give access only to the basic elements of the Sufi path. Anyone wishing to pursue it further needs to search for the guidance of a Sufi shaykh.

The differences between the individualization of the Sufi self and the forms of individualization present in modern European traditions are based on the fact that the former combined in each individual the notion of idiosyncratic uniqueness with that of community belonging, whereas the latter separated or emphasized these features as distinct conceptions of individuality. Although the construction the Sufi self is pursued through the cultivation of an emotional and experiential inner life, it can only be fully achieved and expressed through the constitution of a community. The connections between the individual selves in the Sufi communities are done not through the construction of shared normative discourses about the self, as in the French and Anglo-American bourgeois tradition, but by the dissolution of all individual differences in the emotional attachment to the shaykh. The fact that the emotional dimension of the power relations inscribed in Sufi identities was not objectified in the public debate allows them to be unconsciously reproduced as affinities and dispositions within the practices and worldview of Sufi adherents.

The Sufi idea of common good is centered on the concrete reality of the Sufi communities as the guardians of the values of an abstract umma, allowing for many different ways to reach accommodations with an authoritarian public order. This attitude facilitates understanding the variety of the Sufi reactions to colonial occupation in various Muslim societies, ranging from fierce resistance to active collaboration (Gellner 1993 [1981]: 221—30; Gilsenan 2000 [1982]: 157—63). A recent example of the potential radicalization of Sufi communities when faced with foreign threat was seen during the Anglo-American war and occupation of Iraq. Sufi shaykhs and their followers in Syria considered the military campaign an attack on Arab and Muslim society, with which they have strong personal and religious ties. Many Sufi shaykhs in Aleppo trace their genealogical origins to Iraq, and the most important Sufi saints, ‘Abd al- Qadir Jailani and Ahmad al-Rifa’i, are buried there.

On the other hand, the terrorist attacks of September 11 and the war against the Taliban and al-Qa'ida in Afghanistan had little mobilizing effects on the Sufi communities in Syria, for it involved a foreign power set against groups whose interpretation of Islam that was perceived to be deeply hostile to the Sufi worldview. The American support to Israel during the second intifada and the war against Iraq strengthened the perception among the Sufis in Syria, however, that the American government is inherently hostile to Muslims and Arabs. The political and economic pressure and the threats of a military attack against Syria that were done by the American administration during and after the war in Iraq transformed political antipathy into mobilization for resistance. This process culminated with the statement by shaykh Kuftaru in March 2003 that all forms of resistance to occupation, including "martyr operations," were legitimate and necessary to combat the "American, British, and Zionist invaders,"[29] showing the degree of radicalization that can be reached in Sufi communities if faced with threats from a power perceived as inimical to Islam.

The final picture shows the existence of spaces and mechanisms of both accommodation and confrontation with those power hierarchies that try to control the public sphere and shape the official public discourse. Whereas Sufism contributes to the reproduction of certain aspects of the Syrian authoritarian public order, the Sufi communities can also pose limits to state authority. Sufi models of the common good tend to favor hierarchical forms of social organization and participation by defending the charismatic authority of shaykhs in public religious debate. Nevertheless, the emotional attachment of the Sufis to their shaykhs is also linked to the idea of the existence of multiple individual paths toward the divine truth, preventing the imposition of an easy consensus on public debate. This creates a degree of plurality and even a space for individual autonomy in the Syrian public sphere.

This analysis of the public religious debate in Syria shows that the limits that determine the dynamics of the public sphere are not simply imposed by the state or set by institutional structures, for they are also produced by the power relations embodied as emotional and habitual dispositions in the identities of the agents. So the public sphere cannot be reduced to a homogeneous space of rational exchanges where objective interests are pursued through calculated strategies, for the logic of discourse is contradicted and modified by affective attachments and emotional dispositions inscribed in the agents' identities. However, the notion of alternative or multiple rationalities does not give an accurate idea of the dynamics of the public sphere, either, for it still supposes that the limits of rational debate are given by equivalent, albeit distinct, logical and normative principles.

In order to grasp the limits of the public sphere one has to look to the processes of subjectification displayed by the various groups, for they connect power relations with emotional elements in the constitution of public identities. The production of emotional attachments toward particular forms of authority limits the possibilities of the construction of shared ideals of the "common good" through public debate. The embodied character of these dispositions keeps the basis of power legitimacy dependent on personally established emotional ties that remain beyond the reach of public argument. This is clear in relation to

the consensus on the necessity of implementing Islamic values as the normative social model that was built in the public religious debate in Syria, but that was fragmented by personal attachments to conflicting structures of authority inscribed in the various Muslim identities. Thus, the emergence of “public religions” does not mean the simple incorporation of new perspectives into public debate, but rather the organization of distinct normative universes defined by power relations that are inscribed as emotional dispositions in the public identities of their adherents. This process can either lead to the failure of public debate or allow for the emergence of a more inclusive configuration of the public sphere, the outcome depending on the possibilities for the objectification and public challenge of the forms of power that define and support its limits.

** Chapter Nine: Islam and Public Piety in Mali{3}

Benjamin F. Soares

Since the late nineteenth century and the onset of colonial rule in West Africa, scholars, including colonial scholar administrators, have devoted considerable attention to the study of what has been assumed to be the main institutional form for the practice of Islam in West Africa: the Sufi orders, the mystical paths. In an almost unending stream of studies, various scholars—political scientists, sociologists, geographers, historians, and those in religious studies—have focused on Sufi orders in various countries of the region. It is important to note, however, that Sufi orders have never had the importance in large parts of West Africa—in Mali, Niger, Cote d'Ivoire—that they may have had, say, in Senegal or elsewhere in the Muslim world (cf. Soares 1997, 1999). When scholars in West Africa have not focused on Sufi orders, they have tended to study the critics of the Sufi orders—so-called "reformists," Salafis, or, more recently, Islamists (for example, Rosander and Westerlund 1997). Most West African Muslims I have encountered during the course of my research—and, I claim, many of those I have learned about through reading colonial archives—are neither formally affiliated with any of the Sufi orders present in West Africa nor are they "reformists" or Islamists. Moreover, many West African Muslims categorically reject such appellations. This is not to deny the importance of Sufi orders, Sufism, or "reformism" in Mali. Rather, since all of these objects of study are so thin on the ground, it would seem to follow that we should shift our attention away from preoccupations with such presumed forms of Muslim social activism, not least since the events of September 11, 2001.

In this chapter, I do not privilege such categories in my analysis. During the course of fieldwork in Mali in the 1990s, it would have been difficult to avoid, let alone ignore, the many discussions Malian Muslims were having about Islam. Some of these discussions focused on questions of doctrine and "correct" ritual practice—for example, whether Friday communal prayers had to be performed in a mosque. Others focused on Muslim politics—for example, whether Muslims should be opposed on principle to the Gulf War and subsequent U.S. and British air strikes against Iraq in the 1990s. However, many of the discussions about Islam in Mali centered on more general questions of piety and the "correct" ways of being a pious Muslim. Indeed, there seemed to be considerable concern with—and often debate about—the public signs of piety.

On numerous occasions during my fieldwork, Malian friends and informants asked me whether I had noticed the mark or sign on a particular person's forehead. They used the term seere in Bamana/Bam- bara, Mali's most important lingua franca (or seede in Fulfulde/Pulaar), which some of my informants told me derives from

the Arabic, shahada, meaning testimony or witness, as in the Muslim profession of faith. This term, seere, refers to the sometimes circular spot or mark on some people's foreheads. Many Malians note that such a mark indicates regular prayer—even beyond the obligatory five ritual daily prayers—and presumably appears from touching the forehead to the ground. For many, such marks index piety. By all accounts, these marks are much more prevalent that they used to be. I myself have noticed the appearance of the marks on the foreheads of several friends and acquaintances between different periods of fieldwork in Mali, sometimes to my astonishment. What follows is an attempt to make sense of such signs. However, I must first present quite a bit of background information in order to understand the link between piety and some of its public signs in Mali.

*** Islam in Malian History

Although Islam has been practiced in Mali for at least a millennium, it was only in the twentieth century that Islam became the religion of the majority. It has largely been through the development of a public sphere that this Islamization has occurred. Arguably, a public sphere has been developing in Mali that differs considerably from the idealized bourgeois public sphere described by Habermas (1989 [1962]; cf. Calhoun 1992), in which there is a space for so-called rational critical debate, and religion clearly has no place. Elsewhere, I have traced some of the elements of such a public sphere in Mali back to the colonial period, when the spread of newspapers, publications, political parties, associations, and organizations opened new spaces for political and social debate and deliberation (Soares 1996, 1997). Following John Bowen, who has written about Aceh in Indonesia, I would argue that in Mali there is a "public sphere of discourse that combines religious, social, and political messages" (Bowen 1993: 325). By considering the development and contours of this public sphere, I explore here some of the enduring paradoxes that have accompanied the spread of more standardized ways of being Muslim in Mali.

First, let us examine briefly the features of Islam in the region (cf. Launay and Soares 1999). Although it is difficult to speak with great precision about the nature and extent of Islamization before the twentieth century, we do know that in the precolonial and early colonial periods (at least until the first decades of the twentieth century), religious practices often reflected membership in hereditary social categories. That is, whether people practiced Islam and the way in which they did so often had to do with their hereditary social status. Certain lineages were known as Muslim religious specialists or marabouts in French colonial parlance. They historically had control over Islamic religious knowledge, education, and sometimes trade. The hereditary transmission of both learning and sanctity has been historically very important here. Members of lineages of religious specialists and their descendants were generally those who performed the ritual daily prayers, fasted during the month of Ramadan, and abstained from consumption of alcohol. In short, they exhibited some of the outward signs of the practice of Islam. Other lineages, sometimes even members of the political/military elite who were Muslims, did not —nor were they expected to—conform to the standards of piety that were typical of clerics.

If before colonial rule Muslim elites had almost a monopoly on Islam, transformations of the entire political economy during colonial rule would change this. The increased movement of persons and commodities rendered some of these elites obsolete and helped to facilitate the Islamization of large segments of the population. Indeed, the period of French colonial rule in West Africa—from the late nineteenth century until 1960—witnessed the rapid spread of Islam in new areas and among groups that had historically not been Muslim. Many non-Muslims, including urban and agricultural laborers, conscripts to the army, students in colonial schools, and increasingly their village kin were converting to Islam. At the same time, more standardized ritual norms were spreading among virtually all Muslims, including those Muslims who had previously not been expected to conform to such norms. Thus, people from all sectors of society (members of the precolonial political/military elite, recent converts to Islam, and those of marginal social status—hereditary “caste” and servile status) began to emulate the religious practices of Muslim clerics. Religious practices, such as regular prayer and fasting during the month of Ramadan, became ritual norms for all Muslims regardless of social distinctions, hereditary or otherwise. This helped to make the practice of Islam—especially in its public ritual forms—more uniform across space and time. It is striking that today one of the most commonly used terms for Muslim in Bambara, selibaa (most likely from the Arabic, salat), means quite literally “one who prays.” To ask “do you pray?” or “does he pray?” is the ordinary way to inquire whether someone is a Muslim.

Although it is important to look to the colonial era to understand such changes, there are also generally overlooked antecedents for the public sphere in nonsecular discursive forms in this part of West Africa. Prior to colonial rule, debates between Muslim religious figures—a small educated elite for whom classical Arabic was the main language of written communication—often centered on such questions as the legitimacy of rule by particular Muslims and non-Muslims, including the French, the licitness of trade with non-Muslims, and so forth.[30] We have evidence of such debates in the form of various treatises in Arabic and oral histories and narratives from the precolonial and early colonial periods.[31] During the colonial period, the French administration sought the “loyalty” of virtually all Muslim clerics to whom ordinary Africans were assumed to owe allegiance.[32] Although during colonial rule some Muslims migrated for politicoreligious (not to mention economic) reasons to areas beyond French control and argued that others should do the same, most did not. Most Muslim elites accepted the fact that they were living under non-Muslim rule and did not deem flight or migration (hijra) from such rule necessary.[33] Acceptance of French rule occasionally came enthusiastically and, at other times, grudgingly. As the decades of French rule passed, for those least enthusiastic about the French presence there was resignation if not acceptance. Debate and deliberation between Muslims about political and economic issues such as the legitimacy of non-Muslim rule was, on the whole, attenuated during the colonial period. This was more or less the case until the 1950s, the decade leading up to independence.

*** Muslim Preachers and Public Sermons

There was an important development in the propagation of information about Islam during the colonial period that is useful for helping us to understand the emergence of more uniform ways of being Muslim. Drawing upon preexisting discursive forms and particularly written forms, Muslim preachers during the colonial period began to address sermons on specifically Islamic themes to the public outside the context of the mosque. Such preachers came to constitute in effect a new category of religious personality. In large parts of French West Africa, public sermons came to be known in various vernacular languages as waaju (or warate in Wolof) from the Arabic wa'z, meaning sermon (cf. Launay 1992). Such sermons became an increasingly popular form of communicating to large groups of people, both Muslim and non-Muslim. Although it is not possible to date the arrival of this discursive form in West Africa or to trace its relationship to developments elsewhere in the Muslim world, it certainly existed prior to colonial rule. The expanded public sphere under colonial rule facilitated the spread of public sermons, however, and they became one of the principal means for facilitating the spread of Islam and for the standardization of Islamic practices, with implications for public piety in Mali.

It is important to note that there were various kinds of Muslim preachers who used the public sermon. In fact, preachers from the colonial-authorized Muslim establishment sometimes gave public sermons on subjects of interest to the colonial administration. French colonial attempts to use Muslim clerics to exert influence over Muslims in this part of Africa are perhaps best exemplified in the career of one religious personality, Seydou Nourou Tall. From the 1930s onward, Seydou Nourou Tall was the Muslim religious leader in West Africa closest to the French, perhaps even the embodiment of the colonial-authorized Muslim establishment.[34] A grandson of al-Hajj 'Umar Tall, the leader of a nineteenth-century state who had clashed militarily with the French, Seydou Nourou traveled thousands of kilometers across French West Africa on behalf of a succession of colonial administrations, encouraging colonial subjects not only to obey the French and its representatives but also to pay taxes, to work in colonial projects, to ignore calls to strike, to use colonial health facilities, not to immigrate to neighboring colonies, and to perform their Islamic "religious duties."[35] Many of Seydou Nourou Tail's public pronouncements—usually in the vernacular language of his audience—took the form of a public sermon in which he related the topic at hand to the discursive tradition of Islam, and especially the Qur"an and the hadith. In one of his sermons in the 1940s, he spoke about such "civic" duties as obedience to French authority and the need to fulfill one's religious obligations as Muslims, which he stressed were much easier given the conditions of colonial rule (see also Chailley 1962). In any case, this new form of public sermon—waaju—that sometimes linked Islam with the objectives of the state spread throughout French West Africa. Such public sermons also helped to spread a more standardized Islamic culture premised on the notion that all Muslims should have similar duties and ritual obligations. Eventually, such preachers would widen their appeals to encourage those who could afford to do so to perform the hajj and to contribute funds toward the construction of new Friday mosques in colonial centers, such as Bamako, the Malian capital.[36] But these public sermons were not to remain the preserve of the colonial-authorized Muslim establishment, nor were members of this establishment the only ones to use such sermons to promulgate the idea that regular prayer and fasting during the month of Ramadan were to be ritual norms for all Muslims.

Paradoxically, the new colonial public sphere created a space in which various kinds of Muslim preachers flourished and made public pronouncements about the practice of Islam that were nonpolitical (at least from the perspective of the French). That is, they did not contest French authority. In colonial archives, one can read about individual Muslims—I want to call them freelance Muslim preachers—who gave sermons and sometimes traveled around to do so. Many of these preachers actively sought to convert non-Muslims to Islam; they also admonished people to give up their un-Islamic practices. In many reported cases, they tried to get people to relinquish or to destroy their allegedly un-Islamic ritual objects —“fetishes” in the colonial lexicon. It was usually when such preachers disrupted the colonial “public order” that they came to the attention of the French and were sometimes arrested and even sent into exile—hence traces in the colonial archives. Indeed, colonial reports document numerous cases in which conversion to Islam and the destruction of ritual objects in various places led to open conflict, often along generational lines.[37] That is, younger people, frequently migrants, contested the authority of non-Muslims, who were quite often their elders. Issues of gender were also important here, since most of the first converts seem to have been men. There are also reported cases of certain preachers haranguing those who considered themselves Muslims for failing to practice Islam correctly. For example, some preachers openly criticized African colonial civil servants for drinking alcoholic beverages and/or for exceeding the maximum of four wives permitted according to the rules of Islamic jurisprudence.[38]

Many of these freelance preachers, some not discussed in detail in the colonial archive or discussed only in passing, carried out the work of spreading Islam. Sources here include triumphalist oral narratives and hagiographic accounts in Arabic (and sometimes in French). One of the freelance preachers frequently discussed today, who also left considerable traces in the colonial archives is Cheikh Salah Siby (ca. 1888—1982), a Dogon convert to Islam, largely credited with spreading Islam among the Dogon.[39] Although those familiar with the Griaule school of French ethnology might find the idea of a Dogon Muslim an oxymoron, Cheikh Salah is just one of many such Dogon converts to Islam. During the colonial period, Cheikh Salah actively began to instruct people in what he took to be proper Islamic religious practice—ritual daily prayer, fasting during the month of Ramadan, getting people to slaughter animals according to the rules of Islamic jurisprudence (halal), and so forth—some of the outward signs of Islam. From the 1940s on, he mainly directed his attention to two groups of socially marginal people: first, his fellow Dogon, many of whom took him to be a living Muslim saint, and second, some of the many former slaves in the region. These were sizeable groups whom their Muslim neighbors often treated with disdain. In any case, such people—mostly recent converts to Islam—were beginning to emulate the conventions of religious practice, as well as standards of piety, of those with claims to Islamic religious authority—the Muslim elites. Most of the newly Islamized also abandoned other public signs—such as long braided hair for men and certain forms of facial scarification for their children—that indexed them as nonMuslims. In any case, this particular preacher was helping to facilitate the emergence of a more generally shared way of being Muslim. Such developments were only possible given the complex transformations occurring under French rule and with the expansion of the public sphere.

It would be hasty, however, to assume that the adoption of outward—indeed public—signs of Islam meant that allegedly un-Islamic traditions were no longer important. Over time, various kinds of such “traditions” were desacralized and made into local and regional folklore. In some cases, the therapies or medicines of non-Muslim healers were also desacralized and, therefore, rendered licit for Muslims who might seek to use these along with or as an alternative to the increasingly available Western biomedicine. Other “traditions,” such as certain masking traditions, were not so much desacralized as made into children’s games held at certain points in the Islamic calendar, and, therefore, rendered “harmless.” Still yet other allegedly un- Islamic “traditions”—forms of spirit possession and the use of certain non-Islamic ritual objects—have been increasingly relegated to private or at least semipublic venues, that is, out of the view of potential critics, Muslim or otherwise. [40] It is here that one can see some of those excluded from the expanding public sphere in which Islam dominates.

*** Muslim Associations and New Muslim Intellectuals

In contrast to the freelance Muslim preachers, new Muslim associations were founded in urban areas, increasingly from the 1930s onward. These new Muslim associations ostensibly admitted all Muslims as members, but tended to attract those who were colonial civil servants, former soldiers, and others involved in the new colonial urban centers of economic activity (cf. Loimeier 1999; Meillassoux 1968; and Gomez-Perez 1991, 1997). Some of these early associations sought to encourage and facilitate the hajj, which increasingly became a goal of an expanding and aspirant African Muslim bourgeoisie.[41] Several of the associations organized public meetings where invited speakers, including prominent African Muslim intellectuals, talked about such topics as Muslim unity and morality.[42] Working with one association, Fraternite Musulmane, Mahmoud Ba, a West African educated in Mecca in the 1930s, gave public addresses in which he condemned Muslim youths for being more drawn to drink and pleasure than to practicing religion.[43] According to French accounts, such meetings were decidedly nonpolitical or at least generally avoided political issues. In 1948, however, after developments in Palestine, one organization made public statements that “this dispute” did not concern West African Muslims living under French rule.[44] It is noteworthy that the public meetings of these associations generally ended with speakers thanking France for her “civilizing mission,” however perfunctory such statements might seem.[45]

By the early 1950s, certain West African Muslim intellectuals began to enter the public arena in new ways. In contrast to those Africans who had engaged in French-language secular schooling, such as many of the members of the early Muslim associations, these intellectuals were part of a newly emergent, highly educated Muslim elite, who had undergone advanced Islamic education, whether in Mali, elsewhere in West Africa, or abroad, at institutions like al-Azhar in Cairo or the Dar al-Hadith in the Hijaz. Inspired by the nationalism sweeping the Arab world, the independence of British colonies, most notably, India and Pakistan in 1947 with their large Muslim populations, and the independence of Libya from Italy in the early 1950s, some of these Muslim intellectuals sought to connect anticolonialist ideas with more reformist ideas about Islam. Given that their activities were

under constant surveillance, they were not able to act as freely as the colonial-authorized Muslim establishment. Indeed, some “reformist” preachers were subject to harassment after making their own public pronouncements that were deemed insulting to the French or other Muslim clerics; they sometimes had their schools closed and were occasionally imprisoned for allegedly disrupting public order (see Brenner 2000; Kaba 1974).

In the early 1950s, “reformist” Muslim intellectuals[46] in what is present-day Mali (together with intellectuals from the neighboring French colonies of Senegal and Guinea) founded the Union Culturelle Musulmane (the UCM, Muslim Cultural Union), a voluntary organization whose stated objectives included “the establishment of a reformed Islam [un Islam renove], education, and the liberation of the African Man [IHomme Africain]” (cited in Chailley 1962: 46).[47] Some of these reform-oriented intellectuals also published pamphlets in French and Arabic that explicitly expressed anticolonial views. In the introduction to one such pamphlet, Cheikh Toure boldly identified “the trio” of the “Capitalist, Marabout [Muslim cleric], [and] Colonialist,” who “exploited, misled, and oppressed” people in West Africa (Toure 1957: 1). This author even decried “the collaboration with the [colonial] authorities carried on even in our mosques, meetings, and [during] religious holidays” (Toure 1957: 9—10; see also Diane 1956 and Chailley 1962). In 1954, after the outbreak of war in Algeria, some of these intellectuals demanded that West African Muslims not be sent to serve in North Africa. In some of their public pronouncements and published writings, these reformists criticized certain Muslim clerics for what they considered to be un-Islamic practices. They condemned in particular their use of the Islamic esoteric sciences, those areas of secret or mystical knowledge (“magic” by most anthropological definitions), as well as for the pedagogical style of “traditional” Islamic education centered on the memorization of texts. In general, these new Muslim intellectuals sought to change the way Islam had long been practiced in West Africa in order to bring it more in line with what they deemed to be more “correct” practices, modeled on the presumed center of the Islamic world, the Arab Middle East. Toward this end, a number of them set up their own “modern” Islamic educational institutions in some of the largest towns, borrowing their pedagogical style from the colonial French-language secular schools (see Brenner 1991, 2000).[48]

When these “reformists” entered public debate, they helped to animate discussions about what it meant to be Muslim—what was the proper way to be Muslim. And since the 1950s, some of the ongoing debates and sometimes conflicts about Islam in Mali have been between the heirs of some of these urban-based reformists and those we might call “traditionalist” Muslims, who are more closely identified with Sufi orders and traditional Islamic education. Over time, there have been heated debates between these groups about religious doctrine and practices—for example, about whether to cross one’s arms across the chest during prayer. What is remarkable, however, is the actual convergence between such reformists and those they criticize about the practice of Islam and piety over the past few decades. In fact, “reformists” and “traditionalists” generally agree that all Muslims should practice a more standardized Islam—regular prayer, fasting during the month of Ramadan, and the hajj whenever possible. They are frequently in agreement about the kinds of “traditional” or “magicoreligious” practices—most notably, spirit possession and the

use of un-Islamic ritual objects—that they find objectionable (Soares 1999). Moreover, they are also sometimes united in their opposition to the secularism of the postcolonial state.

*** The Public Sphere, Standardization, and Difference

The public sphere that developed under colonial rule and through which public sermons spread has only continued to expand in the postcolonial period, in which the Malian state is ostensibly committed to the principle of laicite. Today the public sphere is animated by religious education, sermons, print and audio-visual media, and the country's Islamic organizations, all of which have been influenced by transnational and global interconnections (cf. Bowen 1993; Eickelman and Piscatori 1996; and Anderson 1991). This public sphere has helped to make information and ideas about Islam (not to mention other areas of knowledge), including that from beyond the immediate area, more readily available to the public. Although this public sphere is perhaps more vibrant in urban areas, it also extends into some of the far reaches of the country where for many people to be Malian means to be Muslim. The public sphere has, if anything, helped to foster a supralocal sense of shared Muslim identity in Mali, an imagined community of Muslims often linked to the Malian state whose members are to varying degrees attentive to the broader Islamic world that lies beyond the state boundaries.[49] There are of course those excluded from such a sphere, most notably, Christians and other non-Muslims in Mali. Although some Malians see themselves as participating directly and unambiguously in the global Islamic community—the umma—many other Malian Muslims recognize differences between themselves and others that cannot be elided in the imagining of such a transnational community.[50] This imagined community of Muslims in Mali helps shape the way ordinary Muslims practice Islam. This public sphere has helped to create pressures to standardize Islamic practices, especially in their public ritual forms.[51]

With the shift to more standardized norms of piety and the rise of an ostensibly more uniform way of being Muslim, what Eickelman has called a "generic Islam" (1989b), one might suspect that there would no longer be any place for the hereditary transmission of learning or hereditary sanctity or charisma. This is not, however, the case. In many places in Mali, including western Mali, lineages of religious specialists have been able to retain control over Islamic religious education and leadership positions such as imam, not to mention roles in the various Sufi orders. This has also been the case in some urban areas where people have objected to recent converts to Islam and even their descendants acting as imam.[52] Members of lineages of religious specialists continue to have reputations for their knowledge and use of the Islamic esoteric sciences.[53] Almost without exception, Muslim saints and other esteemed living or deceased religious personalities come from these same lineages thought to have access to such secret knowledge. In some cases, certain living Muslim saints have flourished along with the expansion of the public sphere (Soares 1997, 1999, 2000a).

If these might seem to be examples of all that is “traditional” in contemporary Mali, it is useful to consider one of Mali’s—may I dare say—more postmodern religious personalities to understand how differences between Muslims continue to be so important. Cherif Ousmane Madani Haidara (b. 1955) is the head (or “spiritual guide”) of Anfar Dine (in Arabic Ansar al-din), one of the more successful of the many new Muslim organizations that have proliferated in Mali since the overthrow of President Moussa Traore’s authoritarian regime in 1991 (see Hock 1999 for an extensive, though necessarily incomplete, list of such new organizations). He is perhaps Mali’s most controversial and flamboyant Muslim media personality. Ever since being arrested and banned from preaching on several occasions in the late 1980s for allegedly insulting remarks, Haidara has managed to garner considerable public attention.[54] He states quite emphatically that he fashions himself after the Egyptian preacher ‘Abd al-Hamid Kishk (see Kepel 1986), and that Kishk’s sermons have provided inspiration for his own. Haidara appeals to a mass public—including many who are illiterate—in Mali and among Malian migrants elsewhere in Africa and in Europe largely through his sermons (in Bamana/ Bambara) on audiocassette and video that circulate widely.[55] Haidara has received considerable media attention for provocative public statements he has made about the immorality and dishonesty of politicians (much like Kishk), merchants, and other clerics, as well as for his interventions in debates about public morality and the correct practice of Islam. His is a project focused on the shaping of moral subjects in the public sphere, a very public Islam that also includes a social agenda. In this way, he is not unlike such colonial-era Muslim preachers as Seydou Nourou Tall. In his sermons and other public pronouncements, Haidara has insisted that Malian Muslims—many of whom know little Arabic—can perform the ritual daily prayers (salat in Arabic) in whatever vernacular language they speak. The discussions and controversy about this and other subjects raised in his sermons have undoubtedly helped to spread his reputation, even notoriety.

Although the media have been central to the making of Haidara’s career, his ability to receive a forum—even to enter public debate about morality and Islam—seems to relate in no small part to his status as a member of a lineage claiming descent from the Prophet Muhammad. In fact, his patronym, Haidara, indicates sharifian descent here, as it does in large parts of Muslim West Africa. However important his personal charisma, which includes his skills as a talented orator and his media savvy, authoritative hereditary charisma seems to be the condition of possibility for the making of his career. Furthermore, Haidara—whom some consider an Islamist—is often venerated much like a “traditional” Sufi saint. I have watched as people have approached him to kiss his hand or be touched by him, that is, in exactly the same way many Malian Muslims approach descendants of the Prophet Muhammad or other saintly Muslim figures. Although I have witnessed Malian “reformist” and “modernist” Muslims react to such displays toward Haidara with dismay, sometimes even utter disbelief, most Malians do not find the veneration of Haidara in any way surprising.

*** Islam in Public

Ritual daily prayer and particularly communal Friday prayer have become perhaps the most public of all signs of piety in contemporary Mali. Fasting during Ramadan and the breaking of the fast at sunset have increasingly become public acts, especially in urban Mali. The hajj—the pilgrimage to the Holy Cities—is also a public act, when pilgrims embark on their voyage and upon return. Such public signs have not, however, guaranteed the probity of everyone's piety. It is interesting to note that those of "caste" and servile status and recent converts to Islam were among the first to finance the construction of large and imposing mosques in their natal villages throughout Mali. Even these acts, perhaps the most visible and therefore public acts of piety, have not erased individual actor's marginal status in relation to Muslim elites—clerics and marabouts—as far as matters Islamic go. Even today, when such people have been able to perform the hajj their motives have been questioned. More generally, as the number of those from broad sectors of the society going on the hajj has increased, so have suspicions that many ordinary Malian Muslims might have less than pious motives for performing the hajj. Many Malians joke about their compatriots performing what they call "the business hajj," that is, traveling to the Holy Cities under the pretext of the hajj with the real objective being commerce—to purchase consumer items such as electronics, jewelry, and so forth to resell at a substantial profit in Mali.

At the beginning, I mentioned one public sign of piety that is especially important. This is seere, the dark, sometimes circular, spot or mark on some Muslims' foreheads. As I have noted, some state that the mark indexes regular prayer beyond the obligatory five ritual daily prayers and presumably appears on the forehead from touching the ground during prayer. Many Malians readily note that the Prophet Muhammad's close companions had such a mark. Those with formal Islamic education can easily identify textual sources where this mark and those close people to the Prophet Muhammad are discussed—most importantly in one of the sura s in the Qur"an (al- fath, 48: 29).

It is instructive to focus on these publicly visible signs of piety not only because they were the subject of considerable discussion in Mali but also because they are not limited to any one group of Muslims. That is, they are not limited in the way that, say, beards and black veils might be limited to reformists or so-called Islamists. In a sense, they concern all Muslims and the more standardized set of norms that have become widespread in this setting.

When some of my Malian informants and friends spoke about the marks on people's foreheads, they did so as a way to refer to how much a particular person apparently prays as a Muslim. In this way of thinking, the mark indexes piety. Or, at the very least, it indexes performance of prayer that is regular, even out of the ordinary in its regularity. Many Malians think and state otherwise, however; they note that many of the most pious Muslims they know do not have this mark, though admittedly some do. Some refer mockingly in French to those with the dark spot as having le tampon noir, the black stamp—the ubiquitous bureaucratic seal the French colonial state introduced—on their foreheads. Many state that certain Muslims will go to great lengths for people to think they are pious. Indeed, some even speculate that many Malians will rub something on the forehead—even a stone—

until such a mark appears. Several people told me that they too could easily have one of these marks if they wanted.

Over the course of my fieldwork, I began to notice these marks on various people's foreheads, almost all of whom were adults. They were from all sectors of society, from schoolteachers and civil servants to market traders, the unemployed, and Muslim clerics. They included some of my male friends in their thirties and forties, and relatives of my informants, including a few adult women. Although some of those who have these marks were esteemed religious leaders, including some with saintly reputations, they were clearly not the overwhelming majority. In fact, the overall pattern was, at least for me, entirely unexpected.

Prominent Muslim religious leaders aside, many of the Malian Muslims whom I know with these marks fall into two categories (what follows draws on conversations with some of my more sociologically minded informants). First, there are those of relatively marginal social status, who, despite the performance of the practices of a standardized Islam that has become more widespread through the public sphere or even the financing of new mosque construction, are not readily accepted as Muslims on par with the descendants of the hereditary Muslim clerics. For example, former slaves, members of "castes," and descendants of recent converts.[56] A subcategory here would be some of the ordinary Muslim women I know who are childless and have these marks. The exemplary piety of such women and the mark that indexes this piety, I suspect, relate to their inability to bear children in a setting where childbearing is greatly valued. Second, there are various persons from all sectors of society whose moral character is in question, usually because of charges of corruption, embezzlement, or illicit sexual activities; or because of the amassing of considerable wealth under economic conditions that are very precarious. For example, I know several civil servants— some of whom are members of prominent lineages of Muslim religious specialists—who have been charged with stealing public funds upon whose foreheads the marks have appeared. In one case, the mark appeared after a period in prison. Similarly, there is the case of one friend accused of embezzling money from his father's prosperous import company who also had a mark appear. I also know young well-to-do businessmen—French-educated in some cases—with reputations as notorious womanizers with these marks.

One might read the appearance of such marks as attempts to clear one's name after public embarrassment or to safeguard one's reputation. But it is perhaps unwise for the anthropologist to speculate about the intentionality of actors. Indeed, it might even be churlish to read these signs as acts of deliberation—that is, actions of mindful bodies. Be that as it may, it is clear that there is no better way to prove one's piety than through signs that are publicly recognized as valid.[57] Whether the individual actor uses such signs consciously is perhaps beside the point. What is important to note is that actors exhibit their piety according to certain accepted norms and they do so publicly, that is, in ways that the public sphere encourages. As I have suggested, some of these signs of piety, and the marks in particular, are not unlike what linguists have called hypercorrection in language use, or the quest for what Bourdieu (1984) has called "distinction."

Unlike Habermas’s view that “public opinion” is key to the public sphere (1989 [1962]), the “consensus” (ijma^c) of the Muslim community is what seems to be of paramount importance in Mali. After all, on the one hand, there does seem to be “consensus” about proper Islamic religious conduct, the appeal of a more “generic Islam,” and identifiable processes of the standardization of religious practice and public piety. On the other hand, there are real differences, which belie the existence of any such publicly proclaimed or tacitly accepted “consensus.” As I have argued, hereditary sanctity and distinction remain very important factors in how Islam is practiced in postcolonial Mali. Moreover, the “consensus” about proper public conduct and piety excludes all of those whose actions in private or in semipublic venues do not partake of the consensus. It is the much- discussed seere that helps to illustrate some of the paradoxes of the “consensus” about public piety within the broader public sphere in Mali. Some of those Muslims with such an ostensibly visible sign of piety on their foreheads actually risk publicly betraying their inauthenticity—in short, their very lack of piety—to other Muslims. This has been a topic of much discussion, both in public and in private, among many, if not all ordinary Malian Muslims for whom piety and its public signs have become in recent years matters of considerable concern.

** Chapter Ten: Framing the Public Sphere: Iranian Women in the Islamic Republic[58]

Fariba Adelkhah

It is possible to understand the 1979 Iranian Revolution and the Islamic Republic that emerged from it in terms of the formation of a public space. The successive crises that the regime experienced should then be read according to the splits that such a process creates. Major political scandals, such as the trial of the former mayor of Tehran, Gholamhossein Karbashi (1998), or more recently the Sharam Jazaeiri Arab affair (2002), originated with the private appropriation of public funds, although the distinction between private and public was hardly clear from the perspective of the different protagonists. The repression of Islamic

intellectuals critical of the Republic, such as Mohsen Kadivar or Hassan Yossefi Eshkevari, was justified not for what they thought but because they expressed their views in public rather than within the “qualified” circles of the clerical establishment. Not all truths are good to say in public. The conflict between “conservatives” and “reformers” turns in large measure on the definition of public space and the modes of legitimate action within it. The polemics and repression engendered by student demonstrations, the use of satellite dishes, and women’s presence in sports stadiums exemplify this conflict.

For over forty years the relation between the private and public spheres has been a subject of constant debate in Iran. It was shaped by the issue of social being (adam-e ejtemai), characterized by committing oneself to others in the public domain and redefining one’s relations with others. Secular and religious thinkers, as well as social movements, have been major contributors to this process. Beginning in the 1960s, this theme was developed in the struggle over what has been called the “modernization” of Iran. It has concerned the socially recognized means for citizens to deal with one another as “enlightened” and distinguished authorities in both the public and private spheres.

From the outset, it involves thinking of the private and public spheres as a continuum and not as polar opposites. From this perspective, these ongoing debates over social being have worked against the partitioning or atomization of social life in the residential quarters that characterized urban life prior to the oil boom, demographic growth, and the emergence of a “middle class.” This theme is threaded though the “modernization” of the 1960s, the calls for liberty at the time of the revolution, the necessity of territorial defense during the war with Iraq, and throughout the period of liberalization under Rasfanjani (1990–1997). It is equally at the core of the transformations under way since the electoral victory of Mohammad Khatami in 1997 and the concept of zabeteh, or rule of law (as opposed to that of rabeteh, or clientelism) that Khatami sought to foster. The terms of this aspiration have changed from one period to the other. Simply put, the accent in the 1970s was on enhancing the value of the public sphere. For example, this period witnessed the double process of the individuation of space—with the appearance of separate rooms for parents and for their children—and the opening up to the outside world; rooms for receiving guests henceforth became living rooms situated near the entrance of homes. After the revolution—again simplifying—a new value was placed on the private sphere. People sought to enhance and protect the private sphere through a public and rational discourse, that of rule of law, in which each person is treated as an equal.

Forms of sociability multiplied in the wake of the Islamic Republic— religious meetings, sport, and cultural events. They took their legitimacy from legal demands, but informally thrived to the extent that they could evade formal registration or state control. These new forms of sociability developed in family space, among neighbors, and in professional milieus. Two examples are the funds for interest-free loans and women’s religious meetings (jaleseh). The at least partially private conduct of public practices facilitates their appropriation and control by actors in a mass society. These practices are a factor of trust and predictability in an otherwise uncertain environment, be it from the declining value

of currency or the fluctuations in parity between the Iranian rial and the U.S. dollar, or in the context of a minimalist state.

Whatever the continuity between the public and the private, their imbrication is of major significance. One of the political weaknesses of the reformers since 1997 is not to have understood the importance of this permeability. They relied instead on a stereotyped and dated conception of public space hardly understood by those who voted for Khatami in 1997 and 2001. This lack of understanding is suggested by the high rate of abstention in the 2003 municipal elections in the larger towns. At issue is less the weight of legitimacy of religious authority in politics, as is often thought, than the exclusive and unidimensional nature of this authority and its claims to a monopoly in a society that has become complex, differentiated, and open to foreign influences. This continuum of public and private is based on the use of reason in both the public and private spheres, and in the passage from one to the other by means of a multiplicity of small activities. The goal of this chapter is to show this through analyzing the social and political participation of women in society.

Women played a crucial role in the major protests against the imperial regime in 1978, a mass mobilization that gave birth to an Islamic feminism (Adelkhah 1991). Many women resisted when Imam Khomeini indicated his preference for the wearing of the headscarf, and the left and the “democrats” refused to support them, giving priority instead to the “anti-imperialist struggle.” Although some Islamic feminists took the side of the protestors in the name of the freedom of choice inherent to belief in Islam, the obligation of wearing the headscarf (hejab) gradually emerged, and the women’s movement appeared gradually to split, asphyxiated by the rising political violence, the increasing state repression, and the exigencies of the war against Iraq. The involvement of Islamic feminists in public activities, which rose with the appointment of some women to high government posts immediately after the revolution, subsided with the increasing intensity of the war against Iraq and authoritarianism.

This interpretation is corroborated by the problematic nature of the role of women in society, an issue that remains unresolved by the process of democratization in Iran. A genuine women’s social movement continues to smolder in Iran, somewhat like the embers under the cooling brazier of the revolution. This does not involve a systematic confrontation with the state, although there are occasional conflicts with institutions or authorities. Moreover, the emerging power of this feminist movement springs in part from the war with Iraq and the recurring economic crises of the 1970s.

Our interest in the growth of the women’s movement in Iran stems less from the exemplar of the mobilization of women at the time of the revolution than from the continuity and vigor of a women’s movement burrowed deep in the undercurrents of the Islamic republic. To understand this growth, we must avoid a linear or strictly political vision of this movement. In the Iranian case, it consists of a form of regulation and of reshaping of the relationship between the private and public spheres. In outlining the mobilization of women on themes

pertaining to the public sphere (such as debates about polygamy, divorce, and dowry), their public presence— in the media, in courts, and in Parliament—has made a major contribution. Inversely, this participation in the public sphere has allowed women to change the balance of power in private family space to their advantage. In this perspective, this social movement draws its force less from the confrontation between state and society than from the inevitable articulation between private and public.

*** The Participation of Women in Public Space

The election of Mohammad Khatami to the presidency of the Republic appeared to mark a new era for Iranian women, said to be obstinately subject to and closed within the archaic and phallocratic Republic of the Ayatollahs and the misogyny of Islam. Many women supported his candidacy, and his victory was seen as one for women as well as the younger generation. In November 1998, many saw the demonstration of several hundred female sports “fans” in Tehran’s Azadi stadium, where crowds had gathered to celebrate the triumphal return from Australia of the national soccer team and to defy the prohibition against demonstrations, as a confirmation of this evolution of women’s public roles.

This evolution of women’s public roles antedates the Khatami era and is integrally linked to the history of the Iranian revolution and the Islamic Republic. Since the end of the 1980s it was clear that the new order could not be reduced to a binary opposition between dominators and the dominated, including women. Paradoxically, the veil permitted many women of the lower middle and middle classes, as well as those from working class families and the countryside, to occupy public space and to play active economic and social roles, especially during the Iran-Iraq war of the 1980s.

The mobilization of women to support the Islamic revolution and the ideology of at least some Islamic thinkers, such as Ali Shariati, Ayatollah Morteza Motahhari, and Mehdi Bazargan, contributed significantly to widening women’s sphere of action. Broadly speaking, the status of women was more profoundly transformed by the Islamic revolution than it had been by the superficial authoritarian modernization of the Shah. Nonetheless, the achievements of the old regime were largely preserved, at least after the tense first stage of the revolution, thanks to the resistance of women themselves—Islamic militants among them—to efforts to turn them away from public roles. The support of women for the Islamic Republic, or at least certain of its policies and practices, cannot be underestimated. It is based on moral convictions; notwithstanding the obligatory nature of the wearing of the veil (hejab), wearing it signifies the rejection of fesad, corruption signified by social disorder. In this way, it legitimates the presence of women in the public sphere.

After the Iran-Iraq war and with the politics of liberalization led by Ali Akbar Hashemi Rasfanjani, the presence of women in public space grew throughout the 1990s. Once again,

the decisive contributing factors were socioeconomic, including increased women's access to education, accelerated urbanization, the spectacular transition to lower birth rates (Ladier 2003), and, facilitated by the economic crisis, women's role in informal trade with the other Gulf states, Turkey, and Syria, often combined with pilgrimages to holy places (Adelkhah 1999). The salient feature of these practices was the nearly systematic blend of trading activities—mostly in contraband—with religious and welfare ones.

In these contexts, translation into politics was almost inevitable. After 1979, Parliament had only a handful of women (only four women deputies in the first three legislatures of 1980, 1984, and 1988), and in the government women were noted for their absence. The turning point was the 1996 parliamentary elections. Women candidates were more plentiful than before (82 in 1992, 324 in 1996—and 504 in 2000). During the campaign, women were highly active and often formed "propaganda fronts" (setadhah-ye tablighati) that paralleled those that men organized. This mobilization was not limited to the large cities. Finally, the electoral campaign in 1996 was marked by unexpectedly strong support for certain candidates, such as Jamileh Kadivar, Nahid Shid, Bibik Qodsyeh Alavi, Elaheh Rastgou, Iran Ahou Riya, and Faezeh Hashemi (Adelkhah 1998: 138–39). By her spirited style even more than her status as daughter of the president of the Republic, Hashemi Rasfanjami became a media presence and gave a new look to Islamic feminism. In the end, the results of the balloting did not equal the visibility of the candidates and the intensity of the electoral campaigns that they conducted, since only twelve women were elected. But the roughnecks of the populist organization nostalgic for the original revolutionary values, the Ansar-e Hizbollah, recognized the significance of the strong showing for women. Several weeks after the second round of balloting, they attacked women bicycling in Tchitgar Park, which was opened to them for recreation by Tehran's reform-minded neighbor, Gholamhossein Karbastshi, politically close to Faezeh Hashemi.

The local elections of February 1999, the first of their kind since the revolution, confirmed for the first time that women were fully exercising their rights under universal suffrage, The number of women candidates rose to 7,000 out of a total of 300,000. This number may appear small, but the political significance was real. In spite of the disproportionately low numbers of female compared to male candidates, women became candidates in the holy cities, remote provinces, and rural areas—for example, Qom, Sistan-Baluchistan, Hormozgan, and Khuzistan—confirming that the social or political participation of the "second sex" was not merely an appendage of the large metropolitan areas or the privileged classes. Only 781 women were elected (out of a total of 200,000 municipal councilors), but this should not negate the fact that women's political participation has taken root in society. Out of 781 women elected, 484 were from rural regions.

We stress that this change in women's status has been brought about by transformations in the "objective" conditions of women— employment opportunities, education, reduction of birth rates—and by a lively press and publication opportunities for women. Likewise, women represent more than 40 percent of the student body of universities and have obtained a more than 60 percent success rate in university entrance examinations since 2000.

Under pressure from the participation of women in society, political and legal debates concerning them, and women's specific cultural contributions, including those in the religious field, men's discourse has had to change. Ayatollah Khomeini, who challenged the legitimacy of the right to vote that the Shah gave to women in 1963, did not reopen the issue after the Islamic revolution and regularly received delegations of women. Nowadays no one has doubts about the necessity for women to participate in social and political life, not even the conservatives. Whatever their political inclinations, politicians and administrators have women as collaborators and advisers, and they deal with issues concerning women like any other public issue. They do not evade the obligatory discussion of the role of women in the Islamic Republic, celebrating the annual women's day that coincides with the anniversary of the Prophet's daughter, Fatima, and giving awards to "outstanding" women. As for women, theoretically exercising their civic rights as equals of men, it is noteworthy that none of the clerics has tried to enforce within the Parliament a rule that female votes shall count for half that of men, since the Qur"an states that woman's testimony is worth half of that of a man (Ebadi and Zeymaran 1375/1996).

The Islamic Republic is built around a balance. It recognizes and even promotes the social and political discourse of women, which is omnipresent in its discourse, even in its silences, but strict limits are imposed on them at the same time. One limit is veiling, which no one officially calls into question. Its sacred character is the regime's last defense, both in terms of domestic and international politics.

*** The Questions of Women and the Contingencies of the Political Order

The municipal elections of 1999 and the parliamentary elections of 2000 showed the weakness of the women's movement, including the strictly Islamic one mentioned earlier. Recall that women were only 781 of 200,000 candidates, less that one percent, in the 1999 elections. The 2000 Parliament had only thirteen women, as opposed to fourteen in the prior session and, even more troublesome, these are all teachers and doctors. Six of them are from Tehran, and the others from the major regional cities with the exception of a delegate from Dashtestan in Boushehr province. What appears as an element of progress in the view of some observers—the fact that these deputies belong to the reform movement—in our view shows instead how narrow is the social representation of politically active women. At the same time, women show themselves highly active in other domains, including informal business, certain service professions, in welfare activities, and in religious ones. There is no woman, however, who has been minister in the government for the more than twenty years since the revolution, even if since Hashemi Rafsanjani the presidency of the Republic has had women advisors; there are no women prefects, mayors, or diplomats, even if no law blocks this possibility. Finally, women continue socially and often juridically to be subject to discriminatory practices that the Committee on Human Rights of the United Nations calls into question year after year.

In this respect, Mohammad Khatami has done no better than his predecessors, and he has not adopted for women's rights the same words and deeds that have characterized his reformist activities in other fields. In his words, women remain idealized in the image of the Prophet's daughter, Fatima Zahra. Women are encouraged to be mothers and guarantors of the well-being of the society that men continue to manage. The leftist press is very timid on this theme. If it took part in the juridical debates in favor of improving women's status, or rather that of mothers, it has refrained from arguing such issues in explicitly political terms. It has shown no fear in opening debate on the constitutional principle of the government by clerics (velayat-e faqih), but it is silent concerning the obligation of veiling, which is stipulated neither by the constitution nor by law.

The feminist movement, including Islamic feminists, is not politically autonomous, and female political candidates are not emancipated from the factional struggles that remain dominated by men. In this context, the reformers continue to ask women to scrupulously wear the hejab and to show moderation in their demands to avoid giving ammunition to their adversaries. The conservatives stress strict adherence to veiling in order to set themselves apart from the political tendencies that from their perspective betray the revolutionary principals of the Islamic Republic. Taking into account how the factions loyal to the regime ejected the independents imposed on them by the 1996 elections, and again in the 1999 elections, it is easy to doubt that a specifically female political voice can take hold at the core of the existing political institutions. The determination of those holding on to power to protect "the honor of the system"—according to the consecrated formula, that is, its unity—leaves little place for a more gender-balanced politics.

Politically active women are themselves ambiguous in this regard. The principle of hejab appears internalized and sustains a near-unanimous adherence. The declarations of the most prominent women candidates in the February 2000 elections illustrate this. On the question of whether the hejab could be the subject of a referendum, Jamileh Kadivar, the woman with the second strongest showing on the Tehran electoral list, told us: "On the basic idea of the hejab, absolutely not, but as to its exact form, there has never been full agreement. Today you can find many forms of hejab. The deputies who were elected were chosen on the basis of their religious faith. They are believers and do not want to call into question such a basic Islamic principle" (interview with the author, February 2000). Moreover, a main current in Islamic feminism, represented particularly by Mrs. Taleghani and her magazine, Payam-e Hajar, explicitly challenges a gender-based approach that, from her point of view, marginalizes women by distancing them from the real social problems.

At the extreme, the social and political participation of women also emanates from elaborating on the famed "honor of the system," rather than subverting it. The feminist movement does not go beyond its cliches and rituals. The political liberalization that unleashed social debate in so many other domains has not really addressed women's issues. The hejab question, which does not contradict a real movement, and which is largely accepted since it has created a "thrust"— as it is often worded—between sexes, is

nowadays stuck in a narrow but legitimate conception of women's condition. It has not permitted more "audacious" claims. Under the veil, women are confined to tactical issues and have not succeeded in developing a genuine "strategy" specific to them. In certain ways, Faezeh Hashemi, in stressing participation in sports and new forms of hejab better suited to a modern, active life and contemporary tastes, has obliquely felt the importance of the women's movement and the need to transform the status of women. However, in the heat of the February 2000 electoral campaign, the significance of her activities was lost. The principle of the hejab is always susceptible to being used by men as a means to delegitimize women's conduct, as the former are reluctant to give up their privileged status. Some say that this is evidence that the hejab creates social exclusion. But a complication stems from the fact that historically there never was an exact time in the history of Iran when the hejab did exclude women, and to the contrary, hejab favored the access of women to the public sphere, often against the will of their father, husband, brothers, and some religious authorities. Many religious dignitaries consider the presence of women in the public sphere, raising their fists outside their chador, shouting slogans, and marching alongside men as the epitome of corruption, leading society directly to the gates of hell. We emphasize this point. It is only after having provided room for the massive presence of women in the social realm that the hejab as a mobilizing tool was neutralized because of the internal weakness of the women's movement, the escalating political crisis, the war, and the resulting coercive policy of the regime.

This seeming contradiction between first encouraging the participation of women in public life and the subsequent hardening of the regime against women's rights dissipates by looking at a case study, the electoral district of Fariman in the Khorassan region, where we observed the 1996 legislative elections. In February 2000, we did not see women participating in the core electoral activities, as we witnessed in the "propaganda fronts" four years earlier. In 1996, of course, there was no woman candidate in this town, which was largely conservative and traditionally-minded in spite of a solid leftist presence. In this context the candidacy in 2000 of Amenah Beyraghdar—the sister of a martyr, married, and in charge of religious training in a secondary school—could appear to reaffirm the general tendency of the growing political presence of women. The circumstances of her participation, however, make us hesitate to reach this conclusion. Hossein Ghazizadeh, historically the leftist leader in the region, asked several of his supporters to declare themselves candidates in order to replace him in case the Council of the Guardians of the Constitution prohibited him from running. Amenah Beyraghdar was one of these surrogate candidates.

The Council of Guardians denied Ghazizadeh the right to run in the election. He asked for Jafar Afghani to represent him and campaigned for him. Mrs. Beyraghdar chose nonetheless to remain in the race, hoping to keep the left alive and take advantage of its networks. Despite her courage, dynamism, and family support—her husband went so far as to sell his house in order to pay her campaign expenses—she found herself isolated. The local notables refused to endorse her campaign and instead supported Jafar Afghani or, rather, the virtual candidate that he represented, Hossein Ghazizadeh. Lacking financial support and campaign workers, she had trouble making her voice heard. Moreover, to limit campaign costs, the

electoral law limits the number of campaign posters that a candidate can post in small towns. It was not possible for women to meet with men, so women stayed away from campaign rallies, limiting their activities solely to women’s religious meetings (jaleseh) and family visits.

Moreover, the Fariman electoral district includes the electoral district of Sarakhs, mostly Sunni, noted for violent incidents pitting farm workers against one of the most powerful institutions of the Republic, the pious foundation (vaqf) of the Astan-e Qods, which today manages a free-trade zone devoted to the transit of goods between Dubai and Central Asia. It was unthinkable for a woman candidate to campaign four hours away from her home and to sleep in communal places such as mosques, where men were able to stay. As an anthropologist, I also had problems of this sort in following the electoral campaign. The candidates did not think of offering me a place in their vehicles and immediately raised the objection that I would have no place to stay or I would be in the company of men. Women were unable to compete as equals outside the main towns. At the most, they campaigned by proxy, through their male relatives.

In the light of the low number of votes obtained by the majority of female candidates, we can ask whether the real objective of the candidacy of some of them was to gain recognition in order to improve their professional standing, especially in the state educational system, or to acquire symbolic capital for other goals. Nonetheless, the obstacles that women face in electoral politics derive less from Islam or current legislation than from economic constraints, local customs, and factional rivalries among local notables in contexts profoundly marked by the control of property and people.

These conditions are different from those prevailing in the larger towns. Even in this context, however, Islamic feminism lacks wide- ranging leaders, with the exception, for a brief period, of Faezeh Hashemi, who was defeated in the last elections. She may have paid for her audacity, or perhaps was a collateral victim of the violent campaign targeted against her father. Would Faezeh Hashimi have won in 1996, or been defeated in 2000, if she had not been the daughter of the president of the Republic? Can we not say the same of Jamileh Kadivar, the wife of Ayatollah Mohajerani, the highly visible minister of guidance and Islamic culture, and sister of the dissident theologian Mohsen Kadivar? They did not rely on family support alone, but it is clear that their activities were facilitated by family connections, making their candidacy different from that of candidates without such a base.

*** Conclusion: I Get Around, Therefore I Am

In sum, the social participation of women, for which the Islamic Republic remains the paradoxical vehicle, remains largely outside of politics. Above all it reflects the structural mutations of Iranian society, such as urbanization, schooling, the opening of the labor market to women because of the crisis, and the professional segregation of sexes as in

health and national education. It is only marginally dependent on political ideology in the strict sense of the term, in spite of the role that women played in the 1979 revolution and the stereotyped homage regularly offered to them. Women's energies are directed instead to informal commerce, welfare activities, and the religious sector, ending fourteen centuries of male monopoly on religious expression.

In practice, the Islamic state is shaped largely by surviving traditional norms capable of reproducing or accommodating local elites and major social forces. These Islamic principles have a highly flexible relation to concrete social practices. The difficulties that Iranian women encounter are due less to the ideology or legislation of the Islamic Republic, which are constantly reformulated, than to the heavy hand of cultural structures and representations that encourage conformity.

From this perspective, the democratic process in turn reflects ambivalence about women's conditions in Iran. The implementation of a genuine Islamic democracy depends more on the inclusion of women in debates about democracy than on the factional fights and rivalries of an elite concerned with safeguarding the "honor of the system" that favors their interests. One of the challenges facing the Islamic Republic is the adaptation of its institutions and forms of political transformation to very rapid social transformations. The women's movement is one such movement, and soon it will have to be recognized politically. Mrs. Beyraghdar placed the following slogan in the space reserved for her posters in the main square of Fariman: "We do not want guardians." Her slogan could be taken to mean Jafar Afghahi standing in as a candidate for Hossein Ghazi- zadeh. But her allusion to other forms of guardianship—of notables over political life and men over women—was clear. Mrs. Beyraghdar was defeated electorally, but she called social norms and power relations into question, calling for an end to the male monopoly on the political scene of this small, conservative provincial town.

This movement of women has hardly had an impact on the political sphere. Nevertheless, its erosion of the guardianship powers of men over women must be taken seriously. It is above all a movement in the strict physical sense of the term, and most of the social practices of women in the private sphere, as in the public one, affirm it. In contemporary Iran, women travel unsupervised from one place to another and sometimes over long distances. Their right to drive automobiles has never been challenged and many do so, especially in large towns. Elsewhere they move about, generally in groups, both in Iran and in neighboring countries, visiting religious shrines, trading, touring, and visiting family. These images of women traveling alone or together among towns, taking the bus to Damascus, or forming contraband "caravans" are common today, reflecting a largely new situation compared to twenty years ago. Such movement among women benefits several types of economic activity, including travel agencies, transport companies, and hotels. Men's guardianship of women is absent de facto, although the rule requiring a husband's or father's authorization to travel abroad is still in effect.

In addition, women active in the formal or informal market place high value on activities requiring such movement and on the social visibility of their customers. Many women have opened beauty salons and body-building studios or become dressmakers, video photographers of family occasions, cosmetic sellers, or teachers, health workers, and salespeople. It is ironic to note that Islamic morality and regulations have rehabilitated, legitimated, and systematized women's employment in many of these domains. But it is even more important to recognize the fact that these women are now in the workforce, making it easier for other women to do the same. Clothing, beauty products, and sports celebrate women's activities and presence in public. In this respect, the women's social movement becomes a series of "embodiments" (Marcel Mauss) learned by apprenticeship and that facilitate women's socialization. This is crucial, as these practices are not limited to particular places, times, or specific social categories. They have become facts that assure the presence and visibility of women in the public sphere.

Movement, the body, and words about women's bodies and practices and their relation to others are all matters of concern in these activities. This is in terms not only of public policies set into motion by the state but also of personal activities and claims. The fact that this women's movement takes place and is "registration phobic"— by definition contraband activities and also most of the service activities in which women participate are without administrative authorization or the paying of taxes—is no reason to underestimate their importance. They form part of a continuity of Islamic feminism from the first years of the Republic and in some ways consecrate the movement, even if their specific Islamic and revolutionary form has been largely dissipated or made banal. There decidedly has not been a stalemate of political Islam (Roy 1994). To the contrary, it has spread far beyond the narrow circle of the first generation of militants. These are not the only activists; ordinary women also are. It is true that the social mobilization of women is for a large part limited to the private sphere rather than politics or trading. This is for good reason: women's inequality before the law occurs essentially only in the sections of the civil code pertaining to the family, notably in matters of divorce, the custody of children, polygamy, parental or marital authority, and succession. (The disposition of the penal code concerning "blood money," in which the value placed on a woman's life is much less than a man's, fortunately concerns only few women!) With these exceptions, women enjoy the same rights as men, particularly in the domain of business.

That which appears as a shortcoming—the fact that women's mobilization is occurring in the private sphere—actually shields them from regime control and coercion. This is because the regime respects the private sphere and because the women's movement thus averts political confrontation. In contrast men, who have priority in public space, are more vulnerable, as is shown by the offensive of the Ministry of Justice against reformers, including their newspapers and their candidacy in different elections. We should not underestimate the potential for change emanating from transformations in informal economic and social activities, including those in the private sphere, as some historians see in the origins of the French revolution (Chartier 1991). Without assuming that the same factors are at play in Iran, we can nonetheless see in the women's movement one of the basic vectors of change, less spectacular but more effective than many explicit social movements. Anthony Giddens poses this crucial question, more important to our eyes than

any other gloss defining social movements: “Is the expansion of a diversity of different forms of organization—in which the conditions of reproduction are reflexively monitored—a medium of emancipation from preestablished modes of exploitative domination?” (Giddens 1984: 206). The movement of

Iranian women today meets this criterion, at least in part, because it is progressively setting into motion a codification of rules and even laws, a necessary if not sufficient condition for democracy to take hold.

** Glossary

Terms are defined according to local usage. Many terms, especially religious ones, appear in slightly different form in each of the major languages of the Middle East and Asia; not all variants are given here. Spellings, consequently, often reflect local usage and not the conventions of the major literary languages. Pages where the terms are explained in context are indicated below. A = Arabic; T = Turkish; H = Hindi; U = Urdu; P = Persian.

<biblio>

adab (A), adab (T): advice literature, 18, 122

akhlaq (A): morality, 145

‘Alawn (A), Alevi (T): Shi’i religious sect found in Turkey, Iraq, Syria, and Lebanon, 183, 192

‘alim, pl. ‘iilama’ (A): knowledgeable person; religious scholar, 3, 21, 38–39, 54, 59, 62—64, 67, 121, 129—53, 157—76, 191—92, 194

‘aqila (A): family, kin, or tribe or any group of agnatic relatives corporately liable to pay blood money under sharia; in general, party to a legal dispute for blood money, 143

baraka (A): grace, supernatural blessing; abundance, especially as transmitted by a Sufi shaykh, 194, 198—99

Ba’th (A): literally “awakening”, name of the ruling socialist-oriented nationalist party in Syria (and, with separate leadership, in Iraq until March 2003), 13, 102, 182—83, 185, 187—90, 192

batini (A): hidden, concealed; esoteric, 186, 195

bay^ca (A): oath of allegiance given to a Sufi shaykh, or to a caliph or, as in Morocco, a religiously legitimized monarch, 3—5

bida (A): unlawful ritual innovation, 166, 191, 194

garaf (T): veil donned by women, as mark of the private; literally “sheet” of fabric, 110—11, 115, 117, 120—21

darshan (H): sacred seeing, 44—46

darura (A): necessity, requirement, according to sharia, 136

Dar ul-Islam (T): the abode of Islam, the territories inhabited by Muslim majorities and governed by Muslim rulers under the sharia, 112

dawa (A): outreach, proselityzing, 62, 64

dhikr (A): Sufi practice of mystical evocation, consisting in the repetition of certain words or phrases in praise of God, 195–98

diya (A): blood money for personal injury under sharia, 142–44

edibane (T): cultured and civilized, modern and progressive, 106, 123
fana fi-llah (A): dissolution in God, final stage of the Sufi path, 186 fatwa (A): legal opinion delivered by an expert upon a legal question, 59–60, 63, 149—50, 157—58, 161, 163—65, 169—73, 177

fesad (P): corruption, 231

hadith (A): saying or deed of the Prophet Muhammad, 191

hadra (A): mystical gathering of a Sufi brotherhood, 193

hal, pl. ahwal (A): mystical state of exaltation, 195

halal (A): Islamic legal category meaning “lawful,” “permitted,” 212

hejab (P): veil or headscarf, 229

hodja (T): religious leader, 117

haqiqa (A): divine reality; absolute truth; God, 186

hijra (A): flight, migration, including the Prophet’s migration from Mecca to Madina, 209

hubb (A): (divine) love, 188, 194

‘ibadat (A): religious obligations, mainly concerning liturgical practice, 161

ijaza (A): license to teach, or to initiate a Sufi group, 164

ijma^ (A): consensus among ‘ulama’, 223

ijtihad (A): procedure in Islamic jurisprudence consisting in creative reasoning in light of the foundational texts to arrive at new rulings, 62, 138

imam (A): ruler; also spiritual leader; prayer leader, 95, 135, 192, 218, 229

Islam hukumat (U): Islamic government, 138

jaleseh (P): women’s religious meetings, 228, 236

kadi (T): judge, 90

kafir (A): unbeliever, 157

karamat (A): miraculous deeds, 194, 198—99

khalifa (A): deputy of a Sufi master; also caliph, 185

khalwa (A): Sufi practice of retreat from the world, 197

kufr (A): disbelief; heresy, 157, 162, 168—73

madhhab, pl. madhahib (A): legal school, 193

madrasa (A): Islamic college, usually attached to a mosque, 10—11, 38, 53—54, 59, 137—38, 142, 146

Majalla (A), (T): Ottoman codification of civil law based on the Hanafi legal school (1869—76), 135

maqam (A): each mystical stage reached by a disciple of a Sufi master, 194

marumakkathayam (Malayalam): a system of matrilineal descent and inheritance found in south India, 168

maslaha (plural: masalih); maslaha ‘amma (A): public interest, 131, 149 muhassil (T): centrally appointed tax collector, 89–90

mukhabarat (A): intelligence services, 183

murid (A): disciple of a Sufi master, 182, 186, 197

murshid (A): Sufi master, 182

nafs (A): self; soul, 186, 196–97

pravacan (H): sermon, 44

qalb (A): heart; physical source of love; corporeal link with God, 195 qisas (A): law of retaliation under sharia (lex talionis), 142–43

rabeteh (P): clientelism, 228

salafiyya (A): Islamic reform movement, 184, 187, 192–93, 203

sancak (T): administrative unit of the Ottoman Empire, 88

sangathan (H): (Hindu) unity, 45

satsang (H): devotional gathering, 44

shahada (A): declaration of faith, 173, 206

sharia (A): the revealed, or canonical, law of Islam, 12–13, 41, 131–47, 150, 152, 161–63, 168, 185, 187, 192—95

shastrarta (H): religious polemic, 48

shaykh (A): religious leader; Sufi master; (lay) personality endowed with social and sometimes charismatic power, 11, 15, 21, 27, 38, 60, 63—64, 71, 166, 168, 171, 184—86, 188, 190—201, 203

Shi’i (A): belonging to a major subdivision in Islam that only recognizes as legitimate the authority of the descendants of the Prophet through the lineage of ‘All and his successors, the imams, 183

shirk (A): impiety consisting in associating with God, “polytheism,” 166, 194

shravaka (H): “listener,” Jain devotee, 43

sidq (A): righteousness, 193

Sunni (A): belonging to the mainstream, orthodox division in Islam that recognizes as legitimate the authority of the consensus within the religious community: some 90 percent of the world’s Muslims are Sunni, 59, 63, 149, 155, 173, 193, 237

sura (A): chapter of the Qur”an, 162, 220

takfr (A): accusation of heresy, 157, 169, 172

tariqa, pl. turuq (A): mystical path, Sufi order, 161, 164, 168, 191—92, 194

taqlid (A): adherence to the established doctrines of one’s own school of law, 138, 155

tarbiyya (A): (mystical) upbringing, initiation, 195

tasawwuf (A): Sufism, Islamic mysticism, 200

tawba (A): repentance, 193

tesettur (T): veiling, 110, 116

vaqf (P): pious foundation, 237

velayat-e faqih (P): constitutional principal of government by clerics in

the Islamic Republic of Iran, 234

waZ (A): sermon, 210

Wahhabi (A): followers of Ibn ‘Abd al-Wahhab, more properly known as al-Muwahhidun, or “the Unitarians,” 64

wall (A): saint, 191

wall al-amr (A): ruler, 134

wasta (A): personal mediation; intercession, 183

wird (A): mystical devotional formula, 195, 197

zabeteh (P): rule of law, 228

Zahirl (A): manifest, external, unconcealed, exoteric, legalistic; generally opposed to batinl, 186, 189, 194

zawiya (A): Sufi lodge, 182, 190, 193

** Note on Contributors

Fariba Adelkhah is a Research Scholar with the Centre d'Etudes et de Recherches Internationales in Paris. She received her doctorate in Social Anthropology from the Ecole des Hautes Etudes en Sciences Sociales, Paris. Among her publications are "Les Iraniens de Californie: Si la Republique islamique n'existait pas..." Les Etudes du CERI, no. 75 (May 2001); Ramadan et politique, coedited with Francois Georgeon (2000); Being Modern in Iran (1999); and La Revolution sous le voile, Femme islamique d'Iran (1994).

Jon W. Anderson is Professor and Chair of Anthropology at the Catholic University of America and Adjunct Professor of Arab Studies at Georgetown University's Center for Contemporary Arab Studies, where he also codirects the Arab Information Project. Recent publications include New Media in the Muslim World: The Emerging Public Sphere, 2nd ed. (coedited with Dale Eickelman, 2003), and Arabizing the Internet (1998).

Brian J. Didier is a Mellon Postdoctoral Fellow at Dartmouth College. He received his Ph.D. in Social Anthropology from the University of Cambridge, and wrote a thesis entitled "Islam and the Dynamics of Religious Dispute on Androth Island, South India." His current research focuses on modes of disputation and forms of reconciliation used by modern Muslims while engaging in religious conflict.

Dale F. Eickelman is Ralph and Richard Lazarus Professor of Anthropology and Human Relations at Dartmouth College. His publications include The Middle East and Central Asia: An Anthropological Approach, 4th ed. (2002); New Media in the Muslim World: The Emerging Public Sphere, 2nd ed. (coedited with Jon W. Anderson, 2003); Muslim

Politics (coauthored with James Piscatori, new ed., 2004); and Knowledge and Power in Morocco (1985).

Elizabeth Frierson is Assistant Professor of History at the University of Cincinnati. She received her Ph.D. from Princeton University's Department of Near Eastern Studies, writing her dissertation on cheap illustrated women's magazines in the era of Sultan Abdulhamid II (1876–1909). Her publications include "Unimagined Communities: Educational Reform and Civic Identity among Late-Ottoman Women" (1995), which won the 1996 Omer Lutfi Barkan Prize. She is currently revising her dissertation manuscript for publication. She also codirects the Modern Middle East Sourcebook project, which can be previewed at <[[http://www.umd.umich.edu/middleastsourcebook/index.html] [www.umd.umich.edu/middleastsourcebook/index.html]]>.

Yves Gonzalez-Quijano teaches contemporary Arabic literature at the Universite Lyon II-Louis Lumieres. He returned to France in the early 1990s after six years attached to French research institutes in Lebanon and Egypt. He has worked for the Institut du Monde Arabe, led a project for UNESCO, translated several novels, and created a collection of contemporary Arab writings for the French publishing house Actes Sud. He is the author of Les Gens du livre: Edition et champ intellectuel dans l'Egypte republicaine (1998) and numerous articles.

Cengiz Kirli teaches in the Ataturk Institute for Modern Turkish History, Bogazici University, Istanbul. He received his Ph.D. in History from the State University of New York, Binghamton, and wrote a dissertation on coffeehouses and the public sphere in nineteenthcentury Ottoman Istanbul.

Paulo G. Pinto is a Visiting Professor at the Graduate Program in Anthropology and Political Science of the Universidade Federal Fluminense (PPGACP-UFF) in Brazil. He received his Ph.D. in Social Anthropology from Boston University in 2002, and wrote a thesis on ritual practices, religious experience, and the embodiment of religious identities in the Sufi communities of Aleppo and the Kurd Dagh in Syria. In addition to his research on Sufism in the Middle East, he is doing fieldwork on local and transnational interpretations of Islam in the Muslim community in Brazil with a research grant from the Brazilian National Research Council (Conselho Nacional de Pesquisa, CNPq).

Armando Salvatore is a Senior Research Fellow at the Institute of Social Sciences, Humboldt University, Berlin. His dissertation was granted the 1994 Malcolm Kerr Dissertation Award in the Social Sciences by MESA. He founded in 2000 the "Forum of Social Research," and he coedits (with Georg Stauth) the "Yearbook of the Sociology of Islam." His publications include Between Europe and Islam: Shaping Modernity in a Transcultural Space (coedited with Almut Hofert, 2000), and the edited volume Muslim Traditions and Modern Techniques of Power (2001). His most

recent works are a manuscript on “Communication, Trust, and Authority: Religious Traditions and the Genealogy of the Public Sphere,” and the volume “Religion, Social Practice, and Contested Hegemonies: Reconstructing the Public Sphere in Muslim Majority Societies” (coedited with Mark LeVine).

Benjamin F. Soares, a researcher at the African Studies Center in Leiden, is an anthropologist whose research interests center around religion and modernity in Africa. He has taught at the University of Chicago, Northwestern University, and the University of Sussex, and held fellowships at the University of Chicago and the Ecole des Hautes Etudes en Sciences Sociales in Paris. He is the author of a forthcoming book, Islam and Modernity in a West African Town, and coeditor of a forthcoming collection of essays on Muslims and the public sphere in Europe.

Peter van der Veer is Professor of Comparative Religion at the University of Amsterdam. He is the author of Gods on Earth (1988), Religious Nationalism (1994), and Imperial Encounters (2001), and the editor of numerous other works. Currently he is doing a study of transnational networks of Indian software engineers.

Muhammad Qasim Zaman is the Robert Gale Noyes Associate Professor of the Humanities and Associate Professor of Religious Studies at Brown University, where he has taught since 1997. He received his Ph.D. in Islamic Studies from McGill University in 1994. He is the author of The Ulama in Contemporary Islam: Custodians of Change (2002), Religion and Politics under the Early Abbasids (1997), and numerous articles. He is currently working on two books, “A History of Islamic Law in South Asia” and “The Idea of Consensus in Islamic Thought.

[1] Horkheimer refused to accept Habermas's The Structural Transformation of the Public Sphere as a Habilitationsschrift, so Habermas submitted it instead in Marburg under Wolfgang Abendroth. See Calhoun 1992: 1–5.

[2] Habermas (1973) has sharply criticized Koselleck's view that totalitarianism finds its roots in the dialectic between absolutism and Enlightenment critique.

[3] The documents in question are located in the Cevdet classification and the (radeler (1255–1309 Yillari (radeleri, Dahiliye—herafter ID) section of the Prime Ministry's Ottoman Archives in Istanbul, Turkey. The documents in the Cevdet classification are neither signed nor dated. Their contents reveal, however, that they were produced in 1840 and 1841. The documents in the (radeler section are catalogued with a date and cover the period between 1840 and 1845. The specific reports used in this article are cited in the following pages.

[4] My goal is not to prove the existence of "public opinion," but to trace its working through individual opinions uttered in the public sphere in the mid-nineteenth century Ottoman Empire. The notions of "public" and "public opinion" are contested notions in recent historical literature. Especially after Habermas's (1989 [1962]) The Structural Transformation of the Public Sphere, these terms have come to acquire a meaning related to the development of the notions of democracy and citizenship. The relationship between the state and "public opinion" as posed by Habermas is essentially an antagonistic one. Influenced by Habermas, historians, in particular those of eighteenth-century France, have almost unanimously agreed that public opinion emerged as a powerful force in the second half of the eighteenth century in Western Europe, which is characterized by the growing literacy, developing press, and people's increasing awareness about politics. They argue that it is from this antagonistic relationship that political consciousness developed and transformed the established order by reform or revolution. The elusive nature of the notion

of public opinion, however, may lead to serious anachronisms (Gunn 1995: 6–7; Kaiser 1998: 189–206) not only in arriving at an understanding of the development of democracy and citizenship in Europe but also in understanding the relevance of these concepts in Ottoman political culture. First, since the term is strongly associated with the birth of a literary public in eighteenth-century Europe, the existence of public opinion in Ottoman society and in the rest of the world alike is implicitly ignored. Second, the discussion that frames the notion of "public opinion" tends to equate the emergence of the concept with the criticism of absolutism in Europe. For examples of the abundant literature on the development and politicization of public opinion in France, see Ozouf 1988; Baker 1990, esp. 167—99; Baker 1992; Chartier 1991; Darnton 1995, esp. 232—46; Darnton 2000; Farge 1995; and Gunn 1995. For England, see Gunn 1983. For Germany, see Bodecker 1990.

[5] I have come across only one instance involving punishment, ID 1038 (September 28, 1840). However, the punishment was not given because of political sedition or insolent talk about the higher state officials, but because the persons mentioned in the report were soldiers. The case involved a military servant who shot a captain in the hand over a prostitute. A note written just above the report orders the transfer of the matter to Daruura-i Askeriye (Military Council) for the proper punishment of the soldiers involved.

[6] By print culture, I refer to the compound of economic and intellectual capital and, for the purposes of this chapter, the producers and consumers of print materials, state regulation or attempted regulation of publication and circulation of print materials, and the active formation of debates among publishers, journalists, illustrators, and their readers.

[7] Mansbridge and Calhoun are both concerned with examining the implications of the fact that "public good" is a contested concept (Mansbridge 1998) and that it ought to be seen as a "social and cultural project" (Calhoun 1998). Whether or how "public good" is to be differentiated from the "common good" is itself a matter of some disagreement among sociologists, though the distinctions are not crucial for my discussion in this chapter. Suffice it to note that, although my discussion of the common good is indebted to Mansbridge and Calhoun, it does not presuppose the identity of the common and the public good any more than it presumes the concurrence of Mansbridge and Calhoun with how I draw on some of their insights in examining the thought of the contemporary 'ulama.

[8] I am indebted to Weiss 1998: 116 and passim for the formulation "foundational texts." For helpful discussions of the five fundamental values or "purposes" of the sharfa, see Weiss 1998: 78–87, 145–71; Hallaq 1997: 89–90, 112–13, 168–74. On "inductive corroboration," see Hallaq 1997: 166–70.

[9] For a study of maslaha in medieval juristic thought, with detailed attention to Tufi and Shatibi (among others), see Opwis 2001. For the text of Tufi's treatise on

maslaha, see Zayd 1964: 205–240. Among legal theorists who attended to maslaha prior to Tufi and Shatibi was the famous jurist al-Ghazali. For his discussion of maslaha, see al-Ghazali 1995, I: 257–66.

[10] Rida published Tufi's work on maslaha in his journal, al-Manar, in 1906 (see Kerr 1966: 206; and cf. Zayd 1964: 194). He also edited and published al-Shatibi's al-Ftisam (Shatibi 1914).

[11] For a pioneering overview of the significance of al-Qaradawi, see Salvatore (1997: 197–209). '

[12] For a brief description of this series, see Qaradawi (2001: 5–9; the quotation describing the purpose of the series is from 5.

[13] Qaradawi does, however, mention Rida in other writings, and with approval.

[14] Qaradawi's position here is no less circular than was Rida's on the question of how disagreement on the interpretation of the foundational texts was to be resolved. Such disagreement, he had suggested, ought to be resolved with reference to those texts themselves (see Kerr 1966: 201).

[15] Deobandi 'ulama—whose designation derives from their association with the parent madrasa at Deoband, founded in 1867, or with any of the thousands of other Deobandi madrasas in South Asia—represent one of the major religious orientations in modern South Asia. On the Deobandi 'ulama and their discourses and politics in contemporary South Asia, see Zaman 2002.

[16] On the different ways in which the 'ulama, the modernists, and the Islamists view the Islamic tradition, see Zaman 2002: 3–11, 31–37. On the difficult relations between the modernists and the 'ulama in Pakistan, see ibid., 74–93.

[17] For the provisions of the law of qisas and diya, put into effect through sections 299-338H of the Pakistan Penal Code in 1993, see Waqar-ul-Haq 1994.

[18] For Qaradawi's discussion of "entertainment and the arts," see 1996: 265–76; on music, 277–312; on pictorial arts, 313–30; on humor and comedy, 331–45; and on sports, 347–51.

[19] For an account of the rivalries and the contestation among the Shi'i 'ulama, with particular reference to Mutada al^adr, one of the most strident of the Shi'i leaders to emerge with the fall of the Saddam Hussein regime, see the six-part series by al-Amin 2003.

[20] On the mosque preachers, see: al-Hayat, April 19, 2003; ibid., June 28, 2003.

[21] One of the consequences of the application of the Shari'at Act in India was that customary practices "contrary" to the sharfa were legally abolished. Given that the system of descent and inheritance on many of the islands is a complex mix of matrilineal (marumakkathayam) and Islamic law, any application of the Shari'at Act would have serious social and legal consequences.

[22] Both Metcalf (1982) and Sanyal (1996) note that a prominent part of the fatwa wars between factions of nineteenth-century 'ulama were these accusations of kufr, but neither isolates takfir as a common strategy.

[23] The data used in this text were collected during sixteen months of field research from 1999 to 2001 at Arab and Kurdish Sufi zdwiyas in Aleppo and in the villages of the Kurd Dagh region of northern Syria. For an account of this research, see Pinto (2002).

[24] The 'Alawi are a Shi'i sect that comprises an estimated 15 percent of the Syrian population. Many Sunni Muslims regard their beliefs and practices as heretic. The Asad family and a large portion of Syria's political and military elite are 'Alawi (Chouet 1995: 106–11).

[25] The Muslim Brothers, an Islamic political movement founded in Egypt in 1928, combined Sufi conceptions of truth and authority with Salafi religious doctrines (Mitchell 1969: 14; Geoffroy 1997: 12—13).

[26] The number of victims varies with the sources of each author. Hanna Batatu (1988: 129) attributes the lower figure (5,000) to Western diplomats and the higher one (25,000) to eyewitnesses of the massacre. Umar Abd-Allah (1983: 192) estimates the number of deaths as 25,000. Nikolaos van Dam (1996: 111) estimates between 5,000 and 25,000 victims, suggesting that the higher figure is probably more accurate.

[27] I thank professor Nasr Abu Zayd for his insightful comments on my paper in the Fourth International Conference on Islamic Legal Studies on May 2003 in Murcia, Spain, highlighting

the parallels between the secular transcendance of the Ba’th party and the mysticism of the Sufi path.

[28] Sa’id Hawa accepted the religious reality of baraka, but he considered that the ‘ulama had social primacy over the Sufi shaykhs (Hawa 1979: 219—20).

[29] Agence France Presse, March 27, 2003.

[30] For examples of such debates in the precolonial period, see Mahibou and Triaud 1983 and Hunwick 1996. For discussion of one such debate under French colonial rule, see Soares and Hunwick 1996.

[31] Many from the region can be found at the Centre de Documentation et de Recherches Ahmad Baba in Timbuktu and in private collections. See Hunwick 2003 for an extensive list of some of the extant documents and published works from the region.

[32] On French colonial policy toward Islam and Muslims in West Africa, see Harrison 1988; Launay and Soares 1999; Robinson and Triaud 1997; Brenner 2000; and Soares 1997, 2000b.

[33] Certain Muslims did migrate, for example, to the Middle East. See Ould Cheikh 2000 for a discussion of a West African living in Palestine who condemned West African Muslims for accepting life under French “infidel” rule.

[34] Seydou Nourou Tall’s colonial-era activities are discussed in documents throughout colonial archives in Mali, Senegal, and France. See, for example, the collection of documents compiled upon his behalf in the Archives Nationales du Senegal (Dakar), 19G 43(108), Oeuvres de Seydou Nourou Tall en AOF, 1923—1948. For discussions of his career, see Garcia 1994, 1997; Soares 1997; and Seesemann and Soares n.d.

[35] See, for example, Archives Nationales du Mali, Koulouba (hereafter ANM), 4E 2382 (I) Traduction des conseils donnes par El Hadj Seydou Nourou Tall a tous les musulmans, June 25, 1941.

[36] See Centre des Archives d’Outre-Mer, Aix-en-Provence, France (hereafter CAOM), 1 Aff. Pol. 2259/4, L’Islam au Soudan, Rapports Trimestriels 1954.

[37] Documents in ANM and CAOM list many cases from the twentieth century that are too numerous to mention here. For example, see CAOM 75 APOM 4/4, Haut-Senegal-Niger, Internement de Fode Ismai'la et consorts, Rapport, September 25, 1911. Early published colonial accounts include some of Paul Marty's writings (for example, Marty 1920), whereas later colonial accounts include one of Griaule's rare discussions of the spread of Islam in West Africa (1949) and Cardaire 1954. See also Manley 1997.

[38] See, for example, ANM, 1B 150, Letter, Fama Mademba, Sansanding, to the Administrator, Segou, April 23, 1909. I am grateful to Richard Roberts for bringing this document to my attention.

[39] See, for example, CAOM 1 Aff. Pol. 2259/4, Soudan franpais, Direction Locale des Affaires Politiques (hereafter Aff. Pol.), Bulletin No. 2 (Confidential), November 1953, "Note sur l'Islam au Macina."

[40] Since such "traditions" are often not public or are only semipublic, the analytical optic of "counterpublics" is arguably applicable here.

[41] On the hajj', see Cardaire 1954 and Chailley 1962.

[42] For example, in the late 1940s, a new organization, Fraternite Musulmane (founded in 1936), organized "des reunions publiques ou les memes themes de morale, sociale et religieuse, sont developpes: condamnation du gaspillage a propos de manage; union des musulmans, respect du Coran; condamnation de la fre- quentation des salles de bal." See CAOM, 1 Aff. Pol. 2259/1, L'Islam en AOF, Aff. Pol. Musulmanes, Rapport Trim., 2d & 3d trim., 1948. These same themes are among those discussed by many Muslim associations in Mali today.

[43] See CAOM, 1 Aff. Pol. 2259/1, Aff. Pol. Musulmanes, Rapport Trim., 2d trim., 1950; see also Kane 1997: 447ff. for a discussion of Mahmud Ba's preaching from the 1940s onward, and Brenner 2000.

[44] See CAOM 1 Aff. Pol. 2259/1, L'Islam en AOF, Aff. Pol. Musulmanes, Rapport, 2d & 3d trim. 1948.

[45] See, for example, CAOM 1 Aff. Pol. 2259/1, Aff. Pol. Musulmanes, Rapport Trim., 3d trim., 1950.

[46] During the colonial period in West Africa, French colonial administrators used “Wahhabi” rather loosely to refer to “reformist” Muslims, and this terminology continues to be used there today in both French and in the region’s vernaculars. On such “reformists” in Mali, see Kaba 1974; Hames 1980; Amselle 1985; Triaud 1986; Niezen 1990; Brenner 1993, 2000; Soares 1997; and Hock 1999.

[47] Mali’s first postcolonial socialist regime of Modibo Keita disbanded the UCM. Following the overthrow of the regime in 1968, the UCM was allowed to reorganize, but disbanded a second time in 1971. On the UCM in Soudan/Mali, see Kaba 1974 and Amselle 1985.

[48] See Brenner’s discussion of the colonial-backed “counterreform movement” (2000). There were also other Muslim intellectuals whose perspectives might be called pro-French “modernist” Muslim.

[49] This formulation of a Muslim community has been influenced by van der Veer’s (1994) discussion of religious nationalism in India.

[50] This is not in any way to suggest the existence of anything like the African Islam (“Islam noir”) of the colonial imagination.

[51] The debate about “orthopraxy” in Islam is relevant here. Cf. Smith 1957; Asad 1986; and Eickelman 1989a.

[52] See Chailley (1962: 29–31) for a discussion of a case from the mid-1950s when groups of Soninke and Toucouleur founded their own mosque in Bamako rather than accept an imam who was Bambara. I learned about similar contemporary cases during field research.

[53] Such knowledge and its use are no less important to what it means to be Muslim for many whose lives are increasingly associated with the modern—here higher rates of literacy and secular schooling.

[54] Some of the Malian newspaper coverage of Haidara and his followers include Sidibe 1993; Traore 1996; Coulibaly 1999, 2000; and Diarra 2003. He is invariably mentioned as among the country’s most influential preachers in recent newspaper coverage of “Islamic” issues in Mali.

[55] In 1999, Haidara told me that he had been making sermons on audiocassettes for more than sixteen years.

[56] See Ahmed 1981, who discusses low-status Bengali Muslims whose strategies of “upward mobility” included claiming descent from high-status Muslim groups in Bengal and emulating their practices. I am grateful to Naveeda Khan for bringing this source to my attention.

[57] Cf. Salvatore’s discussion of “staging virtue” in Egypt (1998) and Hirschkind on the ethics of listening (2001).

[58] Dale F. Eickelman translated this chapter from French into English, and Gene R. Garthwaite provided assistance in transliterating Persian technical terms.

{1} An earlier version of this chapter was published as Dale F. Eickelman and Armando Salvatore, “The Public Sphere and Muslim Societies,” European Journal of Sociology 43, no. 1 (2002): 92—115.

{2} This chapter was conceived while we were visiting faculty at the Summer Institute on “Public Spheres and Muslim Identity,” sponsored by the Alexander von Humboldt Foundation at Dartmouth College in August 2002. We particularly appreciated the opportunity to read and discuss the work of the institute’s fellows. It stimulated us to synthesize our thoughts and research from the past decade on new media technologies and the publics associated with them in the countries of the Middle East where we have worked. These include Egypt, Lebanon, Syria, Jordan, Saudi Arabia, and Qatar.

{3} Various parts of the research for this study, including field and archival research in Mali, Senegal, and France in 1991, 1992, 1993–1994, and 1998–1999, were funded by the U.S. Department of Education (Fulbright-Hays), the Fulbright Program of USIA through the West African Research Association/Center, the Wenner-Gren Foundation, and Northwestern University. The NIMH Program on Culture and Mental Health Behavior at the University of Chicago Committee on Human Development and the National Science Foundation-NATO provided funds in the form of postdoctoral fellowships for the writing. Portions have been presented to the European and American Young Scholars’ Summer Institute, “Public Spheres and Muslim Identities” in Berlin; the Department of Anthropology, the London School of Economics; the conference, “L’Internationalisation du religieux” at the Institut d’Etudes de l’Islam et des Societes du Monde Musulman, EHESS, Paris; the West Africa Seminar, UCL, London; the Islamwissenschaftliches Kolloquium, Universitat Bayreuth; and the Third Mediterranean Social and Political Meeting, Robert Schuman Centre for Advanced Studies, European University Institute, Florence. I am grateful to those audiences. As always, I am

most indebted to the many people in West Africa who have helped me with this material and its analysis.

Introduction

On the Eastern Edge of Europe: Christianity, Islam, and the Bulgarian Political Imagination 1

Dale F. Eickelman and Simeon Evstatiev

Part 1: Secularism in Bulgaria and Its Region

Chapter 1. Byzantine and Ottoman Pasts, Modern Politics

Religious Belongings and Balkan Secularities 27

Simeon Evstatiev and Dale F. Eickelman

Chapter 2. Regulating Religious Freedoms in the 21st Century

Nationality, Religion, and Symphonic Secularism 49

Kristen Ghodsee

Chapter 3. Salafism Is Coming

“Balkan” versus “Arab” Islam in Bulgaria under Milletic Secularism 74

Simeon Evstatiev

Part 2: Christian and Muslim Men and Women under State Atheism and Postsocialist Secularism

Chapter 4. Symbols and Identity in Bulgaria

Parallels between Communist Atheism and Western Secularism

Momchil Metodiev

Chapter 5. Caesar and God in the Public Sphere

Religious and Secular Discourse in Post-Atheist Bulgaria 134

Daniela Kalkandjieva

Chapter 6. The Hijab in Contemporary Bulgaria

Muslim Views on Veiling 161

Galina Evstatieva

Chapter 7. Fasting and Aging in a Bulgarian Muslim Community 187 Ilia Iliev

Part 3: Religion, Publicity, and Concealment in Orthodox-Majority Societies

Chapter 8. Parallel Paths

Christian-Muslim Symbiosis and Religious Education in Greece

Angeliki Ziaka

Chapter 9. The Russian Orthodox Church

Federal Visibility Versus Local-Level Concealment 227

Ivan Zabaev and Daria Oreshina

Chapter 10. Religion and the Challenges of Public Legitimization

The Bulgarian Orthodox Church 249

Plamen Makariev

Index

*** Note on Transliteration

Any book that draws on materials in Arabic and Turkish in combination with Bulgarian, among other languages, poses considerable challenges for transliteration, especially as we incorporate colloquial alongside literary usages. For Arabic and Turkish, with as much consistency as possible, we use the system adopted by the International Journal of Middle East Studies for Arabic, Persian, Turkish, and Urdu, using ‘ to represent the Arabic ‘ayn, and ’ to represent the Arabic hamza. We drop the initial hamza.

In general, we use the following spelling and transliteration from Cyrillic:

| а – a | е – e | к – k | п – p | ф – f | щ – sht |

| б – b | ж – zh | л – l | р – r | х – h | ъ – a/ u |

| в – v | з – z | м – m | с – s | ц – ts | ь – y |

| г – g | и – i | н – n | т – t | ч – ch | ю – yu |

| д – d | й – y | о – o | у – u | ш – sh | я – ya |

When persons or writers are known to have a preferred spelling of their name in a European language, we generally use this form.

*** Notes on Contributors

Dale F. Eickelman

is Research Professor of Anthropology at Dartmouth College (USA) and Executive Director of the Dartmouth College-American University of Kuwait Program. His publications include The Middle East and Central Asia: An Anthropological Approach, 4th ed. (2002); New Media in the Muslim World: The Emerging Public Sphere, 2nd ed. (coedited with Jon W. Anderson, 2003); Muslim Politics (coauthored with James Piscatori, new ed., 2004); Knowledge and Power in Morocco (1985); and Russia's Muslim Frontiers: New Directions in Cross- Cultural Analysis (1993). A former president of the Middle East Studies Association of North America, he is currently president of the Tangier American Legation Institute for Moroccan Studies (talim).

Simeon Evstatiev

is Professor of Near Eastern History and Islamic Studies at Sofia University St. Kliment Ohridski where he is Head of the Department of Arabic and Semitic Studies, Chair of the Center for the Study of Religions and Director of Graduate Studies, Middle East Studies. He was a 2013–2014 Shelby Cullom Davis Visiting Professor at Princeton University. As a Gerda Henkel Fellow (2016–2019), his work was focused on Salafism and he was a 2016–2017 Research Associate at the Leibniz-Zentrum Moderner Orient (zmo), Berlin. Evstatiev's research has been supported by institutions as the European Commission (Horizon 2020), the Shelby Cullom Davis Center for Historical Studies at Princeton University, the Andrew W. Mellon Foundation, the US National Science Foundation, the Central European University, the US Institute of Peace, the Bulgarian National Science Fund (BNSF), and the Centre for Advanced Study, Sofia. His studies include the books Christianity, Islam and Eastern Religions: Normative Text and Sociocultural Context (editor, 2011); Religion and Politics in the Arab World: Islam in Society (2012); and Salafism in the Middle East and the Boundaries of Faith (2018).

Kristen Ghodsee

is a Professor of Russian and East European Studies at the University of Pennsylvania. She is the author of seven books, including Muslim Lives in Eastern Europe: Gender, Ethnicity, and the Transformation of Islam in Postosocialist Bulgaria (2010); The Left Side of History: World War Two and the Unfulfilled Promise of Communism in Eastern

Europe (2015); and Red Hangover: Legacies of 20th Century Communism (2017). Her articles have appeared in publications such as Dissent, Foreign Affairs, and Eurozine. Ghodsee's research has been supported by the National Science Foundation (nsf), Fulbright, the National Council on Eurasian and East European Research (nceeer), the International Research and Exchanges Board (irex), and the American Council of Learned Societies (acls). She has held visiting fellowships at the Radcliffe Institute for Advanced Study at Harvard University, the Institute for Advanced Study in Princeton, the Woodrow Wilson International Center for Scholars in Washington DC, the Aleksanteri Institute at the University of Helsinki in Finland, and at the Freiburg Institute for Advanced Studies in Germany. In 2012, she won a John Simon Guggenheim Fellowship for her work in Anthropology and Cultural Studies.

Galina Evstatieva

holds a Ph.D. in Arabic Studies from Sofia University St. Kliment Ohridski where she is currently an Associate Professor of Arabic and Islamic Culture at the Department of Arabic and Semitic Studies. She teaches under- and post-graduate courses on Anthropology of the Arab world and Islam, Arabic Culture, and Islamic Art. Her publications include the monographs Prosody and Metrics of Arabic Poetry (2011) and Islam and the Veiling of Women in the Arab World (2016).

Ilia Iliev

Ph.D., is Associate Professor of Ethnology and Head of the Department of Ethnology and Cultural Anthropology at Sofia University St. Kliment Ohridski, Bulgaria. His main publications are in history of Bulgarian ethnology (Community Builders and Professional Strangers: Dialogues between Bulgarian and Foreign Anthropologists, 2nd ed. 2019), the social history of communism, and everyday life in post-socialist Bulgaria. His current research interests are in social history of ageing and old age in Bulgaria.

Daniela Kalkandjieva

holds a Ph.D. in History from the Central European University. She is affiliated with Sofia University St Kliment Ohridski through a series of research projects. Her principle monographs are The Russian Orthodox Church, 1917–1948: From Decline to Resurrection (2015) and The Bulgarian Orthodox Church and the State, 1944-1953 (1997). Her most recent studies include "Orthodox Churches in the Post-Communist Countries and the Separation between Religion and the State" (in Law and Religion in the Liberal State, ed. J.H. Bhuiyan and D. Jensen, 2020); "The Bulgarian

Orthodox Church and the Refugee Crisis” (in Forced Migration and Human Security in the Eastern Orthodox World, ed. L.N. Leustean, 2019);

“The Bulgarian Orthodox Church: Authoring New Visions About the Orthodox Church’s Role in Contemporary Bulgarian Society” (in Orthodox Churches and Politics in Southeastern Europe: Nationalism, Conservativism, and Intolerance, ed. S.P. Ramet, 2019).

Plamen Makariev

holds a Ph.D. and a Dr. habil. Degree in Philosophy. As a Professor of Philosophy at Sofia University St. Kliment Ohridski, he teaches courses in Political Philosophy and Philosophy of Religion. He is currently Chairman of the Expert Council on Religion at the Ministry of Education and Science of Bulgaria. His recent major publications include The Role of Religions in the Public Sphere: The Post-Secular Model of Jurgen Habermas and Beyond (co-editor, with Vensus A. George, 2015) and The Public Legitimacy of Minority Claims: A Central/ Eastern European Perspective (2017).

Momchil Metodiev

holds a Ph.D. and a Dr. habil. Degree in Philosophy. He is Professor of Modern History in the New Bulgarian University and Editor in Chief of the Christianity and Culture Journal. His publications include the monographs Between Faith and Compromise. The Bulgarian Orthodox Church and the Communist State, 1944–1989 (2010) and Legitimacy Machine: The Place of the State Security within the Communist State (2008). He took part in the compilation of several documentary collections published by the Bulgarian Dossier Commission. Under several Bulgarian and international projects, he has also conducted research on the Communist past, including the Cold War Research Project at the Woodrow Wilson Institute in Washington, DC.

Daria Oreshina

holds a Ph.D. in Theological Studies from Universitat Wien and a M.A. in Sociology from the National Research University Higher School of Economics, Moscow. She is a Research Fellow at the “Sociology of Religion” Research Laboratory at St. Tikhon’s Orthodox University of the Humanities, Moscow.

Ivan Zabaev

holds a Ph.D. in Sociology from the National Research University “Higher School of Economics,” Moscow. He is a Professor at St. Tikhon’s Orthodox University of the Humanities, a faculty member at the Theology Department, and a Research Fellow at the “Sociology of Religion” Research Laboratory.

Angeliki Ziaka

holds a Ph.D. from the University of Strasbourg and is currently an Associate Professor of Religion at the School of Theology of Aristotle University of Thessaloniki where she is also scientific coordinator of the newly introduced Undergraduate Program on Islamic Studies, as well as a visiting professor at the Schools of Political Science and Education. She studied at the Institute of Arabic and Islamic Studies in Rome, the History Department of the Royal University of Amman, and has conducted research in Iran and Oman since 2006. In 2014, Ziaka was a lucis Fall Fellow at Leiden University’s Centre for the study of Islam and Society and a Visiting Research Fellow (Spring 2017) at the Middle East Institute, Columbia University. Her interests include early and medieval Islamic historiography and theology (kalam); Byzantine and postByzantine literature on Islam; religious historical narratives and the rearticulating of Muslim identities through religious discourse and political realities in the Middle East, especially the Shi’a and Ibadi Islam; interreligious dialogue and religious education in religious and secular environments and institutions. Ziaka’s current research focuses on the philosophy of Ibadi kalam as well as on the political messianism in Shi‘i Islam. Her publications include La Recherche Grecque contemporaine et l’Islam (2002; 2004); Shi‘ism: Religious and Political Dimensions in the Middle East (2004); Between Polemics and Dialogue: Byzantine, Post-Byzantine and Contemporary Greek Literature on Islam (2010); Interreligious Dialogue: The Meeting of Christianity with Islam (2010); Early Islamic Apocalyptic and Messianic Movements: Mahdi the Eschatological Savior (2011); On Ibadism (2014); and Kalam and the Trends of Islamic Thought (2016).

** Introduction

On the Eastern Edge of Europe: Christianity, Islam, and the Bulgarian Political Imagination

Dale F. Eickelman and Simeon Evstatiev

For centuries, religion has been the cornerstone of communal identities in the European East. Particularly in the Balkans, social cohesion based on religious affiliation and loyalty has challenged the coexistence of different groups, engendering much of the socio-political conflict in the past and present. Modern politics in the ethnically and religiously diverse

Balkan countries, erstwhile provinces of the Ottoman Empire, had historically replaced Byzantine influence in the region. Underlying issues of believing and belonging continue to underpin contemporary public policy and debate. The downfall of the Soviet Union in the early 1990s and the violent conflicts, especially in the Western Balkans,[1] brought about the disintegration of former Yugoslavia and strengthened religious affiliations and identities —even among non-believers. Today, the political imagination of a large number of people evokes historical antecedents of religion-related conflicts as a response to new challenges across Southeastern Europe—a term often used interchangeably with “the Balkans.” Two contested easts and pasts—Christian Byzantine and Muslim Ottoman— entangle and intertwine with concepts of nationalism and modernity to shape notions of religion, politics, and identity in contemporary Bulgaria and a large part of Eastern Europe with which the country has shared its cultural and social experience.

*** 1. Historical and Religious Underpinnings of a Secular Modernity

Historical memories of continuity and belonging to or competing with a distant Byzantium encounter traces from the more recent Ottoman past, when Muslim domination was eventually contested by the Christian subjects of the Sublime Porte and the European powers. One of them—Russia—pursued its imperial project drawing its legitimacy against the Ottomans on Orthodox Christian identity. This combined with the linguistic proximity between the Russians and the Slavic-speaking peoples in the Balkans to turn Moscow, imagined in the sixteenth century as “the Third Rome,”[2] into a symbol of Christian solidarity. Yet, after the Christianization of the First Bulgarian Empire (6811018) through Eastern Orthodoxy adopted by Prince Boris in 864 ad and the Golden Age during the reign of his son Simeon the Great (893–927), praised in the sources as a “Christ-loving soul,”[3] in the first half of the thirteenth century, the state ideology of the Second Bulgarian Empire (1185–1396) included the idea of its capital Turnovo as the “New Constantinople”—the “Third Rome” and the major center of Orthodox Christianity.[4] Medieval Bulgaria thus expanded the doctrine of translatio imperii and Roma aeterna in the European East, securing its state legitimacy against the threats posed by both the Latin Empire and Byzantium (restoring from the Latin invasion in 1261) until the Ottoman conquest in the second half of the fourteenth century.

By 1396, the Ottoman Empire conquered the entire territory of medieval Bulgaria and in the next two centuries expanded further beyond the Balkans throughout Eastern and Central Europe. Bulgarian independence was announced only after almost five centuries of Ottoman rule—on March 3, 1878, at San Stefano following the Russo-Turkish War (1877–1878). Subsequently, modern Bulgaria was officially founded on former territories of the Ottoman Empire a few months later, in July 1878, as a state of and for the Bulgarians under a “Christian government”[5] at the Congress of Berlin. The pecking order in Bulgaria and the other nation states emerging from the former Ottoman provinces in the Balkans was upended.

Untangling from empire, Muslims in Bulgaria transformed from Ottoman subjects belonging to the larger imperial society into a minority community within a nation-state. On the one hand, many Muslims declined to sign up as Bulgarian subjects and wanted to register as “Ottomans.” On the other hand, trying to achieve national homogeneity, the new Bulgarian state elaborated policies toward the Muslim population ranging from educational and cultural measures to forced assimilation.[6] The post-1878 decades to the turn of the twentieth century evidenced major demographic changes. If before the Congress of Berlin about 40 percent of the population in the future Bulgarian state (i.e., the Principality of Bulgaria and Eastern Rumelia before 1885) were Muslim, half a century later the Muslim population in the Kingdom of Bulgaria decreased to 14 percent.[7] After 1913, thousands of Muslims left Bulgaria while Christians of Eastern Thrace immigrated to the countryside. However, even with those 14 percent, Bulgaria was the first modern state in the Balkans that emancipated from the Ottoman Empire but—unlike countries like Greece or Serbia—maintained such a large Muslim population.[8]

Before the First World War, however, the Muslims under non-Muslim sovereignty in the new Balkans remained linked to the Ottoman Empire—even in Bosnia-Herzegovina. The attempts of the nation states to break these links were partially successful. Muslims in Bulgaria thus observed the official Ottoman celebrations supporting campaigns initiated by Istanbul. As in the rest of the Southeast European countries, Muslim revered the Ottoman sultan as their protector.[9] Before the Second World War, Islamic law (the shari’a), continued to be partially applied in Bulgaria—mostly in family and inheritance law. This situation resembled the Greek “neo- millet” model in which the functions of the Ottoman Mufti issuing Islamic legal opinions (fatwas) and the judge (qadi) “were fused into a new Mufti.”[10] In Bulgaria, those rules remained in force until the establishment of the Communist regime in 1944 which restricted the rights of all religious communities.

The Communist policies of the so-called Revival Process (vuzroditelen protses) in Bulgaria were only the culmination of the assimilationist approaches adopted in the twentieth century. The Revival Process took place as a set of policies by the Communist regime for the assimilation of the Turkish minority, including through a forceful change of their Arabic-Turkish names, between 1984 and 1989. Some 360,000 people left Bulgaria, around 40,000 of whom returned within the three-month period of their visas in 1989.[11] By the end of 1990, the number of the returnees reached 150,000. In the post-1989 period, the religious freedoms in Bulgaria were restored but the coexistence of Christians and Muslims has faced new challenges, some of which are posed by global, transnational factors.

The complex and ambivalent Christian-Muslim encounters in Bulgaria and the European Southeast have been eventually reshaped and transformed after more than a century of persistent de-Ottomanization following the paths of modern nation building, state development and fluctuating geopolitical (re-) orientations east and west. When the Lebanese civil war erupted in 1975, it was described by many observers as “Balkanization”, while the 1992 war in Bosnia was labeled as “Lebanonization” whereby Sarajevo was portrayed as the “Beirut of the Balkans”.[12] The common Ottoman legacy, often associated with postimperial ethnic and religious conflicts, looms behind such characterizations but its

effects, especially as regards the historical trajectories and understanding of the modern national states, demonstrate significant differences between Southeast Europe and the former Arab provinces of the Ottoman Empire.

Whereas Arabism in the Middle East was not meant to supersede the wider Islamic solidarity or undermine the Ottoman authority,[13] in much of the Balkans modern statehood emerged as a result of bloody wars against the Ottoman state enmeshed with Russian, Habsburg, and other imperial interests, whereby its legacy—whose primary component is Islam—came to be overwhelmingly portrayed as alien to the “authentic” local national traditions and embedded as a traumatic topos in the collective memory. The so-called millet system as the structural organization of subjects of the late Ottoman Empire’s according to their religious affiliations goes a long way in explaining the major role of religion in shaping collective identity and managing religious diversity in the region.

The Ottoman term millet denotes, first, a community, a group of individuals deriving their identity from a shared religious affiliation. In this sense, millet can be synonymous with the Islamic umma or, in the Ottoman case the “ruling millet” (millet-i hakime). The classical Ottoman non-Islamic millets, along with Muslim ones, made up the traditional four major communities (millet- i erbaa): Muslims (administratively not organized in a millet), Greek Orthodox, Armenians, and Jews. During the nineteenth century Latin, Catholic Armenian, Protestant, and other denominations were recognized. Millet was sometimes used as an adjective designating the doctrine and practice shared by one of these religious communities, e.g., millet worship, ritual, and law, particularly the law of civil status. Finally, millet could also refer to a formal organization of a religious community with an ecclesiastical hierarchy, clerical and judicial organs.[14] The core underpinnings of the millet pattern for accommodating diversity thus refer to milletism with its twofold potential—an integrative social force and a venue for a communal extrication, or emancipation.[15]

During the Bulgarian national renaissance (vuzrazhdane), the movement for church autonomy in Bulgaria thus resulted in the rise of a Bulgarian Church in the Ottoman capital (1851). Together with the activity of Bulgarian intellectuals and traders competing with the Greek Phanariots in Istanbul, these efforts succeeded in gaining in 1871 the official status of a Bulgarian millet (eksarhhane- i millet- i bulgar) embracing all subjects of the Ottoman state who belonged to the Bulgarian Orthodox Church (the Bulgarian Exarchate). From a Christian point of view, the Bulgarian Exarchate was “a sad story” as it broke the postByzantine “Orthodox commonwealth” in Southeastern Europe to achieve nationalist purposes.[16] Nevertheless, these events opened up the way to the Bulgarian national emancipation and prepared the establishment of the modern Bulgarian state. After Ottoman rule and the rise of the modern Bulgarian state in the post-1878 era, the new rulers upended the priority of privileged subjects, putting Orthodox Bulgarians at the top of the pecking order. The millet-type of relations has thus been socially

transformed and mixed with modern European conceptions, such as nation-building[17] and secularism.

In Southeast Europe, there exists an intimate, sometimes interchangeable (as in the case of the Bosnians) understanding of religion and ethnicity by most of the Balkan communities. Religion remains an essential part even of many non-believers' identity, often seen as one of its distinguishing features and affecting the spread of violence and extremism rise that shape and intertwine transnationally. This explains why many ethnic conflicts in the Balkans have been perceived by the participants as "religious," and vice-versa. Today, the specter of religion-based violence and identity conflicts has not vanished and some observers are thus apprehensive about the revival of Islam across Eurasia and the Balkans.

From 2001, after the end of these wars and the 9/11 attacks in the United States, the image of the Balkan Muslims as victims was to a large extent superseded in Western public discourse by their perception as radicalized fundamentalists involved in terrorist networks.[18] Contributing factors today include the mass migration of Middle Easterners and other Muslims from Africa and Asia via the so-called Balkan route, the increased number of Islamist terrorist attacks in Europe, and the significant number of over one thousand foreign fighters from Western Balkan countries who joined the ranks of the self-proclaimed Islamic State (isis) in Iraq and Syria, and other violent extremist Muslim groups, such as various al-Qaeda affiliates.[19] As a consequence of the conflicts in Bosnia, Kosovo and elsewhere, the analysis of Islam in this part of the European East was, as Elbasani and Roy note, left to the "tender mercy" of nationalism and postconflict studies. In these studies, religion continues to be interpreted along the lines of "ethnic splits and static national categories."[20] This tendency permeated discussions of the Orthodox Church that, in turn, became enmeshed with nationalism and politics.[21]

Having followed its post-Ottoman path without taking part in supranational state structures as former Yugoslavia, Bulgaria has shared much of the modern developments in the Western Balkans. Through Orthodox Christianity, Bulgaria has been culturally and religiously entangled with Greece and Russia under whose domination it fell as part of the Eastern bloc during the Cold War. The emphasis on Bulgaria in the present book brings to the fore the case of a country that until 1989 was among the "firmest" allies of the Soviet Union within the former Eastern bloc during the Cold War but which in January 2007 became a full member of the European Union (EU). This was the result not only of transnational developments but of long-term aspirations after the independence from the Ottoman Empire. Although sentiments may have often inclined Bulgarians to look eastward to Moscow, pragmatic considerations gave preference to a look westwards. The cultural similarities notwithstanding, Russia had little excess capital to invest in the modernizing economy and army of Bulgaria. Thus, post-independence Bulgaria "gradually became more integrated into the European mainstream."[22]

Within the EU today, Bulgaria—together with Greece—remains predominantly an Orthodox Christian country, but it also has the largest autochthonous Muslim minority. Bulgaria's Muslim population has varied from 21 percent in 1887, less than a decade after the establishment of the independent modern Bulgarian state, to 10 percent in the early 21st century, according to the census of 2011.[23] In Eastern Europe, only Kosovo and Albania have a clear statistical Muslim majority, for even in Bosnia and Herzegovina Muslims are just over half of the population. The size of Muslim minorities in other countries var- ies—one-third in the Republic of North Macedonia, one-fifth in Montenegro and one-seventh in Russia, while Bulgaria has one-twelfth of its population with Muslim identity.[24] Ethnically diverse, these 10 percent (ethnic Turks and Bulgarian Muslims, or Pomaks, and also Roma) of the Muslim population in Bulgaria identify themselves as (predominantly Sunni) Muslims against the backdrop the rest of the Bulgarian population: 76 percent Orthodox Christian, 0.8 percent Catholic, 1.1 percent Protestant, and 0.2 percent "other." In addition, 7 percent of the population indicates "no religious affiliation" while 7.1 percent do not identify themselves in terms of religion.[25]

In sum, Bulgaria's predominant majority religion, Orthodox Christianity, together with the prevalent minority faith, Sunni Islam, underpins communal life, shaping modern secularism and governance. By foregrounding Bulgaria as a context in flux, the contributors to this book thus seek to expand knowledge of the European East as a whole, traversing the relationship of religion, politics, and society in a transregional and cross-cultural perspective. This does not mean that we seek to conceptualize the Eastern, Southeastern Europe or Bulgaria as following a Sonderweg[26]—a "special path" of inter-ethnic tensions and conflicts based on "incompatible identities." Rather, our aim is to indicate comparisons with other countries and regions, drawing on contextually informed case studies.

*** 2. At the Crossroad of Entangled Regions and Religions

Focused on Bulgaria to amplify its experience at the intersection of religion and politics in the last half century, the present book considers three partially overlapping although different historical and contemporary types of regionaliza- tion—the Balkans (and Southeastern Europe), the "cultural" notion of Eastern Europe and the more recent "geopolitical" idea of Eastern Europe referring to the Eastern Bloc during the Cold War. While the fundamental conceptual division of Europe in the Renaissance was South versus North, in the eighteenthcentury Enlightenment, Western Europe invented Eastern Europe as its "complementary other half" thus entangling the notion with evolving Orientalism. The uncertainty of boundaries constructed Eastern Europe as "Europe but not Europe", inventing it as "an intellectual project of demi-Orientalization."[27] On "cultural" lines, that earlier bipartite division effectively identified Eastern Europe with the domain of Orthodox Christianity.[28] Later, in the second half of the twentieth century during the Cold War, Eastern Europe became a catchword for the Soviet bloc thus encouraging area studies encompassing even the post-communist era after the collapse of state socialism.[29] This division in the era of the Iron Curtain excluded Greece from geopolitically conceived Eastern Europe—a paradox given that Greece was historically the heart of the Byzantine commonwealth.[30]

The cultural notion of Eastern Europe as the domain of Orthodox Christianity thus encompasses a region the south of which was subsequently dominated by the Ottoman Empire dramatically clashing in the Balkans and elsewhere with the “Third Rome” of Moscow. Bulgaria’s religious and political history has been uniquely entangled being categorized in various ways. Apart from belonging to Eastern Europe both culturally and geopolitically, Bulgaria was part of what was formerly designated as the “Near East”[31]—a term still based on a “fundamentally bifurcated view and on a reified interpretation of civilizational spheres as self-contained monoliths.”[32] Until the end of 1958, for example, Greece and Turkey were included in what was labeled Aegean and Middle East Division in the U.S. Department of State,[33] and historically for American strategists the Balkans were part of the “Near East” referring to the area of Ottoman Muslim domination after whose downfall the emerging Balkan nation states have been increasingly regionalized as “new Europe.” The European East to which Bulgaria belongs is thus a region of entangled and contesting Orthodox/Byzantine and Islamic/Ottoman continuities. This book contributes to understanding how these continuities compete in shaping modern secularism in Bulgaria, invoking parallels to Orthodox-majority Greece and Russia—countries that symbolize the Orthodox Christian legacy against various types of relationships to Islam, the Ottoman heritage, and the Near East.

A recent survey confirmed that almost a quarter of a century after the fall of the Iron Curtain and the collapse of the former Soviet Union, “religion has reasserted itself as an important part of individual and national identity in many of the Central and Eastern European countries where Communist regimes once repressed religious worship and promoted atheism.”[34] The Balkan countries, sharing social and cultural trends with neighboring areas in the Eastern European region and elsewhere, had their own patterns of religion in society, secularism, and national belonging well before the advent of Communism and after its fall.

Vyacheslav Karpov’s useful discussion of “desecularization” suggests the multiple forms that it can take.[35] He suggests three major components: a rapprochement between secular and religious institutions, a resurgence of religious beliefs and practices, and the return of religion to the public sphere.[36] His invocation of “multiple desecularizations,” in the sense of the many paths that the return of religion to the public sphere can take, provides a framework for making sense of the multiple ways in which desecularization can take place, or even be reversed. Karpov builds on the earlier work of Peter Berger, not least by offering an explanation of why sociologists have been slow to overcome a cultural lag in recognizing how and why individuals and societies, from the bottom up of cultural movements to the top-down of state-imposed transformations (think of Stalin and Ataturk) accept or resist major transformations in belief and practice. As Galin Tihanov has argued, Central and Eastern Europe has been a shatter zone for literary criticism because of the clash of cultures, historical traditions, and current practice.[37] The same reasoning contributes to our focus on Bulgaria as a crossroad of regions and religions, which turns the country into an indicative case in the Orthodox-majority world accounting for how history and religious legacies intertwine with and underpin secularism.

*** 3. Religion and the Political Imagination: Structure of the Book

Our contributors look beyond immediate events. They situate the ongoing developments and public talk about religion in the longue duree of the continuities and breaks in the relationships between religion and politics. Much of the analysis is centered on Bulgaria, although we include historical and contemporary comparisons with neighboring countries, and—when necessary to indicate important entanglements—with the Middle East and Russia.

This volume builds on a convergence of interest between the co-editors. Evstatiev is an historian who—shaped as a scholar of Islam and the Middle East in the 1990s and the early 2000s—benefited from a strong training in Oriental languages and the text-based tradition of Bulgaria which combined both Eastern and Western European intellectual perspectives. He has since complemented this approach, immersing himself in longue duree social history and anthropology while also adding to his interests religion in the Balkans. Eickelman, an anthropologist who has worked extensively in both North Africa and the Arabian Peninsula, also has a strong interest in social history. In the late 1980s he initiated a project with his Soviet—who transformed into Russian—colleagues to compare the implicit and often unexamined assumptions underlying their respective approaches to making sense of North Africa, the Middle East, and Central Asia.[38] When writing from a Balkan point of departure, Evstatiev has similar interests in the historical and contemporary entanglements between the Middle East and Europe.

In Chapter 1, we tackle the patterns of religion and identity in the Balkans with a special emphasis on Bulgaria to foreground the concept of secularities rather than the “fixed” notion of a single path of secularism matching the classical Western ideal. Discussing the religious underpinnings of Balkan seculari- ties and the lack thereof (as in the Albanian case), we are inspired by Benedict Anderson’s Imagined Communities, which marked a new way of using the term “imagined” in understanding politics and political action.[39] Anderson’s concept is straightforward, arguing that ideas of political community are not given but are actively constructed, and contested, by those who hold them, and historically situated. Thus, for example, when adherents of a nation or religion assert that their sense of “belonging” is timeless and enduring, Anderson looks at the historical contexts in which these claims are made. A political scientist best known for his writings on Indonesia, Anderson based much of his work on the emergence of nationalism in nineteenth-century Latin America in order to reach a wider audience by exploring his ideas elsewhere. His sense of “imagined” was concretely grounded in political, historical, and economic contexts, adding senses of how people, both elite and non-elite, shape and experience shared ideas of self and community.

When Anderson first introduced his insightful term, he could hardly have been aware of how it influenced later adaptations of the concept. It was readily expanded by analogy from

describing how nations took shape to the analysis of religious experience—not only for Christians and Muslims but also for other faiths.[40] There has been resistance to use of the term “imagined” because it suggests to some an unreality. However, the term highlights how social and political forms get shaped by individuals and collectivities to become social facts. The notion of politics as centered on power relations and interests alone cannot account for how members of a society interact, cooperate, and sustain social cohesion. Politics is also, to use the striking phrase of Kyosti Pekonen, “a struggle about people’s imaginations.”[41] Overt political struggle is framed by implicit understandings of belonging and, of course, the arbitrary enforcement of what is permitted and forbidden. Pursuing this struggle about people’s imaginations, we delineate the contours of the two concepts invoking both Byzantine and Ottoman concepts implicitly underpinning modern politics—symphonic and milletic secularism, illustrated in detail by the case studies in the next two chapters.

Kristen Ghodsee’s Chapter 2 assesses the changing relation between religious identities, state authority, and secularism from the unusual—at least for non-Balkanists—perspective of three transnational court cases brought before the European Court of Human Rights (ECtHR) between 1996 and 2011. In all three cases, the ECtHR assumed a distinctly Western norm of secularism, which it imposed on a society that had a different trajectory of relationship between religion and politics. Ghodsee sees the reasons for this different underpinnings of secularism in the long history of church-state collaboration, a doctrine known as symphoenia, in which temporal and spiritual powers worked together to promote religious pluralism—hence her term symphonic secularism. On a doctrinal level, this view of church-state relations has been imagined as an ideal of Eastern Orthodox Christianity since the time of the Byzantine Empire. Since then, she argues when introducing the concept of symphonic secularism, “Tsars, Sultans, politburos or prime ministers have consolidated their power over ethnically or linguistically diverse populations, by promoting national identity through a church (or a mosque or synagogue) that instills loyalty to the state as part of its ecumenical dogma while also granting autonomy to other religiously defined communities.”[42]

In spite of the doctrine of symphoenia, which at least for Bulgaria can be traced back at least to 1054 and the schism between Western Roman Catholicism and Eastern Orthodox Christianity, Ghodsee claims that the court imputed the doctrine to the more recent non-democratic side of the Iron Curtain. Even more, she argues that the ECtHR imposes a specifically Protestant conception of religion on predominately Eastern Orthodox countries. Ironically, Ghodsee concludes, the universalism of Western human rights discourses may have more in common with the supra-national universalisms of some Islamic doctrines than with the modern ethno-national “particularisms” of Eastern Orthodox Christianity.

In Chapter 3, Simeon Evstatiev explores the competition of “traditional” (Balkan Hanafi, as well as religiously syncretic) Islam versus “Arab” (mainly Salafi) Islam. In a context with a widely spread religious syncretism,[43] this “Arab” Islam is perceived to have arrived in Bulgaria via Saudi and other Middle Eastern, including Turkish, channels beginning in the

1990s and often through Bulgarian-trained preachers and religious scholars who studied overseas. “Arab” Islam, as labeled by its detractors, claims to lead a return to Islam’s doctrinal roots and also strengthens a sense of belonging to the “imagined community” of Sunni Islam. Tackling the perceptions of “traditional” versus “alien” Islam in the political imagination and public debates, Evstatiev builds on the concept of “milletic secularism”[44] through a case study of Salafism in Bulgaria. The chapter draws on Evstatiev’s regular study visits to Muslim-majority villages and towns in different regions of Bulgaria and to community leaders. He offers an interpretation of a major court case in which thirteen Muslim lead- ers—most of them imams some of whom foreign-trained—were accused of propagating “anti-democratic ideology” in the form of violent Salafi Islamism.

The notion of milletic secularism and Ghodsee’s symphonic secularism are complementary here in that they both trace the religious and historical underpinnings of secularism in a Balkan context thus helping explain the specifics of the issues in the next chapters. Unlike Ghodsee’s symphonic secularism, however, milletic secularism suggests that the post-Ottoman pattern of secularism in the Bulgaria and Southeastern Europe should be seen rather as a reversed form of milletism that upends the model of the Ottoman millet system. It builds the trajectory of modern Balkan secularism as combined with European ideas of nationalism that in the late Ottoman Empire first developed among Christians who, as unlike Muslims they maintained closer contacts with Europe.[45] This approach evokes both mainstream secular discourse and discussions within Bulgaria’s Muslim community, including the state-recognized chief mufti and his Muftiship as the official institution of the Muslim community.[46] Sometimes the foreign-inspired “Arab” Islam is labeled as “radical,” as opposed to the pre-existing and often taken-for-granted local religious understandings.

Max Weber’s classic triptych of forms of political authority remains useful as a point of departure, but it also has its limitations as developed by early modernization theory, which implicitly assumed that societies since the European Enlightenment were on steady progress, replacing generally unquestioned “traditional” assumptions about authority with greater reliance on rationality. Unfortunately, “traditional” is often used as a residual category that blocks attention to how conventional understandings change incrementally over time—and sometimes with great speed. Thus Islamic law, the shari‘a, is sometimes portrayed as immutable and a product of religious extremism, but on close examination can also be characterized as flexible and responsive to diverse historical situations.[47]

Evoking the afterlife of entangled Christian/Byzantine and Muslim/ Ottoman pasts in the modern political imagination also entails how syncretic “local” and global “universal” Islam meet in a specific East European context, offering insight into how court cases contribute to the objectification of religious knowledge and practice—the codification of religious doctrine into formal categories of “religion” and “ideology.” “Objectification” is the process by which large numbers of people explicitly ask questions such as “What is my religion?” “Why is it important to my life?” and “How should beliefs guide my conduct?”[48] Such questions get explicitly discussed. In actions such as court proceedings, how beliefs are characterized is a

distinctly modern process that shapes how people think in public about faith, practice, and society.

Momchil Metodiev (Chapter 4) draws attention to parallels between “Communist atheism” and “Western secularism,” in which the European Court of Human Rights in a 2009 legal case upheld 2009 that the mere presence of a crucifix in an Italian classroom “violates the rights of secular people.” The Moscow Patriarchate responded in June 2010 with the statement that “modern militant secularism” as exemplified by the court decision, like “Russian Communism,” was “not neutral and indifferent to the Christian faith, but frankly hostile.” In refreshingly clear language, Metodiev cautions against facile assumptions of congruence between secularism in Communist Bulgaria and the same process in Western Europe to spell out the differences. The different social historical experiences of Eastern Europe under Communist domination and the West necessitate a “local knowledge” of understanding secularism in its historical contexts. State socialism—which like other grand narratives of modernity and was determined to obliterate religions that were supposed to remain in the past—can thus be viewed as a “secular religion”[49] clashing with the established monotheistic faiths and identities.

Daniela Kalkandjieva’s Chapter 5, on “Caesar and God in Public Space,” complements Metodiev’s chapter by exploring how abstract distinctions such as secular and sacred, and historical/cultural and religious are made in practice. Not long after the end of the Communist regime in Bulgaria in 1989, legal changes resulted in the return of economically valuable lands and property that the Communist regime had seized from the Bulgarian Orthodox Church and the Muslim community. Yet some of these assets had been converted into “monuments of national history and world cultural heritage,” and legal cases challenged the right of the state to return some properties, including monasteries converted into museums that religious authorities were not prepared adequately to maintain. As in earlier chapters, legal cases—as well as journalistic exposes of the misappropriation of religious tangible properties—fuel arguments for and against the control of religious properties and the extent to which representations are part of the contemporary public sphere.

In Chapter 6, Galina Evstatieva tackles Muslim views on headscarves, comparing the opinions on veiling as proposed by Bulgaria’s Sunni religious authorities, domestic cultural codes, and how Muslim women in the country themselves perceive the use of headscarves. She reviews two periodicals with the same name issued by the Chief Muftiship of the Muslim Denomination in the Republic of Bulgaria between 1999 and 2016—the newspaper and the above-mentioned magazine Myusyulmani (“Muslims”). Around 20 percent of the articles deal with topics related to Muslim women, about only one-third of which are written by women.

The views contained in the publications on the role of women remain seemingly stable and unchanged over long periods on such matters as how women should display their piety in accordance with a required return to “true” Islam as understood by the Chief Muftiship. In

contrast to the Communist era, which included a period of forced unveiling in public space and of course in schools, many Muslim women and men see re-veiling as a positive act of community expression. Some Bulgarian political parties see the headscarf as a way of propagating Islamic radicalism. The Turkish-speaking Bulgarian population and the Pomaks, the Bulgarian-speaking Muslims, are divided on the issue of headscarves and the use of full-face veils. As Evstatieva concludes, the hijab maintains a social distance between genders and symbolizes the acceptable role of women in religious law.

Yet, apart from an objectification, the hijab also represents an essentially contested concept, to use the term of Oxford philosopher Walter Gallie,[50] that pits some Bulgarian Muslim religious leaders against upholders of the social norms and moral codes of the secular order of Bulgaria. The revival of Islamic normative teachings is thus seen by the mainstream society as challenging the implicit symphonic and milletic patterns for regulating religious freedoms and public expression. Yet, the centuries of mutual coexistence have shaped shared practices, even though contested as illegitimately syncretic by devout believers and religious specialists.

Ilia Iliev (Chapter 7) argues that over several centuries of cohabitation, Muslim and Orthodox Christian communities in Bulgaria have shared important implicit notions of belief, community, and religious practice, even while many believers deny the parallels in how their ideas of community and faith are structured. The extent of these parallels are not as wide as elsewhere. In Bangladesh, for example, Bengali villagers in the late nineteenth century did not know whether they were Muslim or Hindu, and had to be “taught” by modernist Muslim (and Hindu) preachers who instructed them how to identify themselves explicitly as Muslims or Hindus.[51]

Among the Pomak Muslims of Bulgaria during Ramadan, the month of fasting, not all Muslim villagers fast. The ramazanlii, those who practiced the Ramadan feast are thus pursuing a version of Grace Davie’s model of “vicarious religion.” This term refers to an active minority that implicitly performs religious obligations on behalf of a larger community that understands and approves of their behavior.[52] Iliev’s ramazanlii are analyzed in different groups roughly divided by age cohorts. What they largely shared in common was commitment to fasting for the benefit of a wider community of kinship groups or community members. Iliev accounts for some community members fasting for the good of a collectivity rather than for individual spiritual gain. He concludes with the observation that in the evenings during Ramadan, where both Muslims and Christians gather in coffee-houses and pubs to discuss matters of common interest, the heterogeneity of the collectivity places limits on claims to “privileged access to religious truth or religion-based authority” in the public sphere. Cohabitation over hundreds of years places limitations on both Muslims and Orthodox Christians on the use of exclusive religious arguments. Their objectification of faith entails flexibility and stability alike—despite the current social and political pecking order, they are aware of the “rules of the game” established by the complementary models of symphonic and milletic secularism.

Another form of objectification beyond the Bulgarian context is present in Angeliki Ziaka's Chapter 8 on how religious education for Muslims and primarily Orthodox Christians in Greek state and religious schools has been revised according to European Union (EU) guidelines in order to promote tolerance and understanding among religious communities. As in the Bulgarian and EU court proceedings described in Chapters 2 and 3, Ziaka explains a give-and-take between the creation of European guidelines on religious education, compulsory religious education as implemented by the Hellenic Ministry of Education and Religious Affairs, and the often acerbic public discussions in Greece concerning how open religious education should be to encompass diverse religious confessions. Ziaka narrates how a secular paradigm of tolerance and understanding is negotiated among religious groups. The process becomes even more complex when local, political, ethnic, and religious and non-religious identities, the Orthodox Church's opinion on religious diversity, and the many different voices within the Church are taken into consideration. The focus is on Western Thrace, where Muslims account for about a third of the population. Formulating policy guidelines to improving religious curriculum in Muslim- minority and public schools, Ziaka offers suggestions on how to increase the public significance and visibility of religious education in an Orthodox-majority society, bringing Muslim and Greek citizens together through teacher training.

Ivan Zabaev and Daria Oreshina (Chapter 9) add another valuable comparative perspective. They deal with the seeming paradox of the growing visibility of the Russian Orthodox Church at the federal level versus its local-level concealment. This paradox can be explained, they argue, by the fact that the Church strengthens its position by not explicitly stating the motivation of some of its members to participate in "secular" society. For a comparable example from the Muslim world, we think of Turkey's Hizmet ("service") movement, inspired by Fethullah Gulen. Hizmet was a widely popular movement outlawed after the attempted Turkish coup d'etat in July 2016. Participants in it, like the supporters of the Russian Orthodox Church, are motivated by their interpretation of faith. However, they do not explicitly mention their motivation and adhere to strictly secular norms. This lack of explicitness also blurs the line between religion and ethical conduct. Yet it would be hard to believe that the majority of their clients (including the parents of schoolchildren in the Turkish case and advising women seeking abortions about alternatives in Russian one) are not aware of or suspect the motivation of the practitioners. In the case of the Orthodox Church, by not explicitly identifying themselves beyond their clinical role, they extend their influence more effectively and fold into the mainstream of contemporary society.

Plamen Makariev (Chapter 10) offers an in-depth analysis of informal and formal participation in civil society and the public sphere in Bulgaria. His argument has remarkable parallels with Zabaev and Oreshina's analysis of the Russian Orthodox Church. Makariev distinguishes between the formal participation of the Bulgarian Orthodox Church in public sphere activities—allow- ing gay parades, abortions, and the participation of individual believers in three crucial ongoing debates: gay parades, conception and contraception, and the teaching of religion in schools. Makariev demonstrates how far Habermas' discussion of the public sphere permeates Bulgarian discourse. He also indicates that most accounts of the public sphere in Bulgaria have moved beyond earlier, mid-twentieth century discussions

of modernity in which religion was consigned primarily to the private sphere. Jose Casanova's work appears to have been especially influential in shaping the thinking about religion in modernity, and religion in the public sphere in Bulgaria.[53] Makariev, as Zabaev and Oreshina in their chapter on Russia, distinguishes between the formal statements of Church authorities—and by extension their Muslim counter- parts—and the "informal" statements of people assumed to hold certain views on the basis of who they are. Debate is vigorous and inconclusive insofar as the moral and public values under discussion are best characterized as essentially contested concepts, and Makariev indicates how the more abstract notion of the public sphere joins the rough and tumble of the post-1989 Eastern Europe.

*** Acknowledgments

This book is one outcome of a multi-year collaboration within a team of scholars at the Center for the Study of Religions at Sofia University St. Kliment Ohridski. It is part of an international research project, "Religion and the Public Sphere: Interdisciplinary Approaches," supported by the Bulgarian National Science Fund (bnsf) at the Ministry of Education and Science. Most of the contributors participated in a set of workshops and seminars held under that program in Sofia and elsewhere between 2010 and 2013. Others have been involved subsequently as a continuation of the conversation initiated at Sofia University and expanded through collaboration and discussion with colleagues from Europe, including Russia, and the United States.

We are grateful to the contributors and to the wider circle of colleagues from different countries who contributed to the conversation around the topic of this book through the platform of the Sofia University St. Kliment Ohridski Center for the Study of Religions. Over the last decade, this Center became the first Bulgarian institution to focus on the study of religion from the perspective of the social sciences and the humanities without neglecting conventional theological approaches. We are indebted to the staff of Sofia University's Scientific Research Center (nis), who administered the entire project.

In addition, the Center for Advanced Study in Sofia hosted some of our meetings and workshops. The American Research Center in Sofia also offered a high level of academic hospitality by hosting one of our international conferences and facilitating the academic exchange. Stoyan Doklev, then a doctoral student of Simeon Evstatiev and currently an Assistant Professor at Sofia University, assisted us in the careful editorial double-checking of footnotes and bibliographical references. Support by the Gerda Henkel Foundation for the research of Simeon Evstatiev on Salafism between 2016 and 2019 not only enabled him to add to the issues discussed throughout the book but made it possible for the co-editors to conduct a series of work meetings in Berlin (2017) to frame and discuss the structure of the volume. Finally, we are enormously indebted to the editors at Brill, especially Nienke Brienen-Moolenaar, as well as to our anonymous readers for their insightful comments and suggestions.

* Part 1: Secularism in Bulgaria and Its Region

** Chapter 1: Byzantine and Ottoman Pasts, Modern Politics

Religious Belongings and Balkan Secularities

Simeon Evstatiev and Dale F. Eickelman

Abstract

The chapter tackles the patterns of religion and identity in the Balkans with a special emphasis on Bulgaria to foreground the concept of secularities instead of the “fixed” notion of a single path of secularism matching the classical Western ideal. Discussing the religious underpinnings of Balkan secularities and the lack thereof, we draw on Benedict Anderson’s notion of imagined communities, which marked a new way of using the term “imagined” in understanding politics and political action. Anderson’s concept is straightforward, arguing that ideas of political community are not given but are actively constructed, and contested, by those who hold them, and historically situated. Anderson’s insightful term was readily expanded by analogy from describing how nations took shape to the analysis of religious experience—not only for Christians and Muslims but also for other faiths. There has been resistance to use of the term “imagined” because it suggests to some an unreality. However, as the chapter argues, the term highlights how social and political forms get shaped by individuals and collectivities to become social facts. The notion of politics as centered on power relations and interests alone cannot account for how members of a society interact, cooperate, and sustain social cohesion. Overt political struggle is framed by implicit understandings of belonging and, of course, the arbitrary enforcement of what is permitted

and forbidden. Pursuing this struggle about people’s imaginations, the chapter elucidates the relevance of two concepts invoking both Byzantine and Ottoman notions implicitly underpinning modern politics—symphonic and milletic secularism.

Keywords

secularism — multiple secularities — Byzantine — Ottoman — political imagination — agency — structure — the Balkans — Bulgaria

---

Religion in Eastern Europe, particularly the Balkans, officially marginalized throughout the Communist era, has returned to play a major role in society and politics. Since the late nineteenth century, various political movements asserted hegemony in succession, and no single dominant cultural or political force has taken lasting hold. As Galin Tihanov argues, emigres, exiles, and transnational forces in the region have always been available to counter claimed hegemony in ideas and practices.[54] The multiplicity of languages, dialects, and peoples, and the convergence or awareness of overlapping or competing religious, intellectual, and political traditions from Byzantine and Ottoman pasts in combination with Western modernity make the Balkans a region of bricolage, as Claude Levi-Strauss might have said.

*** 1. Balkan Secularities: Religion, State Atheism, and Public Space

Beginning in the 1960s, the work of Jurgen Habermas on the “public sphere” and “public space,” anchored primarily in the historical experience of Western Europe, was a touchstone for considering the intersection of religion, society, and politics in the Balkans.[55] With the advent of Facebook, Twitter, and other forms of activity, the fragmentation of authority that one of us described as parallel with the “new media” of the 1980s and 1990s suggests a break with the former “Enlightenment” model that leaves behind the salon, the coffee house, and the commons. The erosion of authority threatens more radical transformations than “public negotiation over the rules and discourse that morally bind the community together.”[56] As Tarek El-Ariss argues, it leads us into the domain of leaks and scandals, where faith and belief remain important, but truth and falsehood are less the basis for discussion in public space and the quest for authority is elusive.[57] Nonetheless, the concept of public space as invoked by Habermas, even if overly idealistic, inspires the exploration of intermediate connective spaces between the state and local communities. The conceptions of public sphere and public space developed by Habermas hew closely to an idealized Europe-based ideal, but nonetheless inspired others to adapt it to Muslim-majority societies, including its religious component.[58]

Although religion in Bulgaria, as elsewhere in Eastern Europe and the Balkans, has been politicized and used as an instrument to achieve political goals,[59] secularism should not be apprehended as a monolithic utopian ideal. The “separation wall” between the domains of the religious and secular is significantly more porous in social practice than conventionally assumed. Even under the Communist regime, religious affiliations, although transformed, did not fade away. The official place assigned to religion in public life under a certain political system does not necessarily reflect the actual role of faith in individual life and collective identities. The Communist period in Bulgaria (19441989) was dominated by an overwhelming ideology, in itself a political religion.

Marxism, especially in its Communist form, can—like National Socialism— be analyzed as referring to religious and ecclesiastical structures, having an overwhelming ideology that draws on a consistent set of rituals, symbols and images, religious metaphors related to an eschatology and “revolutionary mes- sianism.”[60] Socialism itself, from which Marxist-Leninism is a specific totalitarian offshoot, can be viewed as part of religious history—in Europe and elsewhere.[61] In a similar vein, Raymond Aron called Communism a “secular religion.” He advanced the concept in 1944, relating it to socialism—and particularly to its totalitarian form, Marxism-Leninism, which developed its own theology and sacred order.[62] This Marxist-Leninist “sacred order” included proselytism and messianism, the deification of leaders, scriptures, ideas of absolute truth, canon, rituals, iconography, evil and salvation until eventually “[t]rue believers became extinct dinosaurs, while the numbers of nonbelievers and atheists (i.e., dissidents) were growing, as well as a number of those who preferred the capitalist hell to the socialist paradise.”[63] In that sense, Communism was a secular religion attempting not so much to politicize religion but rather to replace it by adopting a radical interpretation of earlier socialism and Marxism.

Until the late 1980s and the early 1990s, the opportunities for social and anthropological research on religion in the former countries ruled by Communist regimes, where most of the Orthodox Christians lived, were lim- ited.[64] Under these regimes and thereafter, the Balkan states regulated and supervised the religious scene in various ways, ranging from enforcing homogeneity to “safeguarding a plural democratic home.”[65] Nonetheless, there was a scholarly trajectory that quietly continued a genuinely academic tradition, mostly in Ottoman studies.

In Bulgaria, this field was maintained by scholars with different views, styles, and from different generations, including Vera Moutaftcheva (1929–2009), Strashimir Dimitrov (1930–2001), and subsequently Tsvetana Georgieva (b. 1937). The observed revitalization of various forms of religions in everyday life attracted the attention of scholars, particularly ethnographers who in countries like Bulgaria continued a tradition of studying “folk religion,” describing the social world around seers, clairvoyants, and healers.[66] The most notable example of these studies were dealing with Vanga (1911–1996) known as Baba Vanga.[67] Anthropologists, who brought to the fore new “ethnographies of religious revival,” have chosen “an actor-oriented perspective on ‘religion’” rather than “a church-oriented one” to

study the “revival of Orthodoxy through the eyes of the local actors.”[68] Historians of Orthodoxy, in turn, have focused on the study of the Church during the totalitarian regime and its relationships with the Bulgarian Communist Party.[69] Others examined the Communist policies known as the “Revival Process,” which aimed at assimilating ethnic Turks and the other Muslims in Bulgaria,[70] often using repressive measures.

After the collapse of Communism, new underpinnings for social cohesion were needed and religion was again brought to the fore in public and social life. After half a century of secular religion, a new form of secularism based on a combination of national and historical religious identities gained ground. The earlier close correlation between religion and ethnic or national identity, a legacy of the millet system in the Ottoman Empire,[71] was reasserted anew— notwithstanding that recently some scholars tend to see the Balkan nationbuilding policies not so much as an upended continuation of the Ottoman experience but rather as a “manufactured legacy.”[72] Whether or not an elite choses to intervene or perpetuate a particular feature of the millet-like pattern is, however, not the main question here, as we bring to the fore the implicit, structural underpinnings of the entanglements between religion, nationalism, and identity, which entails how they—elites and commoners alike—have rather re-imagined their communities.

In the post-1989 period, national and religious identities began explicitly to function as entwined, evoking historically continuous, albeit fluctuating, patterns of communal and political identity. Analyzing this reemergence of religion in society, Kristen Ghodsee suggests the term “symphonic secularism” related to the region’s Byzantine past and its imagined model of religion and politics thus exploring the Bulgarian conception of religion through “an Orthodox ideal of state-church relations.”[73] In the modern Balkans, the interest in the Byzantine past and its long-term significance has been directly enmeshed with the search of medieval antecedents of the emerging nation-states. Most of the national pasts have their historical roots in the Byzantine cultural and political sphere, and the knowledge of this empire has become increasingly important for Balkan national historiographies.[74] Dimitri Obolensky’s notion of the “Byzantine Commonwealth,”[75] frames a cultural notion embracing the entire European East and appropriated by modern nations differently for various purposes. As Diana Mishkova writes, there are two central themes at the core of these different and warring systems of appropriating Byzantium and Byzantinism: one is related to national identity while the other—to national expansion, or the nation’s mission. Whence, the “Byzantine factor” is found in various areas of intellectual activity.[76]

Re-imaging Byzantium and its role as a Christian Empire gets contextualized according to the type of nationalism and identity, including in countries that in the past have had competitively shared and sustained the notion of the Second or the Third Rome[77]—from Greece through Bulgaria to Russia.[78] This “commonwealth” was implicated from the beginning with religion, and when applying it to the post-Byzantine period the notion gets even more closely associated with Orthodoxy.[79] Entangled with the subsequent Ottoman experience, Byzantium or rather multiple Byzantiums take part in shaping Balkan political imagination and secularism.

Considering these re-imagined Byzantiums, the concept of “milletic secularism” invokes the Ottoman millet system to refer to divergent and competing transnational collective identities, loyalties, and frames of reference coexisting within the same nation-state. These identities are conceptualized as resembling the way religious communities functioned under the Ottoman millet system but in a reverse, upended way, as today Muslims are the minority in a pluralist society and secular state governed on the basis of non-Muslim procedures and values symbolically overarched by Orthodox Christianity. The concept of milletic secularism thus seeks to explore why and how “implicit,” taken-for-granted understandings prevail in long-term understandings of politics.[80] Juxtaposed but complementing one another in this volume, the concepts of symphonic and milletic secularism suggest socio-theoretical models for approaching the ideological underpinnings of Balkan secularism. Drawing on Clifford Geertz’s notion of “thick description,”[81] the idea of milletic secularism invokes the continued role of the Orthodox Christian identity and the changing, “reversible” Christian-Muslim entanglements in Ottoman and, subsequently, post-Ottoman social experience.

The notion of milletic secularism also indicates that secularism, an ideal type, always takes the form of cultural and historically specific meanings that can look paradoxical at first sight insofar as millet originated as an Islamic religious term. There is no single pattern of secularism but “multiple secu- larities”—a term that complements Shmuel Eisenstadt’s notion of “multiple modernities.”[82] Recently suggested, the concept of multiple secularities[83] transcends the scope of the classical Western idea of secularism with its focus on the relations between religion and politics (“God and Caesar”). It can be applied to distinctions between the religious and non-religious, making it relevant to the study of the Balkans, where religion remains important even in the non-believers’ identities. As can be observed in the case of Bulgaria, its model of secularism and the policies it entails implicit notions as the Byzantine sym- phoneia and the Ottoman millet, thus not fully matching the classical Western ideal of secularism.

The idea of a nation on the basis of a common language has never fully gained ground in the Balkans. The reason is rooted in the “millet mentality,” as Bernard Lory puts it to emphasize that the millet legacy underlies a set of phenomena—from the formation of distinct national identities even when speaking a common language, such as in the cases of the Serbs, Croats and Bosnians, as well as the difficult integration of the Bulgarian-speaking Muslims (Pomaks) into the national community of modern Bulgaria.[84] However, even a widely-spread phenomenon as the Balkan milletic pattern of secularism and identity is not necessarily a single model for the entire region. There is a notable exception—the Albanians whose nationalism lacks the resort to religion as a mark of identity.[85] From the outset of their nation building, Albanians have pursued the slogan “the religion of the Albanians is Albanianism.” If the other Balkan nations sought revenge on previously oppressed Christians over Muslims, who remained a minority in the new states, Albanians did not use the end of the Ottoman era in that way. After all, the population of post-Ottoman Albania’s was roughly 70 percent Muslim, 20 percent Catholic and ten percent Orthodox.

During Enver Hoxha’s regime, Albania was the only Communist state prohibiting all religious practices.[86]

According to recent studies, in today’s Eastern Europe there is evidence that many citizens with Muslim family background no longer self-identify as Muslims—at least according to consecutive official censuses. In his attentive large-scale recent survey of Islam in twenty-one post-Communist Eastern European countries, Egdunas Racius rightly points out the unreliability of these censuses and mentions in passim an intriguing tentative hypothesis that these developments might perhaps indicate a new “return of the secular.”[87] Even if this proves to be a change in the tendency of a “return of the religious” during the first years after the collapse of Communism, it is too early to say whether there is a move to categories such as “non-religious,” “agnostic” or “atheist.” Such a trend, if correctly reflected by the censuses, rather signals a new way in which the elements of multiple identities are accentuated, contextually rearranged and brought to the fore under certain circumstances. First, given the data from available sociological surveys, according to which more Pomaks increasingly self-identify mainly as Muslims, even when asked about their “ethnicity,”[88] other trends seem to unfold on the ground. These trends accentuate the Islamic component as increasingly overarching multiple identities.

Second, there is a new parallel dynamics of mobility and transnationalization of Muslim lives and discourses, as many stricter adherents of Islam constantly travel and sometimes migrate east and west while keeping a connection with their previous homelands.

*** 2. Transnational Religious Identities and Ethno-Religious Belonging

Today more than ever, religious identities are increasingly transnational.[89] In the predominantly Orthodox Christian countries of the Balkans during the post-Communist period, Orthodox identity has been revived—certainly in terms of religious devotion but also in the sense that the majority population assimilates it to national identity. Contemporary Bulgarians thus manifest not a Western pattern of “believing without belonging,”[90] but rather “belonging without believing.” Others add the category of “behaving without believing or belonging” where, for example, in China many citizens neither believe in a supreme transcendent deity nor self-identify as followers of any specific faith but visit Confucian or Buddhist shrines and take part in rituals.[91] Against the backdrop of such paradigms, Central and East Europeans are described also as “believing and belonging, without behaving” insofar as most people in the region claim to believe in God and self-identify as Orthodox Christians despite the low levels of religious observance and church attendance.[92]

Muslim identity has likewise coexisted with various ethnicities but has sought to overarch them as a basis for collective and political identity long before the current globalized era. The Balkans are no exception in that Muslim identity has proved highly resilient to rapidly

take advantage of the development of modern communications, and enabling transnational mobilization.[93] In the Islamic case, modern conditions have facilitated a variety of struggles over religious ideas and the increasingly fragmented authority in which different voices compete for recognition. Transnational Islamic ideas and movements facilitate “the existence and legitimacy of a global public space of normative reference and debate.”[94] Internet and the “cyber-Islamic environment”[95] create a “theatre of the ‘street,’ making evident the multiple connections of this expanding public sphere.”[96] Although Islamic studies scholars have written little to date about transnational Islam in the Balkans, the theme has attracted the attention of an increasing number of works in religious stud- ies, [97] political science,[98] sociology, and social anthropology.[99] With the immigration of Muslim newcomers, the transnationalization of Islamic discourses reached even countries in the broader Central and Eastern European region like Moldova, the Czech Republic, and Slovakia which seems to remain the only European country without a mosque.[100]

In the Balkans, particularly Bulgaria and former Yugoslavia, the mass post- 1989 influx of religious emissaries and evangelizers from different denominations did not lead to the emergence of a “free market of religions” (Hann 2006).[101] The majority of believers have, instead, returned to “traditional” religious denominations, strengthening their collective identities. Some observers, especially Westerners, are often surprised at the high number of the Bulgarians self-identifying as “Orthodox Christian” without even going to church regularly or being devout Christians. As a Western Christian interested in missionary activities in Bulgaria, James Hopkins, for example, perceives the Orthodox Church as “willingly becoming an instrument of Bulgarian geopoliticism, allowing itself to get used by the government.”[102] Emphasizing that religion in Bulgaria has a different genealogy, Ghodsee has criticized Hopkins’s assertion that Bulgarian Orthodoxy is not a “true” religion, but simply a marker of ethnic and national identity “based on a series of carefully crafted nationalist myths.”[103]

Despite the conventional assumptions of Orthodox Christianity as a spearhead of nationalism,[104] the relation between religious affiliation and national identity in the Balkans is more subtle and differs not only among Orthodox Christians and Muslims but also between the various groups subsumed under the categories of “Orthodoxy” or “Islam.” However, the ethno-religious belonging of both communities relates to divergent political imaginations and communal anticipations. Christians and Muslims, no matter their “actual” religious observance, share elements of an implicit social knowledge which is “what moves people without their knowing quite why or how, with what makes the real real and the normal normal, and above all with what makes ethical distinctions politically powerful.”[105] In this sense, religion in postOttoman Southeastern Europe is an essential part of non-believers’ collective and national identity, and this distinguishes Balkan from Western patterns of religion and secularism.

The Balkans may well be seen as fitting into a paradigm of “belonging without believing.” Nonetheless, the Balkans share with some parts of Western Europe the model of “vicarious religion,” a notion that sociologist of religion Grace Davie uses to designate the phenomenon of an active minority implicitly performing religious obligations on behalf of a larger

community that understands and approves of their behavior.[106] Davie focuses on the process by which churches, church leaders, and churchgoers perform ritual on behalf of others, believe on behalf of others, and embody moral codes on behalf of others. In this view, churches provide space for debating the unresolved issues of modern societies.[107] The model of “vicarious religion” seems well-represented in the Balkans as, for instance, the research on the fasting among Bulgarian Muslims during the Ramadan indicates.[108]

Within the evolving post-1989 situation in the Balkans, this pattern, however, functions differently, particularly in public space. In Bulgaria particularly, a religiously dedicated minority can act on behalf of an approving an often silent majority. However, instead of providing space for debating socially significant issues in their churches, Orthodox Christians tend to prefer using the churches for strictly religious ceremonies while staging their faith-related demands in public sphere. This “staging virtue”[109] is the product of various individuals and groups acting on behalf of the community in a deinstitutionalized manner, unfolding informal strategies of communication and public legitimization. Post-Communist Muslims, for their part, have rapidly learned how to couch their demands in “universalistic terms”[110] in the context of the mainstream society of non-Muslims and irreligious people. This pattern may be designated as “proxy religion” by which religious claims are publicly staged in “universalistic” language through the explicit or quietly condoned actions of representatives perceived as acting for the common good of the entire community and on its behalf.

*** 3. Agency and Structure, Divergence and Convergence

Public entanglements between religion and politics produce differing results in social practice contingent on two sets of factors. The first set of factors relates to recurrent social rules and conventions. The second set of factors relates to “agency,” understood as “the socially constructed capacity to act.”[111] The tension between agency and structure entails the question of how they relate to each other in what Antony Giddens has called structuration.[112] Despite the recent prevalence—at least in the study of religious communities, and particularly Islam—of approaches according to which nations are humanly constructed, imagined and invented, some scholars have insisted that the “primordialist” view on nations and ethnicities as historically given entities should not be abandoned. This is a highly politicized theoretical issue because primordial- ism has been heavily criticized partly due to the fear of justifying racism and nationalism despite the obvious difference “between explaining and justifying a phenomenon.”[113] As a ubiquitous topic in anthropological, historical and sociological research, the concept of agency provides a convenient “localizing toolkit” that helps avoid falling back unreflectively on supposedly essentializ- ing[114] generalizations.

In introducing the subject of Islam in the Balkans, Arolda Elbasani and Jelena Tosic, for example, write that “localized Islam [provides] an analytical lens that aptly captures the input of various interpreting agents, competing narratives, and choices of

faith.” They claim that the use of an agency-focused approach allows them to “transcend essentialized readings of Islam.”[115] Behar Sadriu argues that in the post-Communist period and the disintegration of Yugoslavia in the 1990s, the recent Syrian war has accelerated a process, whereby “Muslim Albanians in the Balkans are being ‘reconnected’ with a more cosmopolitan vision of their past.” On the other hand, he claims in his conclusion that Muslims are not just “passive recipients of nationalized categories of belonging—they are active agents shaping their own identities.”[116] Similarly, Laura Olson discusses the revitalized shared identity of Bulgarian Muslims, providing a vivid account of how “a new pious Islamic identity distinguishes itself sharply from local custom” to emphasize that “Muslim communities are not fixed or set apart.... Community is imagined, mediated by ideologies, images, and information.”[117] Such statements, however contradictory they might seem, follow a prevalent trend in contemporary social thought requiring from scholars an almost obligatory account on the role of agency. These developments are intertwined with the contested conceptualizations of unity and diversity, convergence and divergence.

More than four decades ago, the Egyptian social scientist Abdul Hamid el- Zein, equally devoted to interpretive anthropology and to Islam,[118] analyzed the views of Clifford Geertz and suggested the use of the plural islams instead of “Islam.”[119] Inspired by structuralism, el-Zein argued that “Islam,” “religion,” “economy,” “politics,” and even “saints”[120] do not really exist with any inherent meaning. “Islam,” he wrote, “without referring it to the facets of a system of which it is part, does not exist.”[121] Other scholars, such as Aziz al-Azmeh, pursued this line of reasoning to emphasize the multiplicity of Islamic experience and even claim that “there are as many Islams as there are situations that sustain it.”[122] More recently, some authors promote the “global history” approach by even suggesting that the “Muslim world” likewise has never existed and that “the construction of the Muslim world was a product of Muslim subjecthood under empire and a means to criticize European racism.”[123]

Shahab Ahmed, in turn, proposed anew the question “What is Islam?” but he was more cautious than others. Along with the classical views of Islam as law, he likewise rejected what he called the “islams-not-Islam” approach.[124] The problem with such approaches which seek to fully de-compose religion, and in this case Islam, is that they fail to propose any definition. Shahab Ahmed himself eventually suggests that to conceptualize Islam as “meaning- making for the self in terms of hermeneutical engagement.”[125] But if Islam is any “hermeneutical engagement,” as Frank Griffel observes, “there is nothing left in societies dominated by Muslims that is not Islamic.”[126] Indeed, Ahmed is not convincing as to why we should embrace exactly this conceptualization of Islam among other classical and more recent views but he manages to produce one remarkable effect. Struggling against “essentialism,” he suggests a total generalization in which there is no difference between idea and fact, religion and culture, norm and practice.

The study of “little traditions,” and particularly Islam in local contexts, faces the challenge “to describe and analyze how the universalistic principles of Islam have been realized in various social and historical contexts without representing Islam as a seamless essence on

the one hand or as a plastic congeries of beliefs and practices on the other.”[127] The distinction between norm and practice, “great” and “little” traditions initially helped scholars to analyze different connections between the religious traditions as known through their normative texts and exegetical paradigms and their interpretations in a given local or “popular” context. Subsequently, the use of the notion of the “local” has often led to a misleading mixture: “local” has been equated with the “provincial” vulgarizing of the beliefs and practices conceived of as coming from an “authentic” high culture. Therefore, without neglecting the role of agency, individual choice, and diversity in social practice, we suggest refreshing the search for a middle ground in order to grasp how the universalistic elements of Orthodox Christianity and (mostly Sunni) Islam are communicated in practice and of how modes of communication affect religious “universals.”[128] Linking all individual believers to God, Islam is not only normatively defined as the “firmest tie” (al-‘uirwa al-wuthqd),[129] but—as Orthodox Christianity is for Balkan Christians—functions as a major vehicle of collective identity, communal belonging, and social cohesion.

The analysis of religion today, particularly Islam, bristles with well-intended dicta, such as the phrase that “Islam is what Muslims do” or the claims that identities are “not fixed but fluid, changing according to subjective evaluation by individuals and groups of circumstances at a given time and place [as they] are not primordial or a fixed essence.”[130] However, the ubiquitous and persistent re-confirmation of such assumptions, even if theoretically coherent within their own conceptual paradigm, does not suffice anymore for the understanding of the complexity of religion and collective identities. The fear of “essentialism” is turned into a standardized accusation, particularly by scholars who say they adopt an “activist approach to studying cultural and historical heritage.”[131] But seeking to avoid stereotypes “produced in the West,” should not result in creating “counterstereotypes of the West.”[132] As William Hagen has remarked regarding “violence and cruelty” in the Balkans, “[a]lthough journalists ... tend to ‘essentialize’ Balkan violence—that is, to treat it as inherent in Balkan cultures—it is postmodern orthodoxy in the academy to insist that it is “socially constructed.” Neither perspective is very enlightening.”[133]

Religion is far from being a timeless, ahistorical and monolithic whole. At the same time, it is not, as many imagine it, “putty in the hands of exegetes—as if a heritage could successfully be interpreted to mean whatever one wanted and all interpretations were equally plausible to one’s fellow believers.”[134] One can drown in diversity even though the many voices claim to speak for Islam or Christianity, not just some part of them. Religious traditions change but in a time-consuming and gradual way. Charles Taylor notes that belief in God has had a different meaning in the years 1500 and 2000. The same goes for creedal suppositions. He writes, “this emerges as soon as we take account of the fact that all beliefs are held within a context or framework of the taken- for-granted, which usually remains tacit, and may even be as yet unacknowledged by the agent, because never formulated.”[135] Therefore, some structural underpinnings of “staging virtue”[136] at the interface of religion, politics, and identity remain socially implicit.

*** 4. Conclusion

In the long-run, taken-for-granted understandings of belief and practice change, but often in incremental ways so that actors are not aware of what is gained and what is lost. Background understandings are just that. As Taji- Farouki and Poulton write, “Islam in the Balkans has never been monolithic, having always had a broad variety of forms and expressions,”[137] and the same is likewise perfectly true for Orthodox Christianity. These “implicit” forms and expressions of intertwined religion, politics, and identity in the Balkans that traversed do change but within a time-consuming process rooted in the social structure.

After the collapse of Communism in Bulgaria and the splintering of Yugoslavia, Muslim and Orthodox Christian identities have been revitalized, with Christians and Muslims evoking different religious and historical antecedents symbolically represented in the Byzantine and Ottoman past of the Balkans. Today, the transnationalization of religious identities marks certain processes of convergence observed against the backdrop of the otherwise predominant diversity in Southeastern Europe. That convergence does not mean that religious communities are “monolithic” or altogether bound up to a “fixed” identity. Identities remain multiple but their religious component gains an increased public significance. Developments in Bulgaria and the Balkans, as well as some comparisons with regions as the Middle East and phenomena as transnational Salafism or hijab controversies, signal that such homogenizing forces are at work differently among Muslims and Orthodox Christians, including when they pursue religious arguments in a secular public space.

Orthodox Christians stage their religious affiliation in multiple ways of believing and belonging, albeit with an emphasis on bringing religion to the fore in terms of belonging—even without believing. From the perspective of national identity, the Balkan pattern of continuing and transforming the Ottoman organization of communal life in a millet-like model under the emerging modern nation-states shows that even in this respect there is not necessarily a single model of secularism, as indicated by the notable exception with the emergence of the Albanian nation. Due to this multiplicity of experience and forms of modern identity, it is appealing to think of Balkan secularities rather than of a single type of secularism embedded in the classical Western ideal.

The overall Balkan model of milletic secularism, as well as the exceptions from it, prove that the role religion—be it Christianity or Islam with their respective Byzantine and Ottoman legacies—has been transformed by modernity but have not vanished at all. Even the most dedicated communist states in Eastern Europe had to build their ideology on an attempt to replace these “old” religions with “secular religions” based on Marxist revolutionary messianism to try trump Christianity and Islam altogether. These phenomena indicate that secularities—in re-imaging communal life by evoking religious heritages and historical antecedents—entail a traceable longue duree beyond Europe and beyond modernity.

For Muslims in the post-communist period, the transnationalization of religious experience, the ease of travel, internet, Facebook and Twitter have fostered a different type of a higher level of belonging to the global imagined Muslim community—the umma. More mainstream, observant Muslims are increasingly abandoning local syncretic practices and seek to share the universal, core beliefs and rituals with their coreligionists in Turkey, the Middle East, and elsewhere. However different Orthodox Christianity and Islam are in terms of doctrine and ritual, the identities of their adherents need to be further studied comparatively in a search for the implicit religious underpinnings of political imagination and secularism.

** Chapter 2: Regulating Religious Freedoms in the 21st Century

Nationality, Religion, and Symphonic Secularism

Kristen Ghodsee

Abstract

This chapter interrogates Western attempts to render Eastern Orthodoxy as a fundamentally “undemocratic” religious tradition. While contemporary scholars have critiqued the ontological imperialism of Western human rights discourses, they do so only with regard to Islam. This chapter provides a close examination of three cases against Bulgaria at the European Court of Human Rights (ECtHR) between 1996 and 2011: the case of Hasan and Chaush v. Bulgaria (application no. 30985/96—judg- ment 2000), the case of Supreme Holy Council of the Muslim Community v. Bulgaria (application no. 39023/97—final judgment 2005), and the case of Holy Synod of the Bulgarian Orthodox Church (Metropolitan Inokentiy) and others v. Bulgaria (applications nos. 412/03 and 35677/04—final judgment 2009). In all three of these cases the ECtHR assumed a distinctly Western norm of secularism, which it imposed on a society that has a long history of church-state collaboration wherein temporal and spiritual powers work together to promote religious pluralism. This doctrine is referred to as symphoneia, and has been a core theological principle of Eastern Orthodox Christianity since the time of the Byzantine Empire.

Despite the long history of symphoneia, however, the ECtHR repeatedly roots the “Eastern” tendency for states to regulate religious communities to the Communist past, and it is convenient that most Eastern Orthodox majority states fell on the non-democratic side of the Iron Curtain (with the notable exception of Greece). The particular conception of religion that underlies the contemporary Bulgarian understanding of the appropriate relationship between the church and state reaches as far back as 1054 and the Great Schism between Western Roman Catholicism and Eastern Orthodox Christianity. Thus, rather than simply promoting a European conception of human rights and the legal framework necessary to maintain a “democratic” society, the ECtHR imposes a specifically Protestant conception of religion on Eastern Orthodox countries, in the same way that it imposes a Protestant-infused secularism on Islamic countries or upon Muslim minorities in Western Europe. In the end, the

chapter suggests that the universalism of Western human rights discourses is perhaps more compatible with the supra-national universalisms of Islam than it is with the ethnonational particularisms of Eastern Orthodox Christianity.

Keywords

Bulgaria — European Court of Human Rights — Eastern Orthodoxy — Symphoneia — religious freedom — Eastern Europe

---

Since the democratic transitions of 1989, the protection of religious freedom has been a core component of post-Communist constitutions, and almost all states are signatories of the European Convention on Human Rights (echr). Article 9 of the Convention guarantees citizens within the signatory countries the freedom of religion and allows individuals the possibility to sue their own governments in the European Court of Human Rights (ECtHR) in Strasbourg, France, if they believe their human right to freedom of conscience has been violated. Although the echr allows for states to regulate religious affairs, if they are deemed by the Court “necessary in a democratic society in the interests of public safety, for the protection of public order, health or morals, or for the protection of the rights and freedoms of others,”[138] the Court has consistently found Eastern Orthodox states such as Bulgaria, Greece, Moldova, etc. in violation of Article 9 for not maintaining a proper separation of church and state.

This chapter is a close examination of the three cases against Bulgaria at the ECtHR between 1996 and 2011: the case of Hasan and Chaush v. Bulgaria (application no. 30985/96—judgment 2000), the case of Supreme Holy Council of the Muslim Community v. Bulgaria (application no. 39023/97—final judgment 2005), and the case of Holy Synod of the Bulgarian Orthodox Church (Metropolitan Inokentiy) and others v. Bulgaria (applications nos. 412/03 and 35677/04—final judgment 2009). I argue that in all three of these cases the ECtHR assumes a distinctly Western norm of secularism, which it imposes on a society that has a long history of church-state collaboration wherein temporal and spiritual powers work together to promote religious pluralism. This doctrine is referred to as symphoneia, and has been a core theological principle of Eastern Orthodox Christianity since the time of the Byzantine Empire.

Despite the long history of symphoneia, the ECtHR repeatedly roots the “Eastern” tendency for states to regulate religious communities to the Communist past, and it is convenient that most Eastern Orthodox majority states fell on the non-democratic side of the Iron Curtain (with the notable exception of Greece). The particular conception of religion that underlies the contemporary Bulgarian understanding of the appropriate relationship between the

church and state reaches as far back as 1054 and the Great Schism between Western Roman Catholicism and Eastern Orthodox Christianity. Thus, rather than simply promoting a European conception of human rights and the legal framework necessary to maintain a "democratic" society, the ECtHR imposes a specifically Protestant conception of religion on Eastern Orthodox countries, in the same way that it imposes a Protestant-infused secularism on Islamic countries or upon Muslim minorities in Western Europe. In the end, I suggest that the universalism of Western human rights discourses is perhaps more compatible with the supra-national universalisms of Islam than it is with the ethno-national particularisms of Eastern Orthodox Christianity.

*** 1. Talal Asad's Critique

The anthropologist Talal Asad has called for a more historicized examination of the meaning of religion and secularism in different states, critiquing secularism as an Enlightenment-based political project that assumes a very limited view of religion.[139] He argues that secularization projects, whether externally imposed or willingly imported, inevitably privilege a Western European ideal of religion because they seek to subsume conceptions of religion that place an emphasis on embodied practices and rituals in the public sphere. Asad roots the contemporary concept of religion in post-Reformation Western Europe and emerging distinctions between the public and private sphere, viewing secularization process as the "forcible redefinition of religion as belief, and of religious belief, sentiment, and identity as personal matters that belong to the newly emerging space of private (as opposed to public) life."[140]

This new understanding of religion derives from Christianity and the struggles in Western Europe to replace faith and superstitions with science and reason in the public domain. In other words, the secular imperative of keeping faith in the private sphere is a smoke screen for establishing the hegemony of a distinctly Protestant conception of religion.[141] This critique of secularism has become the template for recent explorations of liberalism and secularization processes in the post-colonial context, particularly those that wish to explore the inner logics of Islam.[142] Asad's critical analysis of secularization in the Muslim world demonstrates how the demands of Western conceptions of church-state relations can amount to a form of ideological cultural (i.e. Christian) imperialism. But his critique is based on a very selective genealogy of Christianity, a genealogy that excludes the Eastern Orthodox Church and conflates Christianity with Western Christianity.

Although there are obvious theological differences, Islam and Eastern Orthodoxy have traditionally been othered by the West—orientalized and essentialized as fundamentally non-European and non-modern. From the earliest days of the Enlightenment, Orthodox symphoneia was derided as a pejoratively Byzantine form of government. In his 1689 "A Letter Concerning Toleration," John Locke condemned state interference in Church dogma, comparing Henry viii and his self-serving heirs in England to the Orthodox, "caesaro-papist" Emperors in the East.[143] More recently, Samuel Huntington relegated the Eastern

Orthodox world to the status of a completely separate civilization from the West because the East did not benefit from, “the separation and the recurrent clashes between Church and State.”[144] In its 2009 decision, even the European Court of Human Rights explicitly stated that “democratic societies” should not have governments that interfere with religious communities, even if those religious communities have always been intertwined with state authority.[145]

*** 2. Symphoneia in Bulgaria in Historical Perspective

The long history of Eastern Orthodoxy in Bulgaria is an essential foundation for the close reading of the ECtHR cases that I propose to do in this chapter, but I have engaged with these historical discourses and their modern cultural manifestations elsewhere.[146] The key point is that for centuries those self-identifying as Bulgarians have been taught that Bulgarian ethnic (and later national) identity is intimately bound up with the establishment and the maintenance of an autocephalous Bulgarian Orthodox Church. This church, from its inception, had close links with the head of state, be it a Tsar, a democratically elected prime minister or a Communist General Secretary. Moreover, this historical link between temporal and spiritual authorities is one of the key reasons informing the Great Schism between Eastern and Western Christendom in 1054; Eastern Orthodox Churches refused to subsume regionally based patriarchates to the authority of the Pope in Rome. In Bulgaria, it was ironically the Communists who went the furthest away from Bulgarian traditions in their attempt to separate the church from the state and vice versa.

When Bulgaria achieved its independence from the Ottoman Empire in 1878, the Turnovo Constitution established Bulgarian Orthodoxy as the traditional religion of the new state.[147] This gave the Bulgarian Orthodox Church (boc) a privileged position in Bulgarian society, but this also meant that it was fused with the Bulgarian state during the years of Bulgaria’s alliance with Germany in wwi and wwii. When the Communists took power in 1944, state officials began the process of removing all religious education from public schools in an attempt to impose secularism.[148] The boc strongly opposed the secularization of education, but the Communist government closely followed Soviet antireligious policies, believing that religion would undermine the modernization process. In 1946, the government passed laws only recognizing marriages performed by civil authorities and nationalizing church properties and many charitable foundations.[149]

Named after Bulgaria’s first Communist premier, the 1947 Dimitrov constitution firmly established the separation of church and state by removing the language that had once recognized Orthodoxy as the traditional religion of Bulgaria. Exarch Stefan (the spiritual leader of the boc at the time) opposed these changes, and was forced into retirement by the Communist government in 1948. State officials replaced him with a church leader more favorably disposed to their agenda. At the end of that same year, the Fifth Congress of the Bulgarian Communist Party decided to take a firm stand against the lingering “bourgeois” and religious influences on society by nationalizing monasteries and seminaries. During this

time, many priests who opposed the regime were also imprisoned or sent to work camps.[150]

But the Bulgarian government did not want to destroy the church. Their goal was to control it as a tool of the state. The passage of the 1949 Denominations Act placed the Bulgarian Orthodox Church under the authority of the Communist government. Although Article 1 of the 1949 Denominations Act states that "[a]ll people in Bulgaria are given the opportunity of freedom of religion and conscience,"[151] the law heavily proscribed the activities of all religious groups in Bulgaria, including that of the boc. Article 12 of the Act allowed the state (through the Directorate of Religious Denominations) to dismiss any clergy member who was suspected of working against the "democratic order of the country" or of jeopardizing the "public safety" or "good morals" of the population. This in effect gave the Bulgarian state regulatory control over the religious establishment of all denominations, a tradition that was not in contradiction with the internal canons of the boc.

After Stalin's death, there was a relaxation of religious persecution in Bulgaria and many of the priests who had been sent to labor camps were granted amnesty. Still, religion was frowned upon in public life and social mobility was tied to atheism. All life cycle rituals previously performed by the church (baptisms, marriages, funerals) were replaced by socialist rituals created by the state.[152] Although the Communist government was certainly heavy handed in its regulation of spiritual affairs, it did not invent such statechurch collaborations. Instead, the government was building upon a long tradition of symphoneia whereby temporal leaders and spiritual leaders work together for the purported good of society.

Toward the end of the Communist era, the government of Todor Zhivkov approved the election of the religious leaders of its two largest denominations: the Patriarch of the Bulgarian Orthodox Church and the Chief Mufti of all Bulgaria's Muslims. Patriarch Maxim was elected in 1971 for a life term as the uncontestable leader of the boc. In pre-1944 Bulgaria, it was the Tsar (the official head of state) who traditionally convened the ecumenical council to elect the Patriarch, and by canon law the Tsar and Patriarch should work together in a symphonic relationship. Although the Communist government had officially abolished the monarchy, the continuing cooperation between church and state followed this long tradition of symphoneia. In the case of the Chief Mufti, members of the Muslim denomination came together for a national conference in 1988 and elected Nedim Gendzhev. He was accepted for this position with the support of the Zhivkov government.

Patriarch Maxim and Chief Mufti Gendzhev were not only responsible for the spiritual needs of their faith-mates, but were also in charge of all of the properties and incomes of their respective denominations: the churches, mosques, monasteries, houses and flats, charitable trusts, schools and in the case of the boc, a candle factory which produced all candles for Bulgarian churches and was the largest source of income for the denomination. Although Maxim and Gendzhev were sympathetic to the Communist leadership, for those Bulgarians

who remained theists between 1944 and 1989, there was nothing in their selection that contravened church doctrine or the statute regulating the organization of the Muslim community. Both of these men were the accepted spiritual and financial leaders of their religious communities in November 1989 when Zhivkov suddenly resigned and the nation began its unexpected transition to democracy and free markets.

*** 3. Religion and the Bulgarian Political Scene after 1989

The spiritual liberalization that followed the collapse of Communism could have led to a healthy revival of Bulgaria's traditional faiths. After 1989, however, when the freedom of religious expression for Bulgaria's theists was restored after more than forty years of state-sponsored atheism, those who had remained devout emerged to find themselves facing bitter internal disputes over who their leaders should be. In the fifteen years that followed the onset of Bulgaria's political and economic transition, the leadership of the Eastern Orthodox and Muslim communities spilt into rival factions vying for power and control over each community's properties and resources. These rivalries plunged both postsocialist religious communities into chaos, and ultimately led to three lawsuits against the Bulgarian government before the ECtHR for human rights violation of Article 9 of the echr.

With the help of West European and American legal advisors, the Bulgarian constitution was rewritten to reflect new, post-authoritarian, democratic values and was adopted in 1991. Article 13 of the new Constitution declares that:

1. The practicing of any religion shall be unrestricted.

1. Religious institutions shall be separate from the State.

1. Eastern Orthodox Christianity shall be considered the traditional religion in the Republic of Bulgaria.

1. Religious institutions and communities, and religious beliefs shall not be used to political ends.

Article 37 further expounds on these provisions:

1. The freedom of conscience, the freedom of thought and the choice of religion and of religious or atheistic views shall be inviolable. The state shall assist the maintenance of

tolerance and respect among the believers from different denominations, and among believers and non-believers.

1. The freedom of conscience and religion shall not be practiced to the detriment of national security, public order, public health and morals, or of the rights and freedoms of others.[153]

Thus, the new democratic Bulgarian state retained the right to “assist” with the “maintenance” of tolerance and respect, leaving the door open for direct state intervention in the spiritual affairs of its largest religious denominations, particularly with regard to Eastern Orthodoxy, now once again enshrined in the Constitution as the traditional religion of Bulgaria. Again, these constitutional provisions (allowing for state regulation of religion) were not a continuation of Communist policies (as the European Court would later have it), but rather the continuation of a centuries old practice of church-state collaboration to maintain national security and public and moral order. And it was in precisely this moment of political and economic transition that public and moral order was in very short supply. Bulgaria’s religious schisms occurred during the most tumultuous period of Bulgaria’s recent history.

The immediate post-1989 decade was a time of unprecedented social insecurity. There were food shortages and temporary rationing because Bulgaria’s hard currency deficit did not allow for the importation of food or consumer goods to make up for the shortfalls.[154] Between 1990 and 1997 the economy was choked with hyperinflation, banking collapses, and rampant unemployment. In the first seven years of democracy, Gross Domestic Product declined in real terms by almost 25 percent; consumer prices were twenty times higher in 1997 than they were in 1990.[155] Bulgarians experienced real poverty for the first time in decades.

As the economy went into free-fall and one government fell after another, American and Western European funds to support the creation of political pluralism and civil society also flooded the country, as did foreign religious workers promising salvation and hoping to poach would-be believers faced with internal schisms in their traditional denominations. As early as 1991, the Jehovah’s Witnesses registered themselves in Sofia.[156] The Pentecostal/ Charismatic international missions began work in Bulgaria in 1992.[157] By January 1992, Bulgaria was already home to the Mormons, the Hare Krishnas, the Religious Community of the “White Brethren,” The Children of God, and the Unification Church of Sun Myung Moon.[158] The first American missionaries from the Church of the Nazarene arrived in May 1994, reaching Bulgarians through “sports evangelism.”[159] The Presbyterian Church in America began its “church-planting” missions in 1996.[160] According to the Presbyterians, the Mormons sent over 5,000 missionaries to Eastern Europe in the summer of 1991 and had bought over 1000 apartments in Bulgaria to house their religious workers by the late 1990s.[161]

The Bulgarian population did not always welcome these religious workers, but they were better organized, had access to greater resources and were often the only proponents of a moral discourse.[162] The boc and the Muslim leadership could have reasserted themselves as moral leaders in a rudderless and increasingly immoral society characterized by corruption and organized criminality. Instead, they fell apart. At the exact moment when members of the former security services and Communist elites violently began carving up state-owned assets, religious leaders were preoccupied with internal divisions and a crass competition for material resources and political power.

*** 4. Postsocialist Schisms in the Muslim Religious Denomination

Immediately after the events of November 1989, Nedim Gendzhev remained Chief Mufti and should have continued in that office until 1994 under the then existing statute for the Bulgarian Muslim denomination. Gendzhev saw himself as a spokesman for Bulgaria's Muslim community and openly supported of the continued rule of the Bulgarian Socialist Party (bsp), assuring the world that Bulgarian Muslims now enjoyed freedom of religion and no longer faced state oppression.[163] Gendzhev was not neutral in his political allegiances, and believed that the Bulgarian socialists would be best suited to manage the transition to democracy. His lack of political neutrality soon precipitated a call for his resignation from the Western-supported Union of Democratic Forces (udf).[164]

By the end of 1991, the udf won the parliamentary elections and they formed a coalition government with the Movement for Rights and Freedoms (mrf), a political party primarily representing Bulgaria's ethnic Turkish minority. As soon as the udf/mrf were in office, their government began orchestrating Gendzhev's removal from the Chief Muftiship. In January 1992, Muslim clergy demonstrated in the southeastern town of Kardzhali, a stronghold of the mrf, and students in Sofia called on all Bulgarian Muslims to demand Gendzhev's removal.[165] At the same time, the udf launched an investigation into whether or not Gendzhev's election as Mufti in 1988 was legitimate (and found it was not) as well as into his alleged misuse and embezzlement of funds given to the Chief Mufti's office in 1991.[166] At that time, Gendzhev claimed that the allegations against him were all coming from the mrf in a bid to take control of the Muslim community for political purposes.[167]

Ahmed Dogan, the leader of the mrf, had a great interest in who was in control of the spiritual life of Bulgaria's Muslim communities. Even though many of the top politicians of the mrf, including Dogan, were atheists, they understood that control of the Chief Muftiship could translate into representation in parliament. The majority of Bulgaria's Muslims were poor and rural, and despite the heavy-handedness of the name changes and the forced emigration of Turks in 1989, they were still sympathetic to socialist principles. Furthermore, mosques served as the political and social centers of most Muslim villages, and the imams and hodzhas (local religious teachers) were greatly respected for their education and mastery of the Qur'an. If the Chief Muftiship remained under the control of Gendzhev and the bsp, many Muslims would continue to vote for the

socialists in local and parliamentary elections, effectively cutting into the mrf's constituency. The Muftiship also had access to rents and other revenues generated by Islamic charitable trusts. These could (and would) become a useful source for campaign funds. Since the Chief Mufti was elected by a national conference of Muslims, the mrf could convene a new national conference and elect a new Mufti.

In February of 1992, the udf/mrf government invalidated Gendzhev's election to the post of Chief Mufti in 1988. He was ordered to leave the offices of the Chief Muftiship in Sofia. The government appointed three people to serve as a temporary governing body of the Muslim community until a national conference to elect a new Mufti could be held.[168] Gendzhev appealed the decision and the Bulgarian Constitutional Court supported him, arguing that the government had no grounds upon which to void the 1988 election. In June, Gendzhev and his associates re-occupied the building of the Chief Mufti's office. One day later, Muslims bussed in from Kardzhali protested outside of the building, and the police (on orders from the udf/mrf government) helped to forcibly evict Gendzhev.[169]

In September, Gendzhev issued a statement claiming that his was the only High Muslim Council, and that the alternate Council that was trying to convene a national conference to elect a new Chief Mufti was illegitimately created by the mrf.[170] Since the entire Muslim clergy associated with Gendzhev was suspected of collaborating with the Communists and subsequently of being allied with the bsp, new delegates for the conference were being sought, particularly those who were sympathetic to the udf and mrf. On September 19, 1992, a national conference was held, attended by 665 delegates chosen by the alternate High Council.[171] Fikri Sali Hasan, the mrf's chosen candidate, was elected as the new Chief Mufti. Hasan was only 29 years old, and the existing statute of the Muslim denomination forbade the election of anyone under 35 years old. Nevertheless, the udf/mrf government recognized Hasan's election.

During 1993 and 1994, the dispute between the Hasan faction and the Gendzhev faction continued. In effect, there were two Supreme Muslim Councils that claimed to represent all of Bulgaria's Muslims, and who could convene national conferences by choosing their own delegates to elect a Chief Mufti of their liking. Gendzhev and his supporters convened yet another national conference,[172] and not surprisingly, Gendzhev was elected the President of the High Muslim Council, with a close associate of his elected as Chief Mufti. Gendzhev and his followers immediately applied for recognition from the Directorate of Religious Denominations, the government body in charge of registering new religions. At the same time, Gendzhev tried to form an ethnic Turkish political party, the Democratic Party of Justice, to challenge the mrf's near monopoly of the Turkish vote in the 1994 parliamentary elections (which he failed to do).

A socialist government returned to power in 1994, and one of its first acts was to issue a decree recognizing Nedim Gendzhev and his followers as the legitimate leaders of Bulgaria's Muslims. Gendzhev took over the Sofia headquarters of the Chief Muftiship by force. Hasan

and his followers protested their removal from office. They submitted a complaint to the Chief Prosecutor's Office that Gendzhev and his followers were squatters in the Chief Mufti's office. But the bsp authorities disregarded the complaint, stating that Gendzhev and his High Muslim Council had been recognized by the appropriate authorities and therefore had the right to be in the building. Hasan appealed to the Supreme Court claiming that his High Muslim Council was the rightful leadership of the Muslim community. The Supreme Court dismissed the appeal.

In 1995, Hasan and his supporters convened yet another national conference with their own delegates which re-elected him as Chief Mufti. They re-applied to the Directorate of Religious Denominations for recognition as a separate religious organization, but the government refused to consider the application since the Muslims already had a Chief Mufti. Hasan appealed to the Supreme Court, claiming that the government had no right to impose one leadership on a religious community. Twice the Supreme Court agreed with Hasan, but the Directorate still refused to recognize him. Following these events, Hasan filed a complaint with the European Court of Human Rights against the bsp government, claiming that his religious rights as a Muslim had been violated by the Directorate's refusal to allow him to register a religious denomination of his own.[173] This case will be discussed in detail below.

In 1996, the Bulgarian economy imploded on the socialist's watch and a udf/mrf government was returned to power in 1997. Hasan immediately petitioned the new Directorate of Religious Denominations demanding the immediate removal of Gendzhev and his Chief Mufti. Gendzhev tried to preempt his removal under the udf/mrf government by proposing a "unification conference" where the two rival High Muslim Councils would convene a national conference together and elect a new Chief Mufti. Elections were held throughout the country to select representatives to the national unification conference, and local mayors were supposed to certify the election results. Many local mayors, however, were party members of the mrf, and Gendzhev claimed that the election process had once again been influenced by mrf activists who were supporting Mustafa Alish Hadzhi, a close colleague of Hasan's as Chief Mufti.[174] In two instances, Gendzhev claimed that mrf representatives had threatened local mayors to take possession of the ballot boxes before the votes could be properly counted. He also claimed that at least 100 of the delegates to the conference were mayors elected on mrf tickets.

Gendzhev and some of his allies in the Muslim community pulled out of the supposedly rigged unification conference at the last minute, and the congress was convened without them. Hasan's High Muslim Council regained control of all of the organizational aspects and assets of Bulgaria's Muslim community, and Mustafa Alish Hadzhi became Chief Mufti. The now udf/ mrf-controlled Directorate of Religious Dominations accepted the results of the unification conference and removed Gendzhev from his position. The new leaders also voted to begin a criminal investigation into the alleged unlawful activities of Gendzhev. Gendzhev protested his removal, and appealed the Directorate's decision through the Bulgarian courts all the way up to the Supreme Administrative Court. But the udf/mrf government accepted the results of the unification conference, dismissing numerous appeals. Gendzhev followed Hasan's example and filed a complaint with the European Court of Human Rights.

What is important to remember is that neither of the Muslim factions had differences in belief or in their practice of Islam. Each side was openly allied with a political coalition and each change in the control of the Chief Muftiship occurred after an election where one political group or the other took power and reappointed either Hasan or Gendzhev as spiritual leader of all Bulgarian Muslims. Religion was politics and politics was religion, and few involved in the dispute saw a problem with the synergy between the two. In both cases, the applicants to the ECtHR were strategically deploying the human rights language as a way to supersede the authority of a Bulgarian government controlled by an opposition party. The Court, however, would insist on seeing these disputes through the lens of human rights because the applicants were members of religious communities. If they had applied as members of different factions of rival political parties, the ECtHR would not have heard their cases.

Lawyers for the Bulgarian government went to great lengths to convince the Court that this was not a case about religious freedom, but rather a struggle for power within which the Court had become a pawn of both sides. According to one of the official ECtHR judgments:

In the [Bulgarian] Government’s opinion, the applicants [Hasan’s faction] were pursuing their own personal career by falsely presenting before the Court the events complained of as involving human rights issues. If their logic was followed, every leader of a religious community who had lost the confidence of the believers could lodge an application. That would create a dangerous precedent. The Government urged the Court to distance itself from such essentially political disputes.[175]

The first case, Hasan and Chaush v. Bulgaria (application no. 30985/96), moved through the Court for almost four years and was finally decided in 2000. Despite the continuing evidence of political rivalry between the two religious factions in Bulgaria, the ECtHR insisted on seeing the forcible removal of Hasan from the Chief Muftiship by the bsp government as a violation of religious rights. The Court defended its decision by arguing that:

the believers’ right to freedom of religion encompasses the expectation that the community will be allowed to function peacefully, free from arbitrary State intervention. Indeed, the autonomous existence of religious communities is indispensable for pluralism in a democratic society. [my emphasis]

Here the Court openly asserts that there cannot be pluralism without religious communities that are autonomous from the state, even if those religious communities are themselves intricately involved in determining the leaders of the state. Even though the divide between Hasan and Gendzhev had nothing to do with spiritual matters, the Court claimed that a religious community must have the right to choose its own leaders free from state

intervention, disregarding the fact that both Hasan and Gendzhev were hand-picked by political leaders and then elected by opposing politicized religious constituencies.

The ECtHR would have to revisit its own decision again in the Case of Supreme Holy Council of the Muslim Community v. Bulgaria (application no. 39023/97), which was Gendzhev's complaint against his own removal by the udf/mrf government in 1997. In this second case, the Court also questioned whether the Bulgarian government had the right to force the Muslim denomination in Bulgaria to have a single, unified leadership. According to ECtHR's case-law, "State measures favouring a particular leader or group in a divided religious community or seeking to compel the community, or part of it, to place itself under a single leadership against its will would constitute an infringement of the freedom of religion," and the Bulgarian case was certainly one where the government was favoring one religious leader over another, just not always the same government and not always the same religious leader.

In Supreme Holy Council of the Muslim Community v. Bulgaria, the ECtHR challenged the udf/mrf government's right to enforce the election results of the so-called unification conference, and especially the role of the police in forcibly evicting Gendzhev from the offices of the Chief Muftiship. As in the Hasan case, the defending lawyers for Bulgaria argued that the Court was involving itself in an internal dispute that had nothing to do with religious freedoms. Since both factions of the Muslim rivalry shared the same religious beliefs, the government saw no reason in registering two separate Chief Muftis and adjudicating a just division of property between the two groups. The Bulgarian government also invoked its responsibility to maintain public order, arguing that the divisions in the Muslim community had destabilized society.

The [Bulgarian] Government stated that the divisions within the Muslim religious community in Bulgaria since 1989 had been caused by conflicts of a political and personal nature. In 1997 efforts had been made to overcome these differences and unify the community.... The Government also underlined that the case did not concern a process of putting two religious communities under a single leadership but a situation where one religious community had two leaderships. Contradictory decisions of the authorities during the period 1992–1997, including those criticised by the Court in its Hasan and Chaush v. Bulgaria judgment, had resulted in confusion as to the leadership of the Muslim community. Unlike in previous years, however, in 1997 the State had not interfered in the internal affairs of the community but had only assisted it in its efforts to achieve unification, as part of the authorities' duty under the Constitution to help maintaining a climate of tolerance in religious life.

The Court admitted that Hasan had been unlawfully removed from office by the bsp government in 1995, and that the udf/mrf's forcible removal of Gendzhev in 1997 was an action taken to rectify what the Court had already deemed a previously unlawful action by a previous Bulgarian government. In this regard the Court agreed that the actions taken

against Gendzhev by the state did pursue the legitimate goal of restoring the unlawfully removed Chief Mufti to his offices, and that “the interference with the internal organisation of the Muslim community was in principle aimed at the protection of public order and of the rights and freedoms of others.” In the end, however, the Court found that the actions of the Bulgarian government were unnecessary in a “democratic society.” The following extended passage from the 2005 judgment of the ECtHR captures the essence of the Court’s decision to rule against Bulgaria:

The Court reiterates that the autonomous existence of religious communities is indispensable for pluralism in a democratic society. While it may be necessary for the State to take action to reconcile the interests of the various religions and religious groups that coexist in a democratic society, the State has a duty to remain neutral and impartial in exercising its regulatory power and in its relations with the various religions, denominations and beliefs. What is at stake here is the preservation of pluralism and the proper functioning of democracy, one of the principal characteristics of which is the possibility it offers of resolving a country’s problems through dialogue, even when they are irksome.… It is true that States enjoy a wide margin of appreciation in the particularly delicate area of their relations with religious communities. The Court reiterates, however, that in democratic societies the State does not need in principle to take measures to ensure that religious communities remain or are brought under a unified leadership. The role of the authorities in a situation of conflict between or within religious groups is not to remove the cause of tension by eliminating pluralism, but to ensure that the competing groups tolerate each other.

In both cases involving the Muslim community, the ECtHR assumes a separation of Church and State that did not reflect the reality of the Bulgarian situation and may have been in direct conflict with a local conception of religion, which accepts that spiritual and secular leaders should coordinate their efforts for the good of society. The facts on the ground were that religious leaders were directly involved in political machinations and were using their control of the Chief Muftiship to aid their political allies in Parliament. When the other side came into power, the religious leaders could go to the ECtHR and claim that their religious freedoms had been violated because the State had interfered in the internal dispute of a religious community. But what the Court failed to recognize, and what became even more apparent in the Court’s ruling on the schism in the Bulgarian Orthodox Church, is that the Bulgarian religious tradition of both its Muslim and Christian communities is one that has never required a divide between the spiritual and temporal institutions.

*** 5. Holy Synod of the Bulgarian Orthodox Church (Metropolitan Inokentiy) v. Bulgaria

The religious studies scholar Janice Broun has well chronicled the ongoing schism of the boc after 1989,[176] and the boc schism followed a very similar pattern as that of the Muslim denomination, with religious leaders and clergymen affiliated with the “democratic forces” opposing the leadership of the Patriarch Maxim. The Alternate Orthodox Synod (aos) never

asserted a different set of religious beliefs, but rather questioned the legitimacy of Maxim's leadership. As in the Muslim case, the primary issue was that of property, with the aos wanting to gain control of many church buildings, monasteries and most importantly, the lucrative candle factory in Sofia.

The schism continued throughout the 1990s as power shifted back and forth between the Bulgarian Socialist Party and the Union of Democratic Forces. Then in 2001, Bulgaria's pre-Communist Tsar declared his intention to run for Parliament. Simeon Saxecoburgotski formed a new political movement called the National Movement for Simeon the Second (nmss), and won the 2001 parliamentary elections in a landslide. Saxecoburgotski withed to end the schism in the boc and in 2002, the Bulgarian Parliament passed a new law on religious denominations, a law that would enrage human rights activists in Bulgaria and fell afoul of the ECtHR because it seemed to continue what the West Europeans claimed was a Communist attitude regarding the organization and regulation of religious communities.

The Parliamentary Assembly of Europe openly criticized the 2002 Denominations Act[177] and local human rights advocates claimed that it was even worse than the Communist law.[178] In it, the Bulgarian state's ability to regulate religious affairs in order to protect national security and public order was reaffirmed and the Directorate of Religion Denominations (which had been established by the Communists to replace the spiritual authority of the abolished monarchy) was kept in place. Furthermore, all religious groups in Bulgaria were still required to register with the Directorate if they wanted to engage in public activities. Finally, the status of the boc was further reified by exempting it from all of the formal registration procedures imposed on all other denominations, thereby affirming its status as the traditional religion of Bulgaria. In this section of the law, the Bulgarian Parliament asserted that the rightful Patriarch of the boc was Maxim, following the recognition of Maxim by all of the Patriarchs of the other Eastern Orthodox Churches and the Ecumenical Patriarch Bartholomew. After the implementation of the 2002 Denominations Act, all of the property of the boc fell under the control of Maxim and his followers. Police evicted the clergy associated with the aos from their churches.

Perhaps learning from the case of the Muslim denomination, the Bulgarian government under Saxecoburgotski invited the members of the Alternate Orthodox Synod to register their own new religious denomination provided that they make no claim on the property or resources of the Holy Synod under the leadership of Maxim. The goal of the government was to ensure that it was not forcing a religious community to have one leadership, thereby ensuring religious freedoms, while at the same time protecting the property rights of the Holy Synod. The aos sought legal remedies through the Bulgarian courts, but the judiciary upheld the 2002 Denominations Act. The aos eventually filed two complaints at the ECtHR in 2003 and 2004.

Once again the Court heard a Bulgarian applicant claiming a violation of Article 9 of the Convention. As with the Muslim denomination, the Court recognized that the Bulgarian

Orthodox community was divided; many believers sided with the aos for political (rather than theological) reasons and the members of the aos were longstanding clergymen in the Church who politically disagreed with Maxim’s continued leadership. Although the government represented the aos as a bunch of usurpers after Church property, the Court insisted that this was an issue of religious freedom and the right of believers to choose their own religious leaders, assuming that pluralism required an absolute separation of Church and State.

But unlike the Muslim statute which allowed for the election of a Chief Mufti every four to six years, all of the accepted canons of the Orthodox Church provided that a Patriarch is elected for life. Moreover, there is no canonical allowance for challenges to a Patriarch’s legitimacy. As far as canon law was concerned, Maxim was chosen to be Patriarch for the rest of this life, and he was thus recognized by the entire Eastern Orthodox world, which submitted opinions to the Court in favor of the Bulgarian government. Furthermore, since Maxim was elected for life by the very canons that the members of the aos claimed to believe in, the Bulgarian state was technically not interfering within an internal religious dispute. From the government’s position, “To accept the contrary would be tantamount to considering that by recognising the Pope as head of the Roman Catholic Church, the member States of the Council of Europe interfered with the rights of believers who did not recognise his leadership.”

From the Bulgarian government’s perspective, Maxim was the true Patriarch and the state had a responsibility to protect the rights and freedoms of those Bulgarians who believed that he was the legitimate leader of the boc. It is important to reiterate here that the government did not prevent the registration of a new Eastern Orthodox denomination by the aos, but rather worked to ensure the property rights of Maxim and his followers. The government argued that this violated no religious freedoms, but rather protected public order. Moreover, the Saxecoburgotski government was technically impartial to the disputes between the bsp and the udf that had caused the schism in the first place. The Prime Minister believed himself to be upholding the canons of the boc, and undoing the illegal occupation of churches that had occurred during various udf-controlled governments. Finally, in the Bulgarian government’s opinion, the Court had no jurisdiction to determine the legitimate leader of a religious faith, particularly a religious faith where canon law recognizes the authority of a designated temporal leader to intervene in internal disputes. With beautiful historical irony, the intervention under question had been made by the government of a man who was both the rightful heir to the Bulgarian throne and a democratically elected Prime Minister.

Since an ECtHR ruling against Bulgaria would set a dangerous precedent for all Eastern Orthodox majority countries, the Ecumenical Patriarch Bartholomew took a particular interest in the Court’s proceedings, submitting opinions to the Court in defense of the Bulgarian government. First, Bartholomew concurred that the boc was an ecumenical church administered by the Holy Synod. In accordance with its own internal statute, undermining the unity of the Church was a serious offence punishable by excommunication and anathema, and therefore the members of the aos were considered schismatics by their own

canons. Second, Patriarch Maxim had been elected and recognized worldwide as the head of the Bulgarian Orthodox Church in 1971, including by the Ecumenical Patriarch Bartholomew and all Orthodox Churches, and all Orthodox Churches had officially condemned the actions of the aos as an attempt to divide and weaken the boc. Third, the Ecumenical Patriarch submitted information to show that the aos had seized control of church properties with state assistance in the 1990s, and quoted local human rights activist reports that concurred that the members of the aos had been supported by the then Mayor of Sofia and other influential "democratic" politicians. As a result, the actions of the Bulgarian state after the 2002 passage of the Denominations Act were merely efforts to restore illegally gained properties in full accordance with Bulgarian law.

While the Court admitted that the case was not about religious beliefs but rather about the choice of leadership in a religious community, it still maintained that the situation was a case of human rights violations on behalf of the Bulgarian state, stating: "Were the organisational life of the community not protected by Article 9 of the Convention, all other aspects of the individual's freedom of religion would become vulnerable." Furthermore, although the Court recognized that States have the right to regulate religion to maintain public order and protect the rights of others, this regulation must pursue a legitimate aim, which is considered necessary for the smooth functioning of a "democratic society." The Bulgarian government claimed that protecting the property of the boc was a legitimate aim, and that it was necessary to maintain public order. The Court disagreed with the government's ability to decide what is considered a legitimate aim and argued that its "approach is not unusual, in particular, in cases concerning complex situations arising in the unique conditions of transition from a totalitarian State to democracy and the rule of law." The final decision of the Court used familiar language, stating:

The State's duty of neutrality and impartiality, as defined in the Court's case-law, is incompatible with any power on the State's part to assess the legitimacy of religious beliefs. Furthermore, in democratic societies the State does not need to take measures to ensure that religious communities remain or are brought under a unified leadership. The role of the authorities in a situation of conflict between or within religious groups is not to remove the cause of tension by eliminating pluralism, but to ensure that the competing groups tolerate each other. State measures favouring a particular leader of a divided religious community or seeking to compel the community, or part of it, to place itself under a single leadership against its will would constitute an infringement of the freedom of religion.

The Bulgarian government tried to make these arguments before the Court, claiming that, "the unity of the Bulgarian Orthodox Church was an important national goal of historical significance, with ramifications affecting the very fabric of the Bulgarian nation and its cultural identity. The Government believed that these considerations justified the impugned interference with the applicants' "rights." The applicants (the aos), however, claimed that the Bulgarian government had imposed unity on the religious community by recognizing the authority of Maxim and protecting his rights to all church properties.

The following quotation captures the Court’s thinking in its final judgment:

In the Court’s view, the fact that policies and actions interfering with fundamental rights have been undertaken in the pursuit of goals viewed as being of primary national importance is relevant in the analysis of the interference’s legitimate aim and proportionality but cannot be regarded as a justification in itself. The aims of the interference and the means for achieving them must be scrutinised for conformity with the Convention, which enshrines fundamental principles indispensable for the existence and functioning of the democratic societies that make up the Council of Europe. … Pluralism, which is the basic fabric of democracy, is incompatible with State action forcing a religious community to unite under a single leadership. As the Court has stated in the context of Article 11 of the Convention—also relevant here—the fact that what was at issue touched on national symbols and national identity is not sufficient. The national authorities must display particular vigilance to ensure that national public opinion is not protected at the expense of the assertion of minority views, no matter how unpopular they may be.. It follows that the unity of the Bulgarian Orthodox Church, while it is a matter of the utmost importance for its adherents and believers and for Bulgarian society in general, cannot justify State action imposing such unity by force in a deeply divided religious community [my emphasis].

Based on this reasoning, the European Court found against the Bulgarian government and the Bulgarian taxpayers once again paid damages to the individual applicants (the members of the aos). The Bulgarian government, with the support of all other Orthodox Churches and the Ecumenical Patriarch Bartholomew, moved to appeal the decision of the Court in 2009. No appeal was allowed.

The situation with the schism in the boc and the ECtHR’s decision to hear the case of alleged state interference within the boc could be seen as a modern revisitation of the Great Schism of 1054. The case pitted the Court in Strasbourg against all of the Eastern Orthodox churches in the world as well as the ecumenical Patriarch in Constantinople (Istanbul). Saxecoburgotski’s recognition of Maxim upheld the boc’s doctrine that Patriarchs are elected for life and reaffirmed the symphonic principles of Eastern Orthodoxy, the very principles that had been at least partially responsible for precipitating the Great Schism over a thousand years ago. Back in the 11th century, the Western Europeans believed that no temporal authority (king, emperor, tsar) should have precedence over spiritual affairs and that all Christian churches should recognize the authority of the Pope in Rome over their local sovereigns. How ironic that in 2009, the Western Europeans were once again arguing that spiritual affairs should be free from the influence of sovereign states. Replacing Rome with Strasbourg, it appears that the Western Christians are once again trying to tell the Eastern Christians how to organize a morally sound society and to root the ultimate source of moral authority in the West.

*** 6. Conclusion

This essay is not an argument against the value of human rights and their role in protecting basic political freedoms nor is it an uncritical defense of symphoneia. Instead, I interrogate Western attempts to render Eastern Orthodoxy as fundamentally “undemocratic.” Many contemporary scholars have gone to great lengths to point out the hypocrisy and ontological imperialism of Western human rights discourses, but only with regard to Islam. Indeed, many liberal scholars want to defend the religious rights of the post-colonial other against the “Protestanization” of all religions. The irony is that the East European ‘other’ is rarely is extended the same courtesy, even for infringements as relatively minor as having too cozy a relationship between temporal and spiritual authorities.

The reasons for this remain unclear. Perhaps it is the lingering effect of Cold War politics. Or it could be that universalistic religious fundamentalisms are more easily understood than particularistic ethno-religious nationalisms. Perhaps the collective, Enlightenment-based, Western proclivity toward uni- versalisms informs a European willingness to embrace the cultural differences of the universalistic other (Islam) while at the same time rendering the cultural differences of the particularistic other (Eastern Orthodoxy) intolerable, a subject for further research.

** Chapter 3: Salafism Is Coming

“Balkan” versus “Arab” Islam in Bulgaria under Milletic Secularism

Simeon Evstatiev

Abstract

The chapter analyzes the dichotomy between “traditional” versus “non-traditional” Islam, widespread in the post-1989 Balkans, by foregrounding the case of Bulgaria where the latter has been referred to as “Arab” and increasingly as “radical Islam,” Wahhabism, and Salafism. The public deliberations around that dichotomy are juxtaposed as a twofold and complex social phenomenon differently impacting mainstream secular discourses and the discussions within the Muslim community. Demonstrating how “Arab Islam,” or Salafism, has been discussed as a “radical ideology” as opposed to “traditional religion,” the chapter brings to the fore ethnographic evidence from two Bulgarian localities, Ribnovo and Madan. It then analyzes a judicial case—a high profile lawsuit against thirteen Muslims at Pazardzhik Regional Court, which has foregrounded Salafism as a new subject of public discussions in Bulgaria seen as “unfitting” for the country’s pattern of communal coexistence. In Bulgaria and the Balkans, the dichotomy “traditional”—“Arab” Islam ensues from a specific neo-millet pattern of managing ethnic and religious diversity termed “milletic secularism.” A socio-the- oretical concept, milletic secularism evokes the Ottoman millet system and refers to divergent and competing contemporary transnational collective identities, loyalties and frames of reference coexisting within the same nation-state. The pattern of secularism in modern Bulgaria thus depicted resembles the way religious communities functioned within the Ottoman millet system but for both Muslims and non-Muslims in a reverse, upended way. Today, Muslims are a minority in a pluralist society and secular state governed on the basis of non-Muslim values and political procedures. The ongoing revitalization of Islam and the public discussions inspired by the increasingly transnational Muslim identity are analyzed against the backdrop of the tensions among the varieties of local Muslim religious experience (“little traditions”) and the increasing pursuit of a religious convergence through returning to doctrinal roots and strengthening the sense of belonging to the imagined community of Sunni Islam (“the great tradition”).

Keywords

Islam — re-Islamization — Salafism — tradition — Bulgaria — the Balkans — neo-millet — milletic secularism

---

*** 1. Introduction: The Spread of a Dichotomy

Perceptions of a “traditional” as opposed to “non-traditional” Islam ranging from “Arab,” through Wahhabi or Salafi, to “radical” forms of Islamic experience inspired mostly by the Middle East is ubiquitous in Bulgaria and the Balkans. Such perceptions are spread in regions

where Muslims have for centuries been either a large minority or even a majority subjected to historical changes that brought about different types of religious syncretism, secularism, diminishing religiosity, or even state-sponsored atheism as in the case of the former Soviet realm dominated by Marxist-Leninism. Russian discourses of “Wahhabism” and some new trends in Central Asia indicate that many representatives of the official Muslim religious establishment in Russia, including the Supreme Mufti, dismissed “Wahhabi tenets” in the late 1990s and the early 2000s as contrary to the “traditional” Islam of the Muslim communities in Russia, describing them as an “Arab” influence with “foreign roots.”[179]

Such dichotomous narratives and divisions also characterize the political imagination of many people throughout Southeastern Europe, where the revival of Islam is further seen in “national” categories by contrasting “traditional” (moderate) and “external” (radical) forms of Islamic experience. These categories “capitalize upon notions of local Islam as being challenged by incoming foreign networks.”[180] Since the nineteenth century, the ongoing modernization throughout Eastern Europe entailed a de-Ottomanization of the former provinces of the Sublime Porte paralleled by a process of deIslamization related not only to the waves of forced emigration of Muslims to the Ottoman lands and subsequently to Turkey but to the comprehensive and often forced secularization pursued by the new nation-states.[181]

Islam did not vanish in Eastern Europe during the Communist period, but religious observance significantly diminished. In the course of recent decades, the inherited Muslim faith has been linked to practices that more mainstream observant Muslims increasingly perceive as superstition. Not surprisingly, the deep post-1989 social changes brought a re-Islamization[182] marked by striving towards a Muslim convergence. Under the conditions of a revitalization of Muslim identities, the dichotomy between “traditional” (or local) versus “Arab” (or alien) Islam has rapidly proliferated in Bulgarian public space.

In 2005 Selim Mehmed, formerly Bulgaria’s Chief Mufti (2000–2003), told me: “Before, we [Muslims in Bulgaria] did not know the word jihad—we learned it from Bulgarian media.”[183] Yet, in the early 2000s, a few years prior to our conversation and during his tenure as Chief Mufti, Selim Mehmed undertook various steps to enable Bulgarian Muslims to increase their knowledge of Islam. For example, he formulated a series of questions for foreign scholars, more knowledgeable of Islam, so that they could instruct Muslims in Bulgaria as to what is “right” or “wrong” in their understandings of the religion. Mehmed thus asked Professor Yakub Qgek from the Faculty of Theology (ilahiyat) at Istanbul’s Marmara University a series of questions in which he responded to the Muftiship’s concern about the spread of Wahhabism among Muslims in Bulgaria. In one of the questions, Mehmed directly asked: “Is there fundamentalism and terror in Islam? In Bulgaria, the phrase ‘traditional Islam’ is used to define the Hanefi mezheb.[184] Is that wrong?” After opining that “there is no extremism and terror in Islam” which requires Muslims to behave justly with both their coreligionists and non-Muslims, the Marmara Islamic scholar stated:

It is absolutely not right to equate the term Hanefi with “traditional Islam.” Likewise, the allegation that traditional Islam and the Hanefi [mezheb] are wrong is erroneous. Islam was the true religion in the past ... and it will continue so in the future? [185]

Such theological clarifications signalled a turning point, as Muslims in Bulgaria increasingly seek to adjust their beliefs and practices to what they learn as demanded from them by Islam’s “great tradition.” During the 1990s and the early 2000s, the process was gradual but has accelerated in recent years. By pointing out the inherited “traditional” practice and the well-known diversity of Islam in Bulgaria, anthropologist Kristen Ghodsee, for example, provided a vivid ethnographic account of Madan and Rudozem in the central Rhodope Mountains of Bulgaria’s south by observing a process in which “traditional practices of Islam” are replaced by “new forms of the religion imported from abroad.”[186] A similar observation, though with a different connotation referring to Muslim newcomers, is made by Konstantinos Tsitselikis who distinguishes among the Muslims of Greece “those who are Greek citizens on the basis of a ‘historical settlement’ (Old Islam) and those who are of alien citizenship— immigrants or their descendants (New Islam).”[187] Others point out the phenomenon of a “new” Islam opposing the “old” practices, introduced since the 1990s by young Bulgarian Muslims who studied Islam in Arab countries where they got acquainted with an Islam differing from that in Bulgaria and learned to perceive Bulgarian practices as already “distorted” by Ottoman influence.[188]

Many Bulgarian Muslims themselves who seek to preserve their locally inherited traditions refer to those “new forms” as “Arab Islam.” They perceive “Balkan,” or “Turkish” post-Ottoman Islam as a continuation of a “traditional” Hanafi Sunnism. In the eyes of many, this peaceful and adaptable “traditional”[189] or “Balkan” Islam is seen as a model of a supposedly tolerant “European” Islam. Such claims, as well as the one-sided insistence on the “fundamentalist threat” coming from the Arab world, equally neglect “the diversity of Balkan Islam and the complexity of the links, which, yesterday, just as today, bind it to the Muslim world.”[190]

Within the dichotomy of “traditional” versus “Arab” Islam, the latter component has been designated by a whole scale of terms, such as Wahhabism, Salafism, Islamism, and “radical Islam.” What matters here is that scholars and policy analysts outside of the field of Islamic history and Islamic Studies have in one way or another indicated the existence of two types of Islam in Bulgaria: “traditional” and “new,” the latter taking fluid forms and denoted through a variety of terms. As Egdunas Racius recently confirmed, forms of Islamic religiosity that may be subsumed under “revivalist Islam” proliferate in “practically all Eastern European nation-states.”[191] Not only the media but many policy analysts regard such phenomena as contributing to the radicalization of Muslim youth in the age of the Islamic State (isis) or terrorism. Here, the dichotomy “traditional” versus “non-traditional” also takes many forms but “non-traditional Islam” is markedly linked to “radical Islam,” “Islamism,” “Wahhabism,” and “Salafism.”

Recommendations and opinions based on the assumption that “rich Arab countries from the Persian Gulf” compete to spread “the most retrograde current in Islam, Salafism,”[192] are abundant in public discourses and implicitly draw on the same dichotomy between a “safe” and familiar “traditional Islam” versus a “dangerous” and alien “Arab,” or “radical Islam,” the culmination of which supposedly is today’s Salafism. As a historian of Islam, I have always been confused by the misleading and vague meaning of “traditional” (as opposed to “radical”) Islam in such dichotomies. Nevertheless, the division has increasingly dominated public discourse as well as some practices of state, law enforcement and judicial institutions.

What does the dichotomy “traditional-Arab Islam” actually mean? Is it an expression of a novel “politicization” of religion, or are there continuous, deeper socio-structural underpinnings that enable such dichotomous distinctions? Is “being Muslim” in the contemporary Southeastern Europe, and particularly in Bulgaria, mostly a “very local affair” that does not stipulate a “common Muslimness” based on collective identities beyond the boundaries of today’s nation-states?[193] Or are Muslims in the Balkans, like Muslims elsewhere, “culturally more homogeneous than might be expected?”[194] If so, is the course towards a higher degree of religious convergence only an elite undertaking by muftis and the established ranks of religious specialists, or there is a broader Muslim movement for “mainstreaming Islam” that “signals a major change from below?”[195]

In what follows, I demonstrate how “Arab Islam,” or Salafism, has been discussed in Bulgaria as a “radical ideology” juxtaposed to “traditional religion,” bringing to the fore ethnographic evidence from two Bulgarian localities, Ribnovo and Madan. I then analyze a judicial case—a high profile lawsuit against thirteen Muslims at Pazardzhik Regional Court, which has foregrounded Salafism as a new subject of public discussions in Bulgaria seen as “unfitting” for the country’s pattern of communal coexistence. In the Balkans, the dichotomy “traditional”-“alien” (or “Arab”) in relation to Islam ensues from a specific neo-millet pattern of managing ethnic and religious diversity which I term “milletic secularism.” This dichotomy indicates that there are perceptions of a locally embedded “Balkan Islam” but in a sense different from Alexandre Popovic’s L’Islam balkanique,[196] His idea was to reposition Balkan Islam in what was then conceived as the “peripheral Muslim world” against the backdrop of the “central zone of Islam” in the Middle East or, as another scholar put it, “Balkan Islam” has come about as a part of Europe, a “cultural bridge.”[197]

I tackle the ongoing revitalization of Islam and the public discussions inspired by the increasingly transnational Muslim identity against the backdrop of the tensions among the varieties of local Muslim religious experience (“little traditions”). In this way, I juxtapose the variety of Muslim religious experience in an indicative Balkan context against the backdrop of increasing pursuits of a religious convergence through returning to doctrinal roots and strengthening the sense of belonging to the imagined community of Sunni Islam (“the great tradition”).

*** 2. The Neo-Millet Pattern and Milletic Secularism

Using the term “traditional” Islam, policy analysts, public intellectuals, and state institutions de facto designate a post-Ottoman alloy of normative Islamic teachings embedded in and heavily transformed by contextual cultural traditions, forced secularization, and supposedly syncretic local rites. This designation is part of a broader social phenomenon related to what I have elsewhere defined as “milletic secularism.”[198] This term evokes the Ottoman millet system and refers to divergent and competing contemporary transnational collective identities, loyalties and frames of reference coexisting within the same nationstate. These identities resemble the way religious communities functioned within the Ottoman millet system but for both Muslims and non-Muslims in a reverse, reciprocal, way. Today, Muslims are the minority in a pluralist society and secular state governed on the basis of non-Muslim values and political procedures. Milletic secularism implies a structural link between religious affiliation and collective identity as objectively existing and in constant tension and entanglement with individuals’ agency.

As a recent vast sociological survey indicates that, unlike in Western Europe, “religion has reasserted itself as an important part of individual and national identity in many of the Central and Eastern European countries where Communist regimes once repressed religious worship and promoted atheism.”[199] In Bulgaria, the contemporary “upended” emphasis on Orthodox Christian identity as integral to national identity brings to the fore the Orthodox Church, including mention in the Constitution of the Republic of Bulgaria (1991). Major politicians have drawn upon Orthodoxy for the sake of social cohesion. For example, Boyko Borissov, prime minister of three Bulgarian governments (2009–2013, 2014–2017; and 2017–2021), labelled “a master of political discourse” by a political scientist,[200] once even called God “the Big Boss.” Right after the 2017 snap elections, upon Borissov’s assumption of office for a third mandate, he thus reasserted the importance of God for him, his party (gerb),[201] and the Bulgarian people: “Let God save us, walk with us and we behind Him.”[202]

Bulgaria is a secular state—the principle of laicite clearly underlies Art. 13.2 of the Constitution: “Religious institutions shall be separated from the state.” However, while all “religious denominations are free” (Art. 13.1), “the traditional religion in the Republic of Bulgaria is Orthodox Christianity” (Art. 13.3). The Constitution explicitly imposes a ban on identity politics by stressing that “religious communities and institutions as well as faith convictions cannot be used for political purposes.”[203] The state thus differentiates the adopted principles of secularism and religious pluralism from the historical and cultural underpinnings of society. The dichotomy between “traditional” and “other,” i.e., “non-traditional” religions which are often perceived in the social practice as alien, foreign and even dangerous for the Bulgarian nation and the social cohesion is part of that differentiation.

Noticing that public manifestations of the recognized religious communities designated as “traditional” in the Balkan countries, including Bulgaria, are free as long as they do not challenge or oppose government primacy, Ghodsee coined the insightful term “symphonic secularism.” Explaining the “genealogies of secularism” in Bulgaria, she sees them as evolving from an inherent “symphonic secularism” in which “Tsars, Sultans, politburos or prime ministers have consolidated their power over ethnically or linguistically diverse populations, by promoting national identity through a church (or a mosque or synagogue) that instills loyalty to the state as part of its ecumenical dogma while also granting autonomy to other religiously defined communities.”[204] “Symphony,” however, even as an ideal-type, does not provide enough scope to accommodate religious diversity, particularly when a large minority is Muslim. Even in the more distant past, Orthodox symphony seems to have been an utopian idea of Justinian (d. 565)[205] and, subsequently, there was rather what Hovorun calls “Ottoman symphony,” as the Byzantine church “developed a new kind of symphony with the Ottoman state.”[206] As part of the shared collective social experience of Christians, Muslims, and other communities, the milletic pattern in post-Ottoman times became entangled with modern European conceptions, including secularism. The result is what I have termed “milletic secularism”—a contextually shaped paradigm of social relations which today no longer refers to its original religious content.

When introduced to or adopted by Muslim countries, the nation-state system generally imposed a dominant identity paradigm centered around an ethnicity. Yet such identities have not removed the Islamic identity, intensified by contemporary Muslim movements.[207] In Bulgaria as in other Balkan countries, the centuries of Ottoman rule and the millet system meant that religion rather than ethnicity or language defined communal identity. This sustained a deep sense of belonging along religious lines—a phenomenon reinforced in Ottoman times by “[t]he cohesive nature of Islam as a social force emphasizing the notion of a universal Islamic community or umma.”[208]

Milletic secularism refers to milletism—a concept with a twofold heuristic potential. In Ottoman times, despite its integrative potential for the sake of social cohesion and integration, “milletism eventually was the ground on which non-Muslim identities would grow, divide, separate and burgeon.”[209] The leaders of the millets remained loyal to the Ottoman state but nonetheless the millet was the point of departure for claiming rights along linguistic and religious lines. As Maria Todorova writes, Balkan nationalism preserved a frozen, unchangeable, and uniform image of Muslims, consistently dealing with it in millet terms.[210] Whatever the role nationalism in sustaining such an “image,” the transformation and continuation of those “millet terms” is traceable in countries other than Bulgaria. For example, the legal status of Islam in Greece, particularly of the contemporary Turkish/Muslim minority of Thrace, allows for using the term “neo- millet”—“a system which keeps alive pre-modern legal divisions based on religion and inserts them into the larger framework of modern citizenship.”[211] In Bulgaria today, no religious minorities are officially recognized as such ex lege, but implicitly the pattern of accommodating the Muslim minority is still millet-like. It is embedded in a neo- millet pattern of managing diversity.

Transnational Muslim identities today challenge milletic secularism as an integrative force by foregrounding its emancipatory potential. These identities are reshaped through a dynamic process of an increasing access to the basic normative teachings, principles, and texts of Islam. The tendency sharpens the older tensions between “little” and “great” traditions in which the latter seek powerfully to overarch localities, rapidly eroding the earlier autonomy of the “little” traditions. The complex dynamics of seeking convergence challenge the established pattern of milletic secularism, provoking reactions by state authorities, public intellectuals, various individuals, and groups. Within the set of concepts utilized for “oth-ering,” the “new” religious identities, Salafism increasingly takes a central place.

*** 3. What Is Salafism? A Very Short Definition of a Contested Concept

Salafism has turned into a contested concept that stirs up heated debates in Muslim circles as well as among Western scholars, analysts and policymakers. The Arabic-Islamic term Salafi and the phenomenon of what is known today as Salafism, refer to a religious—mostly theological but also legal—orientation within the Sunni spectrum of Islam that is embedded in a specific mode of scriptural engagement. Salafism is primarily identifiable theologically—through the creed (‘aqida) that extends over the Salafi perception of Islamic law. The methods by which that specific combination of theological and legal views is implemented in religious practice entails varying implications for the socio-political engagement or disengagement of those who belong to the different branches of Salafism. [212]

In ‘aqlda, Salafis privilege beliefs such as the return to the beliefs and practices of the first three generations of Muslims, the “pious ancestors” (al- salaf al-salih), a generation that covered around 80 years in the first Islamic century; a particular understanding of tawhtd (God’s oneness and unity) which does not simply deny anthropomorphism; fighting unbelief, particularly all forms of “associating other beings or things to Allah’s oneness” (shirk); claiming that the only valid sources of authority are the Qur’an and the Sunna of the Prophet Muhammad (equated by Salafis with the six canonical hadtth collections). Believing that after the Prophet his sayings are best understood by the consensus of his Companions (sahaba), Salafis seek to purify Islam from any reprehensible innovation (bid‘a).[213] The Salafis emphasize the idealized experience and practices of the Prophet and the early umma. For this reason, the designation Salafi is prestigious among Muslims, even among those who disagree with the Salafis on some secondary beliefs and methods.

Salafis self-define through a set of specific views of Islamic law and tend to promote la madhhabiyya (“non-schoolism”),[214] meaning that Muslims knowledgeable of Islam should seek to transcend the boundaries of each of the four established traditional Sunni schools (madhhab s) of Islamic law, Hanafi, Maliki, Shafi’i, or Hanbali. The

Salafi adoption of Hanbali views is often mistakenly equated to their presumed following of Hanbali law. Another ubiquitous confusion is to equate Salafism with Wahhabism, using the two terms interchangeably while, by which within so-called “security studies” especially, the latter term is equated with violence.[215] What is labeled Wahhabism is only one branch of the broader Salafi orientation in Sunni Islam. If all Salafis share a set of common basic views, they differ over the method (manhaj) of applying that creed, particularly over the manhaj related to worship (‘ibada) and the manhaj of dealing with society and politics, while the method of dealing with the sources of Islam is probably “universally agreed upon among Salafis.”[216] Salafis are thus diverse by their sociability and varying views of society and politics that underlie the scholarly attempts to classify and categorize the branches of Salafism.

The most widely accepted classification divides Salafis into three categories: “purists,” “politicos” and “jihadis,” shaped as a result of what Wiktorowicz calls their different contextual readings of a shared creed.[217] Since all Salafis are “purists” in terms of seeking to purify Islam, scholars have tended to prefer the term “quietists.”[218] “Jihadis,” for their part, are increasingly known as Jihadi- Salafis.[219] Like Muslims from various other branches of Islam, all Salafis consider jihad legitimate as a basic religious duty. Jihadi-Salafis, however, distinguish themselves by privileging and strongly emphasizing the notion that religiously motivated war “should not just be waged against invading or aggressive nonMuslim enemies but should also be used in a revolutionary way against the ‘apostate’ rulers in their own midst.”[220] Thus, quietist, or “apolitical” Salafis “are fundamentalists in many of their beliefs and practices, but they are not Islamists”[221] like the “politicos” or the Jihadi-Salafis. These social and political aspects of the categorization of Salafism are important, but the blurred lines between the different groups that enable a former quietist to join the JihadiSalafi movement suggest that one cannot overemphasize the importance of the classification. Hence, the most distinctive features of Salafism remain discernible not in the classification but in the specific shared creed that makes it more attractive to Muslims over other Sunni religious orientations.

*** 4. Ribnovo and Madan: Glimpses of Traditional “Balkan” and “Arab” Islam

In April 2016, I visited several localities inhabited by Bulgarian-speaking Muslims,[222] or Muslim Bulgarians (Pomaks)[223] in the mountain areas of the Rhodopes in South Bulgaria. Along with my conversations with people whom I knew from earlier visits, I visited two mosques important to the local Muslim communities—one in Ribnovo and the central mosque of Madan. Geographically isolated from the larger urban centers, Ribnovo is an alpine, densely populated, and entirely Pomak village of around three thousand inhabitants in the Southwestern Rhodopes, the municipality of Garmen—an area whose regional center is Gotse Delchev, district Blagoevgrad. The village is considered a stronghold of local Muslim traditions passed down from generation to generation since Ottoman times. Its picturesque hills and old pinetrees, in combination with its local color and preserved cultural rites, among them the unique Ribnovo wedding, impress tourists who visit the village.[224] Madan, for its part, is a small city formerly known for its mining industry.[225] It is in a different locality—the Central Rhodopes, Smolyan district. In both areas, Islam was revitalized in the

postcommunist period but this re-Islamization has taken different forms related to local, national and transnational factors.

The fall of the Communist regime put an end to the so-called Revival Process (vuzroditelen protses)—a set of policies implemented by the Communist regime to assimilate the Turkish minority and Muslims, including by a forceful change of their Arabic-Turkish names between 1984 and 1989. As a result of those dramatic events, some 360,000 Turks left Bulgaria for Turkey, which opened its borders while the Communist government in Bulgaria provided tits citizens with three-month “touristic” visas to leave. Hence, the ironically used term “the Big Excursion.” Around 40,000 of the emigrants already returned to Bulgaria within that three-month period before the collapse of Communism in 1989. Until the end of 1990, after the fall of the Communist Party, the number of the returnees reached 150,000, i.e., 40 percent of those left.[226]

In the post-1989 period, Madan has distinguished itself as one of the local centers of a revived Sunni Muslim identity and learning. It also has a well- known School for Memorization of the Qur’an (Kursza hafuzi) opened in 1999. In contrast to Madan, heavily dominated by Communist ideology and industry before 1989 and since then experiencing rapid religious revitalization, Ribnovo is usually depicted as a place that has always had distinct local traditions. These local traditions are sometimes hard to reconcile with normative Islam or the “great tradition.”[227] The Bulgarian writer and ethnographer Evgeniya Ivanova rightly highlights the image of Ribnovo as “a conserved Pomak reservation,” quoting a women from Rudozem, not far from Madan, who said: “I am angry that—when it comes to Pomaks, [the media] go all the time to Ribnovo. Why don’t they at least once visit our place here?”[228]

In Ribnovo, I had a conversation with Imam Nezmi Gurdal, whose father was an imam, put in jail for ten years during the Communist period, and whose grandfather was an imam, too. During the talk, he confirmed what I already knew from our previous meetings, when the imam also invited us to his home for coffee and fruits while preparing for the next ritual prayer. Again, Gurdal carefully expressed his concern that the controversies between “young” and “old” Muslims nowadays sometimes cause believers to miss or shun the “main message of Islam” which, according to him, is “love to the other people”: “Those who studied abroad in the Middle East, think that since they know Arabic, they know Islam better than we do via our old Ottoman way.” He continued: “Good, they really know the original Islamic sources in Arabic, but I think that, properly understood, they do not, in fact, contradict our way, they shouldn’t do so.” Imam Gurdal has found his own way to preserve the “old” Ribnovo tradition of transmitting religious knowledge. He showed us handwritten sheets of paper from a school-type notebook on which he had written down his lessons, including the passages from the Qur’an and the Prophetic hadtth., which he gave personally to his pupils at his mosque’s Qur’an school. Thus, in the era of internet, he makes sure that the young boys will not deviate from the “true tradition.”

“The young,” however, were intensely spreading the message they have learned in the Arab world. Among them is the Salafi-minded preacher, Hussein Hodzha, who studied at the Islamic University of Medina, Saudi Arabia. During the recent years, Hodzha has been active throughout the Rhodopes, not only in the Pomak villages of his native Velingrad area where he currently is. Not far from Ribnovo and Gurmen, Hodzha has for years been preaching in Satovcha. According to Khayri,[229] a young and well-educated Muslim from the area who had been also a graduate student in Turkey, Hodzha has managed to “salafize” (selyafizira),[230] or make Salafism prevail over what used to be considered the traditional Islamic practice there. Often following “a style based upon story-telling,”[231] Hodzha skillfully evokes antecedents from early Islam and connects them to the contemporary life of his fellow Muslims. He insists that those who deviate from true Islamic teachings “commit a dalavera,[232] acting not in accordance to what Allah wants [them to do] but according to what they like [to do]. However, Islam is not a religion which we like but a religion as Allah likes it. So, we have to conform to the laws of Allah the Almighty.”[233] Hodzha is one of the most widely popular young Muslim preachers on YouTube and maintains a website with a special emphasis on Muslim women.[234] As a Salafi preacher, he gained a nation-wide following of young devout Muslims.

When the time for the sunset ritual prayer (salat al-maghrib) came, imam Gurdal invited us to the mosque. It was full of people, including many teenage boys, some of whom were his students at the Qur’an course. The other participants in the namaz[235] represented various age groups but most were elderly and middle-aged men. A small group of women was praying in the women’s section on the second floor. At the beginning of the prayer, a thirteen-year old boy performed the call to the dzhemaat[236] for starting the prayer. This created an intimate atmosphere of cordiality and informality, although it was of course performing a standard ritual prayer of three rak‘as containing the set recitation of the Fatiha (the Opening Qur’anic chapter) and the Qur’an in a loud voice. At the end, the imam came to us smiling while his pupils ran to surround him. The same thirteen-year-old boy, who in the beginning performed the call to prayer, was eager to tell us a story. After reciting several memorized verses of the Qur’an, the boy told us a story about a recent trip to a Qur’an school in Ustina, Plovdiv region, concluding: “But they do not know the proper Islamic rites as we do, they do not have the same strong tradition like us in Ribnovo.” The imam approvingly looked at him—his community was preserving the real tradition as passed down from one generation to another.

There was confusion in Madan when I arrived at the Central Mosque right before the midday prayer (salat al-zuhr). This mosque is one of Bulgaria’s largest, opened in 1999 at the premises where the earlier-mentioned Kurs za hafuzi is located. We were first received by Bayram Ushev, a young preacher who previously was imam of another Madan mosque and now a teacher at the Kurs za hafuzi. He graduated from the Islamic University in Medina, where he studied for seven years (2001–2008) and professes discernible Salafi creedal views. Although claiming to respect the local Hanafi tradition in Islamic jurisprudential matters, Ushev demonstrates in conversation, as in his sermons and lectures, his preference to the teaching that a religious scholar (‘alim) should never fall in blind emulation (taqlld) but rather try

to identify the most relevant proof-text (dalll) from the Qur’an and the Sunna for any religious judgement he would make.

After a discussion, we entered the mosque. The prayer had already begun with the soft voice of the imam. One could hear only the bowings of the worshippers who quietly repeated the ritual phrases. The atmosphere was disciplined, rigorous, and dedicated to the prayer, with no additional moves to distract the worshippers from the ritual. I quietly remained several meters from the sufuf (rows) of men worshipping Allah. No women were on the second floor. This created an atmosphere different from Ribnovo. After the prayer, Bayram Ushev and the Imam of the mosque came to ask how the experience was. I said: “Interesting and very different from Ribnovo.”

That statement served as a signal for a joint reaction by my two Muslim interlocutors: “Why different? We follow the same ritual pattern.” Bayram Ushev explained that “everybody comes and tells us that we are promoting a different faith, an Arab Islam, while we, in fact, simply follow the normative Islamic ritual.” The young preacher specified: “Did you attend the same daily prayer, the midday one? It just ritually differs from the sunset prayer.” I knew that the midday prayer, unlike the sunset one, consists of four rak‘as and includes a recitation of Fatiha and the Qur’an in whisper. However, I did not mean a normative difference. “Sure,” I replied, “I only meant the atmosphere, the people and the setting without implying anything of what you just guessed.” Ushev smiled and both of them seemed relieved and we continued with a detailed conversation on Islamic sources and education here and in Saudi Arabia. So many people have already come to Madan and the area to search for the spread of an “Arab Islam” or Wahhabism alien to the “traditional Islam” that local Muslims have become very sensitive to such comparisons, particularly with Ribnovo.

*** 5. At the Court: Defending “Traditional Islam” against “Salafi ideology”

Given the broader context, the confusion in Madan was not surprising. These were understandable reactions of people who more than once have attracted the attention of media, state institutions, and law enforcement agencies, such as the State Agency for National Security (sans) and the Prosecutor’s Office, including in a high profile court proceeding accusing thirteen Muslims from various southern regions of Bulgaria. The thirteen, among them the Smolyan Regional Mufti, Nedzhmi Dubov, and Bayram Ushev, were accused under Article 108, Paragraph 1 of “propagating antidemocratic ideology manifested in opposing the principles of democracy, the separation of power, liberalism, statehood and the rule of law, basic human rights as the equality of men and women, through propagating the ideology of the Salafist current in Islam and the imposition of a shari’a state.”[237] Confusingly for such a judicial text, the indictment contains the term “liberalism”—a political ideology not necessarily coinciding with “liberal democracy” as a constitutionally embedded social and political order in post-Communist Bulgaria.

Nonetheless, “liberalism” is defined by the Prosecutor as “a conception and political tradition, as well as a philosophy and a current engaged with freedom, social progress, the free exchange of ideas, the transparency of government and also the restrictions on the authority of the church (and similar religious institutions) as its basic political values. Liberalism completes democracy and democratism.”[238] What united the defendants under the Indictment, was the “leadership/membership in the legally non-registered in Bulgaria organization al-Waqf al-Islami, a branch of the Saudi foundation of the same name, active on the territory of Smolyan, Blagoevgrad, and Pazardzhik districts.”

According to the Prosecutor’s Office, the “organization” was supposedly directed by the accused Said Mutlu and its members were the other defendants, and has adopted the aim at conducting a crime under Chapter 1 from the Penal Code, namely “propagating an antidemocratic ideology.”[239] Said Mutlu, pointed as the “leader of the organization,” is imam in the Peteltsi neighborhood of the small city of Surnitsa. He used to direct a notorious School for Imams (Shkola za imami) of a Qur’an course type, and is considered the first Muslim from Bulgaria who, after the collapse of the Communist regime, acquired a degree in Islamic law at Medina, Saudi Arabia. For many Muslims throughout the Rhodope Mountains, he is “one of the three major Islamic scholars and preachers in Bulgaria who are academic Salafis.”[240] The other two “academic Salafis,” both among the defendants in the Pazardzhik case, are the imam of Luzhnitsa, Muhammed Kamber, and the preacher Ahmed Abdurrahman(ov) from the village of Pletena, who previously served as imam in Satovcha.

Among this predominantly Pomak group of defendants was the charismatic Salafi Muslim leader and preacher Ahmed Moussa from Iztok neighborhood in Pazardzhik. In mid-1990s, when Moussa went to work in Vienna, he re-discovered Islam and eventually adopted a strictly Salafi orientation. In 1999, he attended the one-year course of study at the Shkola za imami in Surnitsa. In 2004, Moussa was given a three-year suspended sentence by the Pazardzhik Regional Court for spreading anti-democratic ideology and religious hatred. He became widely known as passionately calling for the establishment of a caliphate after earlier arrests around which the media wrote that “in the prayer house established by him radical Islamic literature has been found, and he put an Islamic flag on the roof of his house.”[241] Many of the defendants were working within the system of the Chief Muftiship as either muftis or imams, so during the entire lawsuit they enjoyed the unequivocal support of that institution.

As anthropologist Lawrence Rosen wrote more than half a century ago, scholars and university teachers can play different roles in society and it happens that they are called by the judiciary as expert witnesses at the court which, he claims, will increase in frequency sometimes turning into a real “battle of the experts.”[242] Thus, the Dutch scholar of Islamic law Rudolph Peters, in turn, was an expert witness in the trial against Mohammed Bouyeri who killed the Dutch filmmaker and publicist Theo van Gogh on 2 November 2004 and is now serving a life sentence. After the trial, Peters published his expert witness report within

the analysis in a book chapter.[243] More recently, another Dutch scholar who studies Salafism offered a vivid account of his participation as expert witness in a trial, raising important ethical issues and a critical self-reflection that I largely share.[244] Different court cases involving Muslims in various European countries increasingly demand the academic expertise of specialists in Islamic studies, Middle Eastern politics and culture—from the headscarf scandals in France to the demands for having prayer rooms in German schools. The Balkans, including Bulgaria, could not have been passed over within such a trend.

Together with other scholars, I had been called as an expert to the District Court in Pazardzhik and was one of the two academics[245] whose expert witness report, while being used by the prosecutor, was not challenged by the lawyers for the defendants who even extensively used my evidence. In turn, the report was incorporated into the larger “Complex Expert Witness Report.”[246] Our “Expert Report in the Field of Arab Studies” consists of 70 pages, subdivided into a 56-page description of the evidence (books and documents seized from the defendants) plus a 14-page expert conclusion.[247] We had to respond to six questions, the first of which required a statement on the type of literature and its thematic scope and relation to a “current,” “philosophy,” and “religion.” On the basis of the books and other written materials given to us for expert opinion, we categorized the bulk of literature and handwritten documents as related to the version of Sunni Islam’s Salafi current, officially supported and internationally spread by Saudi Arabian institutions and charities.—.known among Western observers and some Muslim adversaries as Wahhabism.

Among the questions we had to answer was whether the written materials contain “new rites and services falling outside of traditional Islam.” Our answer entailed that Salafism is, indeed, a “new” phenomenon in the sense of recently making its way in Bulgaria, but currents unknown until recently are observable within other major denominations, and not only among Muslims. As to the so- called “traditional Islam,” it has been tellingly described by one of the defendants, the Surnitsa Imam Said Mutlu, as follows: “The most important conflict was among the students who learned and graduated in Arab countries who draw upon the Salafi method (al-manhaj al-salafl) and the old imams resorting to the Ottoman [and] Sufi method (al-manhaj al-‘uthmanl al-sufl).”[248] The handwritten documents by Said Mutlu we had to review explicitly mentioned the “right creed” (al- ‘aqlda al-sahlha) several times, so it was first and foremost the creedal matters which made a difference in pursuing the Salafi missionary activities (da‘wa).

The court oddly entitled our part of the proceedings “Expertise in the Field of Arabic Studies.” That title was perhaps chosen due to the fact that within the academic tradition in Bulgaria, “Arabic Studies” has by default always embraced likewise the study of Islam, its history and religious doctrine. The title’s choice was also probably related to the institutional name of our Sofia University Department of Arabic and Semitic Studies which, however, is an interdisciplinary body combining faculty with credentials in Arabic linguistics and literature, as well as in political, religious and cultural history of the

the descriptive Part One we divided the labor of reading the materials but afterwards each of us checked the materials seen by the other and we always reached a full consensus in terms of phrasing. After having established the “current” on the basis of the textual evidence, within Part Two, I authored the first chapter “Analysis of the Main Doctrines and Terms” (pp. 77–84) with which my colleague has agreed. As to the second chapter “Expert Conclusions” (pp. 84–90) of Part Two we also worked closely together.

Middle East and Islam.[249] Indeed, these taxonomic subtleties can be a subject of a separate study, even as related to the various social dimensions of the lawsuit, for they were used by various actors who, in pursuit of their own agenda, deliberately ignored or simply tried to shun the content and scope of our academic field in order to involve their own experts.—.at the court but also in the public debates around the developments involving Islam.

The lawyers for the defendants, including some human rights and social activists, persistently promoted “additional experts” in “Islamic theology” by which they actually meant confessional Muslim religious scholars as opposed to secular, non-Muslim scholars. Many times, I have been asked by media, social activists and human rights-driven researchers to “tell my story” about the case. During the entire lawsuit and until now, I have refrained from any public talk on the subject.[250] Here, I focus on the concept of “traditional” versus “Arab” Islam, and not on providing an in-depth analysis of the entire lawsuit.

In the public sphere, the Pazardzhik case became widely known in the public sphere as “the case against the 13 imams” or “the case against radical Islam” though neither phrase was used in the judicial text of the Indictment or the statements of the Prosecutor as the legal grounds of the offence. Nevertheless, those public labels, in combination with other factors, urged some researchers to argue that “the Bulgarian government has repeatedly signaled its equation of Islamic activism with violent political Islamism.”[251] The public metaphor of “radical” Islam as opposed to a moderate “traditional” Islam has been so powerful that even some academic researchers speak of “Islam on trial” somehow taking for granted that “the trial in Pazardzhik institutes legal proceedings against propagating radical Islam and imposing sharia law.”[252] In the course of the lawsuit, a social scientist from the Bulgarian Academy of Sciences, Alexey Pamporov, compared Salafism to Protestantism and claimed that “within legal proceedings instituted against radical Islam […] experts in theology must come” prognosticating that “no sentences will be passed namely because of the applied definition, for the term radical Islam does say absolutely nothing and there is no such Islam.”[253] Not only were such opinions a part of the public discussions, but the Prosecutor herself persisted that “nobody denies the right of religious confession in the current proceeding [. and] subject of the trial is not the religion of Islam.”[254] This argument, however, could hardly be listened to by many others.

“Radical” Islam was foregrounded in public discussion partly due to some of the expert witness statements. For example, the conclusion by the Orthodox Christian theologian Klara Stamatova[255] qualified the materials and books to be evaluated as containing “formulations underlying the religious theory of radical Islam which in itself is an anti-democratic ideology inciting to violence.”[256] She defines part of the content of the Islamic literature analyzed by her as “blasphemous,” explaining that she views the texts from a Christian theological perspective “given that 76 percent of the population in Bulgaria is Christian.”[257] Asked by the lawyers during the court session what she actually means by “traditional” Islam, she defined it as “the traditional Islam in Bulgaria which manifests itself mainly on folk-style holiday level, which has a positively styling role, which is a powerful educational factor within the Islamic community, which does not succumb to participation in political actions and influences and which expresses tolerance to members of other faiths.”[258]

The pursued dichotomy between “traditional” versus “non-traditional” Islam became even more misty because of the insufficiently clear distinction between “religion” and “ideology” adopted by the Prosecutor’s Office. The Prosecutor insisted that the defendants propagated and spread not “a faith” but an “ideology” which “is related to elements of Salafism”[259] as opposed to an imagined and perceived as highly distinct “traditional Islam” of “Sunni-Hanafi type.”[260] This core thread within the trial based on the dichotomy “traditional (religion)”—“non-traditional (ideology)” provided the ground for one lawyer to draw upon my statement that in other countries and regions the Salafi orientation has for a long time been part of the intra-Muslim debates by sarcastically noting: “The experts Evstatiev and Dyulgerov explicitly underscored [...] that Salafism was until recently unknown in Bulgaria but likewise unknown until recently were other religious confessions, not only among Muslims. Answering a Prosecutor’s question, Evstatiev stated that he cannot designate one of the two positions as the right Islamic creed.[261] The Prosecutor probably has adopted the right systematic approach.”[262] The lawyers used that to unyieldingly pursue their demand for an “Islamic theologian” and finally involved Sefer Hasanov, a Muslim religious scholar of Qur’anic exegesis (tafslr) with a Ph.D. degree from Turkey who teaches at the Sofia Higher Islamic Institute under the jurisdiction of the Chief Muftiship. Hasanov was called to analyze nine texts in Turkish and opined that the viewpoints expressed by the authors of the seized books are of “dogmatic nature.” He concluded:

The materials are related to Islam by reflecting the position of some Islamic currents as the Jihadi-Salafis (dhzihadskite selyafu) about the existing political situation in the Muslim world. [...] The texts are addressed to the inhabitants of the Muslim countries emphasizing the fact that the certainty in the supreme power of Allah is part and parcel of the belief in Him, so the inhabitants have the duty to fight against the governors imposing on them laws and political systems contradicting with their religious convictions and their social relationships established on the basis of Islam. [.] Given the political and historical circumstances under which they have emerged, those texts do not have a direct relevance to Muslims in Bulgaria while they certainly have an enlightening character providing a better knowledge of Islamic dogmatics and the contemporary problems of faith in the Muslim world.[263]

Hasanov thus pursued a claim strengthening the argument of the defense lawyers: what some of the accused propagated or drew upon as texts was an “Islamic current” and not an “ideology,” moreover those materials had only an “enlightening” (educational) role for Bulgarian Muslims, as they live in a country not governed by Islamic law. On the one hand, according to him, the materials were relevant to the “political situation in the Muslim world.” Hasanov was reluctant to speak of “Wahhabism”: “I am not a political scientist and am unable to say against what Wahhabism is directed, because this is a political movement.”[264] On the other hand, the textual materials were analyzed by Hasanov as legitimately increasing the religious awareness of Bulgarian Muslims as part of what the Muslim religious scholar calls “Islamic dogmatics.” Sefer Hasanov seems to have adopted or at least publicly promoted an interesting, perhaps somewhat idiosyncratic and “localized,” approach to what Islamic law (sharl’a) is. It is somehow seen by him as not actually relevant to Muslims in non-Muslim states, such as Bulgaria: “We cannot claim that as a system of laws [the sharl’a] is something eternally valid. [...] That [i.e., the implementation of sharl’a] could be done only by a state institution which currently does not exist. In the moment sharl’a is not applied. And as far as in the moment there is no sharl’a, we cannot speak of the position of sharl’a towards secular laws but about the position of Islam, of the sacred sources of Islam toward secular laws.”[265]

The legal proceedings at the Pazardzhik court of first instance ended with the imposition of one enforceable prison sentence, two conditional sentences and ten administrative penalties by which Moussa was deprived of liberty for one year and fined for his participation in an unregistered organization, disseminating an antidemocratic ideology, and inciting hatred on religious grounds.[266] Although he was supposed to serve his earlier three-year sentence along with the new one, he appealed the verdict and remained at large. The other convicted persons and their defense lawyers also appealed the sentences bringing at a higher court instance an appeal which drew on my expert statement that Salafism is a current within Sunni Islam, among a bulk of other conclusions and evidence, to emphasize that “the subject of the legal proceedings is not related to an antidemocratic ideology but to an investigation of religious disputes within Islamic religion.”[267] At the Court of Appeal in Plovdiv, Yordan Peev, an emeritus professor of Arabic and Islamic history at Sofia University, was involved as an expert. His conclusion was:

The message [of the reviewed textual evidence] is archaic in its essence and content, backward in its character and hostile to all who share views different from those of its [i.e., of Wahhabi Salafism] holders—Muslim and non-Muslim alike. Every success of the local followers and propagators of that activity imported from abroad threatens the ethno-religious peace and harms our national unity and democratic order.[268]

These views were explained in greater detail during the hearings at the court session where one of the lawyers, Vasil Vasilev, repeated the demand for an additional expert in “Islamic theology” due to the “religious content” of the materials. Instead of replying by emphasizing

the secular character of the proceedings or even pointing out that this is not a shari’a court where the final expert say belongs to Muslim religious scholars (‘ulama’), Prosecutor Popova answered:

From the outset of his statement, Professor Peev said that this [Wahhabi Salafism] is actually an ideology dressed as religion. Here, it is not about religion. […] I consider that with the appointment of this expertise the tasks you [the court] has assigned are absolutely performed and in no way here we speak of religion, so we ask a theologian.[269]

The Prosecutor thus seems to have been entrapped by the dichotomy between (traditional) “religion” and (non-traditional) “ideology”[270] she herself has pursued during the entire case for the sake of her argument under the existing Bulgarian legislative terms.

On July 1, 2015, the Appeal Court of Plovdiv increased the sentence of Ahmed Moussa to a two-year imprisonment while, on the other hand, Said Mutlu and the Pazardzhik regional mufti Abdullah Salih were discharged from the accusation of propagating “antidemocratic ideology” and included to the group of the other defendants by imposing them fines, too. Moussa, nevertheless, appealed his sentence at the Supreme Court of Appeal. It repealed his sentence in July 2016 on the following grounds:

The prosecuting power pointed out, and the court uncritically agreed, that the antidemocratic ideology propagated by Moussa is called Salafism. However, that “ideology” is not among those which are indisputably recognized as antidemocratic. Moreover, Salafism has been expertly defined as a religious current. Due to that specific religious ground of it, the most serious problem in the right application of the material law remains unsurmounted —whether the propagated ideas and views are not part of the freedom of religion fixed in the international acts on which the Republic of Bulgaria is a side, in the Constitution and in other normative acts of our internal law.[271]

Therefore, the dichotomy between “traditional” religion and “new” (religious) ideology widely used in the public sphere was judicially untenable at the Supreme Court.

The Chief Muftiship was engaged with the Pazardzhik trial not only through the direct involvement of Hasanov who was asked by the Chief Mufti to prepare an expert witness statement on behalf of the Higher Islamic Institute. During the entire legal court investigations, high-ranking officials of the Chief Muftiship supported the defendants publicly and attended the court sessions. Ahmed Ahmedov, the then spokesmen for that official Muslim institution, clearly stated:

The position of the Chief Muftiship and the [the institution of the] Muslim Denomination is explicit from the outset of the trial. It defends its servants, those have we authorized to preach our religion which is a right provided to us by the Law of Denominations in Bulgaria, so there is no way that we doubt in their abilities. Their preaching activity is under control. [….] They are servants of the [Muslim] Denomination, therefore they have passed a serious casting in order to achieve their positions.[272]

Indeed, all of the defendants not only have kept their positions as muftis, imams, or preachers but some of them have been gradually promoted or rewarded.

At the 2016 Conference of Muslim Elections, which re-elected the Chief Mufti Mustafa Hadzhi, the Imam of Luzhnitsa Muhammed Kamber became a member of the Supreme Muslim Council (Vissh Myusyulmanski Suvet) at the Chief Muftiship, and from the beginning of 2017, he is member of the Editorial Board of the official monthly magazine of the Muslim institution, Myusyulmani/Muslumanlar. Another defendant during the Pazardzhik trial, the Imam of Rudozem Khairi Sherifov, won the prize “Imam of the Year” in 2014.[273] Until early 2021, Abdullah Salih remained at his office as Regional Mufti of Pazardzhik District responsible for the area of Velingrad largely inhabited by Muslims in mixed or entirely Pomak localities.

During recent years, the development of the inter-related trials involving Muslims accused of spreading “anti-democratic ideology” initiated at the Pazardzhik District Court and passing over various court instances, continued to attract public attention. Prosecutor Nedyalka Popova declared in a 2018 interview that Muslims are a “threat to national security and the future of the nation.” Explaining her views following the court proceedings, she called for measures to reduce the number of Muslims and to limit their civil rights.[274] This caused the reaction of the Supreme Muslim Council at the Muslim Denomination—the Chief Muftiship. It called an extraordinary meeting of all former chief muftis in the post-1989 period and took a decision to declare Popova’s statements as hate speech punishable by law. This Muslim complain was forwarded to various authorities and institutions, including the Prosecutor General Sotir Tsatsarov, who announced that the case would be examined by the Inspectorate of the Supreme Cassation Prosecutor’s Office, and the then President of the European Commission Jean-Claude Juncker, who sent a written response reassuring Muslims that the case would be considered by the EU Justice Commissioner. Thus, Prosecutor Popova herself was accused by Muslim institutions, media, and human rights activists of having made an “Islamophobic statement.”[275] Due to the high-profile of the trials involving Muslims and inter-related through Ahmed Moussa, they are regularly observed by the U.S. State Department’s reports on religious freedom, including the most recent one of 2020. [276]

Meanwhile, in neighboring Turkey under the leadership of the Justice and Development Party (Adalet ve Kalknma Partisi, akp), the government body of the Presidency[277] of Religious Affairs (Diyanet i§leri Genel Mudurlugu) gained an unprecedented

role in domestic, regional, and international policies of the state. The Diyanet has been increasingly active among the Muslim communities in the Balkans where, along with other Turkish foundations competing with the influence from the Arab world and different Salafi circles, it “can operate in a cultural climate to which they are more accustomed.”[278] Bulgaria, where the Diyanet has funded major Islamic activities and educational centers of the Chief Muftiship, is no exception. Increasingly stronger with the support of the Diyanet, the Bulgarian Chief Muftiship seeks to effectively embrace all Sunni Muslims under its umbrella and has achieved much of this goal. It seems that the reemerging “Muslim consensus” embraces the quietist Salafis, particularly the Pomaks, adopting the Salafi ‘aqdla which in this case remains in the background by privileging the revitalized “common Muslimness” around the “great tradition.”

It was only Ahmed Moussa and his following who seemed reluctant to follow the Chief Muftiship by privileging their distinct Salafi ‘aqdla as not allowing them to follow the Mufti as their imam.[279] According to the Chief Mufti Mustafa Alish himself, a group of Roma followers of Ahmed Moussa (then in custody) from different localities were recently invited to a common Muslim event in Velingrad. The Roma attended the event but when the time came for the ritual prayer, they refused to pray behind the Chief and left to pray on their own insisting: “We have a different ‘aqdla .”[280] Among the local Muslims in the Rhodopes, the rumor was spread that “Ahmed Musa, and respectively his followers, accused the Chief Mufti of unbelief thus applying to him takfr ,”[281] Mufti Mustafa Alish himself confirmed this evidence although he used another phrasing, explaining that “the dhemaats following Ahmed Moussa refused to accept the Chief Mufti as their Imam, because he is to them a representative of the unbelieving state and, as such, of the “satanic evil” (taghut).”[282] These new tendencies require further confirmation and research attention but they do not contradict and even strengthen the process of Muslim convergence around the “great tradition” observed among the more mainstream Sunnis in Bulgaria.

Meanwhile, Ahmed Moussa and his following, unlike the Pomak defendants in the Pazardzhik trial, have lost the institutional support of the Chief Muftiship. This is, however, not a real split, as the Roma have never reached full recognition by mainstream Muslims in the Balkans as their equals. The social separation of Gypsies (Roma) dates back from the Ottoman era in which Muslim Gypsies did not enjoy the full rights provided by Islamic law to the ruling Muslim millet, although they enjoyed a higher status than “unbelievers” (kuffar), i.e. Christian Roma.[283] Both Muslim and non-Muslim Gypsies were thus “legally and socially marginalized due to their distinct culture”[284] in Ottoman times, and the Muslim Roma, including in Bulgaria, have not been fully embraced by the post-Ottoman Muftiship either.

This continuing ambivalence toward Balkan Gypsies may contribute to the turn of an increasing number of today’s Roma in Bulgaria toward Salafism. Indeed, Pomak Salafis likewise seek to strengthen their sense of authenticity and religious certainty through Salafism but their other identities allow them to integrate more easily into the more

mainstream Muslim community and the society at large. The overall trend among the various Muslim groups, however, is the rediscovery of “true” Islam and the “great” tradition of Muslim faith as opposed to the syncretic, supposedly superstitious “little” traditions held by local Muslims from Ottoman times to the present day.

*** 6. Conclusion

The Pazardzhik trial has two major implications. First, it corresponds directly to the model of milletic secularism as a socio-structural phenomenon related to the accommodation of diversity in the post-Ottoman Balkans, particularly Bulgaria. In line with this historically continuous pattern, the court case unfolded various categorizations along the dichotomy between “traditional” versus “alien” presuming a suspicion to “new” or “alien” transnational religious identities and loyalties that challenge the established social hierarchies.[285] Second, the lawsuit against the thirteen Muslims has been a key event indicating that after a period of fragmentation of communal Muslim identity a new, opposite process suggests an ongoing Muslim convergence. A similar conclusion regarding the developments among the stricter and more mainstream Muslims can likewise be drawn from field observations in a set of Pomak localities in Bulgaria, including Ribnovo and Madan. The traditional post-Ottoman “Balkan” Hanafi-Maturidis and the “Arab” Salafis both take charge of faith by bringing to the fore the notion of a “shared Muslimness” vis-a-vis the non-Muslim majority in Bulgaria. More devout Muslims increasingly seek to (at least temporarily) overcome the divisive lesser doctrinal differences for the sake of reviving what they perceive as Islam’s “great” tradition by removing the supposed superstitions characteristic for the local “little” tradition.

This process of religious convergence entails intensifying a shared Islamic identity and strengthening communal cohesion. The ongoing convergence will hardly eradicate the existing diversity and a certain degree of context-related heterogeneity will remain. However “localized,”[286] Islam is nonetheless being rapidly transformed and overarched by the normative power of the “great tradition.” A certain level of “unity in diversity” will continue to characterize the life of observant Sunni Muslims in Bulgaria, but shifting stress on “unity” makes an increasing number of them aware of what their general commitment to Islam requires them to believe and do. As any religion and overwhelming doctrine, Islam has always been diverse and will remain so. Nevertheless, the many voices compete to speak for one Islam. The analysis of Muslim cases from Bulgaria shows that relatively rapid changes can be forcibly imposed and lead to heterogeneity or even an uprooting from the “great” Islamic tradition but they also can be rapidly reversed.

Once the members of a community are free to profess and practice their faith, they are likely to initiate a change in reshaping their identity. The ongoing changes foreground a greater attention to religious contents, practices, and values that are often perceived by both mainstream society and “traditional” Muslims as “new” and “foreign,” Arab, Wahhabi, Salafi or even “radical.” Hence, the observed chaotic, often confusing and misleading reactions of policy analysts, state institutions, and law enforcement. More recently, after having resorted

to terms such as “Arab,” Wahhabi, and Salafi, the attempts to “prevent radicalization” increasingly resort to the phrase “radical” as opposed to “traditional” Islam.

This dichotomy is a context-specific social construct ensuing from the pattern for accommodating diversity along religious identity lines that I have termed milletic secularism. Rooted in the shared implicit social knowledge, milletic secularism is based on religion as a major element of collective identity and a powerful socio-structural force. In that sense, the notion of “traditional” Islam refers to an attempt to maintain the integrative potential of milletic secularism. As evidenced in the dichotomy “traditional-alien” Islam, milletic secularism is not simply a manifestation of politicizing religion, though it can be instrumentalized in such a way. The dichotomy is a principle woven in the social fabric and functions as a double paradox. First, it evokes religion without necessarily implying religiosity or any particularly high degree of religious observance. Second, the initial principles of milletism as developed in the Ottoman milieu and secularism as it came into being in the West have lost much of their “original” meaning, as these principles are adapted to new, Balkan circumstances.

From the analytical perspective of Islamic studies, “traditional Islam” makes sense only if it is understood as historically established in a variety of local contexts and passed down from generation to generation within the local tradition. If in the Balkans the Hanafi-Maturidi Islam, and in some areas Sufism, were undoubtedly “traditional,” in other regions, such as the Arabian Peninsula, many Salafis themselves can be qualified as “traditional” despite their otherwise “fundamentalist” (as opposed to “conservative”) stance on various questions of Islamic theology and law. On the other hand, the religious purism and military-political activism of the Taliban, for example, draws heavily on a specific form of Deobandi Islam, a branch of Sunni Hanafi Islam related to the Jam’iyatul ‘Ulama’-i Islam (jui) in Pakistan.[287] So, how does such a “traditional Islam” in the sense of the phrase used by policy analysts, security experts or law enforcement in Bulgaria and elsewhere fit into the idea to privilege the local Hanafi tradition as the prosecutor in Pazardzhik was pleading during the analyzed court investigation?

My objection to the dichotomy does not imply that terms such as “traditional” or “radical” can not be adopted to describe Islamic experience.[288] As this study showed, such concepts, however, make sense mostly in terms of local knowledge. In Bulgaria as in other parts of the Balkans, “traditional” Islam should be grasped not so much as an analytical but as a social con- struct—a public discourse which often does not refer to a clearly defined specific content. Likewise, the public use of Muslim terms, such as Salafism, does not necessarily denote what the concepts designate within Islamic tradition. “Traditional” Islam thus implies that there are local citizens with Muslim identity who are well-integrated into society, as well as the apprehension that the “new” currents and “ideologies” are incompatible with the established, and in this sense traditional, pattern of communal coexistence.

Nevertheless, no matter how untenable the concept might be as a generally applicable analytical category, due to the historically continuous pattern of milletic secularism, the communal belonging of those well-integrated citizens will probably continue to be referred to in public discourses as “traditional” Islam and opposed to the “alien” forms of Muslim faith for a long time ahead. International observers and institutions, such as the European Court of Human Rights or the U.S. Department of State will, in turn, continue to be suspicious to Bulgaria’s privileging institutionally the Bulgarian Orthodox Church which, however, is not a result of any “de-secularization” in the sense of Peter Berger or Karpov[289] but a contextual pattern of Balkan secularity elucidated here under the notion of milletic secularism. “Tradition” can thus be seen as not just something from the past, but a set of concepts and practices that most people take for granted. As dramatically documented in the discussed Pazardzhik court case, the education of some of the new Muslim religious leaders overseas and the complexities of Bulgarian politics make “tradition” not only a concept for sociological analysis but also a term that takes on a distinctly local and politically charged meaning.

Therefore, “tradition” and “radicalism” can be dealt with at two levels. At one level, an abstract one, as Max Weber uses the terms, “tradition” is a fascinating and effective research tool. In this sense, “traditional” and “radical” are “experience-distant” concepts similar to Weber’s ideal types. “Traditional” at that level means an accepted way of getting things done or of understanding something. Because people in a given locality do things in a given way, it needs no particular explanation. Similarly, “radical” signifies the departure from a tradition by referring to the fundamental tenets in pursuing a complete reform. The same concepts, however, can and do acquire an “experience-near” meaning functioning as terms that make sense only in a specific locality. At the level of practice, as in courts, they take on a different set of meanings that are integrally linked to local knowledge. The judges and those making the legal arguments may not for the most part be Muslims, but what they say has the effect of influencing how these terms are understood in the society at large. From such a perspective, there is nothing wrong with terms such as “traditional” and “radical,” provided that one understands the possibility to use them at different levels of analysis.

* Part 2: Christian and Muslim Men and Women under State Atheism and Postsocialist Secularism

** Chapter 4: Symbols and Identity in Bulgaria

Parallels between Communist Atheism and Western Secularism

Momchil Metodiev

Abstract

Is it legitimate to draw a parallel between the atheistic policy of the Communist states of the second half of the 20th century and the secular policies of some European countries in the early 21st century? The issue became relevant in recent years, especially in the context of the Lautsi case that was lodged in the European Court of Human Rights on the right of public schools in countries with centuries of Christian traditions to have Christian symbols on display. Drawing on the experience of the Bulgarian Communist era, the chapter considers the correctness of such parallels, comparing the policies of forced and “natural” secularization in both parts of the European continent and the ensuing results.

Keywords

totalitarianism — secularism and atheism — desacralization — social engineering — Bulgarian orthodox church — Bulgarian communist party

---

Is it correct to draw a parallel between the atheistic policy of the Communist regimes during the second half of the 20th century and the secular policies of some European countries and European institutions in the early 21st century? This issue has gained currency in recent years, especially in the context of the Lautsi case in the European Court of Human Rights, which stirred up emotions on the subject of secularism and the place of Christians in Europe. The parallel between Communist atheism and Western secularism has influential supporters:

The militant secularism that is rapidly gaining momentum in today's Europe is also a pseudo-religion with its own doctrinal principles and moral norms, and has pretensions to a global monopoly and brooks no competition. Modern militant secularism, like Russian Communism, is seen as a world view that came to replace the Christian view of the world. Therefore, it is not neutral and indifferent to the Christian faith, but frankly hostile.[290]

That statement was made by Metropolitan Bishop of Volokolamsk Hilarion Alfeyev, Chairman of the Department for External Church Relations of the Moscow Patriarchate, on 9 June 2010 to the Ministry of Foreign Affairs of Russia. This is one of a series of statements he made in which the atheistic policy of the Communist regime is seen as effectively in parallel with the secular policies followed today by many European countries. The argument was developed in the context of the Lautsi case, brought before the European Court of Human Rights by Soile Lautsi, a Finnish-born Italian member of the Italian Union of Atheists, who argued that the presence of the crucifix in Italian public schools contradicts the secular nature of education and violates the rights of secular people.

After every level of the Italian court system rejected her application, the case was referred to the European Court of Human Rights, which in November 2009 upheld her application, ruling that the presence of crucifixes in classrooms was contrary to the Convention on Human Rights. The decision sparked sharp resentment in Italy, the case gained worldwide attention, and many countries (including in Eastern Europe, among them Bulgaria) associated themselves with Italy's request that the decision be reviewed by a court of higher instance. This "militant secularism" in the West prompted the Moscow Patriarchate to call for the creation of a "strategic alliance" between the Orthodox and Roman Catholic churches with the aim of "jointly promoting public awareness of traditional Christian concepts" of the family and other values.[291]

The experience of modern secular policies aligning with the practices of the totalitarian atheistic Communist countries of the 20th century is worth examining also because of the specificity of secularism developed in the two different parts of the European continent as a result of their differing historical experiences. Indeed, Metropolitan Bishop Hilarion, in the abovementioned speech to Russian Foreign Ministry in 2010, while drawing a parallel between the two processes, also sought to make some distinction between them:

It is necessary to distinguish between two types of secularism. On the one hand, there is aggressive militant secularism, which is a kind of pseudoreligion. It is precisely this kind of secularism that we had operating in the Soviet Union (...) At the same time, we should distinguish this type of secularism, the essence of which is the protection of the principle of neutrality regarding religious beliefs, from other worldviews and principles towards religious practice. Unlike the state atheism of the Communist regimes, this type of secularism is not aimed at the complete destruction of religion, but at pushing it out of public view.[292]

Despite these distinctions, the question remains: Is it correct to draw a parallel between the secular practices in modern European states and the attitudes towards religion that were followed by the Communist countries? What is the “purpose” of these two policies and what are the similarities and differences between them? What lies behind the idea of these two policies being subsumed under the common denominator of “pseudo-religion?”

This chapter aims to address these issues in the light primarily of the Bulgarian experience of the Communist era—an experience that differs from the experience of other East European countries only in the details, but not in the principles on which it is based. Its only purpose is to outline some possible similarities and many important differences between the secularization policies and to consider the sides of an argument about the idea of a possible parallel between them. In what follows, the term “atheism” is used to describe the policy of social engineering carried out by the Communist authorities and aimed at the elimination of religions in foreseeable future, while the term “secularism” refers to the historical process of gradual decrease of the social significance of religion.

What is the basis for the argument that the parallel is possible? Visual similarities. Almost at the same time that the Lautsi court proceedings began, British Airways cabin attendants were forbidden to wear crosses in the workplace. On the shortest of strolls around any major Western European cities, one sees many abandoned churches which fortunate coincidence have been converted into museums or concert halls. On the face of it, this is reminiscent of what happened to some churches in the Communist era in Bulgaria, which were deemed to be cultural monuments and were converted into museums. At first glance, just as in the totalitarian era, in the European Union of today visible symbols of religious identity are under attack, and holding an opinion on public policy from a Christian perspective is often met with incomprehension or even ridicule and disdain. But as

significant as the similarities seem, in fact they portray the very different histories of the imposition of atheism in Eastern Europe and the development of secularism in the West.

*** 1. Atheism as an Imitation of Modernization

What were the reasons for the atheistic policy of the Communist countries? How rational and pragmatic were the reasons for persecuting or at least diluting one of the most powerful social institutions, the Christian church? This policy can hardly be explained solely by rational or pragmatic arguments. One rational explanation is that the Communist state saw the Church as an ideological opponent. However, even if this really was true up to the end of the 1960s, hardly anyone can argue persuasively that in the 1970s and 1980s the Bulgarian Orthodox Church was able to be a real ideological opponent of the Bulgarian Communist Party—and yet the expected administrative restrictions on the Bulgarian church grew in the 1970s and 1980s. Another rational argument is that the Church was sufficiently well organized and with its structure of local branches and parishes, was practically the only institution able to mobilize public opinion against the Communist Party. This argument sounds convincing—namely that their social influence and authority was the reason for the senior clergy of the Bulgarian Orthodox Church to avoid the fate of the leaders of the Protestants and Roman Catholics in the late 1940s and early 1950s, who were subjected to show trials. In the later period, these particular concerns of the Communist Party were true in countries like Poland or East Germany, where it was precisely the church institutions (Roman Catholic in Poland, Protestant in East Germany) that became one of the points of resistance to power. It may be concluded that both arguments contain some justification, but they alone are not sufficient to explain the zeal with which the Communist Party and the state engaged in persecution of and limitations on Christian churches instead of seeking ways of coexistence and tolerance.

As is well known, the logic of totalitarian states often is not based on rational arguments, and policy towards the Church is a good example of this. Therein lies the central difference between the totalitarian states of Eastern Europe and contemporary Western European democracies—while the latter are constantly in need of legitimacy and rational explanations for their actions, totalitarian states do not put their public legitimacy in question and therefore can afford to develop policies frequently based on irrational opinions, prejudiced or ideological. Unlike democracies, totalitarian regimes did not develop systems of checks and balances between different institutions, which enable certain policies to follow their own logic of development.

Classical theory defines secularization as “progressive autonomization of societal sectors from the domination of religious meaning and institutions.”[293] Secularization is seen as a direct consequence of modernization with the important clarification that this process does not lead to atheism, but to “a weakening of the social significance of religion.”[294] The result is a loss of overall social morality dominated up to that point by religion, and its replacement by competing concepts, due to which religion retains its influence only among

certain social groups. Religion is no longer a matter of necessity, but of personal choice and preference.[295] The theory allows as an exception the possibility that under certain conditions, the Church and religion are converted into an instrument for preserving national identity.

Where culture, identity and values are subject to pressures emanating from foreign religion or extreme secularism, it is possible to see a resurgence of religion. Historically, Bulgaria also fits in those exceptions, given the role of Orthodox Church during the National Revival under the Ottoman rule in the 19th century and its active participation in the realization of the Bulgarian national project. According to Professor Archpriest Stefan Tsankov, the struggles at the time of the National Revival left a lasting impression on the way the Bulgarian Orthodox Church was perceived in society immediately after the Liberation from the Ottoman Empire in 1878.[296] At this time, the Orthodox Church often continued to be seen as a tool for the implementation of the national idea, as in it hopes were placed of preserving the identity of other ethnic Bulgarian territories that remained under foreign domination. Therefore, it cannot be argued that the Communist regime created the concept of the Church as the guardian of national identity. Rather it inherited it, developing and focusing on this plan to use the Bulgarian Orthodox Church as one of the "keepers of Bulgarian national identity" thus "justifying" the existence of the Church in a society otherwise turned to atheism. Unlike the previous period, however, the propagation of this idea was the result of a deliberate government policy, not a spontaneous reaction against an external threat from other beliefs.

Without neglecting this tradition, the atheistic policy of the Communist state was inspired by ideological cliches and irrational striving of the regime to look "modern." These were the ideological presuppositions, founded on the classics of Marxism, in prime place being that of the memorable phrase of Marx that "religion is the opium of the people." Today, that phrase may sound like a trite cliche, but these words were always present in the consciousness of all who pushed the atheistic policy at different levels in the Communist countries. This cliche, ideology or maxim builds on the general rationalist conception of the second half of the 19th century, shared also by the theory of secularism, that modernization and secularization go hand in hand. In this view, traditional and poor societies are religious, while modern, wealthy and prosperous societies are secular (atheistic). Religion is characteristic of traditional societies, and the more modern a society becomes, the less influence religion has in it. These are the basic assumptions of the theories of secularism, which remain influential today, with the difference that today's theorists of secularism—under the influence of the example of the United States—tend to allow a revival of religiosity in different isolated, albeit influential social groups. In this way, the theory of secularism really does unite the policies pursued in Eastern Europe during the second half of the 20th century and the policies with the upper hand in the countries of Western Europe in the early 21st century. But it remains the only similarity between them.

The differences, which are extremely critical, arise from the way in which this theory was developed and applied in practice in the two places. While in democratic societies, it is a

gradual process and the state by its nature is forced to comply with public sentiment in order to be legitimate, in a totalitarian state, this policy is implemented through coercion and social engineering.

Communism claims to be a modernization project and in this sense, the imposition of the expected results of this modernization successfully mimics real modernization. Once social engineers want to create a modern society, one of the tangible results has to be secularization and a weakened interest in religion. Just as frequently happened in Communism—after the plan is imposed, the entire bureaucratic machinery of the totalitarian state is harnessed to implement it, which at some point begins to follow its own logic of development to achieve, or at least to imitate, the implementation of the plan. The irrational ideology sets the target, the social engineering mindset mobilize resources to achieve it, and the totalitarian institutional machine gives prominence to this policy that attacks mainly the symbolic power of the Christian religion, with the ultimate goal of completely changing people's thinking.

*** 2. Practical Applications of the Policy of Atheism

The presence of strong irrational arguments in this policy creates problems in researching it. Its evolution can be traced with difficulty, only through the speeches of party leaders, the decisions of the Politburo of the Bulgarian Communist Party, decrees of the Council of Ministers or other documents, as they almost always use cliches like "activation of atheist propaganda,"[297] without it being clear to the researcher whether this was a genuinely new policy or just a repetition of a well-worn ideological mantra. This means that the evolution of this policy can better be traced by looking at the practical actions of the lower levels of the state machinery.

The main objective of the Communist state is to turn the Church into an "invisible' institution —including in the literal sense, at least as regards the observance of rituals. The Church has the right to be seen only in regard to its status as "guardian of Bulgarian national identity through the centuries,' i.e. because of its already diminished historical efficacy. Another objective pursued precisely through "atheist propaganda' was the removal of the religious worldview as a way of thinking and even basic religious culture, which was achieved through the full monopoly of the Communist state on education, culture and media.

One of the visible results of this policy even today is the abandonment of a number of churches, particularly in rural areas. At first glance this is a gradual process, which again gives rise to demand for parallels to be drawn with developments in Western Europe. But even if indirectly, the desolation of the churches in Eastern Europe is also a result of the policy of social engineering. It is the result of forced industrialization, which requires swift urbanization, leading to abandonment of villages and in turn, their churches and the

destruction of parish life. And while the huge concrete panel apartment complexes were built in the new urban centers, there were no churches built to accompany them.

Another policy that also can partly be seen as a “natural” process is the establishment of the Church as “the guardian of Bulgarian national identity” and as a “monument of culture,” that is as a means to maintain and nurture the national spirit. In this regard, the Communist regime actively worked to transform the church into a museum piece. An expression of this policy is the nationalization of entire monasteries (such as the Rila Monastery—the main monastery in Bulgaria, in the period 1961–1968) and the conversion of monasteries into museums and tourist attractions (after the return of the monks to the Rila monastery, they shared the space with the Rila Monastery National Museum, with an agreement based on the philosophy that tourists would not be able to attend or even see liturgies or other sacraments and rituals administered by the monks[298]). An example of the same policy is the desacralization of icons and making them the subject of the work of museums. Even today, in Bulgaria there are cities in which the icons are set out in the town museum, not the church, which is located on the other side of the city square. There are other examples of a number of measures aimed at representing the Church as a “dying institution,” worthy to be represented only in museums.

But the most widespread, most subtle and for this reason, most interesting policy was that of the substitution of religious rituals with civil versions and the formulation of a new system of public holidays to undermine the religious content of existing traditional holidays. This deliberate offensive by the state against church rituals from the early 1970s also was the cause of increased administrative repression of priests on the ground.

What provoked this policy? Again, the irrational desire that the state should appear modern. In 1968, a large-scale public opinion survey entitled “The Process of Overcoming Religion in Bulgaria” was published. It concluded, in the typical style of the era, that Bulgaria is among the leading countries in the growth of atheism and that only 35 percent of the population, mainly inactive social groups, identified themselves as religious. These data, however, portray a false picture, as compared with the data transmitted from the dioceses where church sacraments and rituals were celebrated, from which it is clear that religious marriages made up 36.11 percent of all marriages, 52.42 percent of all newborns were baptized or circumcised, and religious funerals accounted for 80 percent of all funerals, which means that Communist party members also had religious funerals.[299]

These surprising results led to a change to the policy conducted up to then. If until then the emphasis was on “atheist propaganda,” the results of the study forced the government to take practical measures against the high level of religious observance. Most easily solved was the problem of church marriages, which were the most underrepresented, because already at the end of the 1960s they have effectively been replaced by the form of civil marriage made obligatory in 1945. This can be explained, on the one hand, by marriage being seen as a family event that can occur without religious consecration, and on the other

—because married people are the most active part of the population and the most vulnerable to possible administrative measures.

[[i-c-islam-christianity-and-secularism-in-bulgaria-1.jpg][figure 4.1 Religious marriage, 1981 the bulgarian telegraph agency caption to the photo reads: “moments from the old tradition—a religious church wedding, which has become increasingly rare and is simply a custom, a ritual which is more than anything else decorative.” source: pressphoto bta]]

This is not the case, however, with the question of religious funerals. In fact, the main goal of the state was to limit funerals conducted with religious rites. Again, this was sporadic and with administrative coercion to enforce it—in 1968, a Council of Ministers decree made funeral services available for free, but the manufacture of coffins and other items for a funeral ritual was banned for the church administration, if these were part of free funeral services. This decision made possible a wide scope for administrative arbitrariness, as local authorities often refused free services to relatives of a deceased person, if a religious ritual had been performed. The most visible result of this Council of Ministers decree was the artificial replacement of the cross as a grave marker with a pyramid with a pentagram, which was widely used as a grave marker under Communism.[300]

[[i-c-islam-christianity-and-secularism-in-bulgaria-2.jpg][figure 4.2 Scene from a civil funeral (in the foreground, a typical burial pyramid)
source: central state archives, buigarian photography album 545, N° 68-4638-7]]

Another ritual actively imposed by the state from the early 1970s, was the ritual called “naming the child.” In essence, the new rite followed the marriage rituals that already had been imposed, was performed in the same ritual halls and with the same “administrative state employees” and was intended to be a substitute for church baptism. Instructions, stored in the archives, explain how young families should be “officially invited” to take part in the ritual, how the hall should be decorated (the room must have a portrait of the first Bulgarian Communist leader Georgi Dimitrov with a group of children, as well as a portrait of the president of the Council of Ministers at that time, i.e. Todor Zhivkov). The culmination of the ritual occurred when the mother passes the child to “an official person” who in turn “officially” announces the name of the “new citizen of our socialist motherland.”[301]

[[i-c-islam-christianity-and-secularism-in-bulgaria-3.jpg][figure 4.3 Scene from the civil ritual “naming of a child,” 1975
source: central state archives, bulgarian photography album 77-
vi, N° 76-2304-8]]

From one point of view, the new rituals can be seen as an example of comic excess by the authorities. From a Christian perspective, they can be seen as truly demonic rituals, given

the ample Communist symbolism involved. Whatever the perspective, however, the new civic rituals were indicative of a deliberate and large-scale intervention by the authorities in the most intimate moments of human life, including the choice of a funeral rite for the nearest and dearest.

What were the results of this policy? In the years that followed, with civil marriage imposed as virtually the only form of marriage, the baptisms of children dropped significantly and while religious funerals remained the most popular religious ritual, their rate also dropped dramatically.

Table 4.1 Statistical information for religious rituals perfomed in Bulgaria in the period 1968–1980.

| Year | 1968 | 1977 | 1978 | 1979 | 1980 |

| Baptized children (of all newborns) | 52 % | 40 % | 40 % | 47 % | 40,7 % |

| Weddings (of all marriages) | 36 % | 6,59 % | 5,53 % | 4,72 % | 4,52 % |

| Religious funerals | 80 % | 49 % | 49,1 % | 49,6 % | 47,9 % |

Archive of the ministry of foreign affairs (amfa). fund 10, list 14, file 589 (data for 1977–1980).

However, statistics cannot show the extent of this policy and the intervention of the state in people’s private lives, which was met with various forms of resistance or looking for ways to circumvent the new rules. For example, in the early 1970s practice appears to have been for children to be baptized by their grandmothers, formally without the knowledge of the child’s parents. In the archives, there are many cases of attempts to bypass the ban on religious funerals, the priest officiating over the funeral service in the home or after the civil ceremony.

Measures to enforce civil rites were upgraded in the late 1970s with the idea of building an entirely new “socialist civil calendar.” The principle was that traditional religious calendar holidays would be listed as dates to be celebrated, but would be filled with different elements related to life in the socialist state. In the same move, there were attempts to disparage the “Spring traditional series of religious holidays” (Palm Sunday and Easter) and to displace them with different holidays based on something else.[302] The policy of desacralization of major religious holidays was reflected in the “assimilation” of the feast of Saints Cyril and Methodius and its transformation into the Day of Slavonic Culture and Education. While the celebration of the holy brothers shifted from May 24 to May 11 with the change of the church calendar, the day of Slavonic Culture and Education continues to be celebrated on the old date.

The new policies were accompanied by administrative pressures, with parish priests making up the most victims. The general principle valid for almost the whole period of Communism is that priests should limit their activities to within the church building. Any further activity than that on their part was liable to punishment—most often by local authorities and in a way not subject to review by another institution. The biggest disputes and cases throughout the Communist period were caused by ringing of the church bells (especially at the time of major holydays), the performance of processional marches, and especially religious ceremonies performed by priests in the homes of believers.

*** 3. Who Implemented These Policies and How?

As with the Constitution of the People’s Republic of Bulgaria, the principle of freedom of religious denominations was also present in the Religious Denominations Act, although the law contained a number of limitations in the application of this principle. Was it possible for these principles to be implemented in reality?

As might be expected, the answer is no. The central institution charged with making policy for the Church was the Committee for Church Affairs. The committee aimed to maintain the connection between church and state, which is why it is the recipient of all possible complaints regarding limitations on religious freedom. The Committee also had so-called representatives, employees of local administrations of county towns. The other structure relevant to the policy of the Church was State Security, which also had representatives on the ground.

The initiator and main contractor of administrative repression against priests was the local administration. They were familiar with the general political line of imposing civil ceremonies and limiting religious rituals as much as possible—in 1984 an employee of the Committee for Church Affairs told its local representatives that “the best work of the priest is to do nothing.”[303] Concentrated in the hands of local authorities, the practical implementation

of this policy amounted to a veritable administrative arbitrariness, to which parish priests were subjected and from which they could not defend themselves.

As might have been expected, the administrative restrictions forced the priests to complain to their metropolitan bishops, and so a bureaucratic correspondence started that shows the desperate situation in which they were. The reasons for the penalties against the priests listed in the files vary greatly— from tolling the bells on great feast days, visiting the homes of the faithful on Epiphany (without obtaining consent in advance), officiating at religious funerals, among many other offences. In some cases, the repression of priests amounted to a fine, in others, purely local threats and penalties. In 1967, a village priest complained to his metropolitan bishop that he was threatened by the local party secretary that his children will not find a job if he did not change his behavior.[304]

All these complaints from the priests were sent to the metropolitan who in turn forwarded them to the Committee for Church Affairs. In some cases, the Committee genuinely investigated, which amounted to referring the case to its local representatives—an employee of the same administration, who punished the priest. So the bureaucratic procedure came to a conclusion, and its outcome is clear. The result was that over the years such cases declined, but at the end of the 1970s the Synod attempted to exert some pressure, carefully summarizing these cases in a joint letter and sending all the files to the com- mittee.[305] The outcome was again the same.

Contrary to expectations, administrative pressure against priests increased rather than declined through the time of the regime. In the 1950s and 1960s, priests subjected to administrative repression could still count on some protection from the Committee on Church Affairs trying to work within the existing legislation and to limit the most shocking cases of administrative arbitrariness. The archives of these decades include many cases in which appeals to the Committee did not go unheard. In the late 1960s and early 1970s, this led to a real bureaucratic war between the Committee for Church Affairs and the Ministry of Internal Affairs. The Committee repeatedly opposed the party leadership on the new policy of imposing civil ceremonies, highlighting potential problems that it could lead to.[306] In the early 1970s, all of this passed as the Ministry of Interior won the bureaucratic battle, the membership of the Committee was changed and it became an instrument to advance the new policy.

The reason for the deepening repression of the priesthood lies in the autonomous life of the totalitarian bureaucracy. Until the 1970s, after which it was decided to impose civil rites, policy towards the Church gradually slid down the agenda of higher party authorities and was delegated entirely to the efforts of secondary institutions—the Committee for Church Affairs, State Security and local authorities. Once the bureaucratic machine was restructured, it began to push administrative repression, which was essentially uncontrolled.[307]

All this can only happen in a totalitarian state, in which there is a lack of any bureaucratic constraints on the different centers of power. For this reason, the experience of Bulgaria, and possibly the whole of Eastern Europe, is completely unique and cannot be compared with the experience of the societies of Western Europe during the Cold War, and even less with the institutions of the European Union at the beginning of the 21st century. As secular as today's Western European countries are, they have developed systems for balancing the interests of different social groups and institutions which prevent uncontrolled propagation of a line of conduct (even if it has political support) so that it becomes an unstoppable avalanche. The best proof of this is the decision of the Grand Chamber of the European Court of Human Rights in the Lautsi case, which ruled that countries with well-established Christian traditions, such as Italy, have the right to keep crucifixes in the classrooms of public schools.[308]

*** 4. Symbols and Identity

No matter how tempting, the claim of parallels between atheistic policies under Communism and the secular policies pursued by European countries or institutions in the early 21st century is completely incorrect. Although the results of the two policies seem similar, this is only at first glance, given the different historical experiences of the two parts of the continent. A careful look shows that a parallel can hardly be drawn even in terms of the visible effects. Abandoned churches in Western Europe are often located in the centers of large cities, a sign of secularization of parts of the urban population or declining popularity of certain denominations (typical of some Protestant communities in Western Europe). Abandoned churches in Eastern Europe are located mostly in rural areas and are a sign of deliberate social engineering during the years of Communism, while there are insufficient churches in big cities today, despite the decreased level of church attendance. Today, Eastern Europe, especially Bulgaria, has no problem with visible Christian symbols—neither with wearing of crosses nor with religious rituals. In the countries of Eastern Europe, at least for now, cases like Lautsi seem at very least incomprehensible.

This is because the final battle between the Communist authorities and society was conducted precisely in the terrain of religious symbols and basic rituals—and that in this field, the Communist state lost the battle. In Eastern Europe the point of conflict under Communism was exactly about symbols— wearing a cross, reading a Bible, participation in religious rituals marking key moments of community life. Thanks to "atheist propaganda," Communism succeeded in dislodging the religious worldview in the "private sphere," but failed to come to grips with the symbolic force of Christianity. Today, countries such as Bulgaria have no problem with church symbolism, but have a problem with Christian identity, such as lacking knowledge of basic Christian principles as a result of deliberate education policy during Communism.[309] In this sense, a problem can be seen in the lack of a clearly defined secular public opinion— the debate in countries like Bulgaria runs along the lines of the grey area of "tradition" in which everyone applies whatever he wants.

Unlike Communist regimes, the societies of Western Europe have experienced a gradual process of secularization. The result of this “natural secularization” is the presence of secular public opinion which is strong, active and that has a clear identity, which influences the state and which is opposed to the existing strong and clear identity of religious public opinion, even to the extent that in some countries it has become a minority, which also requires the state to ensure their rights. In this context, the state is trying to regulate the relationship between religious and secular communities, the manifestation of which is the legal battles over the place of Christian symbolism in the public domain. However, the state neither can nor wants to somehow regulate the conscience of its citizens by imposing one or another view of the world, in so far that this does not prejudice other community groups. In this sense, whether people like it or not, Christians in Western Europe are part of a competitive social environment, seeking for the state attention and rights. It is highly likely that with the fall of Communism and the democratization of the societies of Eastern Europe, the differences in experience between “old” and “new” Europe are decreasing.

This does not alter the fact that today the differences between Eastern and Western Europe remain relatively large, and that the problems faced by Christians in both parts of the continent are quite different. The attempts to submerge these differences under a common denominator are actually a disguised attempt to “normalize” the Communist regime, showing it as producing identical results with the democratic regimes in Western Europe. This argument may sound strong and assist in achieving a fleeting success, but is insufficient for the long-term protection of the Christian identity.

** Chapter 5: Caesar and God in the Public Sphere

Religious and Secular Discourse in Post-Atheist Bulgaria

Daniela Kalkandjieva

Abstract

On 10 November 1989, the removal of Todor Zhivkov from the state and party leadership in Bulgaria marked the end of its Communist regime. In the religious sphere, the political change shook the decades-old monopoly of militant atheism, thus creating conditions for a return of religion to the public square. Among other things, this process stimulated a restitution of buildings and real estate which the Communist regime had taken away from religious communities. A set of laws adopted in the early 1990s instigated the mass return of arable lands, forests, industries as well as office and residential buildings to physical persons and judicial entities. Being major landholders before the Communist rule, the Bulgarian Orthodox Church and the Muslim community benefited the most from this process.

In 2012, the restitution of the economically valuable tangible assets to religious denominations was over. Regarded as part of the restoration of historical justice, this process was generally welcomed by society in post-Communist Bulgaria. In 2013, however, people opposed the attempts of some political forces to spread the restitution over religious edifices ‘nationalized’ by the former totalitarian regime under the pretext of their preservation as monuments of national history and world cultural heritage. In this regard, Bulgarians faced difficulties that many contemporary secular societies have experienced in dealing with their religious cultural heritage. As this heritage bears special cultural and historical value for both the public and the sacred realms, the questions of its ownership and management often provoke tensions and conflicts between the corresponding religious institutions and the state authorities. In the case of post-atheist countries, this process is additionally complicated by the legacy of the totalitarian past. By presenting the debate of Bulgarian society over its religious cultural heritage, the chapter sheds light on this particular national case.

Keywords

religious-secular divide — Bulgarian Orthodox Church — Chief Muftiship in Bulgaria — religious property restitution — religious cultural heritage in post-atheist societies

---

On 10 November 1989, the removal of Todor Zhivkov from the state and party leadership in Bulgaria marked the end of its Communist regime.[310] In the religious sphere, the political change shook the decades-old monopoly of militant atheism and created conditions for a return of religion on the public square. Among the other things, this process stimulated a restitution of buildings and real estate that the Communist regime had taken away from religious communities. A set of laws, adopted in the early 1990s, facilitated a massive return of arable lands, forests, and industries as well as office and residential buildings to physical persons and judicial entities. Major landholders before the Communist rule, the Bulgarian Orthodox Church (boc) and the institutionalized Muslim community benefited the most from the restitution. According to some sources, by the end of 2012, i.e., when the restitution was over, the Orthodox Church received back 120,000 hectares of arable lands and forests, and

the Muslim institutions—80,000 hectares.[311] Altogether, these Muslim and Christian institutions repossessed 5 per cent of the agricultural area of Bulgaria.[312] In parallel, the same religious organizations had their property rights restored to many office and residential buildings, excluding churches and mosques. Until today, however, there is no register of the restituted tangible assets. Nor is there official information about their value. Attempts to estimate are additionally impeded by the lack of official data about the taxes paid by the Orthodox and the Muslim administrations for their properties, both the newly restored and those previously owned. For that reason, different authors give divergent figures.[313]

In the process of restitution, no objections were made to the property rights of religious denominations on the grounds of the constitutional principle of church-state separation (1991 Constitution, Article 13 §2). Instead, the attention of society was focused on the internal struggles and divisions within the Orthodox and Muslim leaderships which erupted with the start of the restitution in the spring of 1992. In the second case, these struggles did not last long. In the case of Muslims in Bulgaria, their close association with one political party—the Movement for Rights and Freedoms, regarded as a natural defender of their liberties after the fall of Communism—helped the Muslim institutions to avoid an additional politicization of internal conflicts and to achieve a unified leadership in 1997.[314]

The Orthodox Church, for its part, needed more time to do the same. In 1992, its supreme spiritual leadership split into two rival bodies: the Synod of Patriarch Maxim and the so-called Alternate Synod. The involvement of external factors in the schism increased its negative effect. If the Alternate Synod was created with the assistance of the Union of Democratic Forces,[315] Maxim’s Synod received the support of the Bulgarian Socialist Party. Correspondingly, the restitution of church properties followed the zigzags of the Bulgarian political life, i.e., the former benefited from it during the rule of democrats, while the latter thrived when socialists were in power. As a result, it was not clear, which synod had legitimate rights over the boc’s properties. A way out from this vicious circle was suggested by the centrist government of Simeon Saxecoburgotski (2001–2005), the former Bulgarian king. In the end of 2002, it supported the adoption of a new Denominations Act that recognized the Synod of Patriarch Maxim as the legitimate representative of the Bulgarian Orthodox Church. Then, in 2004, on the grounds of this law, all properties of the Alternate Synod were confiscated by the State and entrusted to the church administration of Patriarch Maxim.[316] The attempts of the former to get back the lost material resources failed and in 2012 it ceased to exist.

Under the new conditions, public attention was focused mainly on cases of misuse of restituted property assets by metropolitans from Maxim’s Synod. Still, there were no objections to the boc’s right to return back its property taken away by the Communists. In the case of the Muslim community, some reserves were expressed. Most often they were provoked by the disproportion between its relatively small membership[317] and the size of owned lands. At the same time, the Holy Synod and the Chief Mufti were not satisfied by the restitution and after 2012 called for its continuation. In this regard, some Orthodox hierarchs pretended that 25 per cent of the church lands had not been returned.[318] In parallel, the Chief Mufti filed 52 lawsuits for 83 waqfs[319]- properties.[320] Their list

includes not only the mosques and the other buildings that are used for religious services, rituals and education, but also purely secular objects.[321]

*** 1. A New Wave of Restitution

In 2012, the restitution of economically valuable tangible assets such as arable lands, forests, and office buildings was over. Yet, the interest of religious denominations in this process did not disappear. Now, however, it is concentrated on religious edifices confiscated by the former totalitarian regime under the pretext of their preservation as monuments of national history and world cultural heritage. This new wave of restitution entails a twofold challenge. On the one hand, Bulgarians share the same difficulties that the contemporary secular societies experience in dealing with religious cultural heritage. As the religious sites and items are “interlinked with both Ius publicum and Ius sacrum, the issue of their protection and management can be a potential source of (practical and legal) disputes between heritage stakeholders, i.e., the competent State authorities and the relevant religious institutions.”[322] On the other hand, the restitution of religious edifices is additionally complicated by the legacy of the totalitarian past.

In their pursuit to build an atheist society, the Communists encroached upon the right of religious denominations to own and manage their places of worship. In contrast to the interwar Bolshevik practice of destroying them, however, the Bulgarian rulers used softer methods. In fact, they destroyed only few churches and prayer houses. Moreover, these acts were not presented as fight against religion. Instead of ideological arguments, this postwar generation of Communist rules advanced legally justifiable social motives, i.e., the destruction of religious edifices was deemed necessary due to such reasons as their compromised construction, corrections in the city plans, and the building of new roads. In case of mosques, the Communist regime destroyed mostly their minarets. Therefore, after 1989 the renovation of Muslim prayer houses was almost always accompanied with the erection of minarets.[323] In parallel, some monasteries were transformed into social institutions, e.g., sanatoria or madhouses. This practice was especially popular in the first postwar decade.

In the 1960s, the Communist regime launched a systematic nationalization of monasteries and churches under the pretext of their value as monuments of culture.[324] In this way, the state reduced the places of worship without being accused of suppressing the freedom of religion. Indeed, some of the nationalized sacred edifices needed special care, while the corresponding religious institutions were not able to provide it due to the shortage of finances and lack of cadres with the corresponding professional skills. At the same time, under the pretext of care for the historical and cultural heritage, the atheist regime achieved a multifold goal: it ceased the religious services in many churches, monasteries, and mosques; turned them into state property; and used this cultural heritage for polishing its image abroad by the means of various exhibitions.[325]

In this regard, the most shocking one was the case of the Rila Monastery. In October 1961, the Council of Ministers issued a special decree for its nationalization and transformation into a regional museum. As a result, the monk brotherhood was dismissed and no religious services were held there. The situation changed in 1967, when, under the pressure of international public opinion, the Bulgarian Communist Party allowed the establishment of a small monastic community and the performance of restricted religious activities.[326] Correspondingly, after the fall of Communism in 1992, the Union of Democratic Forces restituted the property to the Rila Monastery in an attempt to revive this most prominent site of worship and pilgrimage for Orthodox Bulgarians. In general, however, the fall of Communism did not bring about a change in the ownership of religious sites that had been transformed into state museums before 1989.

In recent years, the Bulgarian Orthodox Church filed many lawsuits to restore its control over such religious museums. The Chief Mufti did the same for 13 mosques which have the status of monuments of culture.[327] At the same time, there are cases where state ownership seems a better option. On the one hand, a restoration of the religious activities in some instances would endanger their cultural value, e.g., the preservation of centuries-old frescoes requires the maintenance of certain levels of humidity, temperature, and light. One of these examples is the famous Boyana Church, declared by unesco part of the world cultural heritage. On the other hand, the administrations of the religious denominations are not prepared to take care of such museums. This task requires not only enormous financial resources, but also professionally trained staff, such as restorers, archivists, and librarians. In this regard, there are a number of cases when the renovation of churches initiated by clergy ended with damages to valuable objects of religious art, e.g., the old frescoes in St. Marina Church in Plovdiv were destroyed when new paper-printed ones were glued on them.[328]

The most intensive debates, however, were provoked by the case of St. Alexander Nevski Patriarchal Cathedral in Sofia. The decision for its construction was taken immediately after the Liberation of Bulgaria by the Constituent Assembly in Veliko Tarnovo (1879). According to that decision, this had to be a memorial church dedicated to the saint-patron of the Russian emperor Alexander ii, then esteemed as the Liberator of Bulgaria.[329] Built on donations from Bulgarian people and state subsidies the temple was considered to belong to the whole nation. Yet, the public value and the religious nature of this monument provoked different attitudes to it among the state and church authorities. While the government included the adjective “allnational” [vsenaroden in Bulgarian] in the official name of the new temple, the Holy Synod placed the emphasis on its ecclesiastical status. The boc’s Holy Synod stressed that the cathedral could not serve as a parochial church, but deserved a stavropegial status.[330] In correspondence to this status, St. Alexander Nevski Cathedral was placed under the direct supervision of the Holy Synod, and not under the supervision of the Metropolitan of Sofia in whose diocese it was situated.[331]

In 1924, this status was additionally confirmed by the Synodic Regulations on the Management of the Stavropegial Memorial Church St. Alexander Nevski.[332] At the same time, they leave no doubt about the public character of the cathedral. The Regulations

allowed only public religious services there, while strongly forbidding the performance of any private services and sacraments (Article 9). They also envisioned the participation of a state representative in the cathedral’s board (Article 5). In a similar way, the financial costs of this memorial church had to be covered by own revenues as well as by annual state subsidies (Article 7). This mixture of civil belonging to the Bulgarian nation with a religiously motivated stavropegial status of the cathedral did not raise questions under the Tarnovo Constitution (18791946). On the one hand, the constitutional status of Eastern Orthodoxy as the dominating religion in the Bulgarian Kingdom (Article 37) made the property issue irrelevant or at least diminished its significance. On the other hand, the Tarnovo Constitution stipulated that, in the sphere of ecclesiastical affairs, the Bulgarian Kingdom was subjected to the boc’s Holy Synod (Article 39).

Meanwhile, none of the currently available documents provides information about the ownership status of the cathedral before the Communist takeover. Moreover, luckily avoiding the nationalization campaigns of the former atheist regime, the St. Alexander Nevski Church has not become a subject of restitution. Correspondingly, it used to be treated as state public property, e.g., the gilding of its domes in 1955 and 2002 was paid from the state budget. In 2012, on the eve of the 100th anniversary from the construction of the cathedral, however, the Holy Synod raised the question of its property. A year later, the Holy Synod officially referred to the state authorities with a request this “symbol of the autocephalous Bulgarian Patriarchate” to be placed under the ownership of the Orthodox Church.[333] In October 2014, the Council of Ministers transferred the property right over the St. Alexander Nevski Cathedral to the Bulgarian Orthodox Church.[334]

*** 2. Towards a Revision of the Religious Denominations Act

An analysis on the recent debates on the legal possession of religious edifices reveals that the interest in this issue appeared in the moment when Bulgarian secular and religious institutions received opportunity to use European funding for their reconstruction. The first steps in this direction were made in the end of 2011, when four village churches were renovated within the framework the Rural Development Program of the European Commission.[335] Simultaneously, a joint committee with the participation of representatives of the state, the Holy Synod of the Bulgarian Orthodox Church and the Chief Mufti of the Muslim community was set up with the task to prepare applications for the European programs for the period 2014–2020.[336] Without a clear ownership status, however, no religious site was eligible for European funding. Meanwhile, the two main religious communities in Bulgaria—the Orthodox Christian and the Muslim, lacked property certificates for many churches and mosques.

To solve this issue in July 2013, a group of deputies from the 42nd Bulgarian Parliament (May 2013—August 2014) proposed a revision of the Religious Denominations Act, which had to settle the status of religious edifices that lacked certificates of property.[337] The envisioned amendments also had to guarantee the rights of registered religious

denominations over their places of wor- ship.[338] More specifically, the draft law proposed a new paragraph to be added to the “Transitory and Closing Regulations” of the Religious Denominations Act. It reads: “the monasteries, churches, and prayer houses that have existed by the time of enforcement of this law and that have been designated as places of worship, together with the plots on which they are built, are property of the Bulgarian Orthodox Church—Bulgarian Patriarchate or correspondingly to other registered religious denominations and their local branches.”[339] This rule was not valid, if the religious objects were used or had been used for nonreligious ends.

The proposed changes were justified by principles and norms embedded in European and Bulgarian national legislation. The first of them is Article 10 of the European Charter of Fundamental Rights[340] (which is consistent with Article 9 of the European Convention on Human Rights).[341] The second group includes guarantees of the freedom of religion embedded in the Bulgarian Constitution:

The practicing of any religion shall be unrestricted (Art. 13.1);

The freedom of conscience, the freedom of thought and the choice of religion and of religious or atheist views shall be inviolable. The State shall assist the maintenance of tolerance and respect among believers from different denominations, and among believers and non-believers (Art. 37.1).[342]

The initiators of the legal innovations also referred to the separation of the religious institutions from the state (Constitution, Art. 13.2; Denominations Act, Art. 4.1) and the autonomy of the former (Denominations Act, Article 4.2) in national legislation.[343] According to them, these principles required the elaboration of additional legal norms which to arrange the ownership of religious institutions over their places of worship. Besides, they considered that the immovable and movable assets that served the purposes of liturgy and worship were functionally linked with and of essential importance for the exercise of the right of freedom of religion.[344]

In this regard, the authors of the draft law pointed to cases when religious communities lacked certificates of ownership. Indeed, many such documents were destroyed or disappeared during the years of Communist rule. At the same time, although the religious denominations received an opportunity to solve this problem after 1989, they showed little enthusiasm about it. According to the initiators of the discussed amendments, the reason rooted in the fees and payments for these procedures, which “exceeded the financial resources of the religious denominations.”[345] Therefore, they suggested a solution based on Article 25.1 of the Religious Denominations Act. According to it, the state is allowed to grant financial and economic allowances to registered religious denominations (which then counted about 130).[346] Correspondingly, the draft law envisioned the certificates of ownership for churches, monasteries, and prayer houses to be issued for free.

Finally, the draft law foresaw parallel amendments in the Civil Procedure Code, the Law of Local Taxes and Fees and the Law of State Taxes. All of them planned to exempt the churches, monasteries, and prayer houses from any taxes, fees and financial debts.[347] The adoption of this text would be especially beneficial to the Orthodox Church and the Muslim community which central and local administrations have not paid their garbage fees for years.[348] In 2013, St. Alexander Nevski Patriarchal Cathedral in Sofia owed annual garbage taxes of over 200,000 Euro[349] and the grand mosque—about 225,000 Euro.[350] At the same time, some religious leaders openly refused to spend money on this purpose. In 2015, Nikolay, the Metropolitan Bishop of Plovdiv, appealed to the city churches not to pay off their municipal debts.[351] In contrast, the smaller religious denominations used to pay their taxes on a regular basis.

Furthermore, the initiators of the amendments stated that the creation of favorable conditions for the restoration, arrangement, and exercise of the rights to possession of monasteries, churches, and prayer houses were “an indirect act of fulfilment” of Article 10 of the European Charter of Fundamental Rights and the Bulgarian Constitution, i.e., they would provide material support for the right of worship.[352] When approached from a broader perspective, however, the proposed full-scale exemption of religious denominations from the state and local taxes and fees raises questions. On the one hand, there has been no such exemption before the Communist rule. Moreover, the proceedings of the Holy Synod from those times bear witness that the Holy Synod as well as the Orthodox metropolitanates, monasteries, and parochial churches used to pay municipal waste taxes. On the other hand, if adopted, the proposed act will discriminate those non-profit public structures, which are not engaged in religious activities.

Another key motive for the proposed legal changes stemmed from the definition of churches, monasteries, and prayer houses as a special category of immovable property. Once consecrated these buildings become res sacrae, i.e., things dedicated to God. According to the authors of the draft law, this quality of religious edifices requires their exclusion from the civil realm. Consequently, their protection needs to be carried out by legal mechanisms which differ from those used in the case of the non-religious subjects of private law.[353] The same was considered also valid to such movable objects as holy antimensions, sacred vessels, and relics. This approach, however, also raises serious questions. First, it is not clear to what degree the ancient concept of res sacrae is compatible with the contemporary notions of sacred and secular. According to David Wagschal, “a modern legal-doctrinal exposition of the distinction between the civil and ecclesiastical laws seems neither present, nor possible.”[354] The competence of contemporary secular bodies to define one or another object as religious or non-religious is also questionable. Furthermore, the proposed approach is far from the contemporary European practices in the field of religious cultural heritage. In the case of those res sacrae that “are deemed to be of national (or international) importance, ... are protected for enjoyment and public access as integral parts of a wider heritage works.”[355] In this sense, they also belong to Ius publicum and thus are treated as res mixtae, i.e., they not only serve religious worship and but also a greater

public interest. In this way, the model of res mixtae opens a space where the protection of specific rights of religious communities can be balanced with the general welfare at national and international level. From this perspective, the State, together with religious communities, bears responsibility for the proper handling of religious heritage assets.[356] At the same time, there is no direct relationship between the mode of ownership of religious cultural heritage and the autonomy of religious denominations. If the property rights over the old historical cathedrals in France belong to the state, in the United Kingdom they are placed under the ownership of religious communities.[357]

From a strictly religious point, the concept of res sacrae, as defined by the authors of the draft law, may also provoke problems. It is unclear whether such an approach is equally applicable to all religious denominations. Some faith communities do not need special edifices for their worship but use private houses or simply rent the necessary premises. Finally, the historical experience of the Orthodox Church worldwide as well as of its Bulgarian branch does not give grounds for the proposed exclusion of res sacred from the secular/civil realm. In this regard, the medieval history of Byzantium, Serbia, and Bulgaria keeps well-documented evidence of churches and chapels, owned by lay members of aristocracy, e.g., the famous Boyana Church near Sofia.

Another practice that became especially popular in the tenth century was the so called haristikia. It served as a mechanism for avoiding the bankruptcy of monasteries by placing their properties under the protection of lay digni- taries.[358] At the same time, there were also modes of private ownership during the centuries of the Ottoman rule when the Orthodox guilds sponsored the construction of churches dedicated to specific patron-saints and owned these sites, e.g., St. Petka Samardzhiyska Church in Sofia. Some Muslim sultans also referred to this tradition. For example, in 1849, Abdulmecid i (1839–1861) proclaimed the prominent Iron Church of St. Stefan in Istanbul as a property of the local Bulgarian community.[359] In short, it seems that the quality of res sacrae has not presupposed an exclusive ownership of the Orthodox Church over religious edifices, but rather delegated special rights to its clergy to perform religious services there and to organize the religious life of the local religious community in accordance with Orthodoxy’s teaching, dogmas and canons.

Furthermore, the authors of the draft law claimed that the proposed changes addressed future eventualities. According to them, the exclusive property right of religious denominations over the buildings designed to serve and used as their places of worship was the only way to prevent such acts of sacrilege as the selling of temples.[360] For this reason, the primary goal of the discussed amendments was to make the property rights of religious denominations imprescriptible, i.e., nobody else except for the registered religious denominations had the right to own churches, monasteries, and prayer houses.[361] Meanwhile, the authors of the motives did not present any evidence in support of their thesis. Instead, they preferred to refer to cases of monasteries and churches without certificates of ownership and thus declared as state or municipal property. In their view, these acts give green light to a mass “occupancy” of religious edifices without clear ownership status.

The proposed approach, however, is debatable. In fact, it does not make any difference between the contemporary “nationalization/municipalization” of religious sites and the Communist policy of their confiscation. In contrast to the latter, which primary goal was entirely to eradicate religion, the former does not present an attack against the freedom of religion. On the contrary, it provides cure for the complicated ownership situation created as a result of the five decades of atheist rule. In fact, the post-1989 acts of nationalization/ municipalization offer an effective way to rescue abandoned religious sites with unclear ownership status. On the one hand, they offer a mechanism to avoid the time consuming procedures for the arrangement of their ownership status. This is especially important in the case of old churches and mosques endangered to pull down. On the other hand, the same nationalization/munic- ipalization provides legal grounds for the state and municipal authorities to allocate money for their reconstruction. In addition, the declaration of a religious edifice as national or municipal property is not an irreversible act. The restoration or renovation of religious sites on money from the national or municipal budget does not prevent their transfer to the corresponding religious communities. In this case, the change of ownership can be promulgated by a special law, an administrative act, or by a court judgment.

Finally, the motives to the draft law raise questions about the retroactive effect of the proposed amendments. According to their authors, the adoption of the draft law would demonstrate that “the State de jure recognizes a genuine status of the temples, monasteries and prayer houses, many of which have existed before the [establishment] of the contemporary Bulgarian State [in 1878].” They even referred to the Middle Ages, arguing that “part of the properties of the Bulgarian Orthodox Church have been granted by special acts [hrisovul] of the Bulgarian medieval tsars.”[362] It means that the retroactive effect of the discussed amendments is spread over a period which starts with the baptism of Bulgaria in 864. Such an approach sounds unrealistic, counterproductive, and far from historical truth. In particular, it suggests that the Bulgarian Orthodox Church has never ceased to exist, thus never losing its ownership. Such a hypothesis, however, can be easily refuted on historical grounds. For example, the stavropegial Bachkovo monastery, currently owned by the Bulgarian Church, was set up under the auspices of the Patriarchate of Constantinople in 1083. At the same time, many churches and monasteries that today are the boc’s property used to belong to the Patriarchate of Constantinople until the late nineteenth century. In addition, there are also cases of conversion of Orthodox churches into mosques during the centuries of Ottoman rule. After the liberation of Bulgaria (1878) some of them were transformed again into Orthodox temples (1878), e.g., the churches of St. Sophia and St. Sedmochislenitsi in Sofia, or became secular public buildings, e.g., the Bulgarian national archaeological museum.

The most striking feature of the discussed motives is the absence of any reference to the previous totalitarian regime which bears primary responsibility for the current chaos in the ownership status of religious sites in Bulgaria.[363] In fact, their nationalization under the pretext of being preserved as part of Bulgarian historical and cultural heritage was a Communist invention. While in the 1960s and 1970s this campaign targeted religious

edifices, in the 1980s, it gave priority to sacred vessels, holy relics, and icons. As a result, many of them were appropriated by state and regional museums and today continue to be part of their exhibitions.[364] In this regard, it is worthy to mention that the status of religious cultural heritage provoked the most heated debates in Bulgarian society. This discussion also revealed the failure of the authors of the draft law to take into account key issues connected with the non-Orthodox religious communities (primarily Muslims, Jews, and Catholics).

*** 3. The Ownership Debate

The ownership of religious communities over their sacred buildings and prayer houses provoked heated public debates in Bulgaria. Initially concentrated on the boc's properties, they also concerned the restitution of building that used to function as mosques before the Liberation of Bulgaria in 1878.[365] The draft law was warmly welcomed by the leaderships of religious communities. Especially enthusiastic was the boc's Holy Synod, which issued a special statement on this occasion on 22 July 2013.[366] The document stressed the unanimity of the initiators of the legal change, who despite their belonging to different political parties, had acted in tune with Jesus Christ's words: "For where two or three come together in my name, there am I with them" (Matt. 18:20). Such an association, however, is confusing, because it is inappropriate in the case of the Muslim deputies who were co-authors of the draft law.

The Holy Synod's statement reveals deep concern over the ownership of Orthodox churches and monasteries. It points out that these "sacred edifices" have to be open for everybody who searches to pray or serve God and thus they cannot be used for anything else, but for religious services only. In the same document, the Holy Synod also admits that Orthodox religious sites may have had a cultural value. In its view, "the Bulgarian Orthodox Church has always had an understanding that there are some state legal requirements for the architectural appearance of temples with a cultural value which have to be respected." Yet, the Orthodox hierarchs insist that these religious sites have not obtained a cultural value by the means of formal state acts, but had been created as such. According to them, "the status and treatment of some of our [boc's] temples as 'cultural valuables' has no connection with and no influence on the exceptional, centuries long property rights of the Church over them as an institution and organization of believers."[367] Furthermore, the Orthodox hierarchs claim that the Bulgarian Church has preserved these temples without any certificates and has taken care of them long time before the state has started doing it.

In fact, the above discussed statement repeats a view, expressed earlier by Patriarch Neophyte in an interview for Bulgarian media. There, he stressed that temples have been built as houses of God and their present functioning as museums or tourist attractions is of secondary importance.[368] Following this reasoning, the Holy Synod also argues that secular law stems from the Divine one and thus the latter has priority over the former. In this regard, the metropolitans have admitted with sorrow that the contemporary world tends to

deviate from this principle. Still, the Holy Synod accepts that churchmen bare responsibility to God in all religious matters, while respecting civil legislation in the rest. In the end of its statement, the Holy Synod declares that the Church has always given what is Caesar's to Caesar and that the time has come "to be seen whether the Caesar is ready to give to God what is God's." (Matt. 22:21).

Quite similar was the position of the jurist, Borislav Tsekov, a former mp and author of the 2002 Religious Denominations Act. According to him, "the temple belongs to God and serves Him, and not to society, archaeologists, academics or donors. Only the corresponding religious community has the right to possess this property, with or without certificate of ownership."[369] In his view, the Church must get back also those temples that have been declared monuments of culture. In this case, however, it is obliged strictly to observe the restrictions aimed to secure their preservation. At the same time, Tsekov considers that religious denominations should pay taxes for their temples, but only after having the necessary property certificates.

On 17 and 18 July 2013, the draft law was approved by the parliamentary Committee on Legal Affairs and the Committee on Religious Denominations and Parliamentary Ethics.[370] Few days later, however, the representatives of the parliamentary group of the extreme nationalist party, "Ataka," changed its attitude to the draft law. They continued to support it only as a means for solving the problem with the boc's ownership rights over the St. Alexander Nevski Cathedral, but were against the possible benefits of the Muslim and Jewish communities. Ataka opposed to the claims of the Chief Mufti to religious buildings from the Ottoman times which have functioned as museums since the nineteenth century. Such is the case of the National Archaeological Museum in Sofia, which has ceased to function as mosque after the two earthquakes in 1818 and 1858, i.e., during the Ottoman rule.[371] In their turn, Ataka required a ban of the restitution of formerly religious buildings which now have the status of monuments of culture.[372] In this regard, they pointed that religious denominations lack experts in maintaining monuments of culture. In addition, they also argued that the performance of religious services in such religious sites would endanger their cultural value, thus causing their exclusion from the unesco's list of the world cultural heritage.[373] The draft law was also questioned by the vmro.[374] According to this nationalist political organization, the proposed amendments would open the doors for radical Islam. Therefore, it also called its revision, especially in regard to the non-Orthodox registered religious denominations.[375]

Some of these arguments left their imprint on the decision of the Parliamentary Committee on Culture and Media. During its meeting on 24 July meeting, none of its members agree the draft law to be put forward for voting in parliament.[376] Looking for a compromise, the Chairman of the Parliament proposed the disputable religious monuments of culture to be included in a special category as a guarantee that this historical heritage will be protected.[377] On this occasion, Hussein Havuzov, then a deputy from the Movement for Rights and Freedoms and a former Chief Secretary to the Office of Chief Mufti, commented that though he personally does not insist on the return of the property rights over the building of the National Archaeological Museum to the Muslim community, the very fact that this former

mosque does not belong to this community is unjust. In his opinion, Muslims feel disgrace when hearing that alcohol has been served during cocktails there. In this regard, he has suggested a compromise: the Muslim community will not claim property rights over former mosques as the National Archaeological Museum and the Seven Saints Church [St. Sedmochislenitsi], if permitted to build a second mosque in Sofia in exchange.[378] In another interview, he emphasizes that the refusal to recognize the property rights of religious denominations over buildings of their faith is a violation of the will of donors.[379]

On 5 August 2013, the Bulgarian Academy of Science also protested against the draft law. On behalf of his colleagues, its Chairman, academician Stefan Vodenicharov, sent a letter of protest to the Parliament. The document criticizes the use of the criterion “designated for liturgy/religious services” as a means of determining which buildings have to become property of one or another religious denomination.[380] According to the scholars, the purpose for which a building has been constructed cannot justify a title of ownership of “prayer houses” which have lost their initial designation long time ago and today are functioning as museums or galleries, for example. In this way, scholars, tend entirely to neglect the res sacrae quality of religious edifices and vessels. At the same time, they point to multiple medieval temples which have been discovered in archaeological excavations, organized and financed by the state, that need special care and expertise to be preserved for the next generations. Moreover, some of them used to serve various religious cults throughout the centuries, e.g., the Museum of Religions in the city of Stara Zagora is situated in a building which used to serve as a temple by the ancient Thracians, then as a Christian church, further converted into mosque during the Ottoman rule. From such a perspective, the proposed amendments do not offer clear criteria which religious denomination is entitled to own such buildings. Furthermore, the academic community raised the question about the destiny of religious valuables such as the medieval ceramic icon of St. Theodor of Patleyna, found in archaeological excavations and restored on state money. In this regard, it refers to the practice of the Bulgarian Constitutional Court which considers that “in the case of cultural movable and immovable valuables the property rights cannot be treated on a common basis, as they concern the realization of the cultural rights of every citizen and they are guaranteed by the State’s duty to take care of the preservation of cultural heritage which stem from public law.”

Many journalists also supported the position of scholars. In fact, Bulgarian media have been active in drawing public opinion to cases of mismanagement of religious cultural heritage. Thanks to journalistic investigations, society is well informed about the damages which clerics have caused to churches with the status of monuments of culture due to the lack of competence in the preservation of cultural heritage. The most scandalous case was the reconstruction of St. Marina church in Plovdiv where seventeenth century frescoes were destroyed as a result of the decision of the local metropolitan to stick the temple walls with paper-printed frescoes.[381] The opponents of the draft law also reminded the inability of the Bulgarian Orthodox Church to protect its old icons many of which were stolen and sold on the black market in the last years.[382] The archaeologist Todor Chobanov, a former Vice-Minister of Culture, pointed that this Church had been set up by the state and defined as nonsense the Holy Synod’s attempt to refute any property rights of the state over churches.[383]

Not less important are the financial arguments against the proposed amendments of the Religious Denominations Act. It is a public secret that the Orthodox Church has insufficient resources to maintain and reconstruct its places of worship. In this regard, the National Alliance of Municipalities warned that the change of the ownership status of some churches which have been reconstructed on European funding will break clauses in concluded contracts and probably they have to return the money. In addition, they are concerned that the tax exemption of religious denominations will reduce their incomes and some pseudo-religious structures will be set up to avoid the payment of local taxes and fees.[384] In parallel, it was estimated that the vote for the draft bill will deprive the Ministry of Culture of an income of 350,000 Euro which is paid by the visitors of museums situated in former or present places of worship.[385] Some publications also accused the Orthodox hierarchs of being greedy.[386] As a result, the draft law was not voted by the parliament. Meanwhile, the destiny of religious edifices that have not remained under state ownership continue to provoke tensions in Bulgarian society. The decision of the Council of Ministers to transfer the St. Alexander Nevski Patriarchal Cathedral to the Bulgarian Orthodox Church, taken in October 2014, is contested as unlawful in the Supreme Administrative Court of Bulgaria in 2015.[387]

*** 4. Conclusions

The ownership of places of worship remains a sensitive and extremely complicated issue in former socialist societies dominated by state-imposed atheism. The Bulgarian public debate reveals several problems. The first stems from the view that religion (religion in general) was a major victim of the Communist rule and its militant atheism. From such a perspective the arrangement of the property rights of religious communities over their places of worship is considered to be an act of a retroactive justice. Another group of problems concerns the implementation of the principle of separation of religion/church and state. On the one hand, society tends to give priority to res publicae over res sacrae in cases of churches and prayer houses that have acquired the quality of monument of culture. On the other hand, the theological understanding of “what is God’s” tends to absorb the whole public sphere, especially in the case of places of worship. All this points to the lack of an agreement in Bulgarian society whether and to what a degree the sacred is part of the contemporary public sphere.

The next set of problems, which seems to have special importance in Southeastern European countries with religiously mixed population, has been provoked the interplay between the religious and the national and reflects a rivalry between religious leaderships for their shares in the public sphere. In Bulgaria, this rivalry inspires a strong opposition of religious and secular nationalists (both of Orthodox background) against the claims pretensions of religious minorities to owe buildings where their adherents used to pray in the past. This resistance is especially strong in the case of Islam due to the erection of multiple minarets which quickly changed the country’s religious landscape. Instead of entrenching an interreligious partnership, this development tends to evoke associations with the centuries

of Ottoman rule which assist the spread of nationalist claims about a re-Islamization of Bulgaria.

Furthermore, the debate on the property of religious denominations reveals tensions between the theologically motivated instruction “to render God what is God’s” and the human rights’ principle of freedom of religion and conscience. To reconcile them in a religiously non-homogenous society as the Bulgarian one means to elaborate a mode of distribution which balances the interests of the different religious communities. Sometimes, however, it seems impossible to avoid arbitrary solutions, e.g., when a place of worship used to serve different religions. From such a perspective, the allocation of annual state subsidies to religious communities seems more promising. In 2013, these communities received 1.5 million Euros (10 percent of this amount is for the reconstruction of religious buildings). According to the preliminary budget, the Bulgarian Orthodox Church has to receive €830,000 for its domestic needs and €350,000 for the salaries of its clergy abroad, the Muslim community—€90,000, the Armenian community—€20,000, and the Jewish community—€15,000. Meanwhile, until 2014, the Catholic Church did not receive any financial support from the state budget.[388] At the same time, the most recent amendments of the Law on Local Taxes and Fees that exempts the churches and other places of worship from such duties put under question the need for state subsidies to religious denominations in the future.[389]

Finally, the property right over churches and prayer houses turns to be not only a theologically relevant issue, but also one of economic significance. On the one hand, as tangible assets these properties need to be maintained and this costs money. In this regard, the two major religious communities in Bulgaria, the Orthodox and the Muslim, rely on European and national funding as well as on private donors. Their religious leaderships, however, tend to omit the rule “to render the Caesar what is Caesar’s” which resulted in lawsuits filed against their representatives by municipalities. On the other hand, although the places of worships are non-profit entities they still receive incomes from selling religious items and candles, performed rites and rituals, voluntary donations, etc. Currently, however, they do not keep, at least officially, any record of their revenues. In fact, this makes a big difference in comparison with the pre-Communist practice when the Bulgarian Orthodox Church maintained bookkeeping at all levels of its ecclesiastical administration, i.e., it was done by every parish, every diocese, every monastery and the Holy Synod. Even St. Alexander Nevski Cathedral, the ownership status of which is an object of heated debates, kept strict balance of its revenues (from own sources and state subsidies) and all expenses. In this regard, it seems that the pre-Communist past offers useful models of financial and social accountability of religious denominations that may provide solutions for the present dilemma how to proceed with the things of Caesar and the things of God in the public square.

** Chapter 6: The Hijab in Contemporary Bulgaria

Muslim Views on Veiling

Galina Evstatieva

Abstract

Muslims in Bulgaria—male and female—struggle over the “authentic” meaning of hijab against the backdrop of modern secular society by explaining it as a religious duty. My aim is to reveal the role of major Sunni Muslim views on hijab as part of the ongoing broader process shaping a shared Islamic identity in post-Communist Bulgaria. The chapter traces its multiple meanings among interpretations proposed by Sunni religious authorities, domestic cultural codes, and the perceptions of veiling by Bulgarian Muslim women themselves. The

study analyzes two types of evidence. First, it brings to the fore the discourses as documented by two periodicals with the same name, issued by the Chief Muftiship of the Muslim Denomination in the Republic of Bulgaria—the newspaper and the more recent bilingual magazine Myusyulmani/ Muslumanlar (“Muslims”), issued simultaneously in both Bulgarian and Turkish. The examination of this magazine’s issues 1999–2016 indicates that nearly 20 percent of the articles deal with topics related to Muslim women, with one-third of the publications written by Muslim women or representing their opinions. The second type of evidence is ethnographic, drawing on fieldwork among Bulgarian Muslims in several localities of the Rhodopes Mountains. Finally, the chapter highlights attitudes toward the parliament’s passage of the 2016 Law Prohibiting the Wearing of Clothing Concealing the Face (known as the “burqa ban”). In sum, the study shows how Muslims are seeking to rediscover what they believe is the authentic meaning of hijab through a process of re-Islamization—a “piety movement” for stricter observance of Islamic rules. The need to return to “true” Islamic teachings is often publicly explained as a fundamental human right for practicing religion without state interference.

Keywords

Islam — Bulgaria — veiling — hijab — face veil — burqa — Muslim women — Pomaks

---

Bulgaria’s indigenous Muslim communities of ethnic Turks, Pomaks[390] (Bulgarianspeaking Muslims) and Roma date back to Ottoman times[391] and make up about 12 percent of the country’s 7.2 million population. In January 2009, a decade after the fall of the atheist Communist regime, the official periodical of the Chief Muftiship Myusyulmani (“Muslims”) issued a programmatic editorial on religious identity of Muslims in Bulgaria. The Muslim leadership declared that Bulgarian Muslims have “an Islamic and Turkish identity” while only from a “civil point of view, can one speak of a Bulgarian identity” though in recent years, the text states, Bulgarian Muslims have also obtained a “European identity.”[392] The Muftiship further specified that Muslims in Bulgaria are predominantly Sunni of the Hanafi madhhab and that there is only a small Alevi community. Such an announcement is part of the evidence that, along with the post-1989 transition to a democratic political system, Muslims in Bulgaria have been increasingly reviving their shared religious identity. The institution of the Muftiship claims to play the leading role in that process. Thus, Muslims invoke the normative Islamic teachings of public morality, including rules for proper Islamic veiling and clothing for women seeking to be “true believers.”

The public discourse of the Muslim leadership has been integral to promoting the Islamic concept of hijab and female modesty after decades of state- forced national modernization and what was pursued as an emancipation of the “socialist women.” Within that

“emancipation,” female Muslims were involved in a process of social engineering in which veiling was rejected and perceived as a form of a “reactionary” tradition. Yet it is an open question whether veiling represents an ongoing process in secular post-Communist Bulgarian society towards re-Islamization, “resuming” the authority of the shari’a in the everyday practices and public life of Muslim women through a return to a stricter adherence to Islamic norms. In so doing, I trace the polysemy of the Islamic concept of hijab on the basis of intersection between the interpretations by the Bulgarian Sunni religious authorities, domestic cultural codes, and the perceptions of veiling by Bulgarian Muslim women themselves.

My focus is on contemporary Islamic discourses of “proper” veiling and dress practices among Muslim women.

One source to follow the public debate comprises two periodicals with the same name issued by the Chief Muftiship of the Muslim Denomination in the Republic of Bulgaria—the newspaper and the above-mentioned magazine Myusyulmani. After the 1989 changes, the Muftiship launched its own newspaper (1999–2004), and in 2005 this official publication was replaced by the monthly bilingual magazine, Myusyulmani in Bulgarian and Muslumanlar in Turkish. From 1999 through 2016, nearly 20 percent of the articles dealt with topics related to Muslim women. Muslim women wrote one-third of the stories or their opinions were represented in the form of interviews. In general, the two publications are devoted to the teachings of Islam on women’s roles, duties and rights, the explanations of religious beliefs, practices, and the moral observance and behavior in accordance with the Islamic faith. However, the most frequently discussed topics are related to the appropriate Islamic covering, women’s public behavior, education, inheritance, the Muslim woman as a wife and mother, the right choice of a husband, or religiously acceptable woman’s work outside of the home. Those subjects are linked to the hijab, which illustrates the particular importance of this topic.

The second type of evidence is ethnographic and draws on field research among Bulgarian Muslims in several localities of the Rhodopes Mountains since 2003. Along with the observation of practices, this chapter is based on interviews and conversations with several representatives of younger Bulgarian-speaking Muslims, born in the early 1970s, who have received their Islamic education in Bulgaria or abroad in the Arab world. I focus on the Islamic views of two respondents active on the local and national level who articulated female and male Pomak views—Hatije Tiber and Muhammed Kamber.

Married with two daughters, Hatije lives in her native village of Avramovo, Blagoevgrad region, although the place is culturally and geographically closer to Velingrad. She wears hijab and modest attire. Hatije received a bachelor’s degree in Primary School Pedagogy from Blagoevgrad University and in 2005 graduated the Higher Islamic Institute in Sofia as an expert in Islamic theology. She also holds a master’s degree in Public Administration from Sofia University St. Kliment Ohridski. Between 2000 and 2007, Hatije worked as a teacher at

the primary school in Avramovo. Although she was an experienced teacher with extensive abilities and knowledge, after the relocation of that school she was asked to unveil if she wished to continue her career in the national publicschool system. Hatije refused to unveil. Now she is regularly engaged in her family’s agricultural work and teaches in the summer Qur’an school—a course organized for the children in her village.

Muhammed Kamber, for his part, graduated from the Islamic University of Medina in Saudi Arabia, where he studied for seven years. Since 2008, he has been imam in his native village of Luzhnitsa in the Gotze Delchev region of the South-Western Rhodopes. Kamber was among the defendants in “the trial against the thirteen imams” which after the pre-court investigation was carried out at the Pazardzhik District Court between 2012 and 2015. He was accused of propagating “antidemocratic ideology,” but the Plovdiv Court of Appeal discharged him from those accusations. During the lawsuit, Kamber received strong support from the people of his village, who were convinced of his innocence. In 2016, he was elected to the Supreme Muslim Council at the Chief Mufti’s Office. Both Hatije and Muhammed participate in various activities and seminars organized by the Muftiship. Hatije has contributed to Myusyulmani as a guest author. Since early 2017, Kamber has been a member of the editorial board of the highly read Myusyulmani magazine.

*** 1. Veiling as Public Performance of Faith according to the Mainstream Islamic Tradition

The religious justifications for veiling in its classical meaning are to be found in the Qur’an and the Sunna and refer to the concept of hijab (hijab).[393] For Muslims, the wearing of the hijab is closely related to some passages from the Qur’an (especially Q. 24: 31; 33: 53–55, 59) and sayings of Prophet Muhammad from the hadith collections that enjoin women to dress modestly and to cover themselves.[394] Islamic exegesis (tafslr) and jurisprudence (fiqh.) has not fixed certain religious prescriptions for a specifically Islamic type of clothing but focused on the interpretations what parts of the woman’s body have to be covered in public (‘awra, pudendum or, literally, genitals)[395] rather than what she needed to wear to cover her pudendum (satr al- ‘awra). One internal division among the four established traditional Sunni schools (madhhabs) of Islamic law was whether a woman’s face should be classified as 1 awra and therefore is the full veiling compulsory/duty (wajib/fard), recommended (mustahabb) or permissible (mubah). However, there is a clear and decisive scholarly consensus (ijma’) on the mandate of hijab. It is considered a religious duty (fard) of expressing Islamic moral virtues through covering of the female body and head. According to the religious regulation of veiling in Islamic normative textual tradition, hijab denotes not simply an element of garment worn by a woman outside the home but also signifies her proper appearance in public and entire manner of social behavior as a believing Muslima.

This approach to veiling as a public performance of faith is clear-cut and linked to the religious duty of observing the gender division incumbent on the Muslim community (umma) through the medium of dressed gendered bodies. Female modesty transforms into a collective social concern in order to publicly preserve the divinely ordained physical boundaries between men and women.[396] The veiling of Muslim women as a means to maintain social distance between the genders became a de facto institution regulating social relationships in accord with Islamic sacred law (shart'a). Furthermore, as Julianne Funk emphasizes, covered Muslim women have the power to form clear boundaries between Muslims and non-Muslims and sustain the code of conduct that accompanies the hijab.[397] Paradoxically, veiling, which Muslims do not perceive as a religious symbol, acquires symbolic dimensions in the ideologically neutral public space of modern secular societies: an outer expression of personal faith marks the woman clearly in public as a devout Muslim, no matter what her reasons to cover.

*** 2. Muslim Veiling in the Bulgarian Context

Most of the ethnic Turkish population in Bulgaria today is secular and the Islamic headscarf during the recent years is less common among the younger generation compared to the increasingly massive expression of religious identity via hijab-veiling among the Pomaks.[398] Yet this diversity among the Muslim community in Bulgaria does not cause any intra-Islamic debates on whether the veil is mandatory or not. The study of the official periodicals of the Chief Mufti's Office clearly shows that all authors who wrote about Muslim women are unanimous that believing women have to cover their heads and not display their beauty.[399] Thus the Muslim leadership asserts their community in a clearcut manner that there is an existing scholarly consensus in Islam on the mandate of hijab. This unanimity is also a reaction to the various campaigns for "de-veiling" Muslim women by the Bulgarian state, which earlier had pursued strong secularist policies, sometimes by force.

In Bulgaria, the Muslim veil is denoted by words such as zabradka, bulo, kurpa, feredzhe, hijab, yashmak, shamiya, kyulbe, or djar, all of which are used to describe particular parts of the clothing covering woman's body, head or face when she leaves her home and appears in public spaces. The terms are with Slavic, Arabic or Turkish roots and represent a Balkan contextualiza- tion and Ottoman interpretation of the women's garment in accordance with the Islamic moral rules for decency and modesty. Neuburger claims that in Bulgarian writings on the practice, these terms are used interchangeably.[400] However, etymologically the Bulgarian words zabradka (headscarf), bulo (veil) and kurpa (kerchief) refer to different types of headscarves worn by Christian women. The naming of the hijab as zabradka by Muslims, especially in the 20th century, is a domestic cultural contextualization and involves an attempt to protect Islamic veiling norms by adapting mainstream terminology under the conditions of a modern secular state with a predominantly Christian population, where most of the elderly Christian rural women wore kurpi or zabradki. The other terms are originally Arabic or

Turkish and are not interchangeable. They denote separate items of Muslim clothing for covering not only the head, but also the neck, body and conceivably the face.

The Bulgarian government carried out campaigns against the Islamic veil during the early consolidation of the modern nation-state building in 19121913, included an assimilationist policy for a forced Christianization (pokru- stvane) of the Pomaks, who were claimed to be “Bulgarians in their blood.”[401] In the period 1937–1944 active members of the state-supported Pomak movement Rodina played an important role in this process of de-veiling called razferedzhavane (removing the feredzhe) of Pomak women. Muslim women intermittently shed and re-donned their veils and shalvari,[402] whether out of modernist affinities or as a survival strategy. Although the majority of Pomaks were opposed to Rodina and its de-veiling program, state support ensured that pro-Rodina Muslims held an increasingly large measure of local control.[403]

Feredzhe is the most well-known garment, traditionally worn by Muslim women in the Balkans during the Ottoman period and until the first decades of the 20th century.[404] It is a long dark (most often black), modestly cut robe that covered all the body to the throat. Women also covered their heads and faces with a variety of veils or wraps. Hatije explained that in the past, Muslim women from her region put the shamiya over their heads and, while in public, additionally covered the faces and chests with a piece of cloth called kyulbe. Muhammed Kamber specified that until 1912 his female ancestors worn the feredze and covered their heads and faces with the yashmak (an Ottoman type of veil analogous to niqab) that only expose the eyes and the nose. He insists that Muslim women wore “all sorts of clothes including wide shalvar for the purpose of covering every part of the body that must be hidden in public and before unrelated men.” He said that “the leading reason for such clothing was [women’s] willingness to dress according to Islam. The same religious reason motivates them today.”[405] Thus Muhammed confirms that for the Islamic dress code it is much more important to guarantee the covering of the women’s ‘awra rather than what type of clothing she wears.

In spite of the assimilationist Communist policies of forced name-changing or the activities of the regime to modernize and emancipate women through unveiling, many Muslim women continued to veil during the so-called “Revival Process” (Vuzroditelen protses) when the Arabic-Turkish names of the Pomaks (in the 1970s) and Turks (in the 1980s) were forcibly changed to sound “more Bulgarian.”[406] However, women continue to express their Muslim identity through the veil. The attempts of the Bulgarian state to impose restrictions on religious garments and to force Muslim women with administrative measures and fines to take off their headscarves is a sensitive topic in Myusyulmani magazine. A 2012 editorial emphasizes that the Muslim veil was viewed by the Communist authorities as a clear demonstration of foreign Turkish nationalism and religiosity: “The Turkish woman was not allowed to wear a yashmak because it was a representation of both national and religious clothing. The deveiling policies of the regime proclaimed that it is not acceptable for a socialist woman to hide as a ‘scarecrow’ behind sheets, burqu, or feredzhe.”[407] Because of the prohibitions against wearing a veil at work, in shops, in

public transport, or during public events, many Muslim women, especially in the cities, removed the headscarves.

When I asked Muhammed Kamber to explain how the Pomak women from his region kept veiling during this period, he answered: “Our women did not occupy administrative or governmental positions in the towns. They were ordinary farmers and herders living out in the fields and in mountain villages. In fact, this circumstance facilitated and helped them to dress according to Islam.”[408] The lack of desire for a professional career in the Communist governmental and public administration as well as the avoidance of the urban public spaces encapsulated and selfmarginalized the more observant Muslim women, who remained in rural areas where they could practice veiling. Hatije’s comments on the subject confirm that the feredzhes were completely abandoned during the Communist regime when Muslim women started to wear wider simple handmade gowns and dresses. They also continued to cover their heads, although she clarifies that headscarves have little to do with the hijab because they did not completely cover the hair and the neck according to Islamic rules.[409] Thus, the authorities perceived veiling as an element of rural folk costume rather than as a fulfillment of a religious duty.

Nonetheless, modified Islamic veiling unsanctioned by the Communist authorities worked only in the closed environment of the village and particularly in agricultural fields. As Hatije pointed out, over time the economic reality of rural life changed with the opening of different economic opportunities (for example, sewing, weaving carpets, and the assembly of low-current relays) in nearby villages where the Pomak women could find well-paid jobs but were obligated to abandon the shalvars, to wear trousers, and to remove their headscarves inside this “public” workspace. Veiled Muslim women were also forbidden to attend gatherings and festive events in public urban or holiday places. Many of them gave birth at home to avoid going to a hospital where they were obliged to take off their headscarves.[410]

Since 2012, Hatije Tiber maintains her own blog, Muslimabg, where she publishes poems, essays, reflections on Islamic celebrations and seminars, and personal stories about pilgrimage (hajj) or veiling.[411] Her memoir, “My First Hijab,” was republished by the magazine of the Muftiship in 2014.[412] In this narrative, written in the form of personal confession, Hatije denies the allegations that Muslim women are oppressed and deprived of decision-making on whether to cover. She shares memories from the past to show that her forcible unveiling by activists of the Communist Party, when she was fifteen-years old, did not liberate or emancipate her but rather generated only pain and intensified her anger. She is convinced that unveiling deprived her of her core identity. After the democratic changes in Bulgaria, Hatije pursued her studies covered with hijab in the universities. She admits that she was proud to be judged on the basis of her virtues as Muslima, as well as her academic knowledge, and not according to her beauty. Hatije prefers to remain veiled and not to fulfill her career aspirations in the secular educational system, where she would have to lift her veil. She thinks she has already chosen her own way of “achieving the satisfaction of the Creator.” She writes, “This way of life does not allow for compromising with my faith.”[413]

*** 3. Return to the “True” Rights, Duties, and Responsibilities of Women in Islam

Hatije represents the Islamic piety movement among Pomaks that emerged in Bulgaria since the 1990s. This movement has succeeded in “attracting believers who seek a new kind of Islamic knowledge, distinct from official religion or the folk Islam passed down by their elders.”[414] For her part, Hatije characterizes the 1990s as “a very favorable period for exploring Islam and a stricter observance of its commandments.” In an informal conversation, she underlined that a lot of things have changed during the past twenty years: “Indeed, there was a period of a strong conflict between the old hodzhas and the young ones who graduated from Saudi Arabia but gradually the community began to accept the need for a better understanding of the religion. Beginning in the 1990s, lectures were held extensively, especially for women, because as key figures in the family they had to learn more about Islam, and they likewise began to attend the Qur’an school to learn how to read the Muslim Holy Book in Arabic.”[415]

This call of the piety movement for an “authentic” return to the “true” Islamic teachings as revealed in the Qur’an and exemplified by the Prophetic Sunna have over time been gradually integrated into the discourse of the “official” religion. The newspaper, and subsequently the magazine Myusyulmani, provided a platform for publications of young Muslim women who acquired their Islamic education in the Arab world. Some expressed the opinion that the knowledge of Islam, duties, responsibilities, and rights of Muslims as a whole are extremely important, because the “predominant Islam in Bulgaria today is perverted and irrespective of the meaning of the Holy Qur’an.”[416] Moreover, as Gyulgyun Saitova stresses, this local tradition is not related to the Prophet Muhammad’s legacy, and many of their rights as Muslim women were taken away.[417] Numerous articles argue in an apologetic manner, pursuing the conviction that local culture and the “misperceptions” of Islam among the Christian majority have led to a misrepresentation of the social status and role of Muslim women. Different authors assert that Islam gave women more rights than European women have enjoyed in the Christian civilization.[418] In addition, the magazine published an editorial which explains to the Muslim community that in Islam “the rights and responsibilities of a woman are equal though not necessarilty identical with those of a man.”[419]

Important contributions to promoting such a discourse can be found in articles clearly emphasizing the fundamental role of the Muslim woman as a mother for the care and upbringing of future generations in order to preserve the Islamic standards of morality in society,[420] since “the best reward on the Day of Judgment will receive the woman who has fulfilled all her duties as a wife and mother.”[421] That is why some authors have brought to the fore not only the “necessity” but the duty of every Muslim to build a strong family. For example, Hatije Ismail, a then student at the Higher Islamic Institute in Sofia, reviewing the sources and principles of Islamic family law, concluded that “the marriage is a religious obligation, a moral fortress and a social duty for Muslims, because as a religion and a socio-political system, Islam recognizes the family as the basic unit of society.”[422] Opinions

expressed in the official publications of the Muftiship have the purpose of reminding Bulgarian Muslims that the family is a core Islamic value and the basic element and the cornerstone of the umma. Therefore, religiously prescribed gender roles preserve the Islamic social order. In this clearly outlined paradigm of social relations, the roles of Muslim men and women are considered equal but not identical, as men are, in general, responsible for the well-being of family members, while women take the responsibility for managing of household affairs and raising the children as good Muslims.

Based on the Islamic notion of family, some articles in Myusyulmani criticize European secular societies for the tendency to ruin the traditional family by encouraging family planning and birth control, or by promoting the cohabitation and tolerating some forms of same-sex civil unions or marriages.[423] In 2008, one of the Islamic leaders in the Muftiship and currently a Deputy Chief Mufti, Vedat Ahmed, published an article criticizing a new draft Bulgarian family code which intended to reform the law related to cohabitation. According to him, the legalization of same sex marriages or arrangements by two nonmarried individuals to live together, “implies a high risk as a danger [leading to a] moral degradation of society.”[424] There was considerable objection to the bill, mainly from the Bulgarian Orthodox Church and the Chief Mufti’s Office, and, consequently, the Bulgarian Family Code which was passed in 2009 did not recognize the legal status of cohabitation as a valid form of marriage.[425] Its existence has been recognized by various regulations, but only civil marriage has legal validity.

Some editorials of Myusyulmani express a negative attitude towards female emancipation and the gender equality in the West. These achievements of modernity are seen as unacceptable for Muslim women because burdening women with roles extrinsic to them makes any aspiration for imitating the Western pattern condemnable from an Islamic perspective.[426] In this regard, the current (since 2005) Chief Mufti, Mustafa Alish Hadzhi, explains that, in Islam, women enjoy certain privileges of which man is deprived. She is financially secure from her birth and for the rest of her life by her husband, if she gets married, or by her male relatives, if she remains single. Hence, Muslim women are not obliged to work and it is a Muslim man’s responsibility to look after his family.[427] Family life is a social life, writes the Chief Mufti, and social life, accordingly, requires leadership. Islamic law loaded the man with additional responsibilities to provide the livelihood of women and the families, so “he deserves more to take the leadership role in the family.” In this way, the balance between rights and duties is maintained in the shari’a. Further, Mustafa Alish adds: “The family is a constructive element of society. It should be governed by reason rather than by feelings. I do not mean that women have less intellectual capacity than men, but it is a fact that women are more emotionally sensitive than men. Therefore, taking into account the respective capabilities and the physiological factors, the social roles in Islam are well-defined and fairly distributed between the sexes.”[428]

Despite the observed diversity of local traditions and practices among Muslims throughout the country what is remarkable since the collapse of the Communist regime is that the views on the role of women in wider society promoted by the Chief Muftiship and expressed in their two major journals indicate a movement from the inherited “local” Muslim traditions to

the “great” Islamic tradition and normativity. Defending the validity of Islamic doctrine, the systematic argumentation and discourse of the publications present the gender roles as static and enforced by the religious structure regardless of space and time. For example, along with the saying that Muslim women are not bound to carry out any career outside the home to make a living, as the classical Islamic texts stress, the Regional Mufti of Gotse Delchev, Aydin Mohammed, criticizes the changing roles of women in the contemporary Bulgarian society: “The main role of the Muslim woman today seems to be based solely on her work in order to provide support to improve the family’s livelihood. She works in manufactories, in the fields, on a farm, in the kitchen, or wherever money can be earned.”[429] In reality, he adds, this leads to unfulfillment of her maternal and marital family obligations. Aydin Mohammed is convinced that neither the public kindergartens, nor the schools and universities but the mother plays the most important and leading role in the early training, upbringing, and educating children in Muslim families.[430] The enormous increase in the number of working Muslim women, encouraged by state emancipation policies, is a matter of concern for many believers because this can significantly change family patterns and roles.

The views constantly expressed by leading Bulgarian religious leaders aim effectively to persuade return to a “purer Islam” closer to the classical shari’a norms. Ghodsee, for example, observed that gender roles were starting to be redefined locally “so that the ideal family had a husband who worked to support a pious, stay-at-home wife whose primary responsibility was the proper Muslim education of her children, and this is, indeed, a radical departure from the Communist past.”[431] The evidence from the Myusyulmani newspaper and magazine documents ongoing theological and judicial[432] activity for legitimizing that broke with the recent past, especially among the Pomak community in Bulgaria.

Along the same lines, an editorial about the education of young Muslim girls and women encourages education but places faith-based restrictions on subject areas. These constraints, it is argued, are placed “with respect to women in order to preserve their dignity and moral values.” Permitted are all the sciences and knowledge “beneficial to the nature and belief of the woman.”[433] For example, it is considered unacceptable for a women to practice professions or activities which may damage her body (such as military service, construction, or metallurgy), contrary to her feminine nature (engaging in affairs obstructing her main roles as a wife and mother), requiring a strong character (e.g., working as a judge) [434] or violating of her honor and dignity, such as gender mixing in the workplace.[435] This outline socially unacceptable roles and professions for women pits claimed Muslim objections squarely against the value of gender equality in the workplace.

The official Islamic discourse as represented by Myusyulmani magazine is also concerned about women’s careful and informed choice of a husband. For example, the magazine elaborates on guidelines to instruct today’s Muslim youth in Bulgaria on how to make the “right choice” of a spouse in accordance with the principles of Islamic law, since building a strong Muslim family is essential for achieving happiness both in this world and in the afterlife. The Qur’an and the Sunna are the main reference points. The ideal Muslim

woman has to be pious, virgin, of decent origin, good-tempered, and willing to give birth. She should not be a close relative of the husband. Beauty is preferable, although it is emphasized that the concept of beauty is subjective and one must not forget the soul's beauty.[436] The most proper measure of choice is a woman's piety and wish to veil.[437]

When Hatije Tiber explained the massive return of the Pomak community to religion and its values, she specified that the veiling of women constitute an indispensable part of this process: "There are two tendencies in the veiling: a small percentage of women wear a headscarf simply because they follow the local traditions, while the larger group of women made a conscious decision to wear hijab and to cover themselves in public."[438] Arguing that in the near past Bulgarian Muslim women did not properly understand the Islamic requirements to dress in the appropriate way, Hatije gladly notes that she belongs to the second group which strives to fulfill religious requirements and not follow the local tradition in which women's clothing does not entirely meet the standard for "real" Islamic dress.

Hatidje Ali Ibrahim,[439] also from the Islamic piety movement from Avramovo, wrote one of the first articles in Myusyulmani that provided detailed instructions about Islamic clothing requirements for women. The dress code, she pointed out, "is of particular importance because through clothing the Muslim woman increases her dignity in society and preserves her virtue, while a woman who does not respect the clothing prescribed by Allah loses her honour and the respect of others."[440] Proper dress and covering the body in public with a wide opaque "head-to-toe" modest garment that does not show the woman's figure, does not emulate the dress of the opposite sex and is not perfumed, provides Muslim women with dignity, purity, chastity, and nobility as understood in the Islamic tradition. For Hatije Ibrahim, women must veil. Nonetheless, "Islamic clothing does not make the believing woman unpleasant nor humiliate her but makes her much more valuable. Accordingly, she must be proud of having a dignity and a value higher than non-Muslim women."[441]

The periodicals of the Chief Muftiship promote Islamic rules for women's dress code by publishing articles from a female perspective. For example, Gyulgyun Saitova, who was studying by that time at Faculty of Shari'a of Zarqa University, Jordan, explains her belief that clothes can serve as flirting tools that can lead to illicit relationships. Therefore, in Islam the woman should be well dressed, wear makeup and perfume only for her husband, and not show her beauty in public spaces. She adds that according to Islamic law, a Muslim woman's beauty should be primarily for her husband and her close relatives (mahram), with whom marriage is permanently unlawful by kinship or foster relationships. She reassures her readership that this religious command effectively eliminates the problem of infidelity in the Muslim family as the husband believes that his wife will preserve her purity and honor by observing the Islamic dress code and modesty in public.[442]

*** 4. Public Perceptions: Religious Requirements vis-a-vis the Secular Rules

The hijab polarized public opinion in Bulgarian society at large, because its wearing challenges the secular concept of neutrality, a debate that has also galvanized France now for several decades.[443] In 2006, a lively national public debate about Islamic veiling ignited in Bulgaria when two Muslim girls in a Smolyan high school wearing headscarves refused to un-veil and to wear the school's uniform after the director of the school banned the veil in classrooms. A local non-governmental organization, the Union for Islamic Development and Culture, filed a complaint on their behalf against the Ministry of Education with the Commission for the Protection against Discrimination. The complaint claimed that headscarves were mandatory for Muslim women and that the human rights of the two girls were being violated. This case provoked the Minister of Education to propose changes in the future law on education, forbidding the use of religious symbols in schools.[444] The Minister made a statement on the official government policy and declared that the public schools in the country are secular, and that Islamic headscarves could not be worn in the classrooms. In August 2006, the Commission issued a decision rejecting the complaints about religious discrimination and fined all parties in the dispute for their attempt to "incite discrimination." The two girls had to decide either to remove their headscarves or to become private students. They chose the second option.[445]

Right after the Commission's decision, the Chief Mufti Mustafa Hadzhi made a statement against it and declared that the headscarf is a religious duty divinely incumbent upon Muslim women.[446] Actually, since the fall of the Communist regime in Bulgaria, the Chief Muftiship has clearly argued that there is a consensus position on the mandatory nature of the headscarf. However, the Smolyan case provoked almost all members of the Muftiship to actively engage in a campaign to protect wearing the hijab in public and girls' rights to wear it in public schools. Hussein Hafuzov, the then secretary-general and spokesman for the Chief Muftiship, gave an interview to the editor of Myusyulmani magazine in which he affirmed that the headscarf (zabrad- kata) is not "a religious symbol" but "a religious duty" by quoting the Quran 24:31–32 and 33:59. Furthermore, he said that "Muslim women are prohibited from leaving their homes without wearing a headscarf and this is a definitive requirement by God. Otherwise, they are committing a sin."[447] The ban on headscarves in Bulgarian schools and universities, according to him, would put the Muslim women in the situation to face the dilemma of whether to commit a sin, for which they will be punished on the Day of Judgment, or to deprive themselves of an education being not useful for themselves and the society. Thus, Hafuzov clearly indicated that the administrative and legal regulations of the Bulgarian secular state contest the Islamic concept of public morality and violate Islamic law and the religious beliefs it regulates.[448]

In the same time, the Chairman of the Supreme Muslim Council, Vedat Ahmed, also defended the veiling of schoolgirls.[449] He briefly outlined the textual proofs for wearing hijab, explaining Islamic scholars label the area that should be covered ('awra), arguing that within the Hanafi school of law the face and hands are excluded from the 'awra and women may therefore uncover them. In so doing, Ahmed used two terms interchangeably to denote Islamic veiling: hijab and tasettur. The last term, also of Arabic origin, means "covering." Due to the fact that it was widely used by Ottoman Hanafi jurists, it became widespread in the Balkans through Ottoman Turkish—tesettur. Further, the fulfillment of this religious duty is an obligation incumbent upon all Muslim girls who have

entered puberty and that an exception to go out in public uncovered for the gaze of men can be made only for old women. To him, “covering women’s private parts and beauty is an expression of praise and obedience to the Creator” aiming “at ensuring the chastity and honor of women, as well as the honor of men who are often tempted by the beauty of women.”[450] Still, Vedat Ahmed concludes by arguing that the Muslim veil per se guarantees the affiliation of the woman to the definitive divine religion.[451] In this sense, hijab functions as a means of visible expression of her Muslim identity and faith in the public space.

The Islamic arguments for veiling as observed in the periodicals of the Chief Muftiship have contributed to an increasing number of young Muslim women wearing the hijab. However, during the last decade, the presence of veiled women in public spaces was often interpreted by nationalist circles in Bulgarian society as facilitating the public re-emergence of Islam and disrupting the established boundaries between the religious and the secular. The degree and the type of Muslim veiling was a subject of heated political and public debates on the eve of adopting a law banning the full-face veil. In Bulgaria today, the face veil is not considered a “traditional” dress for native Muslim women. Since the first decades of the 20th century they have generally worn different local types of modest attire and headscarves to cover their hair. But recently there has been a rise in the number of fully veiled women wearing the niqab, the long Jilbab gowns or khimar-like garments among Muslim communities of the Roma minority in Bulgaria, around a third of whom are Muslim. In fact, these Roma are almost all members of a tiny community in the Iztok neighborhood of the southern city of Pazardzhik.

In the past several years, the community has been at the center of media attention and public controversy after its Salafi preacher, Ahmed Moussa, was put on trial three times, accused of spreading “religious hatred.” Pazardzhik became the first Bulgarian city to ban full-face veils in public. On 27 April 2016, the Pazardzhik Municipality Council voted an amendment to the Ordinance on Public Order prohibiting wearing of any clothing or accessories that completely cover the face and obscure the identity of the wearer. The facial veil is perceived as a potential security threat because it allows one to hide one’s features. People who do not follow the ban face fines ranging from 300 Bulgarian leva[452] to 1,000 Bulgarian leva for repeated offences.[453] Following Pazardzhik, several Bulgarian towns prohibited the wearing of full-face veils in public. Along with bans on the local level, on 30 September 2016 the Bulgarian parliament approved a nationwide law outlawing face-covering veils in public—at state institutions, schools, areas of administrative, and public services.

This legislation was pushed by members of the vmro Party (within the nationalist Patriotic Front coalition).[454] The argumentation included in the bill was based on many complex factors: face covering impedes identification and poses a security risk; it is an unacceptable form of propagating “radical Islamist ideas” that have nothing to do with the “traditional” Muslim community in Bulgaria; it imposes a disrespectful attitude towards the values of secular Bulgarian society, and violates the principle of equal treatment of men and women. After the submission of this proposal to the parliament, the acting Secretary General of the

Chief Muftiship, Dzhalal Faik, stated officially that “the bill limits the rights of Muslims and can be dangerous.” He added that the headscarf is commonly used in “traditional Islam” and “in principle, the face must be uncovered. However, Muslim women have the right to make their personal choice.”[455]

The bill has been also harshly criticized by members of the Movement for Rights and Freedoms (mrf), whose principal electorate is mainly the Muslim community in Bulgaria. Initially, when discussing the proposed draft in the parliamentary committees, the main criticisms were not related to the violation on religious rights. During a meeting of the Parliamentary Committee of Legal Affairs, the member of the parliament from the mrf, Chetin Kazak, noted: “The Bulgarian version of the Muslim religion and the Bulgarian Muslim tradition do not require the wearing of such clothes. Therefore, it is ridiculous to adopt a special extraordinary legislation because of two dozen fully veiled women from the Roma neighborhood in Pazardzhik.”[456] Basically, there are no statistics in Bulgaria on the exact number of Muslim women covering themselves with different types of niqab and “Arab” style khimar. Estimates on the media provide information about 20 to 40 women from the Roma community in Iztok neighborhood of Pazardzhik.[457] Representatives of the State Agency of National Security stated during the deliberations on the draft law that there are few women in the Roma neighborhoods of the cities of Plovdiv and Asenovgrad who wear full-face veils, too. Neither the Bulgarian press, nor members of parliament or the Chief Muftiship publicly mentioned during deliberations the practicing of full-veiling “Arab” style in some areas of the Rhodope Mountains, and especially in the town of Rudozem by the younger generation of newly devout Pomak women and girls who had studied Islam in Saudi Arabia.[458]

Despite the opposition from the mrf, on 30 September 2016, Bulgaria’s parliament approved the Law Prohibiting the Wearing of Clothing Concealing the Face.[459] The mrf, together with six independent mp s,[460] former members of the parliamentary group of mrf who founded a new Political Party dost,[461] accused other Bulgarian parties of “demonstrating religious intolerance” and refused to take part in the vote. In fact, the full-face veil issue put the secular leadership of the mrf into a dilemma, forcing them to take a stand on a controversial issue that divided their electorate. The vast majority of the mrf’s supporters are secular Turks, and even the headscarves are rarely an element of the women’s dress in public. Nevertheless, the politicians from the mrf and dost were strongly opposed to the face veil ban law, saying it infringes on the freedom of religion guaranteed by the constitution. When, for example, ten years ago, during the national debate about wearing headscarves at public schools, “mrf, in accordance with the official policies of the Turkish government, did not support headscarves in schools. On the other hand, the mrf had good networks in the non-Turkish Muslim population in Bulgaria (both Pomak and Roma), and this issue could serve to drive a wedge between the mrf and the growing number of devout Muslims in the country, particularly among the Pomaks.”[462] Now, however, the mrf has to take into account the current political realities of a changed Turkish policy towards veiling and the emergence of dost as a viable political alternative for Muslim voters, as the members of the new party explicitly use Islamic rhetoric in their political statements.

The law was approved by a majority of the votes. Immediately afterward, the independent member of the parliament Hussein Hafuzov,[463] the former Secretary General of the Chief Muftiship, made an emotional statement, asserting that the “law limit[ed] women’s ability to wear religious garments in conformity with the Islamic dress code.”[464] He declared firm opposition to the law, claiming that it was “the first step towards a complete ban of Islamic clothing.”[465] He also recalled earlier attempts by the Bulgarian state in the 20th century to de-veil (razferedzyavane) Muslim women. According to Hafuzov, the definition of the burqa as “non-traditional” clothing of Muslim women in Bulgaria is “absolutely untenable from a religious point of view,” because “the feredzhe is a kind of burqa, dear colleagues, and what the burqa covers is covered alike by the feredzhe.” At the end of his speech, Hussein Hafuzov emphasized that this legally imposed restriction on Muslim women’s clothing was “an attempt [to damage] the reputation and honor of Muslim women” and “the Bulgarian parliament offends not only the Muslims who are living in the country but also the entire world Muslim community.”[466]

Hafuzov intensified his criticism of the law by including religious reasons in his public political discourse; he defined veiling as a means of preserving the dignity and honor of woman. He defended the right of the Muslim community to draw and maintain the divinely ordained (according to Islamic doctrine) gender boundaries in the public space of the Bulgarian secular society. For the first time since the democratic changes in 1989, it was not a representative of the Muftiship but a Bulgarian mp who explicitly stated that the full veiling of Muslim women in Bulgaria is not a manifestation of “foreign influences.” Public face covering was a long-standing practice in Ottoman time to which some devout Muslim women have returned. Bringing to the fore the claim that “what the burqa covers, is covered alike by the feredzhe”, Hussein Hafuzov stressed that these two kinds of Islamic clothing are, in fact, contextualized cultural manifestations of the religious interpretation that the entire female body is ‘awra. Although it is not compulsory or recommended in terms of Islamic law, it is still permissible in the interpretations of the hijab concept according to the Hanafi School of law. Unlike the politicians of the mrf, Hafuzov’s main argument was that a full-body and face covering is a legitimate form of dress in the tradition of Muslims in Bulgarian lands.

Shortly after the official approval of the Law Prohibiting the Wearing of Clothing Concealing the Face, the Chairman of the Supreme Muslim Council and Deputy Chief Mufti Vedat Ahmed published a critical analysis of the Bulgarian state policy to “modernize” Muslim women during the last century by dictating how to dress and practice their religion. Instead of resorting to the common term razferedzavane, or re-dressing,[467] he used a much stronger, emphatic expression when symbolically calling the forced de-veiling campaigns “a struggle for ‘undressing’ the Muslim woman in Bulgaria.”[468] This phrase indicates how significant the hijab issue is for the religious leaders of the Muslim community in Bulgaria. Vedat Ahmed noted that the struggle for “undressing” is not typical only for Bulgaria, “the Bulgarian mark, nonetheless, is stable in this process.”[469] Summarizing some evidence on the topic and referring to documents from archival sources and historical studies, the Chairman of the Supreme Muslim Council concluded that from the first years of the modern independent Bulgarian state (after 1878) until today, the most successful governmental actions towards de-veiling were the campaigns of the atheist Communists.

Ahmed highlights that despite all those state efforts and pressure over the last one hundred and thirty years, the attempt to “undress” the Muslim women have failed in reality which shows that it will not succeed in the future, “except if the believing women ‘undress’ themselves or if the Apocalypse comes.”[470]

When in December 2016 I asked Hatije Tiber and Muhammed Kamber to express their opinions about the “burqa ban,” they both said that this is a “discriminatory law.” Although Muhammed pointed out that there are no fully covered women in his region, and Hatije stressed that she would never wear a burqa, the two Muslims share the conviction that some Muslim women in Bulgaria are deprived of their right to dress according to their choices. And the choice of the veiling, Hatije added, is of existential importance for the Muslim woman, as it is a public demonstration of her Islamic identity. This must be understood by the Bulgarian society not as a challenge, she said, but rather as a religiously defined external expression of our inner convictions.

*** 5. Conclusion

There is an ongoing process of “re-Islamization,” which stipulates active promotion of a stricter observance of the commandments of Islam among an increasing number of Muslims in Bulgaria. The official Muslim leadership, as well as the representatives of the younger, more devout generation of Pomaks, make efforts to spread more widely the “true” Islamic teachings as revealed in the Qur’an and exemplified in the Prophetic Sunna. The analysis of the periodicals issued by the Chief Muftiship indicates that the call for a return to the rightful rules of the Islamic faith and the public proclamation of the religious norms and values is tantamount to the assertion of their shared Muslim identity.

The observed higher degree of adherence to the norms of the “great” Islamic tradition against the backdrop of “local” tradition and practices in the everyday life is publicly justified and explained as a fundamental human right for practicing religion without state interference. The Muslim veil is seen as a genuine public expression of a woman’s piety, modesty, and high moral standards as embedded in Islamic textual religious tradition. Yet, the hijab maintains a social distance between genders and outlines the acceptable roles of women in accordance with Islamic law. It also generates social tension as this inherently Islamic religious commitment in public space is perceived by the society at large as an attempt to impose social norms and moral codes contradicting the secular order of Bulgaria.

** Chapter 7: Fasting and Aging in a Bulgarian Muslim Community

Ilia Iliev

Abstract

The Muslim community in Bulgarian Muslim villages share many of the characteristics of local Orthodox communities. It encompasses both explicitly religious people and more secular ones. The non-believers and the distant members get involved due to the symbolic sacrifices of their more religious relatives, while the virtuosi of religion get entangled and tempered in the small everyday practices of deference and respect offered by other villagers. After several centuries of cohabitation, Muslim and Orthodox Christian communities in Bulgaria share some important implicit notions about the ideal religious community.

Keywords

Ramadan — fast — ageing — symbolic limits of community

The central square of Skrebatno, a Bulgarian Muslim village in the Western Rhodopes, does not change its daily rhythm during the month of Ramadan. In the early morning, a few men drink coffee in the neighboring shops and exchange a few words while waiting for the bus. These men are followed in the mid-morning by women shopping for bread or cooking oil and exchanging the latest news. By noon come men and women who have been picking tobacco from sunrise until the sun was too hot and the tar too sticky for collecting tobacco leaves. By the early afternoon youngsters show up. They finish arranging the tobacco leaves for drying, and a couple of hours later the commuters began arriving with the afternoon busses.

Each human wave leaves a few customers in the shops. They order coffee or soft drinks, rarely beer, and are seemingly unconcerned with the prescriptions of the holy month, when each Muslim is supposed to abstain from drinking from sunrise to sunset. Yet at the same time the everyday activities of both those who follow the prescribed practices during Ramadan and those who do not, are shaped by the holy month.

In this chapter, I investigate the mechanisms binding religious and apparently non-religious people into one community in the village of Skrebatno. I argue that the fasting during the Ramadan was treated as a moral experience, shared by all the members of the community, regardless of their actual behavior, and I will try to demonstrate how religion provides all the village's inhabitants with tools and language for expressing moral judgments.

*** 1. The Community

The integration of believers and non-believers, distant and present, is related to the study of identity, a major topic in the research on Pomaks. The discussion began in mid-19th century and the most recent monographic studies on Bulgarian Muslims continue to add valuable insights.[471] Most authors agree that religion is a constitutive element of the ethnic identity in Bulgaria, and that this religious element does not necessarily require participation in religious practices. Less studied are the ways that religion manages binds believers and non-believers together, and the question becomes increasingly interesting with the growing number of non-believers. This apparent lack of religious fervor is quite typical for the Pomak villages in the Eastern and Central Rhodopes, where the mosques are frequented mostly by elderly men[472], but apparently lukewarm believers like the inhabitants of Skrebatno are quite common also in the Western parts of the region. Still, the village is reputed for its freethinking among the neighboring Muslim villages. The young imam who led the religious services during the Ramadan in 2013 said that he was sent there under a naryad—a term used in the Bulgarian army for unpleasant but necessary everyday chores. The village is relatively small, with 350 inhabitants, 30 of them Christian, mostly elderly couples or widows, and a vibrant Bulgarian-speaking Muslim community with some 90 children of school or preschool age. In the summer, they were joined by other children from migrant families ('Spaniards', 'Americans,' 'Belgians,' as they called them). This age structure is quite typical for Muslim villages from the Rhodope

Mountains. What sets Skrebatno apart is its relative wealth. The village was predominantly Christian until the urban exodus in the third quarter of the 20th century. The landowners were almost exclusively Christian shepherds, who controlled large grazing fields. Nowadays part of the village lands has been restored to their heirs, but the bulk of the land — the former grazing lands and the commons—remains municipal property. Nowadays Skrebatno, with its 350 inhabitants, controls an area four times larger than Breznitsa with its 4,200 inhabitants, or Ribnovo, to cite only the best-known villages in the region. Actually, the villagers cannot cultivate all these lands and the municipality rents it to households from neighboring villages. Maybe this could explain why Skrebatno is the sole Muslim village in the area with a Socialist mayor (instead one from dps, the political party that gathers the bulk of Muslim votes, or one from the center-right gerb). The villagers from Skrebatno keep some distance from their poorer Muslim neighbors and often tell jokes about laziness, promiscuity, and inevitable abundance of children in other villages, jokes of the sort that richer villagers often say about the poor.

To finish with preliminary remarks about the region, this was not my first field trip to Skrebatno. I went there for the first time in 1993 as a student, and since then I have regularly visited the village and the region under different projects of my own or, in lean times, as an interpreter and a field assistant for Western anthropologists. The field trips in the period between 2010 and 2013 were like visiting old friends, but, of course, I will always be identified as an outsider, a Christian from the city, and I will never pretend that the local people accepted me as one of their own, even if they call my five-year-old son, who helped me with the fieldwork, Ali—a shorter version of Alexander.

*** 2. Ramadan: Who Fasts and Why

My most recent visit was the first time that I did systematic fieldwork during Ramadan, picking tobacco with my hosts. I knew that a good half of the villagers do not fast during this month—it has always been quite obvious—but I expected that the division would follow the lines of families and households. Such were the explanations which I received in the past, when I asked whether or not someone was fasting. “She is from such a family, in which nobody fasts”, or “they are old-fashioned people; they fast”. Actually, it turned out that no family or household observed the Ramadan strictly in its entirety, but also all Muslim households had at least one person who fasted, ramazanliya as they called them. The people who fasted— ramazanlii (in the plural)—were of three main types.

First were young men and women, usually nearing the end of high-school studies, 17–18 years old, who wanted to demonstrate their self-control and reliability. In the 1990s, these were mostly young women who wanted to marry immediately after graduating and wanted to show the traits of a responsible adult. I was younger then and somehow all the young men knew that if a girl fasts, this is more or less a sign of serious intentions, at least from her side. Now, several years later, the proportion of fasting young men has increased. It

seems related to the end of the mandatory military service in Bulgaria. In the 1990s, going to the army was a necessary stage of man’s life and the definite step towards adulthood. Now mandatory military service has been abolished, but in the afternoons, when men gather for some joint activity—for example in 2010 we were digging a common well—older men were telling stories from their army service to the fasting boys, thus symbolically incorporating them into this experience. Both for young men and women it was more or less understood that fasting is an effort clearly limited in time—they were not expected to keep fasting the next year, nor to demonstrate religious fervor after the end of Ramadan.

The second group—and most numerous type of fasting people—were elderly men and women. All of them did something, which, as far as I know, does not fit exactly into the framework of normative Islam—they accredited their efforts and transferred the virtue coming from fasting, to somebody else. An adult person who fasts only for his or her own salvation would be considered selfish, because they would not be fit to work to their full potential for a whole month. The rest of the household would be assumed to rearrange its daily rhythm just for the sake of one single member. Hard work was a usual— and fully acceptable—excuse for breaking the fast, more acceptable than, for example, health issues. Sometimes the elderly people would fast for the sake of the health and prosperity of the whole household. Very often this would be a distant member or distant branch of the family. It was quite common for a grandmother to fast for the sake of her grandchildren living in Spain, the USA, or Northern Europe. Old men tended to fast for the sake of distant branches of the family, living abroad. Thus, the elderly people by the virtue of their sacrifice reunited distant members and branches of the family during the holy month.

The middle-aged men and women were the less numerous group of fasters. They also tended to accredit their efforts for the sake of something or somebody else, but unlike the old people they tended to choose some specific issue, especially important for the well-being of the family or the community—for example the village mayor was making obvious hints that, if the village men find water in the well they were jointly digging each afternoon, this should be attributed to a certain degree to his self-sacrifice. Another man was fasting for the sake of his wife, who was applying for a state job. In all three cases, these were individuals who fasted, not whole families, and their efforts both reaffirmed their respective positions within families, households, and community, and strengthened its social cohesion. The act of dedicating one’s spiritual and physical sacrifice to somebody else also helped integrating the non-believers in a common religious experience.

*** 3. The Ramazanlii and the Rest: Daily Rhythm

The people who did not fast also were also involved in Ramadan. Both Ramadan and the efforts of the ramazanlii dominated the daily rhythm of the village. Special men— telali—circulated through the village beating a drum well before sunrise, so the ramazanlii were able to wake up in time to get their morning meal. A joint contribution from all Muslim households paid for the telali. Of course, all

adult members of the family woke up together with the ramazanlii—to prepare the breakfast, if they were women, or to share it. During the daytime, the presence of the ramazanlii was both permanently taken into account and politely omitted.

In the first days, I made a faux pas and stopped drinking water when I saw a ramazanliya approaching. The man politely but firmly insisted that I should finish my glass. By hiding my eating and drinking, I would demonstrate a lack of confidence in his strength. The proper behavior was to avoid food and water when there were ramazanlii around, but if you should eat and drink—for example while feeding a child—you have to do it in a way that demonstrates full confidence in the ramazanlii's inner strength. Everywhere there were dozens of small signs reminding and acknowledging ramazanlii's presence, for example the bottles of cold water which housewives put in the most obvious places in refrigerator. Ramazanlii are believed to suffer more from thirst than from hunger, and in the hot summer they break their fast each evening with a glass of cold water. So everybody pillaging the refrigerator was seeing first the bottles of cold water, put there as a polite reminder. The same rule applied at work, while picking tobacco or digging a well. There were several variations, of course. For example, young ramazanlii boys insisted on digging more than the adult men in the well hole (it was a deep hole and only one or two persons were able to dig at a time, the rest of the men stayed around and chatted while waiting their turn), but it usually happened that they were not allowed to do this because some older man had just started an edifying story about his army experience, a story which younger ones must hear, and a story heard dozens of times by the older men—so it was somebody older going to dig. In the evening, the customers of the village pub left empty places on the tables at 9 p.m., when the ramazanlii were allowed to break their fast and then everybody flocked to the pub. The ramazanlii boys were allowed to leave the tables of their coevals for a while to sit with the adults, and join the discussions, and even to say their opinion on some important topic. Unfortunately, I was not able to observe what happened in the women's part of the pub. On 19 August, there was a guitar concert in the village, scheduled for 7 p.m. It was postponed to 8 p.m. and then the mayor started an interminable speech in order— as he explained latter—to postpone it even further, so the ramazanlii could join.

The respect, genuine and sometimes exaggerated, paid to the ramazanlii had a less obvious side. The constant deference demonstrated by the rest of the community set the ramazanlii apart as spiritual champions. Yet by the same motion, the rest of the villagers implied that common people should not be expected, let alone required, to follow the example of these special men and women who sacrificed their well-being for the others. The small everyday acts of gratitude and admiration set the few fervent Muslims in the village apart in a special and well bounded category, safely wrapped in deference and appreciation. After all, a common mark of the champions, including the spiritual ones, is that the commoners should not be expected to act like them.

The exclusion of less privileged categories followed another pattern. The villagers were less tolerant towards their neighbors whose daily life was organized around Ramadan, too. The

people from Ribnovo, who rented land in Skrebatno area, tended to take their breakfast near the tobacco fields, just before the start of their work, and at the margin of the allowed time for fasting. The reasons seemed quite obvious—the ramazanlii from Skrebatno were able to take their meals earlier at home, because their fields were at a relatively short distance, while those from Ribnovo had to travel sometimes for hours, especially if they used horse carts instead of cars. Still, the villagers from Skrebatno tended to explain their neighbors' late—by Ramadan standards— breakfast as yet another proof for their lack of self-discipline. The people from Ribnovo usually avoided working on Friday during Ramadan, while those from Skrebatno did, and preferred to interpret their neighbors' choice as yet another demonstration of their laziness, if needed at all, because everybody knows that the poor are lazy and lack self-discipline. At least most of the well-off people "know" this.

*** 4. Among the Ramazanlii

The month of Ramadan in Skrebatno ends with three ritual distributions: arife, when food and especially sweets are donated to honor the death; fitre or fitri— a charity, traditionally equated to the price of five loaves of bread; and Sheker Bayram (from Tr. §eker Bayrami), when junior families of a lineage offer sweet meals to their elders. All these distributions are concentrated in three days— the last two days of Ramadan and the first day of Bayram, and are skillfully used by the villagers to mend broken social ties, to negotiate new ones, and to renegotiate or confirm old ones. Moreover, the people who did not fast use these distributions to demonstrate their respect and support for the ramazanlii.

My host belonged to a junior branch of the same lineage as the village mayor, but quarreled with him. The official pretext was that the mayor was rebuilding his house and was expecting—and more or less requesting—the voluntary help of my host. However, 15 years ago, when my host was building his house, the mayor, then a young man, offered some plausible pretext to not help. My host decided to voice his displeasure with the mayor, but to keep the conflict limited, had been quietly biding his time for 15 years. When the proper time came, he refused to help the mayor, thus demonstrating that he had not forgotten the insult. But on the last days of Ramadan, he urged his wife to prepare especially generous sweat meals for mayor's family, in order to honor the common dead grand-fathers and grand-mothers on the arife day. Then he had to choose to whom he should give the ritual charity, which the local people call fitra. Traditionally, one has to give fitra to five persons amongst several categories like poor ones, complete strangers or travelers, orphans, elderly, people who study the Qur'an, etc. The favorite choice for recipients were the younger ramazanlii. The principles could be extended and it is quite common to give fitra to children who perform well at school, even if their studies are not exactly focused on the Qur'an. For example, the mayor gave fitra to a strong fellow who acted as his bodyguard and who technically was an orphan since he had recently lost his father. Oddly, the mayor—who was fasting and was because of that technically eligible for ramazanliya, also received several contributions.

My host decided to give generous fitra to the mayor’s sons, who were both graduate students, so technically they could be considered schoolchildren and, by extension, part of the same category to which the students of the Qur’an belong. The mayor was not the only one able to bend the rules. But on the Sheker Bayram day, when my host was supposed to pay a ritual visit to the mayor himself, as the latter belonged to a senior branch of the lineage, he chose instead to go to a neighboring village to visit the family of his wife’s elder sister. In a patrilineal society, this was obviously an excuse, but still some formalities were observed. My host was not in his house at the time when he was supposed to pay a visit to the mayor. Using the opportunities provided by arife, fitri, and Bayram, my host had clearly indicated his position—he had a quarrel with the mayor, but not with mayor’s family, since he demonstrated his respect for the common dead ancestors, and gave fitra to the boys.

One of the categories entitled to fitra and arife was strangers. This was an occasion to give charity to the local Muslim Roma who came from neighboring villages. The villagers were careful to demonstrate that they were giving fitra to the beggars precisely in their quality of complete strangers, people who are accepted in the village only on this special occasion. I did not notice any sense of Muslim community, transgressing ethnic and social borders, in this act. Actually, some villagers preferred to give fitra to me, another stranger in Skrebatno. The villagers also made a clear distinction between zakat— the local term for charity at the end of Ramadan, an act subjected to stricter rules, and the less formalized fitra. It seems that, at least in this village and the neighboring area, zakat is mandatory only for rich people or people who significantly improved their well-being during the previous year. Nobody in Skrebatno considered himself rich or significantly better, and nobody gave zakat during my field research. Each Muslim household and several individuals gave money to the mosque by the end of the month but did not classify this as zakat. There were some precedents, for example, I was told that a man who won 30 thousand Euro (approximately 60 thousand Bulgarian Leva) in a lottery, gave zakat to the mosque, and so did a Turkish son-in-law who wanted to pay respect to his wife’s village, but they rather confirmed the distinction between fitra—a charity distributed within the community, according to individual strategies or sense of justice (because the few real orphans in the village were universally chosen as recipients), a charity regulating community life and marking its borders by excluding the strangers, and zakat—a charity related to the symbolic Muslim community. As a rule, the villagers of Skrebatno did not pay zakat.

Another strategic use of fitra was for demonstrating moral position. In 2011, most villagers agreed that a local woman was wronged by her brother. She had taken care of their elderly mother for years, but when the old lady died, her brother apparently took a larger part of the inheritance, regardless of the common understanding that the heir who takes care of an elderly parent is entitled to additional portion. As a good sister, she did not protest, but the case became known in the village and many villagers gave her a fitra on the last day of Ramadan. The woman was staying with her hands full of

small white pieces of paper with money inside—the fitri (as they Bulgarize the plural of fitra)—and the moral verdict of the community was quite clear.

*** 5. Ramadan as the Public Sphere in Skrebatno

The high point of the daily rhythm in Skrebatno during the month of Ramadan was the evening, when most villagers gathered in the pubs around the central square. Men, women, and young people of both sexes usually sat on different tables, with the notable exception of young ramazanlii who were allowed to stay with the seniors, if they wanted. This was the moment when matters of general importance were discussed, consensus was achieved on some topics, and new quarrels were started.

Since the aim of my field research was to investigate the relations between religion and the public sphere in a community, I was particularly attentive to arguments related to religion. It turned out that such arguments were used rarely, always by men of relatively high status (elders, rich men, or the village mayor), and my female interlocutors told me that the situation was similar among the women. As a rule, the discussions quickly switched to another topic after the use of a religious argument. Yet religion was far from a conversation-stopper. The religious argument was rather used when a consensus was achieved on some particular topic, and the invocation of Qur'an came to seal the final verdict. For example, when discussing a new community fountain, where local corruption, irresponsible behavior, and a dry summer combined to bring a disaster, the village mayor summed the discussion with a quotation from Qur'an, and an elderly man added a list of the signs witnessing the end of the world, the lack of water, and the general immorality being prominent among them. This was a crown, closing argument, which sealed the unanimous accord and the harmony achieved.

In a brilliant article on secularism in Bulgaria Kristen Ghodsee, following Talal Asad's critiques of Western-biased theories of secularism[473] claims that the specific way in which the Eastern Orthodox religion operates today in Bulgaria is based on the orthodox Christian conception of symphony, which requires the church to act together with the state for the common good.[474] I would argue that in its original use, the concept involved also the unity of lay and clerical people in an ideal Christian community. The highest authority in the Bulgarian Orthodox Church is the so-called "congregation of the church and the people", or tsarkovno- naroden sabor, which includes representatives of the church and the lay people. This body elects a new patriarch and votes the statutes of the church. The perfect subject of the Christian church as understood in the symphony concept was, and still is, a greater body, encompassing monks, priests, and laymen. In the concept of sobornost, literally meaning "togetherness," the nineteenth-century Russian theologians further elaborated this aspect of symphony to include even the dead members of the community. This understanding of the church body and religious authority postulates the involvement of people with different degrees of religious activities, and requires a consensus among them. It precludes a

monopoly over the religious truth by any category of specialists, be they priests or highly educated specialists. Yet, the very inclusivity of this model makes difficult the involvement of religion in the public sphere. A collective all-encompassing subject that specifically insists on the heterogeneity of its members makes dubious any particular claims for a privileged access to religious truth or religion-based authority. An ideal, which prizes above all harmony and consensus among clerics and laymen, easily tempers any radical or simply controversial claims.

The Muslim community in Skrebatno shares many of the characteristics of this ideal Orthodox body. It encompasses both those who fast during Ramadan and those who do not. The non-believers and the distant members get involved due to the symbolic sacrifice of their more religious relatives, while the virtuosi of religion get entangled and tempered in the small everyday practices of deference and respect, paid by the common villagers. After several centuries of cohabitation, Muslims and Orthodox Christians in Bulgaria share important ideas about the ideal religious community, and face similar limitations to the use of religious arguments in the public sphere.

* Part 3: Religion, Publicity, and Concealment in Orthodox-Majority Societies

** Chapter 8: Parallel Paths

Christian-Muslim Symbiosis and Religious Education in Greece

Angeliki Ziaka

Abstract

The present chapter discusses religious education and whether it advances co-existence, cultivates critical thinking in childhood and youth, and facilitates religious diversity. Its fundamental proposition is that religion and the co-existence of religions in the public sphere is again becoming imperative due to rapid changes in Europe and throughout the world, the “return of religion”—mainly through Islam—and the growing impoverishment of many regions. Religion as a subject matter in public schools has become the focus of heated debate. The chapter focuses on the Greek case against the backdrop of other major

European models of religious education. It looks at the political and ideological debates on religious education, the new curricula and teachers' study-guides, and the place of Christianity and Islam in the public and educational domains. Subsequently this chapter provides a brief presentation of the teaching of Islam in Western Thrace, an area of Greece where various Muslim groups account for about a third of the population, focusing on the way Islam is taught in Muslim- minority schools, mosques, and lately in public schools. It proposes an innovative operational program for education and lifelong learning that would benefit Christian and Muslim teachers of religion and religious officials in Thrace and elsewhere. This learning program is designed to bring Christian and Muslim Greek citizens together through the course of religious education (re) and joint training in an intercultural process of religious education.

Keywords

Christianity — curriculum development — Greece — Islam — Islamic studies — religious education (re) — secularism and religion

---

The question of the role of religion in public space has re-emerged with a new sense of urgency in recent years due to the marked rise in incidents in which religions and world cultures have been both victims and offenders in the Middle East, Europe and the United States. The Greek program in which the present writer has been involved eschews Huntington's "clash of civilizations" model as a construct of doubtful validity that has sown the seeds of suspicion of the cultural and religious "other" in citizens throughout the world. Rather, a re-negotiation of coexistence in religiously and culturally diverse societies needs to be sought to achieve communication between religions in shared public spaces. The program was based on the idea that every citizen should have the opportunity to acquire the tools of critical thinking in the highly sensitive matter of religion, which is sometimes monopolized by certain secular and religious circles with their respective conflicts and obsessions, while the potential and the role of a critical Religious Education (re) within the framework of the state system is underrated. It was thought that the primary aim of critical religious thinking would be to protect religious freedom and ensure respect for an individual's decision on whether to practice religion or not, but also to ensure the harmonious co-existence of all pupils—future citizens with different religious and cultural identities.

While the secular structures of European states guarantee religious freedom, the co-existence of different religions as factors reinforcing the cohesion of the social fabric is often ignored. Instead of finding solutions in negotiating and managing religions, religious communities are often isolated and even segregated within these secular structures. The Committee of Ministers of the Council of Europe only recently included the term

‘interreligious dialogue’ in its vocabulary as a supplement to “intercultural dialogue.” The committee seemed to have politically prioritized intercultural dialogue. Recommendations for the management of religion and interreligious education and for the provision of satisfactory intellectual skills in this area to both teachers and pupils, date no further back than 2001–2002. These recommendations were aimed at defending human rights, furthering respect for the religious and non-religious beliefs of every European citizen as well as those of citizens in neighboring states, promoting solidarity and helping to prevent conflict within the framework of formal and non-formal education.[475]

Respect for religious difference in EU member states, the acceptance of religious diversity in contemporary societies, the defense of religious rights and the obligations of citizens both to their fellow-citizens and to the state as bearers of beliefs, ideologies and identities, are the main starting points of our inquiry. The old dividing lines between public and private space need revision and the entrenchment of religion in the private sphere abrogated, so that every dimension of the religious phenomenon, and everyday religious practices and needs, be cared for continually, in dialogue with the state.

The protection of public space from extremist manifestations that use religion and diversity as a vehicle for alien aims is a central theme. We look upon Religious Education as a constructive instrument enabling religious and non-religious citizens to understand and relate to each other, while remaining critical towards models that seek the complete exclusion of religion from education or aim at using religion to support the state. The project seeks to forestall extremist uses of religion and fanaticism that may lead to dangerous conflicts in public space by prioritizing an open and dialogical re, guaranteed by the constitution of each country.[476] The chapter thus focuses on the importance of Religious Education at primary, secondary, and tertiary levels as a source of social cohesion, through the development of critical thinking through a variety of subjects such as history, languages, literature, art and architecture. It is also intended as a potential tool to avoid conflict and forestall closed and authoritarian religious approaches in the thinking of children, teenagers and young adults.[477]

Greece, our case study, is a secular state that maintains traditional ChurchState relations. It is also a country with an indigenous Muslim minority. This minority’s role and religion had until recently been confined by the boundaries of the geographical area it covered. Education took place mainly in Muslim minority schools and the madrasas. From the late 1990s, however, rapid changes have taken place. Mass immigration, the economic crisis, and structural changes and upheavals in the neighboring Middle East and Europe undermined “old certainties” and created new social conditions and needs. Social cohesion is thus demanded of every citizen in the country in the face of these new challenges, and Religious Education in state institutions, including Islamic religious education, has become part of a new reality.

The learning program advocated here promotes re in public schools while maintaining a critical attitude towards it. This style of Religious Education involves an objective presentation of religious phenomena, eschewing the manipulation of religious ideas by religious communities, where there is rarely ever a meeting of religions and their respective cultures in shared public space. In what follows, the question of re is discussed with reference to ongoing discussions in religious, theological, and political circles, as well as to the shaping of public opinion on the relationship between Christianity, Islam, and secularism in Greece.[478] The analysis thus provides a broad view of the political claims, personal rivalries and of the preservation of divisive secular and religious narratives in public space.[479]

*** 1. Theoretical Approaches to Religion and the Public Sphere

The functional differentiation and emancipation of the secular sphere from religious institutions constitutes the core of secularism and a point of reference and agreement among most scholars. Functional differentiation means the ‘segmentation’ of modern society into a number of semi-independent systems—such as economic, political, legal, and educational—each of which has its own logic and rules of operation. So the sectors of society that had historically been under the control of religious authorities gradually emerged as separate and autonomous spheres removed from the influence of religious institutions. Within this functional differentiation, it is particularly important to distinguish between the political and religious spheres and to see how a certain type of political power was derived from religious legitimization and given ‘meaning’ by it in traditional society.[480]

New nation-states derive their legitimacy from secular structures such as the nation or the people. These factors played a role in the gradual weakening of the legitimizing role of religion in the public sphere, reducing its social influence, and relegating it in principle to the private sphere. The concepts of ‘private’ and ‘public’ refer to the traditional dichotomous model of social relationships that presupposes a distinction between the domestic/private sphere in an individual’s life and the common life of individuals or society, as also expressed in economic, legal, and political institutions. This distinction goes back to Aristotle, who distinguished between the economy of the ‘house’ or household and the organization of the functions of the city (polis) or state. Hannah Arendt stresses that the term public sphere denotes “two distinct but interrelated dimensions,” the space of appearance, which has the widest publicity, that includes all who belong to or are included in this area, and secondly, the common world, that is the world common to all those who live together and share in common or public affairs.[481] This distinction led to the conclusion that the interaction and communication between people in shaping ‘public opinion’ in the public sphere also shapes various political opinions. Habermas considers the public sphere to be the place where people meet to discuss common problems and potential solutions, emphasizing that “access is guaranteed to all citizens.”[482]

By the 1970s and even the early 1980s, the view that religion belonged in the private sphere was still widespread among sociologists, philosophers, and students of humanities in general. With the end of the Cold War, and the consequent emergence of all kinds of collective identities, including religious ones, the impression was created that religion had re-awakened in the public sphere in Europe, Latin America, Asia, and the Middle East.[483] This raised the question of the place of religion in the public sphere. Thus we arrive at one of the main questions: did religion really cease to cause political and social reactions in the modern era? Religiosity continues to permeate everyday life and the intensity of religious feeling is increasingly a cause of concern for the global community.[484]

A chain reaction to post-colonial politics in the Middle East and the massive migration that began after the 1900s, continuing after 2010 with the ‘Arab Spring,’ changed the balance, real and imaginary, within traditionally Christian European countries. Religion came to be used by rival political interests that call for the ‘re-Christianization’ or the Islamification of Europe as the case may be, employing over-simplified and obsolete terms that are exceedingly divisive for society as a whole.[485] In numerous cases, the demands of Muslims within European countries have instigated antagonism with local churches but also with the state, which has reopened the debate on the place of religion in public space. The secular countries of the western hemisphere thus now face new dilemmas in the management of religious diversity, not least due to the demands of Islam for inclusion within these states.[486]

*** 2. European Public Spaces and the Role of Religious Education

A response to these new conditions may come in part from education, particularly from a renegotiation of the style and role of Religious Education. It appears that the various models so far implemented, such as laicite in France or the granting of re rights to religious communities in the Netherlands and Austria, show many gaps in the understanding of the religious phenomenon in the public space.[487] At first glance, the freedom of religious communities to train their youngsters with no state interference gives the impression of a secular management of the religious phenomenon, these models have in practice shown themselves in most cases to be inadequate, failing to foster the ‘interpenetration’ and encounter of religions in the public space, and keeping the children of minority religious communities, especially of migrants and economically vulnerable groups, isolated in a unidimensional identity and cut off from the rest of the social fabric. These models, furthermore, intensified the antagonism between “authentic” and “scientific” religious instruction, an antagonism that appears to spring from the field of education but in reality has substantial political, ideological and national ramifications.[488]

Where there is full separation of church and state, the state’s involvement is limited to guaranteeing the religious freedom of its citizens and does not extend to the provision of instruction in religious topics in a school environment. This is a possibility afforded to private schools, denominational schools and religious communities and their functionaries. The

question in this case is whether young people develop a cultural awareness in religious matters permeated by a critical attitude, and what this may entail for the commonality. If re is provided exclusively in private religious institutions, lessons may be divisive in religious or national terms, and the state may be unable to ensure that the mode of instruction guarantees the corporeal, intellectual and spiritual integrity and well-being of the students.

In countries where the teaching of religion is compulsory, such as Greece,[489] Denmark,[490] and Sweden,[491] the question arises as to what extent Religious Education is conducive to an impartial acquaintance with the religious 'other', incapable of following those unfolding developments that render public space multi-racial and religiously diverse. At this point, the question emerges as to what extent individual societies are ready to go beyond a traditional understanding of religious identity and of its relation with national identity. The fear of forfeiting religious and national identity solidifies into an ideology fostered by religious and political circles that nurture extreme and monolithic political and religious identities.

The return of religion to the public space, with all its demands and controversies, is a reality that needs to be faced urgently. The varied examples of re in European states principally reflect their historical development and identity. The turn towards "critical religion" and the abandonment of the extreme denominational character of education have been prioritized for some time by the Council of Europe, and this educational paradigm has begun to materialize at a national level, preserving to varying degrees the 'cultural particularity' of the individual national states.

The question becomes even more complex when, in the case of Greece, we have to take into consideration the opinion of the majority within the state, the local, political, ethnic, and religious and non-religious identities, the Church's opinion on religious diversity, and the many different voices even within the Church that range from the extremely conservative to the very progressive. The very orientation of the accompanying theological discourse, which encompasses many different attitudes and directions, is, in itself, noteworthy. Views range from a zealous—almost fundamentalist—belief in the Orthodox faith as the "only truth," to a more moderate and open position based on the rereading of Orthodox theological texts on the "other"—mainly drawn from the patristic tradition[492]—and to the position of contemporary theologians who consider and examine the phenomenon of religion in purely academic and secular terms.[493]

*** 3. Ideological Controversies: "Religion vs. Secularism and Secularism vs. Religion"

Discussion in recent years on whether re in state schools should become a subject more open to diversity or be mainly confessional, perfectly encapsulates the tendencies in Greek society since the late 1980s and early 1990s, reflecting the wider view of Greek society in this regard.

Religion is a compulsory subject in elementary (after 3rd grade) and secondary education. In 2010–2011 the Hellenic Ministry of Education and Religious Affairs decided to compile a new curriculum for compulsory education. According to Stavros Yangazoglou, an advisor at the ministry and supervisor of New Curricula for the Institute of Educational Policy:

The new curriculum in re, just like the curricula of all the other subjects, mainly constitutes a process Curriculum, one which focuses on the process of teaching and learning in a context of participatory practices, teamwork activities and interactive approaches. According to this proposal, re as a subject is expected to transcend the traditional notion of transmitting ready-made knowledge from the teacher to the students through teacher-centered methods of teaching. It is expected to serve a different pedagogical dimension and function according to which the student is provided with the opportunity to 'learn how to learn' and to participate actively throughout the learning process.[494]

These initiatives became the target of several attacks, even though the proposed pilot re program did not alter the Christian Orthodox character of religious education. These were channeled through the internet and theological networks and organizations. Their common elements include the eschatological content of their proclamations and their conspiratorial tone. Moreover, they made unjustifiably harsh attacks on colleagues in the theological profession who had worked for the compilation of the new curricula and the writing of the new "Teacher's Guide for the Curriculum for re."[495] This was the beginning of a dispute in theological quarters which was subsequently opened up to the wider public through the internet. Persons with no previous acquaintance with the matter championed "the preservation of the Orthodox faith," or came down in favor of the complete abolition of re, for the sake of "protecting human rights and civil liberty."[496]

"Traditionalists" argued that the new course would be one of religious studies, a theology of multiculturalism, and that by approaching religions in this way it would eradicate the faith of the students. How can such a course be considered Orthodox, they argued, when Christ is not presented as the God-Man, as Savior, and Redeemer? Religious literacy, they said, has no relationship to the mono-religious, Christian Orthodox tradition of Greece. The school of 'religious literacy' they saw as a product of the neo-Marxist Frankfurt School that would devalue faith and give precedence to religions, in the plural. Respect for diversity can only be achieved through the already familiar Orthodox religious tradition and education. Religious pluralism cannot be the foundation of a country's educational program. In view of the difficult period Greece is now facing, it is not the time to attempt such a radical change in Greek religious education. Through these attempts at religious literacy, 'they' are trying to impose a Barlaamite (sic) and post-patristic theology. The pilot program's contents assume a level of perceptiveness that is quite beyond the students. Small children can be taught things about other religions, but only after an experiential development of their own religious faith.[497]

The reply of experts and the authors of the new program textbooks was that despite the fact that several of the critiques were either based on misunderstandings or completely unfounded, it is a useful reminder that these critics need to be better informed, since they are not really commenting on the program itself, but something else that they themselves have imagined and constructed, either because they are not able to understand or because of their insistence on a particular form for the course. [...] Even the most superficial reading of the curriculum makes it clear that the main body of the proposed topics is devoted to Christianity. Judaism and Islam are approached secondarily, while the eastern religious traditions (Hinduism, Buddhism, Taoism, and Confucianism) fall into a third tier.[498]

In the maelstrom surrounding the subject of re, the highest administrative organ of the Church of Greece, the Holy Synod, chose a middle path at the beginning. As Metropolitan Chrysostomos of Messenia advocated in his letter to the Archbishop of the Church of Greece and the other hierarchs in the Holy Synod (5/11/2012), the Church should not interfere in the debate “between the two extremes—in terms of content—of superficial modernization, on the one hand, and traditionalism on the other.” Even though this letter was first made public in November 2012 on the internet, it represents today, in 2016, the only official statement on the issue. Summarizing the Metropolitan of Messenia’s motion, the Holy Synod stated among other things that the course should, first of all,

<quote>

begin with and have as its focus the local Greek Orthodox tradition, which has crystallized as ethos, articulated as a way of life, and is inscribed in the pillars of our culture. [.] The second part of the course should then treat of the great Christian traditions outside Orthodoxy, which can be found in Greece and more generally throughout the world, such as Roman Catholicism and Protestantism. The third part should include some information about the great religions with particular reference to those that hold special interest for Greek society, such as the monotheistic traditions of Judaism and Islam, as well as Hinduism and Buddhism, so that students gain a working knowledge of them.[499]

</quote>

The criticisms became even more acerbic in the school year 2016–2017 when the new programs began. A tough political conflict took place behind the scenes with the Archbishop of Athens and of all Greece Ieronymos ii declaring the new re curricula to be ‘unacceptable and dangerous’[500] and the left-wing government replying, after a short debate, positively to the demand of the church for the resignation of the Minister of Education and Religious Affairs, Nikos Filis. This year, however, the new study programs are being implemented despite great difficulties, with two main characteristics: the cultivation of critical thought and the updating of the lesson to the requirements of today with clearly greater emphasis on Orthodoxy but with creative elements and ways of understanding other religions, cultures and societal reality.

Perusing the new curricula offers new pedagogical tools, such as interaction between student and teacher, and many other positive developments in comparison with the older textbooks. These gave an account of interesting facts but in an outdated and old-fashioned way, in which both the teacher and the student are subordinated to the static approach of the book, which was often unclear and tedious. The pedagogical methods employed in the new curricula are much friendlier to both pupils and teachers. They provide more than one interactive choice per course, the possibility of independent study on the part of the students with the supervision—rather than the obligatory interven- tion—of the teacher, the students' recollection of other information sets, experiences, and skills related to the world, to geography, ecology, the environment, and to other fields which are rightly associated with the course on religion. Additionally, dogmatic theology and the history of the Church are rendered in an innovative way. Unit 4 of the textbook for the first grade of secondary school, entitled "How Decisions are Made," provides an indication of these innovations, critically examining the phenomenon of religious conversion.[501] The student is invited to learn about the many trends within the Judeo- Christian and Judeo-Hellenic environment, and to become more knowledgeable about the rifts between believers and churches over the course of history. The significant difference from previous textbooks is that the 'religious other' is not projected deterministically as a "heretic." On the contrary, the students learn—using the same texts of church history and scripture—about the doctrinal and other differences that emerged in the early Church, with the ultimate goal of being able to seek out and identify examples of religious division, diversity, and conflict in other world religions. This form of religious instruction can contribute to a positive cooperation between students of different religious beliefs and denominations within the same classroom, and even overcome the constrictions placed by both political and religious elites who seek to manage, and sometimes manipulate, multiculturalism and conflicting religious trends within the public sphere. Thus, respect for the social equality of students with different religious backgrounds, be they Greek citizens or immigrants, will receive a solid foundation in the school environment and even in Religious Education. Angelos Vallianatos, an advisor for re teachers, characteristically sums up these contemporary demands by saying that the "special need today is for theology to go beyond modernity and accept plurality and diversity, since it is not a problem but rather a tool to explore one's identity further."[502]

In order to give a complete account of the new Curricula, I must also note some difficulties that came up in its implementation. First, the new material is interspersed with quite a few references to other religions which the teachers and theologians working with it may not have the academic level to handle. Second, extra time is required for the teachers, already underpaid, to get acquainted with the new curricula and to operate in an experimental pilot program, and thirdly there is a need for training in the accompanying pedagogical methodology. The members of the expert committee who co-wrote or supervised the pilot textbooks are making small but substantive changes in response to the public discussions and training sessions, the results of which are not immediately visible but contribute decisively to the steady and effective dissemination of the new program. These difficulties are compounded by ideological resistance reflecting a broader conflict between "traditionalism" and "modernization," "fundamentalism" and "modernity,"[503] which also divides theologians and university teachers into two camps. A few years ago, such

controversy was rather mild, but in recent years it has grown and come to dominate Greek society.[504] With economic and employment difficulties dragging on and the welfare state sliding rapidly into decline, it has been easy to manipulate the religious identity of its citizens, many of whom seem to fear that the economic crisis and the international monitoring of their economy will lead to the loss of what is ‘holy’ to them.

It is clear that re can easily be used by the political establishment to exercise pressure on the ecclesiastical establishment and vice versa, and how debate surrounding this topic can become an ideological conflict. A substantial part of the contemporary political Left, including some socialists, assume a negative attitude towards re pressing either for its complete removal or its re-configuring in terms of the discipline or the Study of Religions in addition to the possibility of making it optional. Many devotees of this perspective have France in mind as it was in the 1960s and 1970s, when they themselves were studying there. They have not been following, however, the way laicite subsequently developed there, especially the debates from the 1990s onwards on the necessity of religious-cultural education and of incorporating a certain kind of ‘religious literacy’ into the school system, nor the discussions that took place on the kind of teaching staff that would be suitable nor the questions posed by the return of religion itself, mainly through Islam, to French public space.[505] In this context it is interesting to observe that the prioritization of human and civil rights originates on the left of the political spectrum, whilst right-wingers, despite their roots in the freedoms of liberalism, do not extend such freedoms to spiritual/religious matters, identifying with the traditional values of nation and church, and often ignoring human rights issues in order to promote very specific geopolitical and economic hegemonic strategies as for example in Syria and Iraq.[506]

*** 4. Islamic Religious Education and a Program on Intercultural Religious Education in Western Thrace

In the context of religious freedom, equality before the law and equal political rights, the Hellenic Ministry for Education and Religious Affairs initiated a law in 2007 which enabled the Muslims of Western Thrace to be taught Islamic religious Education in public schools. These schools have witnessed a steady growth in the number of Muslim students in recent years. The subject was introduced as an optional module and for the same number of contact hours the other pupils were taught re, two hours throughout Primary and Secondary School.[507] The same law also made a number of imams public functionaries, granting them the same status as that enjoyed by priests.[508]

After this law came finally to be applied in 2013, the School of Theology of Aristotle University of Thessaloniki assumed responsibility for implementing a program of training for imams (ierodidaskaloi), viewing it as an opportunity to showcase the importance and necessity of the school class on religion in the Greek public sphere.[509] The School also saw it as an opportunity to connect with the local community of Thrace, a

key geographical region where Christians and Muslims have lived together for centuries.[510]

Table 8.1 Numbers of Muslim students in primary and secondary education/chool year 2014-2015a

| | minority schools | | state schools |

| | primary | secondary | primary |

| xanthi | 2621 | 614 | 654 |

| rodopi | 2452 | 1001 | 602 |

| evros | 429 | — | 611 |

| total | 5502 | 1615 | 1867 |

These statistics were provided in November 2015 by the Regional Education Directory of Eastern Macedonia and Thrace, Office of Minority Education.

The program had to be flexible and address the trainees in a broad and objective way that was easy to understand, attractive, conciliatory, and useful. It could not employ obscure academic terms, nor could it have a narrow dogmatic theological content, since it was intended for both teachers and religious persons in the region, Christian and Muslim, from a variety of educational and language backgrounds. At the same time, it addressed two groups of teachers of Islam: imams in area mosques and teachers who graduated from the former Special Pedagogic Academy for Muslims Teachers (e.p.a.th.) who, for the past two years, had taught Islam for the first time in Greek state schools.[511]

For the project to succeed, networking between ‘educational workers’ in the region through education and, more specifically in the context of intercultural religious education, had to be encouraged. Promoting feedback and communication between the university and the teachers of religion who are active in secondary education and providing equal training for all and access to programs for ‘education and lifelong learning’ would further enhance the project’s prospects of success. At the same time, this was not to be a purely theological training but rather a method by which religions could share their historical wealth and act as agents of reconciliation in the public sphere. This would be Intercultural Religious Education, fortified, however, with a satisfactory knowledge of the religions in the region and of their cultural contributions.

*** 5. Implementation and Prospects

An extensive and ambitious training program was designed, and implemented within just 16 months, with 460 total hours of training in the main cities of the region of Thrace (Xanthi, Komotini, Alexandroupolis, Didymoteicho, and Soufli). The number of participants reached 150, of which 66 were teachers of Christianity and 84 teachers of Islam. There were 21 instructors the majority of whom were drawn from the Department of Theology of the University of Thessaloniki, but also included members of staff from the Universities of Athens and Thrace, as well as Ph.D. graduates in Islamic theology and Ph.D. holders who work as theologian advisors and supervisors in the public school system.

After reviewing the overall training process, internal and external evaluations of the program, discussions with interested parties, and the other trainers and trainees, the following conclusions emerged: The most significant outcome was social and educational. The training sessions established communication, institutional and academic, between two groups dealing with the issue of religion—an issue of vital importance for social cohesion—but which is nevertheless considered by many to be either taboo or outdated, and as such a matter of indifference or a marginal issue to be isolated within the religious communities. For this reason, even though Christians and Muslims have lived together in the region of Thrace for centuries now, and even though we were addressing teachers of religion and people who deal with religious practice and its spiritual dimensions, we realized that the Muslims knew little about Christianity and what they did know was very general and without any specific understanding or knowledge of Orthodoxy and the historical process. The Christians, meanwhile, knew more about Islam, but what they knew was often warped, stereotypical, and sometimes even phobic. The trainings' final effort was precisely to remove these limitations and prejudices, to begin the process of networking, to debunk stereotypes, and to work together to highlight the positive contributions of the religious and cultural diversity of the region as well as to improve social cohesion. Of great help, to this end, were the joint discussions. We also found that trainees needed to acquire greater familiarity with pedagogical methods that employed practical approaches and modern models of teaching, so that they could present the class on religion interactively, rather than statically. We believe that it is possible to develop dialogue between the teachers of re through the creation of joint projects that relate to the cultural monuments in Thrace and Intercultural Religious Education. Through the teachers and students, the broader community will come to know the common monuments and learn their history. The monuments themselves will then become objects of research and respect as the common spiritual and cultural heritage of the area.

*** 6. Religions, Secularism, Ethnicities and Politics in Western Thrace

Initially, the program was not welcomed by part of the Muslim minority, nor also by part of the political left.[512] For some of the minority, the introduction of Islamic religious

education into public schools and its teaching in Greek—in madrasas and minority schools teaching is done in Turkish—was perceived as a violation of the religious rights of Muslims. In the mind of a part of the left there lingered a distrust of anything religious, including religious education which they conceived only in terms of a divisive potential for students. For the sake of human rights, as we have already remarked, they continued to envisage the French secular education model. The possibility of a “meeting” of religions in conditions of respect and within the framework of public education became a gaping void to be filled by further initiatives. This was virgin territory for Greek reality and the program attempted to explore some of this territory.

It became increasingly apparent that society on both a local and regional level had ceased to be so wary and many fears arising from the program and its objectives had been overcome. It also became evident that Muslim Greek citizens could be allowed to express their thoughts and feelings on their religion in the language of the country they live in without any need for political or religious mediators. In left wing quarters, there seemed to be space for a more dialectical attitude and wider rethinking, a tendency towards a redefinition of initial theoretical positions when transferred into a practical level.

On a political level, antagonisms will of course continue. Turkish interest in the area is well known and Turkish antagonism with Greece on controlling the religion of Muslims in Thrace, their political and religious officials, and their national orientation and conscience. Turkish interest in the area forms part of its broader hegemonic policy toward Balkan Muslims who are understood as flesh of its flesh, following the fall of the Ottoman Empire and the emergence of national states in the region.[513] The results of these long-standing ties of Balkan Muslims with Turkey and of the antagonisms with the states in which these minorities live show in the assimilation of Muslim citizens into their states of origin, their linguistic incompetence in the official language of the state they live in, and a selective isolation from the broader public space of the countries in which they live. At the same time, these populations turn their gaze towards “Mother Turkey” for instructions and the ways and means of actualizing the national and religious identities of Balkan Muslims.

However, it is also true that the policy of the national states themselves towards minorities (including Jews and Muslims but also other denominational communities such as Catholics and Evangelicals) exacerbates the isolation of these minorities.[514] In the case of Greece, nationhood was inextricably intertwined with Orthodox religious identity which, in both the popular and learned versions of its configuration, identified the Ottoman Turks with Islam and Orthodox Christianity with the struggles of the nation and of the “most august and holy church” for liberty and national well-being.[515] This historical dimension was re-articulated as a national and religious narrative during the Greek dictatorship of 1967–1974 (also known as the Colonels’ Junta). After long national division of the Civil War (1946–1949) and the subsequent fear of Communists and Communism, the Turkish national identity of Muslims was further reinforced by the policy of the Greek state to monitor, control and suppress Communism. In terms of geography, the mountainous areas across the Greek- Bulgarian border—Bulgaria being Communist at the time—are inhabited throughout their length and breadth by Muslims, the so-called Pomaks, Slavic Muslims who speak a distinctive linguistic

idiom.[516] Even though geographical space was available for these Muslims and no problems were observed in areas co-inhabited by Christians and Muslims, no “space” could be created for them in the national narrative.[517] Similarly, the Church of Greece and particularly the Metropolitan Dioceses of Thrace were inactive for many decades in undertaking initiatives to establish communication and promote amity between the two religious communities. Certain ecclesiastical voices had sparked off tension and divisive speech and actions. It was not until very recently that the situation changed for the better with the consecration of new Metropolitan Bishops in these areas. Much work remains to be done on multiple levels towards establishing a better rapport and solidarity in the public space. The role of the Office of Mufti in the area Thrace remains inward-looking, though not divisive in the common public space.[518]

In general, there is a wide and changing variety of modes of social behavior within the public sphere in the region of Thrace and among the Muslim minority. What we see in the public space in the region of Thrace is quite different from elsewhere in Greece. Streets have both churches and mosques; women in traditional dresses that cover their entire body can be seen side by side with women in fashionable ‘provocative’ attire; men pass their time in the old-fashioned kafenia (cafes), while women and men sit together in the crowded and noisy coffee shops and bars. This variety pertains also to the Muslim citizens themselves, especially young people and children, both in their customs and manners as well as in their relationship with religion (or lack thereof), their political beliefs, and their national sentiments. It is readily apparent, however, that the political climate, political interactions with Turkey, and the politics in this region also affect part of the public sphere, which creates a sense of continual change and spawns a vicious cycle of claims by certain dominant internal groups (the elite). Sometimes the national and the religious compete, and sometimes the religious is identified with the national—such as in the case of the election or appointment of the Mufti and the great debate that began after 1980 about the application of shari‘a law—and other, similar issues.[519]

In the words of Kristin Fabbe:

when state elites reinforce certain social categories over others in the state consolidation process, these categories become reified and later ‘resurface’ in contemporary policy dialogues about the relationship between state security and national values. From the historical record in Greece and Turkey it is apparent that state elites in both countries historically privileged religious categories over potential alternatives [...] in the state consolidation process.[520]

Thus, when foreign observers in the region try to understand all this exclusively in terms of ‘human rights’ and look for the ‘beginning at a precise time’ of the conflict between Greece and Turkey and how this affects minorities, the understanding of space—public, political, and religious—seems even more absurd and tenuous and hardly conducive to arriving at valid and objective conclusions. It is even to some extent also demeaning for the subjects

themselves, the local residents, and how they feel about and live out the concepts of security, dignity, and self-motivation, or their continual dependency on other players in the region.

*** 7. Conclusion

It is evident that Greek society faces the necessity of a deep change in diversity management within the public schools. This is clearly demonstrated by the experience gained over the last few years through ongoing research and educational initiatives, particularly in Northern Greece. The domain of education is a constant guarantor of the prioritization of equal legal and political rights for all students and teachers without exception. The most appropriate way to eschew extremism and ensure the dissemination of social and political benefits among all citizens without mediating elites and “enlightened” avant- garde groups is to enhance various initiatives inducing citizens to become active and assume responsibilities in the common public space.

** Chapter 9: The Russian Orthodox Church

Federal Visibility Versus Local-Level Concealment

Ivan Zabaev and Daria Oreshina

Abstract

In Public Religions in the Modern World, Jose Casanova showed that secularism as deprivatization foregrounds religious organizations into the undifferentiated public sphere of civil society. This type of public religion, as opposed to state religion and religions on the level of political community, shows the greatest compatibility with the conditions of modern society. This transition occurs when religion, through religious actors, performs some actions in the field of civil society, brings them out for rational discussion and thus makes them visible, reaches a consensus with other actors, and changes the situation on the local level together with the agents of the state in accordance with the consensus reached. The present chapter analyzes the activities of Christian Orthodox actors and organizations—representatives of civil society, and shows that the entry of religion into the public sphere does not automatically imply desecularization in the sense used by Casanova. The example of Christian Orthodox work in abortion prevention and the support of women, families, and childbirth illustrates a situation in which a religious actor can contribute to the common good, acting along with other actors of the civil sphere, provided that the religious identity is not publicly visible. Religious actors do not refuse to work in the civil sphere and apply a variety of tactics, successfully adapting them to the conditions of modern society. Our analysis shows that the claim of deprivatization as an indicator of desecularization requires further elaboration, since in the same country in respect to one and the same denomination there may simultaneously occur both an increase in visibility (or publicity) at the level of state religion and a decrease in visibility (or publicity) at the level of the civil society, which does not make it possible to speak of an ongoing process of secularization or desecularization in that country.

Keywords

public and private religion — public sphere — Orthodox Christianity — common good — deprivatization and desecularization — faith-based social work

---

*** 1. Introduction[521]

Discussion of the place of religion in the public sphere became popular after the appearance of the book by Jose Casanova, Public Religions in the Modern World (1994). Casanova showed that if we speak about secularism as a deprivatization or transfer of religion from the private sphere into the public sphere, a foregrounding of religious organizations in the undifferentiated public sphere of civil society[522] means exactly such a deprivatization. Moreover, exactly this type of public religion (as opposed to state religion and religions at the level of political community) shows the greatest compatibility with the conditions of modern society.[523] This problem was formulated in the context of a discussion on how religion can manifest itself in the public sphere.[524] John Rawls insisted that religious actors most certainly have the right to be represented in the public sphere along with any other actors, yet, for doing that their communications had to be translated from the language of comprehensive doctrines into the neutral language of the public sphere.[525] Without emphasizing the problem of translation, Casanova implied the preservation of explicit religious identity when a religious actor entered the public sphere of civil society. In other words, even if the message was translated, the religious actor still presents himself to others as religious. By and large, such preservation of identity while leaving the private sphere for the public sphere may precisely be a sign of desecularization.

In this study, we understand desecularization as deprivatization and not as activization of religiosity or as overcoming functional differentiation.[526] By analyzing the activities of Orthodox actors and organizations—representa- tives of civil society—we intend to show that the entry of religion into the public sphere does not automatically imply desecularization in the sense used by Casanova. Using the example of the Russian Orthodox Church as well as organizations and actors associating themselves with the Russian Orthodox Church in one of the spheres of public life, namely, in countering the increase in the number of abortions in Russia, we will show that (1) such major religious organizations as the Russian Orthodox Church in Russia may enter the public sphere in all three ways proposed by Casanova—as state religion, as religion on the level of political community, and as religion being a part of the undifferentiated public sphere of civil society; (2) This entry may be of a multidirectional kind; thus, increased activity on the level of state religion may lead to more pronounced difficulties for activization of religion on the level of civil society; (3) The development of the federal pro-life agenda leads to difficulties for small organizations on the level of civil society, at least in a country which underwent a massive forced secularization; (4) These transformations are reflected in the need to conceal religious identity for maximizing the impact of an organization. Such a situation shows that the claim of deprivatization to be an indicator of desecularization requires further elaboration, since in the same country in respect to one and the same denomination there may simultaneously occur both an increase in visibility (or publicity) on the level of state religion and a decrease in visibility (publicity) on the level of the civil society, which does not make it possible to speak of an ongoing process of secularization or desecularization in that country.

Analyzing the processes of secularization and desecularization of religion in the late twentieth century, Casanova insisted that we can understand the term “secularization” in

three distinct ways. Following one of these understandings, secularization means that religion left the public sphere for the private sphere and, accordingly, desecularization turned out to be identical to deprivatization of religion (or its exit from the private sphere and entry into the public sphere).[527] Analyzing the conditions for compatibility of religion and modern society and elaborating the typology of public religions, Casanova believed that we had to distinguish between public religion in the sense of a state religion, religion at the level of political community, and religion present in the undifferentiated public sphere of civil society. According to Casanova, it was the latter role of religion, which had the best chance for existing in the modern society. Casanova himself did not clearly elaborate what religion in the undifferentiated public sphere of the civil society was; however, a certain variant of such an implementation may be deduced from Casanova's study.

In introducing his distinction between public and private, Casanova relied on the studies of several authors, the most important of which for our purposes was that of Jurgen Habermas, who defined the public sphere as follows:

By "the public sphere" we mean first of all a realm of our social life in which something approaching public opinion can be formed. Access is guaranteed to all citizens. A portion of the public sphere comes into being in every conversation in which private individuals assemble to form a public body. They then behave neither like business or professional people transacting private affairs, nor like members of a constitutional order subject to the legal constraints of a state bureaucracy. Citizens behave as a public body when they confer in an unrestricted fashion—that is, with the guarantee of freedom of assembly and association and the freedom to express and publish their opinions-about matters of general interest.[528]

It is important to add that public opinion as mentioned by Habermas is formed in the process of rational discussion, "the opinion of humankind is seen as (1) unreflective, (2) unmediated by discussion and critique, and (3) passively inculcated in each successive generation. Public opinion, by contrast, is meant (1) to be the product of reflection, (2) to emerge from discussion, and (3) to reflect an actively produced consensus."[529]

There are several critical studies analyzing both the concept of "public sphere" and specific features of various religions operating in the public sphere.[530] However, we may generally say that the normative view expressed by Habermas (and a number of other scholars) on the importance of the public sphere is still relevant today. One may agree with Charles Taylor, who noted that

the public sphere is not only a ubiquitous feature of any modern society; it also plays a crucial role in its self-justification as a free self-governing society, that is, as a society in which (a) people form their opinions freely, both as individuals and in coming to a common

mind, and (b) these common opinions matter: they in some way take effect on or control government.[531]

It should be stressed that the concept of public sphere is important in bringing the judgments and practices of specific actors to public display in order to reach consensus, and in establishing a strong link between the micro level of specific local practices and the macro level of country, state, and the public sphere. It is important that people rationally discuss various options, reach varying degrees of consensus, and then adjust their positions, local practices, and activities of different actors in accordance with that consensus (with the help of the state or some other instruments). No less important in the concept is its claim that it is exactly the public use of reason (Immanuel Kant, Jurgen Habermas) that provides the gradual improvement of life at a local level. It is a public use of reason which helps specific actors to avoid the problems they face in their private life or in local situations.

Thus, if the theory of Casanova is correct, it means that we may speak about desecularization (compatible with modernity) as the transition of religion from the private sphere to the public sphere in the best way possible, that is, through the entry of religion into the public sphere of undifferentiated civil society. This transition occurs when religion (religious actors), performing some actions in the third sector, brings them out for rational discussion thus making them visible, reaches a consensus with other actors, and changes the situation at the local level together with the agents of the state in accordance with the consensus reached.

In this study, based on the analysis of the activity of the Russian Orthodox Church in the prevention of abortion, we will try to show that the entry of religion into the public sphere does not automatically imply desecularization in the sense used by Jose Casanova in his book.

The current situation with the Russian Orthodox Church in Russia is a good example for analyzing the processes of deprivatization of religion for the following reasons. There is a significant increase in the number of Russians who identify themselves with Orthodox Christianity over the past twenty-five years, rising from 31 to 70 percent.[532] Russian legislation involving religious organizations is generally in favor of the Church; examples include the laws and regulations on the restitution, and the teaching of “the Basics of Religious Culture and Secular Ethics” in secondary schools. Presidential candidates meet with the representatives of traditional religions. There is a growth of media coverage of the Russian Orthodox Church, and agreements between the Russian Orthodox Church and State Agencies on cooperation in the field of health, education, and other fields. However, in our opinion, such an obvious picture representing the entry of the Russian Orthodox Church into the public sphere does not automatically imply the desecularization of the Russian society.

*** 2. Orthodox Pro-Life[533] Organizations in Russia. A Sociological Analysis

In this section, we present the results of our own empirical investigation. We will view the work of Orthodox pro-life organizations in Russia in the context of the problem of public religion and the capacity of the Orthodox community to operate in the civil society bypassing the public sphere.

First, we describe the dynamics of Orthodox pro-life organizations over the past twenty years, which will illustrate the importance of the issue for the Russian Orthodox Church and for the parishioners of the Russian Orthodox Church involved in the work of such organizations.

Next, we analyze the activities of Orthodox pro-life organizations. Orthodox work in defense of life in Russia has its own specific nature: it is carried out in two completely different ways. The first is represented by the actions of Orthodox hierarchs as well as organizations which publicly express the position of the Russian Orthodox Church and the Orthodox community. The second is the work done by many organizations which do not emphasize their Orthodox nature in the working process. Many organizations do not conceal their Orthodox identity; usually these include diocesan or monastery crisis centers and Orthodox centers of assistance to mothers for example. However, pro-lifers' work in medical institutions (prenatal clinics) or work with a large number of calls through professional psychological "hot lines" implies that the religious affiliation of an organization or a professional is not openly manifested, and in communicating with the client the specialist does not recourse to religious arguments.

The religious component can be embedded in various aspects of an organization's work and not in all cases is this component expressed publicly. We intend to show that the public display of religion is a conscious choice of the organization depending on the purpose and terms of its work.

In order to achieve our objective, we will describe, first, the trends and impacts of the organizations which demonstrate their religious (Orthodox) identity and use religious arguments in the discussion on abortion. The same description of trends and impacts will be presented for the organizations which rely on denominational resources, but consciously line up their activities in a manner that would conceal their religiosity both when dealing with an individual "client" (with families or women in crisis situations), and when entering the public sphere (websites, publications of specialized literature, etc.).

The comparison of the two types of organizations will allow us to show that the Russian Orthodox Church and the Orthodox community have a capacity to act towards the improvement of life in the country in various ways, including activities alongside with non-denominational civil society organizations.

*** 3. Research Methodology: Sources of the Data

We used data from the empirical research done in the Laboratory, “Sociology of Religion” at Saint Tikhon’s Orthodox University in 2011–2013. The study consisted of a survey of pro-life organizations and in-depth interviews with the leaders and volunteers of such organizations, their supervising clergy, as well as demographers and representatives of the Russian Family Planning Association. A total of seventeen interviews (each lasting 40–100 minutes) were made in Moscow, St. Petersburg, Murmansk, Orenburg, Nizhnevartovsk, Vladivostok, and Yekaterinburg, following a snowball sampling (since it was almost impossible to find many of the organizations, in particular those which conceal their Orthodox identity in the open sources). Interviews in Moscow and St. Petersburg were conducted in person; in other cities via Skype. The interviews were recorded on voice recorders and transcribed for later analysis.

A survey was conducted at the Second Annual International Festival of Social Technologies in Defense of Family Values “Pro Life”[534] in June of 2012. The Festival was supported by the Synodal Department for Church Charity and Social Ministry of the Russian Orthodox Church and united like-minded people from organizations in defense of traditional family values from Russia, Belarus, Ukraine, and other countries. The scope and interest of those organizations was associated with protecting traditional family values, supporting motherhood and childhood, and opposing abortion. The participants of the Festival included not only religious organizations and representatives of the parishes of the Russian Orthodox Church, but also representatives of government agencies, non-denominational non-profit organizations, as well as volunteer organizations. One hundred and fourteen organizations from various cities of Russia and about twenty organizations from the cis countries were surveyed. The geography of the organizations included such cities and towns as Arkhangelsk, Astrakhan, Belgorod, Chita, Dalmatovo, Dnepropetrovsk, Elista, Ivanovo, Izhevsk, Kaliningrad, Kamenka, Kataisk, Kirzhach, Kolomna, Kostroma, Krasnodar, Krasnoyarsk, Kurgan, Lipetsk, Maloyaroslavets, Moscow and Moscow Region, Murom, Nizhny Novgorod, Novomoskovsk, Novosibirsk, Norilsk, Omsk, Orel, Orenburg, Penza, Perm, Pervouralsk, Petrozavodsk, Polotsk, Rostov-on-Don, Ryazan, St. Petersburg, Samara, Saransk, Smolensk, Stavropol, Syktyvkar, Tuimazy, Tula, Tver, Tyumen, Ulan-Ude, Ulyanovsk, Veliky Novgorod, Vladivostok, Volgograd, Voronezh, Yaroslavl, Yekaterinburg, and Yuriev-Polsky. The questionnaires were processed in spss.

*** 4. Orthodox Pro-Life Movement in Russia: Dynamics of the Number of Organizations

According to the data of demographers, Russia in 2011 showed the highest abortion rate in Europe. The Russian Orthodox Church has a proactive position in respect to the problem of abortions in Russia. The so-called pro-life movement (movement against abortions) operates worldwide; it is represented both by religious (mostly Christian) associations, and secular associations, initiative groups, and organizations.

In Russia, the Orthodox pro-life movement began to develop in a significant way after 2010. An important factor for consolidating the efforts of individual groups of Orthodox activists and several organizations, which by 2010 had accumulated serious experience in the area, was the support (including coordination) on the part of the Synodal Department for Church Charity and Social Ministry, as well as the decision to open centers for maternity protection in all dioceses of the Russian Orthodox Church (2010), adopted by the Synodal Department. In 2010, the Orthodox Network, “Social Technologies in Defense of Family Values “Pro Life””, uniting pro-life organizations in Russia and other countries, started its work. A part of the Network’s activities is exchanging experience and training (in the form of regular webinars) as well as hosting an annual international festival. Orthodox pro-life organizations are a dynamically developing network. New organizations are often created as units or branches of experienced organizations, and effective experience becomes replicated in other cities and dioceses (see Figure. 9.1).

Next, we will describe the activities and impacts of two types of pro-life Orthodox organizations: those which openly use religious arguments and symbols in the discussion about abortions and at public events, and organizations which conceal their religious affiliation.

*** 5. Organizations Manifesting Their Religious Identity

The following activities are pursued by the organizations which openly recur to religious arguments and publicly express the position of the Russian Orthodox Church on abortions: presentations and publications on abortions made by Orthodox clergymen and hierarchs in Orthodox media, on the internet, in blogs and social networks; public events such as the International Festival of Social Technologies in Defense of Family Values “Pro Life”, as well as a number of more local events: exhibitions and information campaigns (placement of banners, stands, leaflets) in schools, universities, libraries, birthing centers, and prenatal clinics. Public actions include social advertising for the protection of life (such as placing banners and stickers on transportation in the urban space).[535] We should point out that the official social advertising in support of traditional family values and childbirth does not always contain references to the religious nature of the organization which placed the posters. Awareness actions also include information campaigns of the so-called Orthodox activists (such as putting up posters, distributing leaflets, performances, and car rallies), [536] as well as picketing and exposing actions.[537] Another type of activities is open training events for Orthodox pro-lifers in the form of webinars[538] and methodological work, such as designing and publishing methodological recommendations and guidelines. Other practical measures include the organization of shelters and crisis centers for women in difficult life situations at churches and monasteries. Individual leaders of Orthodox pro-life organizations try to advocate for their position, in particular, concerning a ban on abortions through participating in meetings of state commissions, committees, and the Public Chamber.

[[i-c-islam-christianity-and-secularism-in-bulgaria-4.jpg][figure 9.1 The number of Russian Orthodox pro-life organizations founded from 1992–2011]]

Public statements of the official position of the Russian Orthodox Church on ethical issues in general and on abortion in particular can be considered to be a part of the latter type of activities. Some examples include the “Proposals on the Improvement of the National Policy on Family and Childhood (2011)”[539] or publication of such statements as “Patriarch Kirill calls abortion a national disaster (2012)”;[540] “Patriarch Kirill and Metropolitan Jozef Michalik: Abortions and euthanasia are the disgrace of modern civilization (2012)”[541] as well as the signing of a formal Agreement on cooperation between the Russian Orthodox Church and the Ministry of Health and Social Development of the Russian Federation on 8 July 2011. According to Article 1 of the Agreement, “The Parties shall cooperate in the areas of social development, health, labor, social protection, and other areas of mutual interest, including ... prevention of abortions.”[542]

Public speaking by Orthodox hierarchs and clergy in the media on abortions has an ambiguous effect. Very often such statements rather cause a negative reaction on the part of those who are not practicing Orthodox parishioners. There is no data on the impact of social advertising on the decision to keep a baby. According to some pro-life activists, aggressive social marketing and presentation materials (made in the rhetoric of infanticide) [543] may cause an unpredictable response. Not all Orthodox pro-lifers support aggressive media campaigns, and many adhere to the “positive agenda” (with the message that “a child is happiness”). “I would not want my children to see blood and the inscriptions of ‘death’ or ‘legalized child murder’ in the Metro or on banners” (an employee of a pro-life organization, Yekaterinburg, 2011). As far as specific actions are concerned (shelters and counseling centers for women), according to the survey, 78 percent of Russians want the Church to set up centers of help for mothers and children.[544] This practice is most certainly very useful;[545] however, firstly, it has a very limited capacity (due to the limited number of places in such shelters), and, secondly, it was designed for the so-called “motivated client”—a woman who has already decided to keep her child and turned for help as a result of her decision. However, the most difficult aspect in the work of the pro-life organizations is exactly to convince a woman or family not to make an abortion, after which she may be referred to a shelter, clothing warehouse, receive cash assistance, consultation with a social worker or lawyer, and so on.

*** 6. Organizations Concealing Their Religious Identity

We now consider the work of Orthodox organizations which do not publicize their affiliation with a religious community. Orthodox pro-life activists can act as professional psychologists or social workers without revealing their affiliation with the Church. Moreover, activities initiated by a priest or a parishioner such as consultations for pregnant women may be carried out by hired professionals (psychologists or professional consultants) regardless of

their relationship to the Church and belonging to a parish. The organization is registered as an ngo; the specialists receive a salary. The source of the funding is grants from state or private foundations, as well as donations of benefactors.

Such organizations engage in the following activities. Firstly, there are “crisis lines” by which women may receive a free consultation of professional psychologists (by telephone, e-mail, icq, or Skype—that is, using all modern means of communication). The information about a hotline can be printed on the packaging of a pregnancy test, on a women’s website, or in a women’s magazine (without any reference to Orthodoxy). Consultations are given by professional psychologists regardless of whether they are practicing Orthodox Christians or not. The task of the psychologist is to help the woman to make a decision on keeping the baby, to help her to resolve a difficult situation, and to find resources to overcome it such as renewing relations with her relatives and finding sources of financial support.

<quote>

You see, we meet the woman when she is deciding what to do: keep her pregnancy or have an abortion ... at a time when we are ready to provide support, when this support is most needed. The lack of such support is obvious, because before the social institutions that provided such a support—family, parents’ family, the child’s father, the immediate social environment—used to be able to provide this support, primarily, I believe, following the reasons embedded in their worldview—these are the importance of a person, importance of family, importance of parenting; they were a part of community; they were present in the public consciousness, but now it is a time of universal fragmentation and atomization of society, when family ties are severed. Thus it is a kind of speculation that a woman should make a decision on her motherhood on her own.

Creator of an organization and an Orthodox parishioner from Moscow, 2012

</quote>

The consulting psychologist also helps the client to connect with other professionals and organizations, depending on what type of assistance the woman or the family needs: legal advice or consultation of a social worker, assistance with things, a shelter for temporary accommodation, and so on (that is, making a referral for the woman depending on her specific problem).

<quote>

And we not only do this with pregnant women; we have a whole range of problems associated with the crisis of the family institute. We encounter problems with alcoholism and drug abuse, problems which are faced by families with many children, and so on and so

forth. Thus, a family entails a whole set of problems ... problems that we also somehow are trying to solve by our own volunteer, communal, or church efforts.

Creator of an organization and an Orthodox parishioner from Moscow, 2012

</quote>

One of such “crisis lines” was organized by one of the Moscow Orthodox prolife groups. In 2011, it provided about 5000 consultations to those who asked “for social and psychological help due to unplanned pregnancy.” In regular psychological counseling practice, it is believed that “the client should be motivated; he has to make a request for counseling. For example, it is not allowed to call back from a hotline to the woman, etc.” (female creator of an organization and a parishioner of a church in Moscow, 2012). The specific nature of an Orthodox “crisis line” is that the psychologist precisely reaches out to the client, “on the contrary, some kind of intervention is needed.” This approach makes it possible to evaluate the effectiveness of their work. According to the data from 2011, the telephone crisis line had a 35–40 percent success rate; ic q — consultation, often used by teenagers, since it is possible to make contact from a mobile phone at any time of day, had a 60 percent success rate.

According to our survey, 35 percent of pro-life organizations indicated that they had a “crisis line.” We can assume that not all of them operate nation-wide and have 5000 calls a year. Nevertheless, even one or two effective hotlines carry out important consulting work. Another area is organization of consultations by psychologists in prenatal care clinics and maternity hospitals, that is, in the places where women would come to have an abortion.

One of the functions of women’s prenatal care clinics is to provide psychological support. Thus, the current legislation recommends counseling for the women who apply for termination of pregnancy.[546] The structural organization of the prenatal care clinic recommended by the law includes the position of a psychotherapist, clinical psychologist, or psychologist on the staff. According to the testimonies of respondents from different regions, such consultation offices of psychologists were in fact absent from prenatal clinics, primarily due to the lack of funding,

<quote>

Well, no one is going to work for 8000 rubles. Naturally, no one can work for 8000 rubles. Even if money was available, it would probably be distributed among them for some other work. Psychologists are now in private practice anyway; who would work for 8000 rubles?

Head of a pro-life organization and an Orthodox parishioner from Yekaterinburg, 2012

</quote>

<quote>

Yes, first of all, these salaries are very low. Nobody goes to work there. A bad psychologist is worse than none at all.... There were some attempts in the days of Zurabov [the former Russian Minister of Health—I.Z., D.O.] to give the Health Service a kind of a gentle social face. I think it was a completely arrogant claim to easy success because there was no funding in the budget anyway.

An expert of the Russian Family Planning Association, 2011

</quote>

Thirty eight percent of pro-life organizations in our survey responded that they have been creating or are attempting to create such psychological counseling rooms in maternity hospitals and prenatal care clinics. Provided that it is possible to reach an agreement with the administration of a medical institution, pro-life activists pay for the work of the specialist,

<quote>

I offered them to fund a position, so we would pay extra from our organization. We were given the green light, went to the chief doctor, and the chief doctor said—I have no money for them. So they were not included this year. Right now we are considering the problem. We are hoping to get a grant to provide funding for psychologists in prenatal clinics.

Head of a pro-life organization and an Orthodox parishioner from Murmansk, 2012

</quote>

Sometimes pro-lifers find devoted psychologists who are willing to spend few hours a week on consulting for free or for a very small fee. “No, of course we cannot pay a salary to psychologists in prenatal care clinics. But we give them a bonus every now and then; their salaries are very small” (head of a pro-life organization an Orthodox parishioner from St. Petersburg).

The third way to implement the consulting function in the institutions of health care is when the employees of the prenatal care clinic themselves share an Orthodox worldview and try to carry out consulting work in order to persuade women to give up the idea of abortion.

There [in the prenatal care clinic] was a nurse who was a believer, an Orthodox person. She said that she does this, talks women out of it. The head of the clinic is aware of it. He does not forbid it, yet does nothing to somehow boost this work.

Head of a pro-life organization and an Orthodox parishioner from St. Petersburg

It turns out that every prenatal clinic depends on the person who works there. In one clinic there was a head doctor which herself consulted before abortions. It is the head doctor who prescribes an abortion, not the doctors who would send women to her. She receives about forty people a year. And about 70 percent decide to keep the child.

A head of a pro-life organization and an Orthodox parishioner from Yekaterinburg, 2012

As a rule, such work in health care facilities excludes any appeal to religion and religious symbolism (of course, there may be a different situation when the presence of icons or stands with Orthodox content in a health center or prenatal care clinic depends on Church affiliation and the personal position of the chief doctor). Firstly, a religious, Orthodox organization has problems with entering a medical facility,

When you come to a chief doctor, you cannot say the word “abortion” because there is immediately a storm of indignation and emotions: For example, “Oh, you are against women’s freedom!” In no way can a religious organization enter into this discussion. At the moment we were negotiating, they screamed and tried to throw us down the stairs: “You will force our women not to transfuse blood,” that is, they confused us with the Jehovah’s Witnesses. One really needs to follow a positive approach to this conversation, “We will help women,” “We will lessen the burden of your doctors from solving social problems, the problems of these women.” That is, one needs to get the administration interested that we can help them to somehow solve their problems and take the burden off their shoulders.

Head of a pro-life organization and an Orthodox parishioner from Moscow, 2012

Secondly, even if the administration and the staff of the facility are regular Orthodox parishioners or are sympathetic to Orthodoxy, establishing a trusting relationship with a woman on the part of a professional specialist may require a “pro-lifer” to either hide his Orthodox identity, or at least, to not resort to the arguments of a religious, Orthodox type in the context of professional communication.

People can go to church for years, light candles, and not understand what is happening. At the same time they can say to the consultant who came from the Church that you will now

recruit us and take away our apartments. These fears and anxieties were directly expressed to us when we at first came from the Church to medical facilities.

A head of a pro-life organization and an Orthodox parishioner from Voronezh, 2012

According to various estimates, the impact of consultations in medical facilities is relatively low (compared to crisis lines)—only about 10 percent of women give up their decision to have an abortion after the consultation. Yet, the organization of such counseling is very tedious. Entering a medical facility requires great effort, and an organization, successfully working by phone may enter in no more than 2–3 institutions in the city. Full-time counseling is also a complex and emotionally demanding job which requires professional training and a professional environment, which means that it cannot be entrusted to volunteers,

One of the greatest challenges is that after all only one woman out of ten who came to the hospital for an abortion, and who were offered every- thing—money and all kinds of support and care—only one out of ten keeps the baby, and nine out of ten go where they were going. At first it is very difficult to cope with, and, of course, even more so for a volunteer. If a psychologist has some professional environment where he can conduct supervision or individual counseling—he already has such experience; some colleagues will support him, and support him professionally, it is very difficult for a volunteer, if he is faced with such a situation. This is why we try to involve volunteers already when the crisis is over, when the woman has made a decision and is keeping the baby.

Head of a pro-life organization and an Orthodox parishioner from Murmansk, 2012

In the cases when the pro-life organizations are able to enter a medical facility and find funding for establishing a consulting room, these organizations in fact compensate for the missing function of state medicine, stipulated by the law but not supplied with budget and personnel. Along with the on-site and off-site (telephone, internet) consulting, pro-lifers are engaged in publishing magazines on motherhood and childhood as well as other materials without religious content.

Orthodox pro-life organizations deliberately choose to “hide” their Orthodox identity for two reasons: firstly, as we have already said, the religious component seriously hampers contact with clients and entry into medical facilities. Secondly, and this understanding is also common, some specialists consider it unethical to assist a person in a difficult situation and at the same time engage in religious activities:

We cannot say anything at all about faith. Even later. We cannot speak, I say it again—she will immediately close up and we will lose the opportunity to support this woman and thus

save the life of the child. We cannot speak to her about faith and that we are from the Church at the time when she is receiving material help, because in this case it is not an entirely ethical situation. It would turn out that we pay her money, and she would feel obliged to listen to us about faith. And this is an ambiguous situation, right? It is simply not entirely ethical, I think. She is dependent on us at this moment, very dependent. A woman in general at the time of pregnancy and after the baby is born is very socially vulnerable and vulnerable in every other way. And later too, when the child is born, she feels indebted to us, and this is not a free situation.

Head of a pro-life organization and an Orthodox parishioner from Moscow, 2012

Restraint in the use of religious arguments can be caused by factors such as education and professional training of a psychologist (or other specialist, involved in the process). Also, it may be affected by the geographical factor: in big cities (like Moscow) psychologists often try to stick to religiously neutral, professional discourse, while in small towns one can more often find examples of appealing to spirituality and the principles of faith in a conversation between a psychologist and pregnant women.

*** 7. Conclusion

We have described the activities of two types of organizations. The activities of the first type are for the most part public speaking, recommendations, information and awareness campaigns made by the Russian Orthodox Church and various activist groups on different levels (country, city, parish), advocating for a law with a ban on abortions. The second kind mostly involves practices aimed at working with a “client”—a woman (a family) which happens to be

in a difficult life situation. The findings of our research suggest that Orthodox organizations can very professionally work with “clients”, excluding any religious elements from their work.

However, if work can be done by specialists who are not necessarily regular church parishioners, and the organization does not declare itself to be Orthodox, is it possible to speak about any role of the Church and Orthodoxy in the efforts to help women and families in crisis?

The link between pro-life counseling (as well as assistance to women who decide to keep the child) and the Church is manifested on several levels. Firstly, through personal involvement of leaders or participants in Church life: people themselves (as a rule, organizers, heads, and

leaders) are practicing Orthodox Christians—they regularly go to church and participate in the sacraments of confession and communion.

Secondly, the parish can provide the infrastructure for work: the office of the organization can be located on the territory of a parish; a parish often houses a storage place for things to help women with babies (such as clothes and food).

We simply did not have room to conduct supervision. The psychologist cannot split in two and be at the same time a social worker and a volunteer who brings cribs. Psychologists have their narrow task, and, of course, the support of the parish was very great, because they helped us to find accommodation.

Head of a pro-life organization and an Orthodox parishioner from Moscow, 2012

The parish provides resources in a situation when the local authorities refuse to support non-profit pro-life organizations,

They said: “We provide help to families; we have centers for social support, where families can receive help; send your applicants there.” Of course, we cannot send people we are taking care of there, because they will be given a package of sweets once a year and that’s it.

Head of a pro-life organization and an Orthodox parishioner from Moscow, 2012

Thirdly, pro-life activities can be fostered through the parish community, when the parishioners are engaged in assisting the work of a pro-life organization.

The parishioners are involved even if they do not have special psychological education or social work and lack the needed professional skills. They can simply work as volunteers, as carriers. For example, to bring a stroller and a crib to a woman who decided to give birth, to keep the child, and she has no other support. To meet her with a car in the birthing center with flowers, if no one else meets her. Then, to help, for example, while the woman is in the birthing center with older children, that is, to take home a small child, a preschooler, while the mother is in the birthing center with the second child.

Head of a pro-life organization and an Orthodox parishioner from Moscow, 2012

For collecting money and material resources, the social network of the parish—personal ties of the parishioners—is employed.

Fourthly, an important role in the organization or group is played by the so- called spiritual resources—meetings, conversations with a priest and spiritual advisor who gives guidance to the group, which may involve both practicing Orthodox Christians and non-practicing employees of the organization.

In such a morally sensitive area as opposition to abortions, public activity of the Church has an ambiguous effect. Political steps, such as the agreement of the Russian Orthodox Church with the Ministry of Health on cooperation (one of its aspects is work on abortion prevention), in fact, do not bring practical outcomes: the likelihood of establishing working contacts between Orthodox organizations and medical institutions much more depends on the personal attitude of the personnel to the Church and Orthodox values of life rather than on formal regulations or ministerial instructions. Open statement concerning the position of the Church in the media (on the need to ban abortions in the country) is perceived by society as attempts to infringe on personal rights and freedoms. Such statements can be perceived in a positive way only by a deeply Christianized part of the population, which is not the target group of the antiabortion campaign, since by virtue of their association with the Church such people are not in the risk group. It turns out that the Church reaches the goal of reducing the number of abortions by refusing to make public statements and focusing on the implementation of Christian principles (in particular, the principle of the value of life) in practices which exclude any religious aspects and rhetoric, having the form of professional psychological and social assistance.

The work of Orthodox organizations, aimed directly at helping the “cli- ent”—a woman or family in a crisis situation—in most cases implies that the Orthodox nature of the organization will be hidden, or at least will not be publicly emphasized. In the meantime, these activities are reinforced by the resources of the Church in several respects, including a spiritual resource that stimulates the creation of such organizations, provision of parish infrastructure to pro-life organizations, and the use of the parish community capacity (volunteers, material and financial aid, contacts, a network of support and community resources).

Orthodox pro-life activists are primarily guided by moral principles, first of all, the absolute value of life. However, in their practical work they are compelled to give up the open appeal to moral standards and base their work, for example, psychological counseling, on the model of other non-profit organizations, minimizing or even altogether removing the moral component. Otherwise, they risk making it impossible to continue communication with clients (women and their families), causing irritation and rejection.

Thus, returning to the point in the beginning of this article, we cannot with certainty say whether Russia is undergoing a process of secularization or desecularization. In the moral and sensitive areas, publicly visible activities of religious actors may cause very diverse reactions on the part of the population, ranging from acceptance to criticism to the extent of rejection. At the same time, the invisible network of support and social projects, developed by religious actors with the assistance of the Church and by reason of their religious motivation, is in demand by the categories of the population which are in need of such help and support. The example of Orthodox work against abortions and in support of women, families, childbirth illustrates a situation when a religious actor can contribute to the common good, acting along with other actors of the civil sphere, provided that the religious identity is not publicly visible. It turns out that religious actors do not refuse to work in the civil sphere and apply a variety of tactics, adapting them to the conditions of modern society for the sake of achieving success. The question of whether such a strategy of religious work is evidence for secularization or desecularization in the country remains open and requires, among other things, further discussion on the concept of secularization and desecularization for theoretical clarification of specific characteristics manifested by these processes in the countries with forced secularization experience.

** Chapter 10: Religion and the Challenges of Public Legitimization

The Bulgarian Orthodox Church

Plamen Makariev

Abstract

This chapter assesses the opportunities for the religiously-minded in Bulgaria (especially the Bulgarian Orthodox Church and its congregations) to participate—both as believers and through religious institutions that organize their collective activities and represent them—in the country’s public life. The theoretical problem addressed relates to the contrast between the manner of public legitimization characteristic of religious institutions and communities, on the one hand, and the patterns of such legitimization common to the public sphere in modern and “late-modern” societies, on the other. I hypothesize that the ways in which a religious “public” is persuaded that a given social norm (e.g., a law) or practice (e.g., a public policy) is legitimate or illegitimate are not necessarily convincing to the general public. The challenge is to find a common language between religious publics and their non-religious counterparts in order to avoid unnecessary antagonisms. I claim that this challenge is met in the case of East Orthodox Christianity differently by two types of religious public—a formal one (representatives of religious institutions) and an informal one (lay members of religious communities and rank and file clerics). I test this distinction through three case studies, comparing the formal and the informal Orthodox discourses concerning three major public issues in Bulgaria during recent years: gay parades, in-vitro fertilization and surrogate motherhood, and the teaching of religion at public schools. I use the internet versions of those discourses—the official websites of the Holy Synod of the Bulgarian Orthodox Church

and the Bishoprics for the formal, and two major Orthodox web portals for the informal ones. I argue that informal religious publics demonstrate a greater capacity to speak a “common language” with the general public.

Keywords

Bulgaria — Orthodox Church — public sphere — public legitimization — concealment

---

This study explores how religiously-minded groups in Bulgaria (especially Orthodox Christians) participate—both as individuals or communities of believers and through the religious institutions which organize their collective activities and represent them—in the country’s public life. My interest in the subject has been drawn by the desecularization debate. In recent years, despite all theoretical and ideological objections, this debate has rendered obsolete the simple solution offered by the secularization paradigm: that the only “territory” where religion is allowed to exert influence on the hearts and minds of the citizens of a liberal democracy is their private lives. One can often hear or read questions such as “How far is it safe to go in this direction?” and “With liberal tolerance and multiculturalist recognition of the value of cultural identities, do we not risk opening the door to religious conflict, the spread of fundamentalist and radical religious ideologies, and the misuse of the electoral mechanisms of democracy by indoctrinated, fanaticized members of our polities?”

Seeking answers to such questions, we should take into account also the specific circumstances of each society. The problems can be quite different, depending on the traditions and history of religious groups, doctrinal specificities, the cultural background, and the democratic political experience of the citizenship. Referring to the Bulgarian case, I reflect on the issue in question on the basis of the normative model of the public sphere, rooted in Kant’s idea about the Publizitat as a mediator between morality and politics, and articulated by Jurgen Habermas in his Structural Transformation of the Public Sphere ,[547] and his later Between Facts and Norms.[548]

The theoretical problem that this chapter addresses relates to the contrast between the public legitimization characteristic of religious institutions and communities, on the one hand, and the patterns of such legitimization common to the public sphere in modern and “late-modern” societies,[549] on the other. The problem is that the ways in which a religious public can be persuaded that a given social norm (e.g. a law) or practice (e.g. a public policy) is legitimate or illegitimate, often are considered to be not convincing by the general public. The challenge here is to find a “common

language” between religious publics and the general public in order to avoid unnecessary social tensions and antagonisms.

John Rawls and Jurgen Habermas have different conceptions of the public sphere, and these differences shed light on the problem of common language between believers and non-believers. A common feature of the solutions that Rawls and Habermas propose is that religiously motivated claims concerning public issues should be formulated in such a way as to be universally accessible, so that they can become the subject-matter of proper public debate. The difference between the two conceptions is that Rawls puts the task of this reformulation to the claims’ authors, i.e. to the religious people, whilst Habermas relies on the cooperative efforts of religiously-minded and secularly-minded citizens within the public sphere to do this job.

Both solutions have serious shortcomings. In order to avoid some of them, I turn my attention to the differences between two types of religious discourse on public issues—the formal one, as practiced by the institutions of a denomination, and informal discourse, as practiced by the religious public made up by lay people and rank-and-file clerics not involved in institutional decision making. My thesis is that the challenge of “finding a common language” with the public at large is met in substantially different ways by the formal and the informal religious publics and that this difference should be taken into account when we seek ways to facilitate the participation of religious groups in public life.

I offer case studies comparing the formal and the informal Orthodox discourses concerning three major public issues in Bulgaria which were subject to public debate in recent years: the gay parades which have been organized annually since 2008; the in-vitro fertilization and the surrogate motherhood; and the teaching of religion at public schools. Those discourses were conducted on the internet and appeared on the official websites of the Holy Synod of the Bulgarian Orthodox Church and the Bishoprics (the formal ones), and on two major Orthodox web portals[550] (the informal ones). As a result of an analysis of the means of persuasion which were used within the two types of discourse, I argue that the informal religious public demonstrated a much greater capacity to speak a “common language” with the general public.

*** 1. The Model

The public sphere model on which the present chapter is grounded traces its origins to Immanuel Kant. In his Perpetual Peace: A Philosophical Sketch, among other works, Kant formulated the idea that politics and morality are interconnected through the Publizitat. In an appendix to that work,[551] Kant introduces the concept of a “transcendental formula of public law”: “All actions relating to the right of other men are unjust if their maxim is not consistent with public- ity,”[552] and further down the page: “All

maxims which stand in need of publicity in order not to fail their end, agree with politics and right combined."[553]

Almost two centuries later, another German philosopher—Jurgen Habermas—presented a model of high- and middle-class public communications from the 1670s to the 1820s, for which the term he uses in Structural Transformation is Offentlichkelt (known in English as "public sphere"). The chief characteristic of the public sphere according to Habermas is an unharnessed communication on the issues of importance to society as a whole. The result is that societal rules and public policies are legitimized (or the reverse). The influence of the Frankfurt School on the early Habermas is visible in his claim that at the time of the publication of the Structural Transformation, the public sphere was being eroded by the deliberate and inadvertent manipulations of the media in favor of persons or institutions, by the commercialization both of media and of the modern mass society at large. The consumerist culture and the welfare state, by being unfairly influenced by clandestine figures, combine to make the public sphere unreliable, and thus unable to legitimize the norms of social life. Several decades later, in Between Facts and Norms, Habermas formulated the model more clearly and effectively by dropping the connection between the public sphere and a particular period in history.

In Habermas' terms, the public sphere mainly exists to legitimize or delegitimize rules that govern society and eo ipso influence their design and enforcement by the authorities. According to his model of the public sphere, norms and policies cannot be regarded as legitimate if they are not approved by all whom they affect. Therefore, the debate on their legitimacy should be open for all who can provide relevant input. Hence the very terms "Offentlichkeit" and "public sphere".

This "openness" underlies Habermas' idea, as well as the problems many commentators find with it. The broad consensus is that such an open public communication can exist only within a unitary public sphere. However, the separate participants in public communication may have different understandings of what the justification of a norm or policy should look like. While for some observers a passionate appeal to the heart by a charismatic orator may have great legitimizing effect, those from a different background may be struck by this as demagoguery and find legitimacy only in a calm and collected appeal to reason. The medium of the debate, or the discursive resources (after Nancy Fraser's expression), such as officially recognized idioms, vocabularies, paradigms of argumentation, narrative conventions, and modes of subjecti- fication, that are used can also produce very different effects among participants from different backgrounds.[554]

This variability in public communication patterns can in effect shut out potential participants from taking part in the discussion of issues of common concern. If bearers of important information are prevented from accessing the discussion because their means of

communication are disregarded as unconvincing or irrelevant by the other participants, this can have devastating effect on the legitimacy of the outcome.

Most authors in this field reject the notion that the public sphere is unitary. “Twenty years after the translation of Structural Transformation, nearly all scholars of the public sphere agree that our social world is composed of multiple, overlapping, and unequal publics. It is more accurate to talk of publics and public spheres than to refer to the public sphere.”[555] There are outliers according to whom it is class differences that form an impermeable barrier between citizens and thus there are a “bourgeois” and a “proletarian” public sphere existing side by side.[556] The vast majority, however, see cultural differences as the chief factor for the constitution of separate publics —differences of creed, ethnicity, race, and gender.[557] Especially important is the possibility that a social group can establish communicative domination over others (Antonio Gramsci calls this “cultural hegemony”)[558] by utilizing its economic or political domination for establishing a monopoly over the discursive resources and imposing a discourse which is specific for it as an allegedly universal one. Consequently, other co-existing groups will also consider that discourse as their own, despite the fact that it may not reflect their true interests and/or serve to oppress them. As Gramsci would put it, these hegemonic relations sustain the division into superior and inferior groups.

To prevent that type of relation in the public sphere, Fraser and others[559] have developed the theory of “counterpublics.” Within the counterpublic (for instance within a racial or religious minority group) a new group-specific discourse can have a “petri dish” in which to develop on its own, uninfluenced by the hegemonic one. Whether such a plethora of publics is at all compatible with the public sphere model of Habermas, however, is an issue which puts the applicability of that model in doubt. Habermas states the public sphere ultimately produces a political effect through the change in public opinion, but it is far from clear that the multitude of publics can ever speak in one voice on an issue of common concern. To achieve legitimacy and thus change public opinion and policies, “a series of autonomous public spheres is insufficient. There must be a single public sphere, even if we might want to conceive of this single public sphere as made up of a series of subsidiary public spheres, each organized around its own political structure, media system, and set of norms and interests.”[560]

The diversity of the patterns of public legitimization does not necessarily compromise the Habermasian model of the public sphere—a model that shows convincingly the ways in which ordinary citizens can, via their “communicative power,” complement (and correct if necessary) the functioning of representative democracy.

*** 2. Religious Groups as Publics

Public legitimization has been one of the main functions of religions since the very beginning of their existence. The question that I try to answer here is: how can the specific forms of such legitimization, which are characteristic for the activities of the Orthodox religious community in Bulgaria, fit into the model of the public sphere which is characteristic of modernity. In general terms, my answer is that the relationship between these forms of legitimization and the Habermasian model is problematic. The reason is that their typical traits are at odds with this model's criteria for legitimization which is properly public, i.e. protected against manipulations.

In the Bulgarian case—the religious activities in the public sphere are problematic because the patterns of legitimization which are typical for them do not correspond to the predominant understanding of legitimacy in Bulgarian society. The latter understanding has been influenced greatly by the secularist and even atheist tendencies in the country's public life during almost half a century of a socialist political regime, and is influenced nowadays by the values of late modernity which are widely regarded as a "guiding light" in the process of the "Westernization" of Bulgarian society. Under these circumstances a claim by a religious group for a change of certain public policies, for example, which is being justified by emotional appeals referring to the authority of the Scripture, has little chance to be taken seriously by the general public.

Therefore, if we are to use the Habermasian model in order to make methodological conclusions about the opportunities of religious groups in Bulgaria to take part in the country's public life, it would be best to regard them as distinct publics, which serve as arenas where issues of general concern can be discussed among like-minded people in substantive terms and without procedural restrictions. When it comes to attempts to legitimize or delegitimize national policies or legal norms, however, the "rules of the game" of a modern public sphere should be followed. It is important for the de/legitimizing effect of such interventions that they respect the self-awareness of the addressees of legitimizing or delegitimizing messages as modern citizens who know what they are doing when they make their choice whether or not to accept a norm or a policy as justified.

And here, in my opinion, we should distinguish between the role of the religious "establishment" and the one of the ordinary congregation members. In order to substantiate this claim of mine, I propose to turn our attention to the relationship between a citizen's cultural (in our case this should be her/his religious) identity and her/his civic identity. The relationship between them has been traditionally of a modus vivendi type. This tension has made, for example, some outstanding philosophers of religion criticize Rawls's proposal that religiously motivated claims should be advanced into the public sphere only if accompanied by a universally accessible "translation."[561] The critics insist that such a reformulation would be a too great burden for people of faith who would have to split their personality into a religious and a civic "half"[562]—a somewhat schizophrenic endeavor.

In my opinion the tension between the cultural and the civic identity of a religious person can be explained, at least partially, by referring to the fact that the interventions of religious publics in the public sphere are directed in most cases by the leadership of the respective religious institutions. Consequently, these interventions are “designed” to correspond first of all to the interests of the religious “establishments”, and not so much to the visions and ideals of the rank and file members of the religious communities. Consequently, a necessary condition for a non-competitive, “synergetic” relationship between a citizen’s religious and his/her civic identities would be a direct involvement of the members of a religious public in the communicative interaction with the public sphere. By “direct involvement” I mean one not mediated by the community’s leadership.

Ordinary religious people are most interested in the existence of a healthy social environment. They live as citizens in their societies and bear the negative consequences of social and cultural conflicts. The case is quite different with the religious institutions. Their interests are intertwined with the ones of the other institutions in a modern society, especially with the interests of the political powers, in intricate ways. The cause of maintaining and even promoting the social prestige and influence of a religious institution as an organized entity does not necessarily include as its element the maintaining of a healthy balance between the realization in public life of the ideals of the members of the religious community, on the one hand, and social peace and harmony, on the other. In some cases certain antagonisms between the leadership of a religious community and society at large benefit this group’s establishment, invigorating the latter’s ties with the rank and file members of the community, stimulating its organizational life and possibly demonstrating its strength to the other big institutional “players” in public life. As Henri Tajfel and John Turner point out, group conflicts of whatever sort “not only create antagonistic intergroup relations but also heighten identification with, and positive attachment to, the in-group.”[563]

I do not claim that there is necessarily a systemic contradiction between the interests of the ordinary people of faith and their religious institutions. I simply propose not to regard religious publics as homogeneous wholes, and instead differentiate between a formal and an informal component within a religious public. I qualify as “formal religious public” the religious institutions of a particular Christian denomination, and as “informal” one—the community of laypersons and rank and file, ordinary clerics who belong to this denomination. Further, I argue that public claims and argumentations advanced by an informal religious public are more likely to be an expression of a balanced relationship between the cultural and the civic identities of their authors than claims and argumentations which are presented publicly by religious institutions. Therefore, it is more likely that an informal religious public finds a “common language” with the public at large.

*** 3. Case Studies

**** 3.1. Methodology

I compare the two types of religious public discourse -formal and informal—in three case studies. As formal discourses I regard the formulation and argumentation of the positions of the Holy Synod of the Bulgarian Orthodox Church and the Bishoprics. As informal ones I take the positions and argumentations of ordinary clerics and of Orthodox laypersons as expressed in the discussions on the two major Orthodox web portals in the country: “Dveri na Pravoslavieto” (Gates of Orthodoxy)[564] and “Pravoslavie.bg” (Orthodoxy.bg).[565]

**** 3.2. The Two Criteria

When issues of common concern are publically discussed (usually with the aim of legitimizing or delegitimizing norms and practices), i.e. when the public sphere is “at work,” a rich variety of means of communication is used. A large part of them are rhetorical in nature, i.e. they aim at exerting influence on the public’s “hearts and minds” by acting on people’s emotions, prejudices, tastes, even subconscious preferences for styles of expression, and other personal idiosyncrasies. However, a clear priority of argumentative communication as a means of public legitimization belongs to the modernist ideal of a public sphere. The authors who hold this view insist that only communication which addresses the reason of the interlocutor can convince him/her that a given norm or practice is legitimate or illegitimate, without a risk of manipulation. The argumentative communication “respects the freedom of the interloc- utor.”[566] The information provided in a argumentative manner may happen to be wrong, incomplete or misleading in some other way for the addressee, but it is the latter’s responsibility to assess critically its reliability.[567] Argumentative communication recognizes the interlocutor’s agency, which is a characteristically modernist value.

This approach to public legitimization has been extensively criticized by postmodernist authors.[568] They argue that the modernist prioritization of argumentative communication presupposes certain assumptions about the nature of truth, of logical inference, of critical thinking which are dogmatic, naive, simplistic, and even—at least in some cases—manipulative, i.e. aiming at social domination via cognitive means.[569] It is not my task here to comment on this controversy. For our purposes it suffices to clarify the place of rational communication in the modernist model of the public sphere. From this follows that the more argumentative a religious discourse is, the better its chances to produce claims that are convincing for a (late-) modern public at large.

The other criterion has been comprehensively discussed by authors dealing with the challenges of the participation of representatives of religious communities in discussions within a modern public sphere.[570] This is the so called “universal accessibility” requirement, and it complements the “rationality” criterion. Even a perfectly constructed argumentation cannot convince a public if it refers to norms (and/or facts), which are not recognized by its addressees as valid (or really existing, or having existed). A classical example in this respect would be to substantiate a claim concerning public policy by

referring to the Bible. However cogent and meaningful this argumentation may be, it would be worthless for the interlocutors who do not regard this text as authoritative. That is why the rationality of a particular discourse is not sufficient by itself as a condition for the latter's integration in a modern public sphere. The argumentations used should be universally accessible.

In his The Idea of Public Reason Revisited, Rawls proposes an answer to the question whether reasons, which aim at de/legitimizing political (i.e. public) norms and practices, can be convincingly presented from non-public positions. This is a more general formulation under which our problem with the role of religions in the public sphere can be subsumed. The answer is Rawls's famous "proviso": "reasonable comprehensive doctrines, religious or nonreligious, may be introduced in public political discussions at any time, provided that in due course proper political reasons—and not reasons given solely by comprehensive doctrines—are presented that are sufficient to support whatever the comprehensive doctrines introduced are said to support."[571]

In other words, the reasons, which support a given claim that is being introduced into the public sphere from a non-public source (e. g. from the positions of a religious community) should be presented together with their "translation" from a culture-specific (or, if we use Rawls' terminology—"doctrinally specific") language into an universally accessible one.

Commenting on Rawls's view about the role that religion can play in the public sphere, Habermas does not deny the necessity of such a "translation." He objects only to the requirement that it should take place "in advance," i. e. before the claim has left the non-public domain. He agrees with the critics of Rawls[572], mentioned above, that in the case of the participation of religious communities in public discourse, it is not morally justified to put the whole burden of "translation" onto the members of these communities. In his opinion this task should be regarded as a common challenge for both the "authors" of claims which originate from non-public domains and the general public. It should be a cooperative undertaking and an element of complementary learning processes.[573]

**** 3.3 Gay Parades

3.3.1. The Institutional Discourse

Annual gay parades have been organized in Bulgaria since 2008. They have been the subject-matter of heated public discussions, especially in the beginning. The Bulgarian Orthodox Church argued vehemently against them. Most characteristic in this respect are two official statements of the Church's Holy Synod—of 2009 and of 2010.[574] The former one qualifies the Gay Parade as "a shameful and disgraceful demonstration of this heavy deadly sin which brings harmful consequences for society and especially for the young

people.”[575] The latter says that the parade “nullifies the God-like dignity of the human personality, the lofty meaning of the family love between man and woman, the foundations of morality.”[576] Both statements end in prayers to “Almighty God” for “reasonability, penance and reformation of persons who have been possessed by this deadly sin.”[577]

The other allegations against the gay parades in the two texts are in the same rhetorical style. The case is similar with the official position of Nikolay, the Metropolitan Bishop of Plovdiv,[578] regarding the gay film festival organized in this city in June 2013. He claims that these movies “praise the vice and encourage the disintegration of the family.”[579] They are “‘modern’ shameful demonstrations of decadence and sinfulness.” The Metropolitan’s main argument against the festival is that “Society is not obliged to tolerate some people’s eagerness to make public their perversity. It is not obliged to observe passively how someone is destroying the souls of our children. How he poisons the very idea of the sanctity of the family union between man and woman on which the state’s bases rest.”[580]

Apart from an attempt to find reasons supporting the idea that gay propaganda should be regarded as a public enemy (pointing out that it aims at ruining the family, and the family is of basic importance for the state), the Metropolitan’s attack against the gay film festival makes use mainly of “artistic” means to influence the public opinion. Passionate, emotional messages, strong words like “decadence,” “sinfulness,” “perversity,” “destroying the souls,” and “poisoning the sanctity of the family union” aim at acting not on the public’s reason, but on the people’s feelings. The same is valid also for the statements of the Holy Synod. I am presenting just a few examples here, but the other two texts are similar in form. Instead of substantiating a claim that gay parades are not acceptable for Bulgarian society by presenting reasons which should be convincing for the public at large, the authors of these declarations rely on the condemnation of homosexuality as a deadly sin. If we try to reconstruct some sort of argumentation at this point, it may be of the sort of “gay parades should be forbidden because they try to legitimize a behavior which is proclaimed to be sinful by the Bible.” But even if we recognize this as a rational attempt to convince the interlocutors, it is doctrinally specific. It can have no effect on the general public, because many of its members do not consider the text of the Scripture as authoritative.

The situation is somewhat different with the statements on this matter of the Varna[581] Bishopric. Generally they follow the same rhetorical communicative strategy as the declarations of the other Church institutions. For example, “the Church regards homosexuality as a lust, illness and unnatural state of mind, being a consequence of the Fall.”[582] However, certain argumentative considerations are also presented. “We protest against the attempt to achieve, via parades of this sort, a change of public opinion, so that the unnatural would pass as natural and would gain acceptance.”[583] Here we have a critique of the gay parades as a form of manipulation of the public. If a practice which is at odds with widely accepted values and norms becomes—in some way, in spite of public resistance—a routine, after a certain time the public gets somehow accustomed to it and little by little adapts its value system to it. This is a widely used manipulative technique and

by presenting the event in question as an instance of its application, the Bishopric addresses the general public in an argumentative way.

**** 3.4 The Informal Discourses

The two Orthodox web portals presented here have been an arena of discussions on a multitude of topics of public interest for quite a few years. Long before the gay parades started, homosexuality was subject-matter of informal virtual debates. The author Polina Spirova, for example, posted a text on “Gates of Orthodoxy” on 24.04.2005 commenting the wish of gay people to adopt children. In her opinion this is a manifestation of the striving of Evil to reproduce itself. “Demons are evil and that is why they want to lead with themselves to ruin as many people as possible. In the same way the homosexuals not only lead a sinful life themselves but wish to reproduce their model of behavior through ‘their’ children.”[584]

Here we witness the same rhetorical style of persuading public communication which is characteristic of the formal statements of the Orthodox Church’s institutions. However, a different pattern of communication prevails in the two portals. For example, the theologian Dr. Klara Stamatova published on the “Gates of Orthodoxy” (26.08.2005) a text in which she argued that “We have to take into account the difference between the sin and the sinner, i.e. we have to respect the personality of the sinner but at the same time to condemn the sin—in this case the spiritually and physically harmful nature of homosexual- ity.”[585] Here the author refers to a conceptual commonality between Christian theology and modern philosophy—the separability of human personality from its particular characteristics (which in Kant’s philosophy has the form of the differentiation between the intelligible and the empirical character). It looks worthwhile, in this frame of reference, to employ the energy of the Christian struggle against homosexuality not for the demonization and ostracism of gay people, but for their reformation. Another author, Tsvetomira Antonova, presents on the same portal (27 May 2005) a Russian Orthodox internet site which offers spiritual help to homosexuals.[586] It comprises mostly texts by Church Fathers, Orthodox clerics, psychiatrists. Antonova comments that “if we despise these people and turn away from them, we increase their sufferings and contribute to their further sinking into the abyss of sin ... Instead, we should encourage them not to lose hope on the difficult journey of their struggle with passions and lust.”[587] The idea that the human personality is not necessarily bound to any of its particular characteristics, which is associated in modern philosophy with the reason’s capacity to exercise self-reflection, is an important element of the modern conception of the agent’s capacity for selfcontrol and his/her moral and legal responsibility. Approaching in this way the challenges of dealing with homosexuality from the positions of Orthodox Christianity, the two authors of the “Gates of Orthodoxy” develop a strong universalistic argument in favor of a more respectful attitude to the personalities of the gay people. One may argue, of course, that the idea to cure homosexuals from their “sinful” passions by winning them for the moral and religious values of Christianity is not realistic and even not “politically correct”, but still this would be a debate which fits easily into the mainstream public sphere.

Comparing the two types of discourse, the formal and the informal, it is worth noting that they do not differ in terms of their basic message—that homosexuality is bad, but rather in the ways in which this message is presented. In the former case the authors concentrate their efforts on condemning this sin by rhetorical means, doing their best to persuade the general public that it must oppose policies that tolerate homosexuality. In the latter case attention is focused on the fact that intolerance towards non-standard sexual practices does not have to be directed also against the persons who exercise them. The differentiation between sin and sinner is characteristic for Christianity in general, but as a matter of fact it was not mentioned in the formal discourses as presented in our case by the Holy Synod and the two Bishoprics, whilst the two lay authors directed the attention of the public precisely toward the separation of the attitude toward homosexual behavior from the attitude toward the persons who behave in this way, thus giving the addressees of their message reasons to reject uncompromisingly the homosexual practices without the uneasy feeling that this amounts to treating the gay people in an inhumane manner. In both cases the aim of the authors is the same, but the means are different. The representatives of the religious institutions try to incite their public against the gay parades directly by emotional appeals. The “Gates-authors” point out to their readers that condemning homosexuality may be done without stigmatizing the homosexuals as persons. In the latter case the readers who belong to the general public are offered a rationale to adopt a Christian-type stance in regard of homosexuality without conflicting with their modern mentality.

Another contribution to the gay-parade-discussion which is characteristic for the informal Orthodox discourse on the two web portals is the comment of Andrey Romanov, published on “Pravoslavie.bg” (22.06.2009).[588] It referred to a demonstration of theology students from Sofia University against the planned annual gay parade. More specifically, the author defended the students who were criticized by the mass media for displaying slogans and posters whose content was of the nature of hate speech. Romanov did not deny that these messages were not politically correct. However, he qualified them as a manifestation of common sense and traditional morality. “Because in the contemporary society you need courage in order to dare protest against a perversity which pretends to be a norm. You break the silence, you tear down the veil of the universal hypocrisy.”[589] The author regards the public condemnation of homosexuality as an act of civic courage directed against an officially fortified conformism. He justifies the behavior of the students by referring to the modern value of the autonomy of the individual. In this case, just as in the former one, we have here a very controversial public position, which is defended, however, in a universally accessible argumentative way.

**** 3.5 The Debate on the Advanced Methods of Human Biological Reproduction

3.5.1. The Institutional Discourse

Bio-ethical issues including in-vitro fertilization, surrogate motherhood, cloning, euthanasia, are subject-matter of heated philosophical and theological discussions in many countries. The Bulgarian Orthodox Church has been especially active in its resistance against so called assisted reproduction (mostly in-vitro fertilization) and surrogate motherhood. There is an official statement on this matter of the Holy Synod, published on its web site on 16.09.2014. I refer to several of the most characteristic theses.

One of them is that human conception and birth-giving are Divine Sacraments and that is why any manipulative intervention is a sacrilege. “The Holy Synod of the Bulgarian Orthodox Church is extremely opposed against any human intervention, not authorized by God’s will, concerning the basic existential aspects of human life.”[590] The family relationship is regarded as something more than ordinary relations between two individuals. “The original relationship between a man and a woman and hence all further husband— wife relationships are of ontological and sacramental nature.”[591] Consequently, in-vitro fertilization and surrogate motherhood are a perversion of the order of human reproduction, established by God, and, besides, are a violation of the Sacrament of the family relationship. “These medical practices disrupt the unity of the family ties and involve the activity of third, usually entirely strange, persons in the most intimate spheres of the husband—wife relations and in the life of the forthcoming child.”[592]

Another important thesis is that Christian humility justifies a “humble acceptance of the infertility of the husband or the wife, so that it would not jeopardize the unity and the happiness of the family.”[593] Proceeding from these considerations, the Holy Synod appeals to the families which have reproductive problems “to try to overcome their pain and to direct their love to children who have no parents.”[594]

A third characteristic point in the statement of the Holy Synod refers to the undeniable fact that the methods of assisted reproduction and surrogate motherhood are not based on absolutely comprehensive and reliable information, so there is no guarantee that they will produce results which will be in the best interest of the families involved, including future children. “Because of the inevitable limitations of the available technologies, medical skills and intellectual capacities, no one can be fully confident that he can predetermine in an absolutely safe way the life of other human beings. Only God knows perfectly well the depths of our hearts, our needs, our worldly and spiritual destinies.”[595]

The critiques against the advanced methods of reproduction are inferred logically from basic elements of Christian doctrine. However, this argumentation is not universally accessible. It cannot be recognized as valid by members of the general public who do not share the Christian faith.

Another official document of the Bulgarian Orthodox Church which concerns surrogate motherhood is Metropolitan Nikolay’s address to the clerics and laypeople of the Plovdiv

Diocese issued in July 2012.[596] He claims, first of all, that surrogate motherhood introduces a commercial element into such an intimate sphere of human life as the parent—child relationship. The author of the address refers here to the fact that in most cases the surrogate mother receives a substantial financial compensation by the would-be parents of the child to whom she will give birth. In this respect surrogate motherhood is similar to other practices which are treated as morally and legally unacceptable. The Metropolitan Bishop asks what would happen if we legitimize such a motherhood. “How can we justify, then, our struggle against prostitution, procuring, sex slavery, human trafficking?”[597] These practices combine business with intimate human relationships.

The analogy used by Nikolay as an argument against surrogate motherhood may not seem quite convincing. We may point out substantial differences between this practice and prostitution, for example, but still we cannot deny that the Metropolitan’s thesis is substantiated in a universally accessible way. However, this is not the case with the other important claim of his address. In the concluding paragraph he qualifies surrogate motherhood as one of the numerous attempts to “cheat God.” While “the Holy Orthodox Church teaches that children are a Blessing from God. This is known by any woman who has become mother, because she has understood and felt that there is something in motherhood which cannot be explained by science and cannot be formulated in words. This is a Divine miracle.”[598] Instead of seeking ways to solve reproductive problems by ourselves, we should rely on faith. Genuine faith can produce miracles.

This manner of persuading the public is in blatant contradiction with the standards of legitimization characteristic for the (late-)modern public sphere. Instead of argumentative communication we have emotional appeals and references to miracles.

3.5.2. The Informal Discourses

Remarkably, the “Gates of Orthodoxy” web portal published on 14.09.2012 a comment on Metropolitan Nikolay’s address.[599] The author, Kalin Yanakiev, professor at Sofia University and one of Bulgaria’s foremost Christian intellectuals, shared the Metropolitan’s negative opinion about surrogate motherhood but criticized the address in a methodological aspect. The target of this critique was precisely the inability of the representatives of the Church’s institutions to find “common language” with the general public. “A moderate presentation of the arguments which refer to the risks associated with the surrogate motherhood—risks to produce greater suffering than the suffering which it aims to cure—would have made the Church’s position much more authoritative and much less vulnerable to the criticism by the mass media”.[600] As nothing of this sort was done, another opportunity was missed to initiate a serious bioethical debate between the Church and Bulgarian liberal society, which could have enriched the country’s public sphere.

Another author, Andrey Romanov, reflects in a linguistic aspect on the official statement of the Holy Synod which was cited above. On “Pravoslavie.bg” he writes (09.03.2012) “The simplicity of language and thought are not among the virtues of our Bishops. The way of thinking and expressing one’s opinion which are characteristic for the modern person are absolutely terra incognita for them. They simply cannot understand that with such a pompous, archaic language which they have learned 50 years ago in the Seminary they have no chance to reach the consciousness of modern society.”[601]

**** 3.6 The Debate on the Teaching of Religion at School

3.6.1. The Institutional Discourse

The debate on the teaching of religion at Bulgarian public (municipal[602] and state) schools is the most extensive and significant one in which the Orthodox institutions and informal web portals take part. Religion is taught as an elective discipline (the students are obliged to choose a fixed number of disciplines among a greater number of offered ones) and in a confessional way (either as Orthodox Christianity or as Islam, depending on the denominational composition of the student population). Due to the negative influence of a number of factors (insufficient funding of education is the most important of them) the school authorities generally do not encourage the students to choose this discipline and at present only about 2% of the schoolchildren study religion. This, in its turn, influences negatively the training of teachers in religion at the theological faculties of Bulgarian universities and at the Higher Islamic Institute in Sofia (there is little interest among the students in theology to get such training because of the negligible chances to get a job as a teacher) and as a result the teaching of religion at school is in steady decline.

In order to overcome this tendency two alternative strategies have been proposed. Both aim at a mandatory status of a religious discipline at school. One of the options which are being discussed is a non-confessional subject of the type of Religion Studies or History of Religion which would deal with the general traits of world religions (this conception was prepared by a working group, appointed by the Ministry of Education and Science in 2007 and called “Public Council”), and the other option is a confessional subject, similar in content to the “Religion—Christianity” and “Religion—Islam” which are taught now, but accompanied by an alternative secular subject (according to some of the versions of this conception it should be Ethics, according to others—History of Religion) for the schoolchildren who do not want to study religion in a confessional way.

So, there are three “parties” in the present discussion: supporters of the status quo (elective confessional subject), supporters of a mandatory nonconfessional subject, and advocates of a mandatory couple of, alternatively, a confessional or a secular subject. The religious institutions in the country (the Holy Synod of the Bulgarian Orthodox Church and the Grand Muftiship) support the third option.

The most authoritative official document of the Bulgarian Orthodox Church in this respect is the “Conception of the Holy Synod Concerning the Status of the Subject ‘Religion’ at the Bulgarian School”. Proceeding from the typology which we use here, we can find three types of statements in this text.

There are some ambivalent ones in the sense of being to a certain extent, or implicitly, argumentative. Let us consider, for example, the claim that the main objective of school education which is defined in the Law of National Education (article 15, paragraph 1) as the “formation of autonomous, moral and socially active personality”[603] cannot be attained without “raising the students in the spirit of the Orthodox Christian faith, of the traditional moral virtues and culture of our ancestors.”[604] This statement implies that Orthodox Christianity is an important element of the traditional moral culture of the Bulgarian nation and this message is a strong universalistic argument in favor of the mandatory study of religion. If the enculturation of the students into the traditional virtues of the Bulgarian people is a necessary condition for the attainment of the main objective of school education, and Orthodoxy is inseparable from this culture, then how can the main objective be attained without the study of religion? This is almost a syllogism.

The second type of statement is explicitly argumentative. They are not many, but they occupy an important place in the Conception. One of them is the assertion that a mandatory confessional study of religion at school would not jeopardize the secular[605] character of public education, because there is a number of precedents in other European countries of such study of religion which have not brought about any religious conflicts. “There is study of religion at school in 20 member-states of the EU (in 16 of them exclusively confessional, in two both confessional and non-confessional, and in two—non-confessional) … These facts are an evidence that the studying of religion at school in various forms nowhere contradicts the secular character of education and human rights.”[606] Besides, the authors of the Conception refer precisely to universal human rights in order to substantiate their claim. “One of the basic human rights in the Universal Declaration of Human Rights of the UN is the right to information.”[607] Would a restriction of the teaching of religion at school not infringe also the right to information?

The third type is statements which are expressly rhetorical or doctrinally specific. What about the following instance of persuading communication: “The Church is linked with the world through its human nature and spiritualizes it through its Divine essence. It is through its Divine nature that it influences beneficially the life of society.”[608] It is thus inadmissible for the Church to isolate itself from mass education. This would deprive “the children and the adolescents from its blessing.”[609]

Another example of the same rhetoric: “The Church reminds the people who work in the field of education and culture that their calling is to perfect the souls of the humans, including

their own—to be of use and help to the people by restoring in themselves the image of God which has been darkened by sin."[610]

3.6.2. The Informal Discourses

The contrast between the positions of the authors of texts on the two Orthodox web portals and the official discourse is not so much in terms of content— most of the participants in the informal online debates favor the Church's maximalist demand, that religion should be studied as a mandatory confessional subject. The difference is methodological. The informal discourses are mostly argumentative and universally accessible.

The most popular argument in favor of a mandatory study of the confessional school-subject "Religion-Christianity" is that it does not preach values and ideals which are doctrinally bound, i.e. which divide the people and antagonize groups against each other, but on the contrary—teaches mostly universal ones. According to Evgeni Gyunov (text published on "Gates of Orthodoxy" on 18.11.2006) "The Biblical statements about the eternal struggle between Good and Evil in society and in the interpersonal relations, about the lofty and spiritual beauty, attract people's minds with their universal[611] meaning."[612] Yordanka Vassileva (same portal, 9 May 2006) maintains that "The subject 'Religion' is the only school discipline which motivates the child to seek the Good in her/ himself and in the Others."[613] On the "Gates" portal one can also find an interview with a young teacher in Religion, Ivaylo Stoyanov, which was published originally in the educational weekly Azbuki on 3 July 2013. He asserts that he is trying to teach his students to do Good to the people who have done Good to them, and that from the first moment in class he talks with them about "human virtues—humility, kindness, respect, reverence to the elderly."[614]

A less common approach to the challenge of the integration of a confessional study of religion into a generally secular school curriculum is demonstrated by Smilen Markov. He claims ("Gates of Orthodoxy," 25 September 2010) that the debate on the teaching of religion should take into account the specific traits of European Christian culture. In his opinion these characteristics preclude indoctrination as an element of the confessional study of the Christian faith (the author refers here to the concerns of the opponents of the confessional study of religion at school, that it would be indoctrinating the children). "No, this cannot be done, because in the European Christian traditions we have a norm of critical conceptualization of the faith-content."[615] In other words, if some teacher in "Religion-Christianity" indoctrinates his/her students, this would not be due to the nature of Orthodoxy, but the incompetence of the teacher insufficiently familiar with his/her own religious tradition.

Another trend in the publications on the two web portals concerning the status of the teaching of religion at school is the critique against the approach of Church institutions to

this issue. The professional journalist Yavor Dachkov, a theologian by education, for example, maintains (“Gates of Orthodoxy,” 4 March 2008, the original publication was in the Monitor newspaper) that it is too early for a reform in the teaching of religion. The reason is that the Bulgarian Orthodox Church is in a severe spiritual crisis itself and “the place of religion is firstly in the family and in the church and until it starts to sound authentically from the mouths of the priests themselves, there is no way for it to be propagated among the larger public.”[616]

One of the few authors who favor the status quo (“Religion” as an elective subject) is Polina Spirova (“Gates of Orthodoxy,” 10.10.2010). She does not do this because she is pleased with the present state of affairs, but because she thinks that it is too early to press the public with maximalist demands. In her opinion the discourse of the Church institutions concerning the introduction of “Religion” as mandatory looks coercive and therefore counterproductive. In order to entrust someone to take care of their children, the parents should trust the person. The token for the success of religious education at school is public trust. However, the Church can work in this direction even under the present conditions, i.e. “Religion” taught as an elective subject. “The Church must make efforts not only for the introduction of mandatory religious education, but also for the formation of a public of younger as well as of mature people, present and future parents, who would willingly back the Church’s claims for mandatory religious education for their children. The Church should advance into society and change its disposition so that it becomes more sensitive to the Church’s demands.”[617]

*** 4. Conclusion

The above analysis of the three public debates shows substantial differences between the discourses led by the institutions of the Bulgarian Orthodox Church and the ones via which the informal public of rank and file Orthodox Christians takes part in the formation of public opinion on religiously relevant issues. The ways in which the authors try to persuade their interlocutors are different. Rhetorical and doctrinally specific patterns of public communication characterize the institutional discourse, while within the informal discourses mostly argumentative communication, which is open for discussion and objections from various points of view, takes place. In other words, the legitimizing communication on the institutional level is substantially different from the one in the public sphere, while the informal religious public speaks more or less the same language as the public at large. This gives the informal religious public better chances to legitimize the positions of the religious group to which it belongs in properly public debates and so to promote the capacities of this group to participate in the exercising of “communicative power,” i.e. to exert influence on legislation and public policies.

Why is there such a difference? It would not be correct to assume that the informal religious public is generally more secularly minded, which facilitates its communication within the public sphere. My observations on the two web portals do not provide evidence in support of

such a hypothesis. Unconditional religious convictions are manifested in a great part of the texts posted. A more plausible explanation—at least partially true in my opinion—is that such publics provide space where people of a religious and of an entirely secular mindset can mingle. This can be observed on the web portals in question. In that aspect, the informal religious public is very much like the informal, “weak” public described by Habermas in “Between Facts and Norms.”[618] Following Habermas’s model, one could expect some kind of cooperative, dialogical activity to produce “translations” of rhetorical and doctrinally specific claims into universally accessible argumentative ones on a reciprocal basis. Nothing of this sort is happening on the Orthodoxy.bg and “Gates of Orthodoxy” portals. What is happening is that participants who express and defend deep religious convictions are trying to do their best to formulate—monologically, so to say—their claims in the “language” of the general public sphere. So, this real picture corresponds much more to the standards of Rawls’s “proviso,”[619] than to the Habermasian model of deliberative democracy.

What motivates these genuinely religious people to use such means of public communication which are not typical for a religious discourse but provide better opportunities for them to persuade the general public why this or that matters so much to them, thus publically justifying their claims concerning legislation or public policies? I differentiate two types of relationship between a religious person’s cultural and civic identities—one of competition, or even conflict, and one of mutual complementarity. The former type obtains when such persons’ awareness of their civic obligations is one of compliance with external requirements. The latter type results from an awareness of these obligations as a duty.

It is more likely for the rank and file member of a religious group, whose well-being depends directly on the well-being of the society in which s/he lives, to develop an authentic civic allegiance than a representative of a religious institution whose relations with society are mediated by the interests of the establishment to which he belongs. Therefore, in such a frame of reference, we can expect the member of an informal religious public to be more prepared to recognize the “rules of the game” of the general public sphere, even if this would curtail to a certain extent his/her capacities to advance and substantiate claims which follow immediately from his/her unconditional religious convictions. However, such a person has no reason to experience compromises of this sort as a betrayal of his/her faith,[620] as long as they are necessary in order for him/her to maintain a healthy balance between his/her cultural and civic identities.

Of course, participants in the discourses on the two web portals which I have studied do not represent all the members of their denomination. First of all, they are educated people, with well-articulated civic awareness. Besides, the virtual environment in which they argue with each other, i.e. the web portals, provide ideal conditions for public discussions. Most importantly, they are free from the influence of political and commercial interests. The present status of the Bulgarian Orthodox Church (not only as a religious institution, but also as a community of believers), being predominantly apolitical,[621] leaves the Orthodox online-forums free from political manipulations, which cannot be said about many other

kinds of internet discussions. Last but not least, there is a clear demarcation line in the Bulgarian Orthodox denomination between Church institutions on the one hand, and the informal religious public, on the other.

This line is much more diffuse among Muslims. Certain international Islamic foundations, for example, exert significant influence on the functioning of the Muslim public in Bulgaria. Should these ngo s be regarded as informal structures, or as religious establishments of a particular kind? There is ample empirical evidence that some of these allegedly non-governmental organizations are involved in strategic[622] political “games” and consequently the participation in public discourses of ordinary citizens who are under their influence cannot be regarded as motivated solely by people’s religious convictions and civic allegiances. There is no hard and fast line between the institutional voice and that of the informal Muslim religious public.

The majority of this chapter has concerned the distinction between the institutional voice of the Bulgarian Orthodox Church, constrained to speak in the name of Church doctrine based on scripture, and the informal voice of the religiously-minded followers of the Church. The senior Church hierarchy pronounces doctrine on critical issues, but its voice is limited in its ability to persuade because the leadership uses doctrines and sources that in principle persuade the believers alone, and them not always. In contrast, what I have termed the informal voices of the religiously minded can draw on a wider range of arguments that persuade, inspired perhaps by the teachings of the Church but not limited by it.

There is an additional “gray area” to consider, beside the question about the participation of religious people in public communication—whether it is mediated by the interests of religious leadership and/or institutions, or not— which was raised above. On “hot button” issues such as the acceptance of homosexuality, in-vitro fertilization and surrogate motherhood, and the teaching of religion at public schools, there are common sense understandings shared by the religious and non-religious alike. Attitudes toward homosexuality, in-vitro fertilization, and surrogate motherhood go beyond formal religious practice, and formal religious doctrine is often consonant with accepted common-sense understandings. These unwritten, and often not fully articulated, understandings change over time, but not always by doctrines from above, whether from the Church or a half-century of socialist rule. One can be strongly motivated by religious beliefs and practices, and these often are consonant with the understandings of a wider public.

Speaking as an institution, the Bulgarian Orthodox Church can have a powerful voice, but it is also constrained by its very authority over its own parishioners. However, individual articulate believers are those likely to exchange views on websites and in other public media. These voices are “informal,” but in this sense they hew most closely to Kant’s notion of public discourse, persuasive statements considered irrespective of the rank of the speaker —ruler or priest, general or professor. In the examples provided here, the identity of many of the speakers/authors is fully known, but they are empowered to speak only for themselves.

The task of their readers or listeners is to impute authority or persuasiveness to them. Kant, Rawls, and Habermas have provided us with powerful critical tools to understand how the public sphere works.

In earlier versions of modernity, there has been a tendency to relegate religious understandings and practices to private understandings outside the public sphere. Yet the state takes a great interest in formal religious institutions and their leadership. Our examples show a great deal of flexibility in how the “informal” voices advance arguments in the public sphere, and the challenge in making sharp delineations between formal and informal voices —or for that matter indicating a sharp divide between modernity and, for want of a better term, pre-modernity. The public sphere is a useful concept, but its composition might best be considered one of Walter Gallie’s “essentially contested” con- cepts.[623] There can be agreement on the concept, just as there can be an agreement on what is soccer. However, there may not be agreement on how success in the game is evaluated. Few real-life situations are as simple as the games philosophers play, but the concept of “essentially contested concept” allows us to acknowledge that uncertainties about the contours of the “public sphere” do not constrain us from assessing the what works and does not in the changing contours of the Bulgarian public sphere.

[1] The “Western Balkans” is a concept recently introduced by the European Union (EU) to designate the area covering Albania, Bosnia-Herzegovina, Croatia, North Macedonia, Serbia, Kosovo, and in some cases Moldova. The term signifies that these counties are in a process of “Europeanization” and enjoy the prospect of accession to the EU.

[2] On the notion of Moscow as the Third Rome having not only succeeded but also superseded Byzantium, the Second Rome, by which the Russian Orthodox Church was above the Greek Orthodox Church, see Marshal Poe, “Moscow, the Third Rome: The Origins and Transformations of a ‘Pivotal Moment’,” Jahrbucherfur Geschichte Osteuropas, 49, 3 (2001): 429; Alar Laats, “The Concept of the Third Rome and Its Political Implications,” in Religion and Politics in Multicultural Europe: Perspectives and Challenges, ed. Alar Kilp and Andres Saumets, endc Proceedings, 12 (2009): 111.

[25] In comparison with the previous censuses, that of 2011 (http://censusresults.nsi.bg/Census (accessed 9 May 2021) used a new methodology. It allowed people to choose whether or not to declare their religious affiliation and ethnic identity. As a result, 21.8 percent of the citizens, mostly young people in the biggest cities of Sofia, Plovdiv, and Varna, did not answer to these questions. For further details, see Simeon Evstatiev, Plamen Makariev and Daniela Kalkandjieva, “Christianity, Islam, and Human Rights in Bulgaria,” in Religion and Human Rights: An International Perspective, ed. Hans-Georg Ziebertz and Gordan Crpic (Heidelberg: Springer, 2015), 3–4.

[46] The word muftiship or, as some authors prefer, muftiate is derived from the Arabic mufti (a Muslim jurist qualified to issue a legal opinion, orfatwa) to denote the institutional structures that represent a Muslim community vis-a-vis the state authority in regions, such as the (post)-Ottoman Balkans or the Russian/Soviet domains. See Antonina Zhelyazkova and Egdunas Racius, “Introduction: Rationale of the Book,” in Islamic Leadership in the European Lands of the Former Ottoman and Russian Empires: Legacy, Challenges and Change, ed. Egdunas Racius and Antonina Zhelyazkova (Leiden and Boston: Brill, 2018), 4.

[183] Personal communication during a focus group with Bulgarian Muslim Turks from the area of Plovdiv, Asenovgrad, 16 September, 2005. The meeting was part of a research program, “The Muslim Community in Bulgaria: Facing the Global Challenges,” of the Center for Intercultural Studies and Partnership, Sofia.

[184] From Arabic madhhab (pl. madhahib), or school of Islamic law. Under the influence of Turkish language, Muslims in Bulgaria usually pronounce the Hanafi madhhab as Hanefi mezheb. When relevant, I give the Arabic terms established in Islamic normative textual tradition, otherwise using a transliteration from Bulgarian to provide a description ethnograph- ically closer to local practice.

[229] Except when discussing well-known public figures, such as muftis, preachers, or imams, in the ethnographic part of my work I have changed the names of the people in order to protect their privacy.

[230] Most Bulgarian Muslims, including some of the Salafis who obtained their degrees in Islamic law (sharia) in Saudi Arabia, prefer using terms such as selef and self or selyaf and selyafi instead of salaf and salafi some of which are Turkish-influenced. Considering the special role of Arabic language in Salafi thought and practice, whether this preference is to be understood as referring to the local context influenced by other Islamic terms entering Bulgarian via (Ottoman) Turkish, is unclear.

[231] Laura J. Olson, “The Multiple Voices of Bulgaria’s Unofficial Islamic Leaders,” in The Revival ofIslam in the Balkans, 134.

[232] Dalavera (colloquial Bulgarian), a dishonest and unfair deal.

[245] I prepared the expert report in the field of Arabic and Islamic studies with the assistance of my colleague at Sofia University’s Department of Arabic and Semitic Studies, Ivan Dyulgerov, a specialist in Arabic linguistics.

[246] Kompleksna Expertiza ot Oblastite Bogoslovie, Sotsiologiya i Arabistika [Complex Expert Witness Report from the Fields of Theology, Sociology and Arab Studies], Reference Number within the Pre-Court Proceedings: No 9/2009, Expert Witnesses: Dr. Klara Stamatova, Associate Professor Dr. Antoniy Galabov, Associate Professor Dr. Simeon Evstatiev, and Assistant Professor Ivan Dyulgerov, Pazardzhik District Court, 2009.

[247] The so-called “Expert Report in the Field of Arab Studies” is divided as follows. Part One is entitled “Zaklyuchenie (literally “Conclusion” though this is, in fact, a description of the books and written materials seized by the Prosecutor’s Investigation Office),” pp. 1874. Part Two is “Zaklyucheniya na Veshtite Litsa ([General] Conclusions of the Expert Witnesses)” where our explanation, overall conclusions, and answer to the specific questions are given on pp. 77–90. Our expert report was prepared in the following way: within

[248] Said Mutlu, Three-Monthly Report (in Arabic) to Ghassan al-Rimal, Director of Da‘wa Division, Muslim World League in Mecca, court evidence—report No 27, 20.5.1426 ah/ 27.06.2005 ad, as mentioned by Simeon Evstatiev and Ivan Dyulgerov in the “Expert Witness Report in the Field of Arab Studies” included in the “Complex Expert Witness Report,” Part i, 50.

[249] Internationally, the area of my own academic expertise as a historian of Islam corresponds to what is known in Europe or North America as Islamic studies within which the knowledge of Arabic and the ability to work with Arabic sources is a basic requirement. Islamic Studies are explicitly part of numerous publications, the under- and post-graduate curricula and the various programs developed by our department at Sofia University St. Kliment Ohridski and this is a well-known fact in Bulgaria and internationally.

[250] I did so on the grounds of two main reasons. First, I accepted to take part as an academic expert with the initial reservation that the possession of a book cannot be an offence in itself, so I wanted to remain as objective as possible. Second, the case was so highly politicized by various actors in the public sphere that any statement I would make outside my scholarly field would be used not only by the litigants but by various opposing individuals and social groups. Further, some of the accused were Muslims I have known for years from my fieldwork, teaching, or research. I was not aware of the identities of all the defendants when I was called to review tens of books and documents seized from some of the accused or the witnesses within the court proceedings.

[259] Prosecutor Nedyalka Popova, “Pravo na Replika na Prokurora [Right to Answer of the Prosecutor],” 8.

[260] Prosecutor Nedyalka Popova, Obvinitelen Akt po Dosudebno Proizvodstvo [Indictment on Legal Proceedings] No 9.2009, Correspondence Number within the Register of District Prosecutor’s Office 1122/09, 6. Here, the Indictment stresses that “the defendants have built their orderly system of views—an ideology drawing upon elements of Salafism which they presented in its radical version to their followers in Bulgaria” (p. 6). My statistical analysis of the indictment shows that the word “traditional” as denoting something positive and a legitimate “religion” in Bulgaria is used 19 times as opposed to the “ideology” of Salafism and its derivatives (Salafists, Wahhabi-Salafi, etc.) used, for its part, 188 times.

[261] My answer, in fact, implied that as a secular scholar of Islam, it is not my purpose to judge which one of mutually contesting Islamic currents is “right” or “wrong.” In so doing, I stressed that I do not have Islamic religious credentials, as in order to take, for example, a pro-Hanafi-Maturidi and thus an anti-Salafi stance, or vice versa, for which one had to be an Islamic religious scholar (‘alim) or a Muslim jurist (faqlh) which I am not.

[398] Pomaks define themselves either as Muslims—to differentiate themselves from the majority Bulgarian Christian identity—or as a Bulgarian-speaking community in contrast to ethnic Turkish Muslims. As reported by Evgeniya Ivanova, the research leader of the sociological survey "Attitudes of Muslims in Bulgaria—2011," only 26 percent of Pomaks identify themselves ethnically as "Bulgarian," while the self-identification of 69 percent is "other." About 20 percent choose Islam as an ethnic marker. The survey is published in: Ivanova, Islyamizirani Balkani, 226–54, see also 130, 176.

[399] Mary Neuburger makes the observation that the Muftiship, in its post-1989 newspaper "Muslims," provides no women represented without veiled hair and necks. See Mary

Neuburger, “Re-Dressing of Bulgarian Muslim Women, 1878–1989,” in Anti- Veiling Campaigns in the Muslim World: Gender, Modernism and the Politics of Dress, ed. Stephanie Cronin (London and New York: Routledge, 2014), 263.

[402] Baggy trousers made of colourful flowery fabrics that extended down to the ankle.

[403] See Neuburger, The Orient Within, 119–25.

[404] Behar Sadriu, for example, mentions that the full face-veil (Alb. pege /ferexhe) was also practiced among some Muslim women in Kosovo until the middle of the twentieth century (Behar Sadriu, “Rhetorical Strategies of Kosovo’s Imams in the Fight for Women’s Rights,” in The Revival of Islam in the Balkans, 189). Andreja Mesaric also considers in her study the practice of full covering of Bosnian Muslim women and points out that face veiling had been practiced by certain sections of Bosnian society well into the twentieth century. It first started declining under Habsburg rule (1878–1918) but only disappeared from practice in the 1950s. See Andreja Mesaric, “Muslim Women’s Dress Practices in Bosnia-Herzegovina: Localizing Islam through Everyday Lived Practice,” in The Revival of Islam in the Balkans, 108–9.

[432] Here, I use “judicial” in the sense of Islamic jurisprudence, and not of secular law.

[433] Editorial, “Kakvo Moje da Uchi Zhenata [What Can a Woman Study],” Myusyulmani/ Muslumanlar 10/87, (September, 1999): 7.

[434] The woman cannot become a judge and deal with criminal cases “because her nature is more compassionate and merciful rather than strong and hard”, as explained in an editorial. See Myusyulmani 8/113 (November, 2002): 3. Such sharta-based instructions differ from other Islamic interpretations of the issue, however, despite the diversity of opinions, they reach the same conclusion. For instance, the President of the High Judicial Council of Saudi Arabia stated that women are unfit to serve as judges because this would grant women undeserved authority (wilaya) over men (“Ma‘ Samahat al-Shaykh ‘Abd Allah bin Hamid,” al-Tawhid, Rabi‘ al-Awwal 1396/March 1976, 13).

[443] For more details about the French public positions on the necessity to limit religious freedom in secular contexts, see Valeri Amiraux, “The Headscarf Question: What is really the Issue?,” in European Islam: Challenges for Society and Public Policy, ed. Samir Amghar, Amel Boubekeur, and Michael Emerson (Brussels: Center for European Policy Studies, 2007)424–43; John R. Bowen, Why the French Don’t Like Headscarves (Princeton, NJ and Oxford: Princeton University Press, 2007); Joan W. Scott, “Symptomatic Politics. The Banning of Islamic Headscarves in French Public Schools,” French Politics, Culture & Society 23/3 (2005): 106–27. The headscarf issue as an example of the struggle over the control and interpretation of symbols is discussed by Dale F. Eickelman and James Piscatori, Muslim Politics (Princeton, NJ: Princeton University Press, 1996), 9, 90–91. See also Joan W. Scott, The Politics of the Veil (Princeton, NJ: Princeton University Press, 2007).

[444] However, no changes in the legislation banning all religious symbols in schools were formally made. The official opinion of the Ministry of Education is that the issue of religious symbols in public schools is considered in the context of the Law on National Education stating that there shall be no privileges or restrictions of rights on the grounds of race, nationality, ethnic belonging, sex, social origin, religion, or social status. See Focus Information Agency, “Ministerstvo na Obrazovanieto: Religiozni Simvoli, koito Protivorechat na Tselite na Obrazovanieto, Sledva da Budat Ogranichavani v Suvremennoto Uchilishte [The Ministry of Education: Religious Symbols, which Contradict the Objectives of Education, Must Be Restricted at the Contemporary School],” Written Answer of the Ministry of Education, Youth and Science to Focus Information Agency with Reference to the Headscarf Affair in Bulgarian Public Schools, 30 May 2012, http://focus-news.net/opinion/0000/00/00/21351/ (accessed 10 January 2018).

[475] See “Recommendation cm/Rec(2008)12 of the Committee of Ministers to member states on the dimension of religions and non-religious convictions within intercultural education (Adopted by the Committee of Ministers on 10 December 2008 at the 1044th meeting of the Ministers’ Deputies). The Committee of Ministers, under the terms of Article 15.b of the Statute of the Council of Europe […] The Committee of Ministers Considering the provisions of its Recommendation Rec (2002)12 on education for democratic citizenship in which the Committee of Ministers states that—that education for democratic citizenship is a factor for social cohesion, mutual understanding, intercultural and inter-religious dialogue, and solidarity. […] Bearing in mind the Wroclaw Declaration on fifty years of European cultural co-operation (10 December 2004) which underlined the importance of systematically encouraging intercultural and inter-religious dialogue based on the primacy of common values, as a means of promoting awareness and understanding of each other, preventing conflicts, promoting reconciliation and ensuring the cohesion of society, through formal and non-formal education [.]” Recommendation cm/Rec(2008)12 of the Committee of Ministers. Last modified 10 December 2008, https://wcd.coe.int/ViewDoc.jsp?id=1386911&Site=CM (accessed 1 November 2018). On the Toledo Guidelines and the relevant case-law of European and United Nations human rights bodies as well as the key guiding principles relating to re in state schools, see Carolyn Evans, “Religious Education in Public Schools: An International Human Rights Perspective,” Human Rights Review 8, 3 (2008): 449–73.

[476] At this point, a series of vital issues come to the fore that include protecting public education and equal access to it irrespective of gender, economic status etc., ascertaining the standards of private education through accountable and competent public institutions, maintaining standards in state education, ensuring that the kind and degree of autonomy of private education in curricula and elsewhere, is properly monitored, especially in primary and secondary education. There are also numerous other matters related to whether citizens are given equal opportunities through education, the future of education and society in countries with neoliberal economic frameworks, the impact of commercialized education on the rest of the world or the kinds of discrimination and postcolonial dependencies on the level of Human Resources generated through education. A shocking example is afforded by African countries where, though the general population is impoverished to an extreme degree and vulnerable to numerous diseases, access to secondary and tertiary education is a privatized good enjoyed by the privileged few. See N. V. Vargeese, Private Higher Education in Africa, International Institute for Educational Planning (iiep), Geneva: unesco, 2004.

[477] Serious questions are posed by the young female students from various European states (known as isis brides) who had partaken of European education and culture but were conscripted through virtual—for the most part—religious propaganda and secretly abandoned their European homes in search of an ideal “Islamic Caliphate.” The inadequacy of state or private religious education in forming a critical religious attitude in potentially freethinking future European citizens was thus demonstrated. They also disclose an inability to manage religious diversity and protect underage persons from extremist ideologies and

draw attention to the impact of virtual cultures. Michael Humphrey, “From Diaspora Islam to Globalised Islam,” in Islam and Political Violence: Muslim Diaspora and Radicalism in the West, ed. Shahram Akbarzadeh and Fethi Mansouri (London: I. B. Tauris, 2010), 107–23, as well as 114–15 on the de-culturalisation and re-Islamization, victimhood and virtual umma.

[478] See Marios Koukounaras Liagkis and Angeliki Ziaka, “Religious Education in Greece-Orthodox Christianity, Islam and Secularism,” European Journal of Social Sciences, Education and Research 5, 1 (2015): 44–53. On the recent changes and debates concerning re and ire in Greece, see Angeliki Ziaka and Marios Koukounaras Liagkis, “Islamic Religious Education and Teaching About Islam in Greece,” in Islamic Religious Education in Europe: A Comparative Study, ed. Leni Franken and Bill Gent (New York: Routledge, 2021), 162–178.

[479] Ibid., 44–5.

[480] I would like to thank my colleague in Sociology of Religion, Niki Papageorgiou, for her patience in reviewing the theoretical part of this article and helping me clarify some conceptual ambiguities.

[482] Jurgen Habermas, Sara Lennox and Frank Lennox, “The Public Sphere: An Encyclopedia Article (1964),” in New German Critique 3 (Durham: Duke University Press, 1974): 49.

[483] During the editorial process, Dale Eickelman has observed that the “Solidarity” movement in Poland (1980) suggests that religion never left the Polish public sphere, and the same goes for the role of liberation theology in Latin America. What wasn’t changing were the simplistic versions of “modernization theory” in the social sciences, perhaps too in the thrall of policy makers. Ole Riis, “Religion Re-Emerging: The Role of Religion in Legitimating Integration and Power in Modern Societies,” International Sociology 13, 2 (1998): 249–72.

[484] Grace Davie demonstrates that secularism does not necessarily entail the marginalization of religion to the private sphere, nor even a decrease in religious practice. See Grace Davie, Sociology of Religion (London: Sage, 2007), 224–43.

[485] An electronic search with the terms “Islamization of Europe” reveals an abundance of material fraught with neologisms and intense Islamophobic emotions, such as the term “Eurabia.” Statistics featured in Islamic websites on the “Fertility Rate for Muslims vs. Non-Muslims” in Europe enjoy high visibility along with other conspiratorial topics that create fear, uncertainty and conflict among readers. Most of these websites come near the top of search engine results and literally bombard individual readers, whilst many of these neologisms appear on websites, such as Wikipedia, which thus establishes their use and gives them legitimacy. (See for example the Wikipedia article on “Eurabia,” last modified May 16, 2019, https://en.wikipedia.org/wiki/Eurabia (accessed 29 Nov. 2016). On the notions of re-Islamization and victimhood in migrant Muslim communities, see also Michael Humphrey, “From Diaspora Islam to Globalised Islam,” in Islam and Political Violence. Muslim Diaspora and Radicalism in the West, ed. Shahram Akbarzadeh and Fethi Mansouri (London: I. B. Tauris, 2010), 107–23.

[486] On these new antagonisms and “the multiple ways in which the public sphere can be made transculturally feasible by encompassing the evolution of non-Western societies in which religion plays a vital role” see Armando Salvatore and Dale Eickelman, eds., Public Islam and the Common Good (Leiden: Brill, 2006). See also Daniel Bell, “The Return of the Sacred: The Argument about the Future of Religion,” Journal of Religion and Science 13, 3 (1978): 187–208.

[487] Maurits Berger, “Education in Islam for All. The Leiden Islam Academy” (paper presented at the International Scientific Conference Intercultural Religious Education and Islamic Studies. Challenges and Prospects in Greece and Europe, Kavala, October 10–11, 2015) in Intercultural Religious Education and Islamic Studies: Challenges and Prospects in Greece, Europe, USA, edited by Angeliki Ziaka (Athens: Maistros, 2016), 313–33. See also Maurits Berger, A Brief History of Islam in Europe. Thirteen Centuries of Creed, Conflict and CoExistence (Leiden: Leiden University Press, 2014) and especially the last chapter where Berger contends that “Europe is still seeking a balance between the new freedoms for all, and the right to be different for particular communities.” For a brief legal presentation on Religious Education in Austria, see Georg Konigsberger and Louis Kubarth, “Religious Education in Austria,” in The Routledge International Handbook of Religious Education, ed. Derek H. Davis and Elena Miroshnikova (London: Routledge, 2013), 32–37. France, a country with a clear separation of state and religion, restarted a public debate in the late 1980s and early 1990s on the need to reintroduce religion in state schools, mainly as means of developing cultural awareness and of exploring “religious issues” connected to the role of religion in the shaping of the world civilizations, a field on which French students seemed to be weak due to the tradition of laicite. Later in the first years of the 21st century, the French Ministry of Education reignited the debate with a document entitled “Teaching religious facts in a laistic school.” See Anna van den Kerchove, “Teaching about Religions within the Renewed Laistic System in France,” Pedagogiek 33, 2 (2013): 153–65.

[488] See Berger, “Islam Education for All. The Leiden Islam Academy.” By “national ramifications” we mean those antagonisms that are immanent in various religious

institutions that pose as mediators of the “upright and authentic” faith and identity. Within Muslim communities, there is an antagonism between the representatives of “authentic” and “European” Islam, the latter expressed either through Salafism or Turkish Islam and their private religious institutions in several European countries.

Introduction of Pan-Religion in the Greek School],” 0pn<rKeuTiKa Blog (re Blog), http://thriskeftika.blogspot.gr/2015/12/blog-post_21.html (accessed 3 December 2017).The same blogger, among others, turned against the creation of an Islamic Studies strand in the School of Theology of the Aristotle University of Thessaloniki. He associates the establishment of this strand with a maniacally persistent endeavour to impose the “pan-religious educational model in primary and secondary education through the proposed Curriculum for re in Primary and Secondary School despite the reactions, including those of the Holy Community of Athos.” This evinces that “these designs are systematically and methodically expanding not only to Primary and Secondary but also to Tertiary Education.” See “Yno^vn^a KaSnynT) HpaKM) PepaKn ayeTiKa ^e Tnv ano^aon ^8puon; MouoouX^aviKwv SnouSwv oTn ©eoXoyiK) SyoX) An© [Memorandum of Prof. Herakles Rerakis on the Decision to Found Muslim Studies in the School of Theology of Aristotle University of Thessaloniki],” Petheol Blog, http://www.petheol.gr/nea/ekpaideutikanea/ypomnemakathegeteeraklererakeschetikametenapophaseidrysesmousoulmanikonspoudonstetheologikescholeapth (accessed 3 Dec. 2018).

[496] In this case, some metropolitan bishops, catechetical organizations and other Christian “circles” as well as right-wing and far right-wing politicians championed the catechetical character of Religious Education. Left-wing political forces were partly—and mainly at the beginning of their governance—in favor of abolishing Religious Education altogether or else of promoting re as the “Study of Religions.”

[521] This chapter has evolved from a collaboration between the authors and the Bulgarian team resulting from Ivan Zabaev’s participation in the workshop “Religion and the Public Sphere” (Sofia, 2–5 July 2013). Otherwise, the chapter was prepared within the project “Russian Orthodox Church in the Public Sphere: Deprivatization of Religion in Contemporary Russia” made with the grant support of an Institute for Public Planning in 2014 (inop).

[522] According to Casanova, modern polity should be regarded as consisting of three arenas— state, political society and civil society, all having public sphere as a constitutive element. Public religions, correspondingly, may exist in each arena in relevant forms: (a) as church at the state level, (b) as a political party or political movement, mobilized against other religious or secular movements, in the arena of political society, and (c) in the form of public action in the arena of civil society. As far as modern anticlerical contestations have weakened, there is no need for churches to mobilize laity in social and political movements. This way of public action compatible with modernity and its liberal values Casanova calls the “entering of the religion into undifferentiated public sphere of civil society” (Jose Casanova, Public Religions in the Modern World, 1st ed, (Chicago and London: The University of Chicago Press, 1994), 55–61). Casanova does not give the strict definition of the term “undifferentiated civil society”, but—according to his arguments and the empirical evidence in his research— he speaks about public action and public communication of religious communities, faithbased organizations, religious movements, and networks usually aimed at changes in the societies in which they are embedded.

[533] The English term “pro-life” started to be actively used by the Russian Orthodox community after the 1990s. It is believed that the movement emerged in the United States in 1973 in response to the abolition of the ban on abortions in several states by the Supreme Court. The core of the pro-life movement around the world consists of Christians of various denominations: Catholics, Protestants, and Orthodox Christians.

[534] Official web site of the International Festival of Social Technologies in Defense of Family Values “Pro Life,” http://prolife-fest.ru/content.php?id=18 (accessed 18 June, 2017).

[535] For example, the Foundation “For Life” designed a social advertising action “They Were Born Third (Sixth, Twelfth ...) in the Family,” which was implemented in many cities and towns of Russia. For examples of the banners see http://www.pravmir.ru/oni-rodilis - semnadcatymi (accessed 18 June, 2018).

[543] Overall, presentation materials with aggressive content as well as events which use the rhetoric of “abortion-murder” are less common. “Bloody” and intimidating advertising has been less and less frequently used by the pro-lifers and does not always have the status of officially authorized public advertising: often it consists of stickers and posters illegally posted on the street or on public transportation, although there are some examples of

official events which recur to frightening imagery. For example, they include the lecturing and exhibition project “Silent Revolution,” which has been implemented since 2001 in many cities of Russia, Ukraine, and Moldova http://www.prolife-fest.ru/projects/ 2/ (accessed 18 June 2018).

[618] In order to avoid a possible misunderstanding: the differentiation between formal (related to religious institutions) and informal Orthodox Christian publics which I make should not be confused with the one between a formal, “strong”, related to the institutions of political power public and informal, “weak” related to civil society publics, which Habermas makes within his “two-track model of deliberative politics” (see for example Between Facts and Norms, 304). In Habermas’s terms, all religious discourses are conducted within informal publics.

In the Name of God,

The Most Gracious the Most Merciful

Several months remain before the close of the century, yet do the Arabs have a plan to deal with the twenty-first century? The twentieth century has come to an end, yet the Arabs and Muslims have achieved only independence and modest economic growth. Arab unity is still an unrealized ideal and the projects of modernity have failed to deliver on their promises. Instead, they have entrenched oppressive regimes that hypocritically flaunt slogans of modernity, science, and development, while the Islamic revival is hopelessly lost in protest and bargaining over secondary issues such as the Islamic veil, the republication of ancient Islamic texts by the millions, and in perpetrating senseless acts of violence with obscure goals. So is there now an Islamic charter with which we can enter the twenty-first century with a comprehensive perspective that takes into account the diversity of all nations and peoples?—a workplan with which all can enter the twenty-first century?

I have been asked by the International Forum for Islamic Dialogue and others in the Arab and Islamic worlds to write a proposal for an Islamic Covenant which can serve as plan for Islamic action in the next century, which takes into account general Islamic principles. I answered the Committee’s request and I offer the reader the following proposal.

Dr. Muhammad Shahrur

Damascus

1 July 1999

In the Name of God,

The Most Gracious the Most Merciful

*** Introduction

A covenant is literally a tying together. It is a relationship that binds the two parties either by force or by reciprocal binding trust between the two parties. The first connotation appears in the Qur’an in the following context:

<quote>

“Therefore, that day, He will punish none as his punishment. And none will (He) bind with chains as his binding” (Sura 89, al-Fajr, v. 25–26).

“When you meet the disbelievers (in the battle fields), strike off their heads until when you have routed them; then tie (your captives) firmly ...” (Sura 47, Muhammad, v. 4).

</quote>

The second connotation appears in the following verses:

<quote>

“And remember when we made a covenant with the children of Israel (saying): ‘Do not worship but Allah ...’ “ (Sura 2, al-Baqara, v. 83).

“But because of their breach of their covenant, we cursed them and hardened their hearts ...” (Sura 5, al-Ma’ida, v. 13).

</quote>

A covenant can be a charter or an agreement that regulates the conditions of a relationship between two parties in the first meaning of the term. Hence necessity and obligation tie the two parties. But a contract can never be a covenant (mithaq). Thus God has willed that the relation between Him and humankind be a covenant and not a contract. If it were like a contract, then it would be a capitulation agreement in the sense that God is the more powerful other partner. The distinction between covenant and contract is not a matter of mere linguistic distinction or arbitrariness, as some might assume. It makes us understand the multiplicity of divine intentions. Without it, the multitude of these meanings is concealed from us. We see how God calls marriage a sacred, strong covenant. It is not just the marriage agreement or the “act of [sexual] pleasure,” as we call it today:

<quote>

“And how do you take it back after you have lain with each other, and they had taken from you a strong pledge?” (Sura 4, al-Nisa’, v. 21).

</quote>

Faith in the sovereignty of God (rububiya) is a covenant. It is based on the trust of the created in God, who created natural and cosmic laws. It also rests on the confidence of the created in the continuity and prevalence of these exact laws, identical for the compliant believer as well as the extreme disbeliever. All humankind attested to this sovereignty since they were only seeds in the loins of their fathers (and thus their testimony lies in their very existence):

<quote>

“And remember when your Lord took forth from the children of Adam, from their backs, their descendants and made them testify on themselves, (He asked them) ‘Am I not your Lord?’ They replied: ‘Yes, we do testify ...’ “ (Sura 7, al-A‘raf, v. 172).

</quote>

Even Satan, as a disobedient, could not deny God’s sovereignty (rububiya). The covenant of sovereignty is a coercive bond for which the created have no choice but submission to His laws and their natural manifestations (destiny). The covenant of Lordship (uluhiya) is a completely different matter. As mentioned earlier, it is based on mutual trust between the two parties, in which God trusts man and declares this trust to his angels before man’s creation, and before mankind knew of His announcement of trust:

<quote>

“Behold when your Lord said to the angels: ‘I will create a viceroy on earth ...’ “ (Sura 2, al-Baqara, v. 30)

</quote>

Man’s vicegerency of God (khilafa) on earth was exemplified in His breath (knowledge and legislation), in humankind’s possession of the Spirit of God, and freedom of choice (trustworthiness):

<quote>

“We have offered the trust unto the heavens, the earth and the mountains, but they refrained from bearing it, and were afraid of it. But manundertook this charge, because he was unjust and ignorant” (Sura 33, al-Ahzab, v. 72).

</quote>

Therefore vicegerency (khilafa) and trust (amana) are the objective and direct expressions of God’s trust in man. This was a given fact before man was commanded to do anything; and in that, the honoring of humankind over God’s other creatures:

<quote>

“And, verily, We have honoured the children of Adam and carried them on the land and the sea, and provided them with good and lawful things, and we have exalted them above many of those whom We have created ... “ (Sura 17, al-Isra’, v. 70).

</quote>

Thus what remains for man is to trust in God, a trust which stems from a conscious will, which believes in Him and submits to His orders and prohibitions.

From this point of departure, we declare that Islam is a covenant between God and the whole of humanity, and that faith (iman) is a covenant between God and the believers who specifically follow Muhammad’s prophecy. Hence we declare ourselves as Muslims first, and second as believers trusting in God, a conscious trust free from compulsion.

This leads us to talk next about freedom, knowledge, and legislation. No one has the right to claim a monopoly or exclusive possession of them, because these concepts belong to all the

peoples of the world, and without them any given society would descend to the level of beasts. Hence what distinguishes human society is knowledge, legislation, ethics, freedom as described in the Qur’an as vicegerency (khilafa), and trust (amana). All these are God’s gifts to humankind. Societies [in different historical periods] demand these things according to their levels of understanding. This [clear and simple] contractual relation between God and people, as described earlier, is distorted and badly explained in heritage literature (turath) and by those traditional jurists (fuqaha’) who were closed to the participation of the laity and satisfied with reductive notions of freedom. In this way, freedom was seen only as exemption from bondage, as if there was an implicit agreement among jurists to avoid serious discussion. It was a restricted preserve in many Islamic states, where no one is permitted to discuss the issue of freedom.

So the jurists were satisfied with an interpretation which preserved their well-being. They considered freedom as the opposite of bondage because slavery was a common and widespread practice at that particular period in human history.

All of this, however, in our opinion bears no relation to the divine intention and expectations of the people because God created all Adam’s children to be worshippers (‘ibad) and not miserable slaves (‘abid). In many Qur’anic verses he indicated to them their freedom to choose between belief and disbelief, obedience and disobedience, and then promised them an encounter on the Day of Reckoning to reward the worthy and punish the wrongdoers.

In His revelation, God took into account first of all his obligation and covenant between him and the people:

1) To have mercy on humankind and to provide them with sustenance:

<quote>

“Tell My servants that I am the oft-forgiving, the Most Merciful” (Sura 49. al-Hujurat, v. 49).

</quote>

He also pre-ordained the sustenance of people and the rest of living creatures on earth before humankind was present:

<quote>

“He set above it (the earth) firm mountains, and He blessed it and measured (the creation) its sustenance in four days alike for all who ask for it” (Sura 41, Fussilat, v. 10).

</quote>

2) To forgive them and pardon their sins:

<quote>

“Say: ‘O My servants who have transgressed against their souls! Do not despair of the Mercy of Allah, for Allah forgives all sins ...’ “ (Sura 39, al-Zumar, v. 53).

</quote>

3) To answer their pleas and lead them on the straight path:

<quote>

“When My servants ask you about Me, I am very near. I answer the prayers of every suppliant when he calls me ...” (Sura 2, al-Baqara, v. 186).

</quote>

4) To defeat the oppressor, relieve the oppressed and deliver victory to the just:

<quote>

“And remember when Allah promised you victory over one of the two bands, but you wished to fight against the unarmed one ... “ (Sura 8, al-Anfal, v. 7).

“The Word of your Lord is perfected in truth and justice. None can change His Words ... “ (Sura 6, al-An‘am, v. 115).

</quote>

In the covenant of Islam, God also expects people to fulfil their commitments, which include:

- To believe in God as the only God:

<quote>

“Say: ‘It is only inspired to me that your god is One God: Are you then Muslims?’ “ (Sura 21, al-Anbiya, v. 108).

</quote>

- To believe in the Last Day, the Day of Judgement:

<quote>

“... whoever believes in Allah and the Last Day and does righteous deeds, will have their rewards from their Lord, and they will have nothing to fear nor to grieve for” (Sura 2, al-Baqara, v. 62).

“Yea, he who surrenders himself to Allah, and does good deeds, shall have His Lord’s reward, and he will have nothing to fear or grieve for” (Sura 2, al-Baqara, v. 112).

</quote>

- To do right (ya‘malu salihan) among themselves and for the rest of mankind. This is an open article in the contract that touches openly on ethics and virtue, and does not relate to specific deeds:

<quote>

“... whoever believes in Allah and the Last Day and does righteous deeds, will have their rewards from their Lord, and they will have nothing to fear nor to grieve for” (Sura 2, al-Baqara, v. 62).

</quote>

This verse is immediately followed and supported by the following one:

<quote>

“Remember when We took your covenant and We raised the mountain (Sinai) above you ... “ (Sura 2, al-Baqara, v. 63).

</quote>

We understand that whoever commits himself of his own will and without coercion to these three principles is a Muslim in the eyes of God. This is regardless of the faith to which he or she is affiliated or the customs and rites practiced, whether a follower of Muhammad’s noble prophecy, Jewish, Christian, or other. So we see that the corpus of teaching and adherence to the noble precepts belongs to all of humanity, taking into account that these teachings have evolved from Noah to Muhammad by means of the various prophets throughout human history. So we understand the Prophet’s saying (hadith): “I was sent only to complete the noble traits of character.”

As for the covenant of faith (iman), it is a covenant between God and His prophets on the one hand, and the believers in these prophets on the other. It includes belief and conviction in the prophecies of all God’s prophets and messengers, and the observance of religious rites such as prayer (salat), fasting (sawm) and almsgiving (zakat):

<quote>

“The Messenger has believed in what has been sent down to him from his Lord, and the believers believed in Allah, His angels, His scriptures, and His messengers. ‘We do not

discriminate between any one of His messengers, and they say: ‘We hear and obey ...’ “ (Sura 2, al-Baqara, v. 285).

</quote>

The affirmation that there is no God but God is the foremost principle in the covenant of Islam and is required of all people, but the affirmation of Muhammad as God’s messenger stands as the foremost principle in the covenant of faith required specifically from all followers of Muhammad’s message. Just as Muslims fast and pray in accordance with what Muhammad had done, other religions practice these rites in their own distinct ways which are attributed to a particular prophet:

<quote>

“... We have ordained a law and assigned a path for each of you. Had Allah pleased, He could have made you one nation. But his will is to test you by what He had given you ... “ (Sura 5, al-Ma’ida, v. 51).

</quote>

Just as the rites of prayer and fasting vary from one religion to another, diversity in religious practices is a natural law affirmed by God Himself:

<quote>

“Had your Lord willed, He would have made mankind one nation: but they will not cease differing” (Sura 11, Hud, v. 118).

</quote>

The only issue that does not bear any form of alteration is the pillars of Islam (arkan al-islam) (faith in God and the Last Day, good deeds and adherence to the Straight Path) which is eternal and universal to all humanity till the Last Day of History. This is why we find two types of faith (iman) in the Holy Qur’an. The first concerns those who believe that there is no God but God (Islam—Muslims). The second concerns those who

believe that Muhammad is God’s messenger (faith—believers), as the following verses make clear:

<quote>

“O you believers! Believe in Allah and His Messenger and the Book that He had revealed before him. He who denies Allah, His angels, His scriptures, His Messengers and the Last Day has surely gone far astray.

Those who believed in Allah, then rejected their faith, and afterwards believed again, and then rejected faith and increased in disbelief, Allah will not forgive them nor guide them to the Right Path” (Sura 4, al-Nisa’, v. 136–137).

</quote>

We also find that God’s decrees and commandments are directed once towards those who believe in God and the Last Day, whom He refers to as “the people” (al-nas), and again to those who believe in Muhammad, whom He refers to as “the believers” (al-mu’minun). These examples relate to the first usage:

<quote>

- “Allah is the Protector of the believers, He brings them out from darkness into light. But the patron of unbelievers is Satan (Tagut), he takes them out from light into darkness ... “ (Sura 2, al-Baqara, v. 257).

- “O mankind! Fear your Lord who created you from a single msn (Adam) and from him he created his wife (Eve), and from them both he created many men and women, and fear Allah who will question you about your kindred (do not cut off relations with them). Allah is always a Watcher over you” (Sura 4, al-Nisa’, v. 1).

</quote>

Examples for the second usage are as follows:

<quote>

- “O you believers! Fasting is prescribed for you as it was prescribed for those before you, so that you may fear Allah” (Sura 2, al-Baqara, v. 183).

- “O you believers! Do not establish your prayers when you are drunken, but wait until you understand what you say ...” (Sura 4, al-Nisa’, v. 43).

- “The (true) believers are those who believe in Allah and His Messenger and, afterwards, do not doubt anything, and they strive in the cause of Allah with their possessions and themselves, and those are the sincere ones” (Sura 49, al-Hujurat, v. 15).

</quote>

In the light of this distinction—particularly since faith in the holy texts and the messengers can only occur after faith in the sovereignty, lordship, and unity of God—we can realize the importance of interpreting the Book in a contemporary way and of re-interpreting the divine decrees (ahkam) in contemporary circumstances. This is in order to deal appropriately with those who believe in God and the Last Day as well as with the followers of Muhammad’s message, without oppressing or discriminating against others.

Perhaps the best way to exemplify this point is to contemplate the opening verse of Sura al-Saff (the Battle Array):

<quote>

“All that is in the heavens and the earth celebrate the praises of Allah. He is the Exalter in Might, the Wise.

O you who believe! Why do you say what you do not do?

It is most hateful in the sight of Allah that you say what you do not do.

Verily Allah loves those who fight in His cause in battle array as if they were a solid cemented structure” (Sura 61, al-Saff, v. 1–4).

</quote>

Early Islamic scholars, in their interpretation of the occasions on which God sent down certain verses (asbab al-nuzul), agreed (ajmaʻu) that the verses concerning the followers of the Prophet in the Battle of Uhud. The scholars assumed that these verses were specific to this occasion and not relevant to others. So they overlooked how the opening verse refers explicitly to belief in God and how Jews and Christians could also fight for the cause of God, and they may say what they do not do. As for the verses that deal with the pilgrimage to Mecca, it remains for Muslim scholars to interpret:

<quote>

“... pilgrimage to the house is a duty decreed by Allah for every Muslim who can afford it. But he who disbelieves, Allah is not in need of all mankind” (Sura 3, Al ʻImran, v. 97).

“And proclaim unto mankind to come to the pilgrimage. They will come walking on foot or riding on every lean camel; they will come from every faraway place” (Sura 22, al-Hajj, v. 27).

</quote>

These verses pose a problem for Muslim scholars to solve. The traditional scholars regarded the Hajj (a pillar of Islam, like prayer, charity, fasting, and almsgiving) as specific to the followers of the message of Muhammad, despite the fact that these verses address all people.

*** A Proposal for an Islamic Covenant

1. Glorification of God is a mode of existence for all rational and non-rational beings. It expresses itself in their constant transformation. They praise God, who is not subject to the laws of transformation and development, leading to corruption and decay.

<quote>

“... everything will perish except Himself ...” (Sura 28, al-Qassas, v. 88)

“The seven heavens and the earth, and all the creatures in them, give glory to Him. There is not a thing but celebrates His praises, but you do not understand their praises ...” (Sura 17, al-Isra’, v. 43).

</quote>

2. All people are the responsibility of God, the believers and the unbelievers, conformists and dissenters, monotheists and polytheists; all were created from clay and made to be worshippers (‘ibad) and not slaves (‘abid). They obey Him of their own free will and disobey by their own choice and yet in both cases the fact remains that they are worshippers. Hence the right of a person to adopt or convert to any sect or religion, to enlist or resign from any sect, and the right to declare this without fear from assassination or oppression. People are the servants of God on all occasions, obliged to be committed to the social and human dimension of sacred teachings, the prohibition of suicide, false testimony, fraud, and lying. This fact of having no compulsion in religion is too fundamental to be subject to elections or debate, and cannot be altered by humankind:

<quote>

“There is no compulsion in religion. The true faith is now distinct from error. Whoever rejects Satan (Taghut) and believes in Allah has grasped a firm handhold of the truth that will never break ...” (Sura 2, al-Baqara, v. 256).

</quote>

3. Life is a gift from God to all the people and therefore no one has the right to violate it, and retribution is an eye for an eye, as the most extreme [permissible] form of punishment.

<quote>

“... and do not kill the soul which Allah forbade to be killed except by way of justice and law. This is what Allah has commanded you ...” (Sura 6, al-An‘am, v. 151).

</quote>

The shedding of blood is forbidden (haram). It is only exceptionally permitted where God specifies in His verses (or [to prevent] killing or corruption on the earth, such as crimes against humanity. Therefore every person has the right to defend his life and take care of his health with food, drink, and medical treatment. And he had the right to insist on it because the life of man is open and uncertain:

<quote>

“No soul will die except by Allah’s leave, at a postponed term. Anybody who wants his recompense in this world, We shall give him of it, and he who wants it in the hereafter we shall reward the grateful” (Sura 3, Al ‘Imran, v. 145).

</quote>

4. Freedom is the only form in which man’s worship of God can be embodied. Worship is not through the undertaking of ritual obligations such as prayer and fasting, as some assert. Rather, it encompasses all the deeds and actions that humans freely undertake and within the conditions of this earthly existence, as God has thus described:

<quote>

“Know that this worldly life is only a play and a pastime, adornment and boasting among you, and rivalry in respect of wealth and children: this is as the similitude of a plant that flourishes after rain: the tillers rejoice to see it grow, but then it withers and becomes yellow, and then it becomes worthless stubble …” (Sura 57, al-Hadid, v. 20).

</quote>

Thus the guarentee of the exercise of freedom is one of the most important political and economic precepts for society, because the progress and flourishing of any society is founded on this principle.

5. Knowledge and the process of law-making is the result of God’s breath in people. From this follows people’s right to gain knowledge (education) and their right to elect representatives to legislate (parliaments). These are sacred rights that cannot be violated, like freedom and life.

6. God says to Moses’s people:

<quote>

“We certainly gave Moses the scripture, but differences arose about it. Had it not been for a word that had gone forth previously from your Lord, the matter would have been decided between them ...” (Sura 11, Hud, v. 110).

</quote>

And he says to Muhammad’s people:

<quote>

“Mankind were but one nation, then they differed. Had it not been for a word that had already gone forth, their differences would have been settled between them” (Sura 10, Yunus, v. 19).

</quote>

This word has been the same for all nations and peoples. The Law of God is the absolute word of freedom for man; he may be faithful to it or choose to rebel and stand responsible for his own decisions (amana). It is the Word of Justice through which God metes out His justice fairly. In a just and open society, we find that God’s Law is superior, whereas in an oppressive society we find that God’s Law is suppressed and weak, regardless of the different names and slogans by which a particular regime chooses to call itself, whether it be Islamic, secular or national, a monarchy, a republic or any other type of rule.

7. Justice and freedom are absolute values which man practices in his society in a relative way. These values as expressed in the Qur’an include counsel (shura), the encouragement of good and the prohibition of evil (amr bi-l-ma‘ruf wa-l-nahy ‘an al-munkar). These are the integral, inseparable, and indivisible characteristics of shura:

A) Democracy is so far the best relative standard that man has achieved for the practice of shura:

<quote>

“And those who respond to their Lord, establish regular prayers, conduct their affairs with mutual consultation ...” (Sura 42, al-Shura, v. 38).

</quote>

Moreover, shura is a quality shared by all humanity, so that no society has a monopoly on it. With shura, genuine culture flourishes for the benefit of all people according to historically specific understandings of liberty.

B) Democracy, the best relative form of government in which humankind can practice shura, can exist only if it includes and allows genuine opposition. This entails political pluralism, freedom of opinion and expression, and the freedom to express ideas peacefully through the available means of communication, and unbribed and non-corrupt committees that can freely oversee state apparatuses. Unless this sort of opposition exists, one cannot adhere to the Islamic precepts of encouraging what is good and forbidding what is wrong, and consequently one cannot establish the optimal democratic government:

<quote>

“Let there be a nation from you calling people to righteousness, enjoining what is virtuous and forbidding what is vicious. Such persons will surely be triumphant” (Sura 3, Al ‘Umran, v. 104).

</quote>

And also as God says:

<quote>

“You are the best nation that has been raised up for mankind: you enjoin right conduct, forbid evil and believe in Allah ... “ (Sura 3, al-‘Umran, v. 110).

</quote>

C) There is no democracy without opposition, political pluralism, freedom of expression, and the right to criticize. This illustrates the importance of opposition as a tenet of Islamic society, which is a de facto civil society.

D) Although a framework for governance and life, democracy has both negative and positive aspects. However, this should not be perceived as an excuse for despotism, autocracy, oligarchy or any other form of absolutism.

8) Islam in its purest, abstract form exists only in the Revelation of God. The word of God is absolute in itself. Its authenticity can be realized only by its manifestation in nature and its practice through social decrees. In other words, God's Divine Revelation discloses itself in its entirety through human history and not, as presumed by some, through Arab or Arab-Islamic history alone.

9) Change and flux are a law (sunna), one of God's laws of nature. Human societies are evolving societies. From this derives the necessity constantly to reinterpret the legislative verses of the Qur'an (shari'a) in order to embody these principles as accurately as possible in reality.

10) Since the interpretation of the legislative verses and their application is a human activity, it is fallible and can only be relatively right. What is valid for one era may be irrelevant to another in spite of the fact that the sanctity of the legislative verses is eternal. For this reason, no human interpretation or practice ought to be accepted without discussion as it carries relative historical characteristics and will vary from one period to another, and differ from one society to another.

11) No one is above questioning or challenge, be it an individual, a political party, or an institution. The privilege of [unquestioned] supremacy is reserved for God alone:

<quote>

"He is not to be questioned about what He does, but they will be questioned!" (Sura 21, al-'Anbiya, v. 23).

"The Executor of all what He wills" (Sura 85, al-Buruj, v. 16)

“... They have no protector besides Him, and He does not share His command with anybody” (Sura 18, al-Kahf, v. 26).

</quote>

The Lord of the World alone possesses the qualities of divinity (uluhiyah) and sovereignty (rububiyah). He is the God of the people and none but He deserves total obedience and submission. The sovereignty of God to govern (hakimiya) is immutable whereas human rule is contingent upon time and place. Hence, anyone who claims that role is by necessity fraudulent and misleading, who conceals his oppression and violations of human freedom.

12) Democracy in society is a form of practice in which humankind expresses its freedom. Democracy has its principles and sources, the most prominent of which are the Islamic covenant and the covenant of faith (iman) The covenant of Islam (mithaq al-islam) is founded on the primordial teachings and sublime ideals stated in Sura 6, al-An‘am, verses 151–153. It requires that humankind must obey, conform, and submit without questioning. Belief in the unity of God cannot be submitted to referenda and voting. Faith in God, the Hereafter, and good deeds are not arbitrary values. Responsibility for parents, shunning suicide, avoiding obscenities, fairness to orphans, keeping promises and contracts without lying or fraud are all human values, unanimously agreed upon and not submitted to referenda, either in religious or secular states, with no place for objections from any sects, parties, or classes. In it, the sovereignty of Islam is manifested as expressed in the Qur’an:

<quote>

“The only true religion accepted by Allah is Islam (submission to Allah)” (Sura 3, Al ‘Imran, v. 19).

“Anybody who adopts a religion other than Islam, it will not be accepted from Him, and in the hereafter he will be one of the losers” (Sura 3, Al ‘Umran, v. 85).

</quote>

These religious tenets do not embody a legislative dimension because they are above law-making and parliamentary action. The doctrine of unity (tawhid) and faith in God and the Hereafter (iman) are tenets of a divine, absolute, and universal covenant and therefore can never be subjected to choice or will.

The covenant of faith, which comprises faith in the prophets and messengers and religious affiliation to a sect that believes in God, the hereafter, and in morality, are purely personal matters which are independent from politics or state intervention. In the same spirit, prayer, fasting and almsgiving (zakat) are not subject to any form of collective or legislative decision-making. This is why Islam (the way we have explained it and not the way the jurists have done) and Islamic societies, allow mosques to stand adjacent to Christian churches, Jewish synagogues, and Buddhist temples. The social, epistemological and aesthetic dimensions always vary according to different societies' abilities to define and articulate with local customs and their democratic capacities within a particular geographical area and a historical period.

Islamic jurisprudence (shari'a) is a legal system practiced within God's limits (hudud Allah). Islamic jurisprudence is flexible and contains its own internal constraints; it is not a stern, brutal and rigid system as commonly perceived. For example, cutting off the hand of a thief is [only] the outer limit of penalties for theft. From this we see that most legislation in civil society emanates from legislative bodies operating within God's limits (hudud Allah). In this it is understood that there are differences from one place and time to another. Every sound practice is accepted because it is within God's limits.

13) Islam is a creed that is not subject to time (history) or place (geography). It is unlike a state which is an institutional body conditioned by borders and historical pressures, like the Roman and Arab governments. Consequently a government is always in need of adaptive legislation that does not exist in the Qur'anic text, and this is precisely what the Prophet Muhammad accomplished at Medina in the seventh century Arabian peninsula. He established civil law within God's limits by taking the general Qur'anic outlines and adapting them to everyday use, taking into consideration the local aesthetic, social and epistemological dimensions, as exemplified in his practices (sunna).

14) Islam is the primordial and comprehensive religion. It is the only religion that God granted to humankind and preserved from alteration and fabrication from the time of Noah to Muhammad. Consequently, it is transcendent and unrelated to geography. So, for example, it is to the English as it is to the Arabs. The understanding of the state within its limits is a pure geographical understanding. Although the concept of state is a solely geographical concept, nationalism in that sense does not conflict with the Islamic conception of statehood. Citizenship can be perceived in two ways. First is that which refers to general human needs. The second is the local dimension. Islam is sufficient and relevant to establish human society, but not to establish a normal state with public, economic, geographic, military, and national policies.

15) One of the special prerogatives of God is the authority to make absolute prohibitions (tahrim al-haram), since these are all-inclusive and of unlimited duration. The Qur'an itself specifies no more than twelve fundamentally forbidden acts. Nine of them are

specified in Sura 6, al-An‘am, verses 151–53), in addition to the prohibition against incest (maharim nikah), usury (riba’), and the dietary prohibitions. This means that the forbidden is specified and cannot be extended by analogy to other things; the permitted (halal) is unrestricted. The basic principle is that most things are lawful, and the forbidden is exceptional. Thus, the function of the oral tradition (sunna) regarding other than cultic commands is to order the domain of the permitted. That is to say, a restriction on the otherwise unrestricted (al-mutlaq) which applies a circumstantial attribute (sifa zarfiyya), is not a [categorical] prohibition (tahrim). This clarifies the mention of the Messenger alone [without mention of God] in the verse:

<quote>

“... whatever the messenger gives you, accept it, and whatever he forbids you, abstain from it. And fear Allah, for Allah is stern in punishment” (Sura 59, al-Hashr, v. 7).

</quote>

It is clear and explicit that the above verse speaks of the state, operational procedures, and the Messenger [Muhammad] as a sovereign authority (state leader) [where] nonetheless this obedience to the Messenger is separate from obedience to God:

<quote>

“O you believers! Obey Allah and obey the Messenger, and obey those who are charged of authority among you ...” (Sura 4, al-Nisa’, v. 59).

</quote>

And this is a restriction on the otherwise unrestricted practice (mutlaq), because everyone agrees that the absolute is not affected except by a restrictive form, and it cannot [otherwise] exist except in [the state] of being permitted (al-halal).

This is the significance of parliaments in the majority of the world. They order, prohibit, and organize within the domain of the permitted yet they cannot categorically prohibit (tahrim) the permissible (halal) because that would give to themselves the unrestricted right of legislation or the permitting of that which is prohibited

(by God). We can say that parliaments are the contemporary forms of prophetic norms excepting in religious ([cultic] practice. They are the equivalent of the civil law for the state that the Messenger established. For this reason we now need plebiscites rather than religious decrees (fatwas), and parliaments instead of religious councils in all matters of life and legislation other than the customary religious rituals. These rituals embody obedience to the Prophet, [although this is] connected with obedience to God. This [distinction] is in agreement with the following Qur'anic verse:

<quote>

"And obey Allah and the Messenger, that you may obtain mercy" (Sura 3, Al 'Imran, v. 132).

</quote>

16) People are free to express their views through the different means of communication available, and any aberration will vitiate and impair the implementation of God's Word in the Islamic society, and jihad will therefore be compulsory for its restoration. Jihad does not only mean the use of force, although force can be one stage in the course of holy war, but speaking truth to authority when needed and at the right time may also be seen as a form of jihad. We see how this jihad of the word and being steadfast to truth are the more efficient types of jihad in contemporary times. As for military jihad, such as defense of the homeland, it is a legitimate right for people everywhere. Similarly, the use of force in emergency cases such as war or self-defense is also legitimate.

17) Killing for the cause of proselytization and conversion to Islam or the persecution of other religious creeds is strictly forbidden:

<quote>

"O you believers! When you go out fighting in the cause of Allah, be careful in discerning precisely: do not say to him who offers you peace. 'You are not a believer,' wishing the gains of this worldly life ... " (Sura 4, al-Nisa', v. 94).

</quote>

Hence, the distinction between dar al-islam and dar al-harb is erroneous and delusive; instead we have the abode of faith (dar al-iman) and the abode of infidelity (dar al-kufr), as God says:

<quote>

“Yet most of the people will not believe, though you are keen to make them believe” (Sura 12, Yusuf, v. 103).

</quote>

Therefore this distinction does not justify enmity, hatred, and killing, as evident in the Qur’anic verse:

<quote>

“And if it had been the will of your Lord, all mankind would have believed, all of them together! Do you (O Muhammad) want to compel mankind to become believers?” (Sura 10, Yunis, v. 99).

</quote>

18) The concept of jizya, the tax on free non-Muslims under Muslim rule, was a strictly political form of taxation that was applicable to a specific historical period.

19) All people have the right to be judged justly and fairly:

<quote>

“... and when you judge between people, you should judge justly” (Sura 4, al-Nisa’, v. 58).

</quote>

20) Material and intellectual creativity is encouraged and respected in Islamic society:

“O my people! Give full measure and full weight in justice! And do not decrease others of their possessions” (Sura 11, Hud, v. 85).

21) Work, diligence, profit and saving are matters that are reserved for everyone and are not predestined. Man is free to labor and struggle for his sustenance:

<quote>

“While Allah has created you and what you make” (Sura 37, al-Saffat, v. 96).

“So that they may eat of its fruit. It was not their hands that made this; will they, then, not give thanks?” (Sura 36, Ya Sin, v. 35).

</quote>

22) A government is really a contract between the citizens and the ruling authorities, regulated by a constitution in which the principle of rotation of rule is preserved for the practice of democracy and the maintenance of trust. If the state does not abide by the conditions of the contract, it loses the confidence of its citizens and the ability to rule:

<quote>

“O believers! Fulfill your obligations” (Sura 5, al-Ma’ida, v.1).

</quote>

23) Woman is a counterpart to man’s striving for procreation, industry, livelihood, and inheritance. God has regulated the issue of inheritance between male and female in His Holy Book:

<quote>

“... Men shall have their share of what they earn, and women shall have the same of what they earn ...” (Sura 4, al-Nisa’, v. 32).

“Allah recommends you for your children; a male shall inherit a double share of that of the female” (Sura 4, al-Nisa, v. 11).

“And that is He who creates the pairs, males and females” (Sura 53, al-Najm, v. 45).

“Anybody—male or female—who does righteous deeds and he is a believer, We shall make him live a good life ...” (Sura 16, al-Nahl, v. 97).

“... the righteous women are devoutly obedient, and they guard, in their husband’s absence, what Allah would have them guard ...” (Sura 4, al-Nisa’, v. 34).

“If a wife fears ill-treatment or desertion from her husband, there shall be no blame on them both if they arrange an amicable settlement between them ...” (Sura 4, al-Nisa’, v. 128).

</quote>

24) Freedom of conscience (freedom of expression without fear) is ensured to every person, whomever he may be:

<quote>

“O you believers! Stand firm for Allah, and bear true witness. Do not let your hatred for other people lead you to injustice ...” (Sura 5, al-Ma’ida, v. 9).

“O you believers! Stand up firm for justice, be witnesses to Allah even though it is against your own selves, your parents, or your kinfolk ...” (Sura 4, al-Nisa’, v. 135).

</quote>

There is a charter for political action like other covenants, and which does not deviate from the principal point of departure represented in the covenant of Islam. It is based undisputedly on the freedom of the people to choose, since they are worshippers of God. These are matters that every one who is active in political or national causes should be aware of and committed to:

1) People are free to choose and adhere to their beliefs and political views. There is no place for violence or political assassinations, especially where there are differences of religious creed or political views.

2) Political pluralism is an essential condition for the regulation of authority and the state. The freedom to form political parties, committees, associations, clubs, and the freedom to publish newspapers, journals, and magazines is a basic right to all citizens, provided that they announce their work and objectives in detail.

3) The only way to reach power must be through elections and the principle of rotation of power.

4) Opposition is present in free expression and multiple parties. This is the ideal and indispensable condition for encouraging good and prohibiting evil. Political work cannot be undertaken without it. If an individual, a party, or coalition comes into power, this does not entail the elimination or uprooting of an opposition, even if it is a minority.

5) No one, be it a particular party or an institution, has the right to present itself as the sole measure of justice or authority over others or to condemn anyone without evidence.

Doctor Muhammad Shahrur

Damascus, 25th of July 1999

12 Rabi‘ al-Awwal 1420

In Remembrance of the Birth of Greatest Prophet, Muhammad (PBUH)
